It is a great pleasure to welcome on behalf of *Grit* Family, the guest of the evening, and those who have so kindly joined us in celebrating his twenty-fifth anniversary as general manager of *Grit*. The occasion is full worthy the celebration we hold, for rarely does one man attain the distinction of remaining at the head of a newspaper twenty-five consecutive years. While men may continue to live, newspapers, like some children, are hard to raise. According to statistics covering the last quarter century, only one newspaper in seven has attained its majority, though there are today about 20,000 of all kinds published in the United States, representing an invested capital of $200,000,000, employing directly 100,000 people, and yielding annually a product valued at $300,000,000. In no business is competion keener; in none is there need of greater resource, enterprise, energy, good judgment, and business acumen. In none is there severer test of men, and none better proclaims the worth of them. Twenty-five years service in leadership is a marked distinction.

Dietrick Lamade, Manager of Grit.

In a measure we can appreciate the successful life-work of our general manager, though not fully. We cannot all understand the courage that led him to stake every dollar saved and his credit as well, on a venture that twenty-five years ago presented little prospect of success. We cannot comprehend the determination that withstood all the discouraging conditions that accumulated around his modest paper. We cannot properly estimate his venturesome spirit that plunged his publication into debt, nearly every time it had a small surplus in the treasury. We cannot participate in his sublime faith in the plain people for whom he labored to produce a paper that they would want. We, that is, the majority of us, have engaged with him under entirely differeent conditions—during years when hopes were realized, ambitions satisfied, ideals established, and victories won. We see the fruits of ceaseless toil, the results of splendid energy, the achievement of magnificent enterprise. We see a man grown gray, yes white, whose leadership is more inspiring than it was twenty-five years ago, and his successful life work—a newspaper that proclaims his personality more eloquently and forcibly than tongue or pen.

And we respect that personality because it presents example worth emulating. It presents every quality of manhood, even to that kindly interest which tells us that in him we have not only an employer but a friend. He has been actuated as was James Oliver, who declared, "To benefit yourself, you must benefit humanity." Dietrick Lamade has benefited humanity, not alone in publishing a paper that is an instrument for good wherevr it goes, but in leading hundreds of men and women in closer relation than readers, to view the affairs of life from higher viewpoints in inspiring in them greater hope, larger ambitions and higher ideals.

This is why he is our chief guest on this occasion and why this occasion would not be complete without some more enduring memento than the words spoken in his eulogy. This is why, Mr. General Manager, the members of *Grit* Family ask you to accept from them this loving cup as a slight token of their esteem:

Filled to the brim with our best wishes,
O'erflowing with our loyalty and love,
This loving cup holds earth's best riches
Near kindred to those joys above.

THE MANAGER OF GRIT MAKES ACKNOWLEDGMENTS AND GIVES SOME VERY INSTRUCTIVE AND INSPIRING THOUGHTS AS TO GRIT'S STANDING, WORK, INFLUENCE AND ACCOMPLISHMENTS.

Mr. Lamade said in part:

I wish I could express to each one of you individually my sincere appreciation of the distinction you have conferred upon me. I wish I could find words to tell you how highly I value the sentiments which have prompted you to arrange this observance. To me this is evidence that you entertain for me a feeling of personal affection, such as I always have cherished for you and others with whom I have labored for so many years. Nothing else has given me such incentive to do my utmost, as has the confidence that I was supported by, and had the good will, the kindly regard and co-operation of all those who have been a part of this business. To feel that we are in full harmony with all those with whom we daily associate, has been one of the greatest pleasures of our daily lives.

THE HIGH QUALITY OF THE MEN AND WOMEN ON THE PAPER'S FORCE MAKES GRIT A POSITIVE FACTOR FOR GOOD IN THE COMMUNITY.

I have been told, and I believe, that *Grit* is a positive factor for good in this community, and in every other community into which it enters. This is largely due to the high quality of the men and women who constitute the working force in every department of the large business comprehended under the term *Grit*. From a very small beginning it has, during this quarter of a century, grown to be a giant, and for us to have been entrusted with the development of this enterprise is cause for just pride. It is a great privilege for me to be able to look back over twenty-five years of joint activity crowned with a large measure of success, and I desire to lay claim to but one thing—that I have been enabled to gather around me an organization of well qualified men and women who have shared with me

THE FLORIDA PRESS ASSOCIATION

AN EDITOR CONVERTED BY THE FERVENT, REVERENT READING OF A PRAYER AT AN ENTERTAINMENT OF THE EDITORS—THE NEWSPAPER MEN PROVIDE GOLD MEDALS TO BE COMPETED FOR BY THE BOYS AND GIRLS OF FLORIDA—VOTE FUNDS TO HELP PAY EXPENSES OF EXECUTIVE COMMITTEE TO N. E. A.

LORIDA editors made a record of doing things at their annual convention held in the oldest city of America, San Augustine—the place of meeting of the National Editorial Association in 1875, that is held in most pleasing and grateful remembrance by between three hundred and four hundred editors, the members, in all parts of the United States.

The following from the story of the convention sessions, and entertainments, as told by Executive Committeeman C. L. Bittinger, in his paper, the Ocala *Star,* will be read with pleasure by newspaper workers all over America and the world of printerdom, and it is to be hoped that the recounting of the experience of the one editor, in being soundly converted through listening to a prayer, will not be unfruitful in results and will tend to greater fervency and faith on the part of those called upon to offer up invocations at the opening of meetings of newspaper-makers:

One of the unexpected happenings at the State Press meeting at St. Augustine was the conversion of Editor Willis B. Powell, late owner of the St. Petersburg *Independent.* It all came about by a beautifully prepared prayer, which the rector of the Episcopal church read on the evening when the people of St. Augustine gave an entertainment for the delectation of the visiting editors. The incident was the more remarkable because the rector did an unusual thing, read his prayer, something along spiritual lines that is seldom seen or heard these days. As intimated, the prayer was a very beautiful and touching one, the sentiments were noble and the diction employed to express the heart-felt thoughts of its author was indeed Addisonian. Now Powell has roamed the world over, seen all peoples of the earth and experienced all climes and it remained for him to visit the oldest city of the American continent and of these United States, and have his heart touched by the simple but touching and appealing words of a plain every day Episcopal rector. Now, this evidence was equally startling to the association, for it was all of Powell's telling. As no one had suspected up to that hour that Powell had experienced a change of heart, but that he had, his own words are in evidence, by getting up in open session and requesting that the prayer as read be made a part of the proceedings of the meeting of the Press association, and the same be embodied in the official published report. In making this modest request, Mr. Powell said he had never heard a prayer that so touched him as that one did. He had always believed in the application of the sentiments expressed in it, namely: that the power of the press should never be abused, that its primal thought and purpose was to clothe the misdeeds of the world with a mantle of charity; to speak ill of or misrepresent no one; if you couldn't say a good word of a person to remain silent, but to push and smile that others might be induced to do the same, and was free to confess that prayer had fully converted him and so impressed was he with it, he asked for its publication, so he could always have it with him as a memorial of the last meeting at which he ever expected to be present with the state association, as his face would shortly be set toward the "Golden Horn," where in a little while he would again take up the burdens and pleasures of journalism and spend his declining days in the Occident free from the cares and vexations incident to the work by which he had made his fortune, in the newspaper business at St. Petersburg. The editor of the *Star* noting the state of mind and heart of Powell, a prime favorite with every member of the association, moved and it was seconded, that the association have printed in the highest style of "the art preservative of all arts," the prayer and the same be sent to Mr. Powell in his Pacific Coast home, with the best wishes of the association. The incident was so unique and impressive that it marks an epoch in the history of the association.

The following were elected officers for the ensuing year:

Harry Brown, editor and manager of the St. Augustine *Record,* president; Frank Harris of the Ocala *Banner, vice* president; T. J. Appleyard, of the Lake City *Index,* secretary; J. W. White of the *Fraternal Record,* treasurer; C. L. Bittinger, of the Ocala *Star,* state national committeman, with an appropriation of $50 to assist in paying his expenses to attend the National Editorial Association, which convenes in Seattle, Wash., July 19th.

The Press Association also appropriated $50 for gold medals to be competed for by the high school boys and girls of Florida, supplemented by a $25 gold medal to be competed for by the boys or girls capturing the first prizes. Those making the contribution were Messrs. J. W. White, C. L. Bittinger and T. J. Appleyard.

The association passed resolutions asking Congress to require the post office department to desist from printing business men's cards on stamped envelopes, which work, by right, belongs to the job printing offices of the country. The association also passed resolutions requesting the legislature to appropriate $25,000 to advertise the state.

Tuesday night the citizens of St. Augustine entertained the association at the new Jefferson opera house, which cost $100,000, with a varied program of music and oratory. The speakers were President Hetherington, of the Lakeland *News,* who stood up for the integrity and honor of the state press against the dishonor that attaches to the state in its convict lease system, which sentiment won general applause.

Hon. Frank Clark, congressman from the second district, made a very pleasing address, the substance and essence of which was the integrity and honor of the state as well as the individual, evidently a thrust at the state for not paying Col. Wailes' just claim against the state.

The editor of the *Star* took the side of the government in its envelope printing, stating that the government let the contract to the lowest bidder and it was the contractor and not the government that competed with the local printer. It raised a storm of protest, as Appleyard, Humphreys and Harris contended the government was doing work that belonged to the individual.

A banquet was tendered the association at the Alcazar Hotel and it proved a very elegant and enjoyable affair. Col. Taylor was toastmaster and proved a past master at the art. His witty introductions produced much merriment. Those who responded were Hetherington, Appleyard, Powell, Bittinger, Harris and McWilliams and Larned of the St. Augustine *Record.* All voted the occasion a great success.

The association inspected the famous Ponce de Leon Hotel, gazed in wonder at the magnificent dining room that seats 1,000 persons and the ovals over the entrance into the hall and over the opening into the kitchen which cost $40,000 Also a glimpse at the $17,000 mantle in the parlor and the $10,000 painting in the same gorgeous room.

The inspection of the *Record* office disclosed the most perfect, complete and effective plant in the state of Florida, and one that does the largest job business.

We also took a look at the old state armory, being put in effective order for use in supplying the state troops with supplies of all kinds by Gen. J. C. R. Foster, an officer who is doing splendid service for the state, and a genial, kindly gentleman, whom it was a pleasure to meet.

We witnessed the landing of Ponce de Leon, celebrating the 397th anniversary of this important historical event. The city was beautifully decorated. Everything had a holiday appearance and the city was alive with visitors. It surpassed anything of its kind ever attempted in attendance and grandeur in the Ancient City.

ILLINOIS EDITORS

The program of the Illinois Press Association at Ottawa, June 16, 17 and 18, 1909 is short but sweet, presenting opportunities for much enjoyment:

Wednesday Morning, June 16 1909, 10 A. M., Called to Order by the President. Invocation, Rev. J. L. Albritton; Address of Welcome, Mayor Farrell; Response, C. W. Bliss; Appointment of Committees; Adjournment.

Wednesday Afternoon, 1:30 P. M., Music; President's Address; Music; Printing Government Envelopes, C. W. Warner; Business.—Question Box.

Wednesday Evening, 8 P. M., Music; Annual Address—"The Trail of the Yankee," Hon. W. H. Stead; Music.

Thursdy Morning, 7:50 A. M., Take street car at Clifton Hotel enroute to Federal Plate Glass Factory; 10:00—The Real Country Editor, G. W. Hughes; 10:30—Business.—Question Box.

Thursday Afternoon; Trolley Trip to Marseilles.

Thursday Evening, 6 P. M., Banquet at Ottawa Tent Colony; 8:00 P. M.—Stereopticon Lecture "Starved Rock" by Horace Hull, at Boat Club; 9:00 P. M.—Reception and Ball. (Informal.)

Friday Morning, 10 A. M., Memorials; Report of Committees; Typesetting Machines, C. J. Lumpkin, G. W. Crowden, E. E. Williamson; Business Session, Election of Officers; Adjournment.

Friday Afternoon, 1 P. M., Trip to Starved Rock by boat and return by Interurban.

"TOPCOL TOPICS"

The veteran editor and Past-President of the National Editorial Association, A. O. Bunnell, of Dansville, N. Y., has retired from business, but during his years of successful newspaper-making, he put by enough to provide himself with a pleasant homestead, which he lovingly named, after that much-prized position in the newspaper, "Topcol." Now, to keep in touch with the calling and his many friends, he furnishes a column to his old paper under the above title. His "Topcol" in the issue of the *Advertiser* of May 13th, was devoted to Editor Sleicher of *Leslie's Weekly* and will be of interest to all readers of the NATIONAL PRINTER-JOURNALIST:

"As a rule the great men of New York city, the leaders of thought and action, are born outside the city, mostly in the country," said Senator Depew at a banquet given to the Republican Editorial association by the Republican club of New York city. "But once in awhile," added the Senator, "a city dude like Mayor Low, who sits at my right, comes into prominence." A canvass of the great men of the metropolis, leaders in the pulpit, at the bar, in journalism, in mercantile business, in the arts and sciences, will fully justify Senator Depew's bold assertion. In the journalism of New York city, and in the illustrated journalism of the world today, is John Albert Sleicher, president of *Leslie's Weekly*. Mr. Sleicher was born at Troy, New York, Oct. 8, 1848. He received his early education in the public schools of Troy, and the Troy High school, graduating from the latter in the English and Latin classical course. From here he went directly into the practical school of journalism as reporter on the Troy Daily *Whig*. From that position he became succesively city editor of the *Whig*, managing editor of the Troy *Press*, city editor and news editor of the Troy *Times*, manager of the New York State Associated Press service in New York city, one of the proprietors of the Troy *Times*, owner and editor of the Schenectady *Union*, editor-in-chief and part proprietor of the Albany *Evening Journal*, editor of *Leslie's Weekly*, editor-in-chief of the New York *Mail and Express*, Supervisor of the New York *City Record*. Returning to *Leslie's Weekly*, he took entire charge, remodeling and modernizing that paper. *Judge*, *Leslie's Weekly* and other publications are now controlled by an incorporated company of which Mr. Sleicher is president and chief owner and manager. Mr. Sleicher was founder of the Republican Editorial State association in 1893, and its first president; organizer of the Republican Editorial association of the United States in 1900 and its president for two terms; an early and always active member of the New York State Press Association and its president. He is an influential member of the National Editorial association. Mr. Sleicher was a civil service commisioner of the state of New York in 1889, serving out a term, and is now a member of the State Water Supply commision. He is a member of the Civil Service Reform association of New York city, director of New York Board of Trade and Transportation, member of the Rensselaer County society, National Civic Federation, and the Albany County society, and also has membership in the Union League, Republican, Quill, and Sphinx clubs of New York city, and the Fort Orange and Aurania clubs of Albany. In every position named, Mr. Sleicher has made good, vitalizing and improving everything he has touched His most notable and most recent success in journalistic work has been since the entire plant of the Judge company was burned in January 1908. Instead of being discouraged, Mr. Sleicher rose to the heights of faith and endeavor. In the present magnificent new quarters, *Leslies' Weekly* passed the 100,000 mark in May of last year, reached 107,000 in June, 113,000 in July, 117,500 in August, 120,800 in September, 130,000 on Thanksgiving day, 135,000 on Christmas, and 160,000 on the 1st day of May 1909! This phenomenal success demonstrates not only the organizing ability and the energy and skill of Mr. Sleicher, but also the sterling character which he as a man has imparted to his paper. There are probably few journalists in this country holding such intimate relationships with its notable men from president down, men in public, professional and business life; no man who more firmly holds or better deserves the confidence of such men. A republican, a strong partisan, broad and sound, he has been often consulted by party leaders and often engaged to formulate party platforms. As writer and speaker Mr. Sleicher excels. A leading characteristic of Mr. Sleicher, and one which has endeared him to many, has been his helpfulness to those less successful than he. His loyalty to the country press has won for him the strongest of friends and admirers throughout state and nation. Mr. Sleicher has a handsome home in Albany and a most lovable family, but he spends the greater part of his time in New York city, with rooms at the Holland house. To sum it all up, he is a man whom it is a pleasure and a benfit to know, and his friendship is a rich enjoyment as the editor of this column can gratefully testify.

INSTRUCTIVE NEWSPAPER IDEALS AND EXPERIENCES

(Continued from page 405)

the ambition to produce and circulate a newspaper which would appeal to the best thought of every community, and who have freely put into the work the best that was in them. I want to emphatically say that one, or a few, could not possibly have achieved the results that have been attained, and that have raised this business from one of the smallest proportions to one which has attracted considerable attention in the newspaper world.

HONESTY AND HIGH STANDARDS OF RIGHT.

The general policy of *Grit* was established at its beginning—that of honesty in all transactions, of serving the people, of maintaining high and advancing standards in every direction, of supporting right and justice. In short, our whole aim has been to publish a newspaper that would be fair to all, and of real value and interest to every reader. In the efforts I contributed to carry out this policy, I have had co-operation such as money alone could not buy. During periods of a struggle for existence—at times when clouds hung heavily in the business sky—I always have been fortunate enough to be surrounded by loyal, honest and sincere men, who were able and ready to give that effective co-operation before which all obstacles have fallen.

In a broad sense, we have but just begun to supply the demand for a real family newspaper; working together on present lines, and broadening them as circumstances change, and intelligence and development progress, I see for ourselves and our successors a steadily widening field, where all may continue to put forth their energy and effort of mind and body, and where our influence, exerted through the columns of the newspaper we make, will be a power for good among constantly increasing numbers of persons in all parts of this country.

I cannot undertake to say, or even outline, all that my heart prompts me to speak on this, to me, most memorable occasion; but I will again say that to every member of the *Grit* Family, to all persons who take part in the making or distribution of *Grit,* is due the same recognition which you have been pleased to accord to me—in short, I believe that to the humblest newsboy who sells *Grit* on its merits, belongs a full measure of credit for his contribution to the success of the paper, just as to any other persons concerned in its making.

Ladies and gentlemen—all who are here in person or in spirit—I wish again to thank you for the very distinguished honor you have shown me, by making me your guest on this occasion, which, I assure you, will always live as one of my dearest recollections.

A JUDGE'S VIEW OF A NEWSPAPER MAN'S GOOD CITIZENSHIP.

The toastmaster read a letter from the Hon. W. W. Hart, judge of Lycoming County courts, who was unavoidably absent. The letter was a tribute to Mr. Lamade's citizenship in which he said:

My long and intimate acquaintance with Dietrick Lamade, the chief of your household, has brought me more closely in touch with him as a citizen and as a neighbor than as the successful manager of a great enterprise which, with the co-operation of his loyal and faithful family, has made the name of *Grit* a welcome household word throughout and beyond the length and breadth of a continent. I indulge in no fulsome praise when I say that as a citizen Dietrick Lamade ranks second to none in all that goes to make up good citizenship. None surpass him in his devotion to the welfare and material advancement of his fellow men, in his devotion to the best interests of his city and community and in the advocacy and furtherance of progressive measures tending to its general prosperity and to the comfort and well-being of its people; and none surpass him in his unswerving fidelity and devotion to his country, to those principles of free government which have for their highest aim the greatest good to the greatest number, and equal and exact justice to all men. In the still closer relation of citizenship, that of neighbor, I know he feels the full measure of the highest order of men. Charitable in the fullest sense of that word, generous and just, genial and companionable, a gentleman at all times and under all circumstances, I am proud that I have him for my near neighbor, and that I have this opportunity of paying this meager tribute to the worth of our mutual friend and in wishing him a long, prosperous and happy life.

A MAYOR'S VIEWS—GREATEST PAPER, BECAUSE OF HONEST PURPOSE.

In responding to the toast, "An Exemplar of Good Government," the Hon. Charles D. Wolfe, mayor of Williamsport, said:

There are a great many things that I could say of Dietrick Lamade and *Grit,* to show that they advocate good government, but I am at a loss to know which should be mentioned first. Yet I believe that the first should be this—Dietrick Lamade has never permitted anything of a personal nature to stand in the way of his public duty. He has today, in my judgment, one of the greatest newspapers in the country, because, animated by honest purpose to serve all the people, it hews to the line, let the chips fall where they may. I believer that *Grit* is as honest and fearless in its stand for good government, as any paper published. One of the most illustrious editors this country ever had once said that when a journalist abandons partisan journalism and enters the field of independence, he ceases to be an advocate, and rises to that high honorable position of judge.

THE PRESIDENT OF THE BOARD OF TRADE TELLS OF THE PAPER'S CONTRIBUTION TO INDUSTRIAL PROGRESS.

The Hon. S. N. Williams, ex-mayor of Williamsport, and president of its Board of Trade, reviewed Mr. Lamade's contribution to the industrial progress of the ciay and said in conclusion:

Twenty years ago if you stepped into a business place and introduced yourself as from Williamsport, you would be asked, where is Williamsport located? But mark the change of today. If you go in a business house and announce that you are from Williamsport, Pa., you will not be asked to locate the town. Why? What made this change? The energy and efforts of her citizens through her manufacturing industries, the press and efforts of the Board of Trade. We have manufacturing plants that distribute their product largely through the different states of the Union and in foreign fields which give us prestige.

We are here tonight to show our esteem for Dietrick Lamade, who embodies the qualifications to which I have referred. *Grit's* reputation, its state and local power, its very wide circulation shows the ability and judgment that has been displayed in the building up of this industry of which Williamsport is proud. I commend the example to the *Grit* Family.

NEWSPAPER-MAKING A ROCKY ROAD TO A LIVELIHOOD WITH SOLID COMPENSATIONS.

Geo. E. Groff, manager of the *Sun,* a competitor of the *Pennsylvania Grit,* said:

Whatever the legitimate function and standing of the press may be, we of the business office see it stripped of

much of its glamor and come to know it for what it really is—a rocky road to a livelihood. Rocky! aye in the sense that it is rough, but there the simile ends; for there are times when one would forgive the roughness for the feel of solid ground under foot. A better comparison might be found in one of the journeys adventurous explorers occasionally make to the frozen poles, where the pathway lies over hummocky, unstable ice, encountering here an obstacle which yields only to direct frontal attack; again a berg too high to climb over, which must be taken in flank; at another time a stretch of open water yawning directly in the pathway and threatening to engulf the whole project in a cold, and in all likelihood, a fatal plunge. These dangers and these struggles are none the less real because they are viewed from a long perspective. Final success softens them and time smooths the rough outlines of the journey, but as the honored guest of the evening rests for these few moments along the trail to look back upon his plendid accomplishments, the mind must dwell for a moment upon these things to get a correct measure of the value of his efforts. A man who has given twenty-five years of constant, unremitting labor to the attainment of one end has given that object the best that is within him. To few has it been given to see such a large success result from his life work as Mr. Lamade is privileged to look upon this evening. He has regarded his work as the knight of old regarded his armor—as a proud burden, and right proudly has he borne it. The highest compliment I can pay him is to say that he deserves the success which has come to him. His example has been, and will continue to be, a distinct inspiration, and a notable subject for emulation to all engaged in any capacity upon the press in this part of the state. On behalf of the press, I desire to lay a laurel spray of sincere appreciation at his feet upon this occasion, and wish him a long and continuing prosperous life in which to enjoy the fruits of his labor.

STRUGGLES, ENERGY, BURNING OF MIDNIGHT OIL REQUIRED.

Among Mr. Lamade's business associates for twenty-five years there was one able to speak "from experience," he having been Mr. Lamade's advisor. He knew Mr. Lamade's ideals and purposes, and he reviewed them in a most helpful manner. So the next toast, "Herald of High Ideals," was responded to by James B. Krause, Esq., who said in course of his remarks:

We have honored ourselves tonight by conferring this distinguished honor upon this disinguished father of *Grit* Family. In that loving cup we have placed our hopes, our aspirations, our heart yearnings, the nectar extracted from the love of our hearts, all there and well up to overflowing.

The artist when he paints a picture of life to get the plaudits of the world, must introduce a cloud. In the rugged pathway of preferment, sorrows, failures, defeats are but the discords that unite with the joys, the triumphs, the successes, to make one grand harmony. Take from the life of any man the struggles, the defeats and the reverses that he has overcome and surmounted by dint of great courage, industry and determination, and you take from him that which is the sweetest portion of his life.

It required struggles, it required energy, it required all sorts of burning of midnight oil to accomplish that which has been so nobly done by the brother whom we are honoring tonight. In this world of business activities the tendency is to centralization of power and of might—unfortunately. The young aspirants, those who are ambitious in life, start out nowadays with a paper promoting some great enterprise, to find out how much each will subscribe to it. The great institutions of this country were not built up by such persons, nor in that manner.

Dietrick Lamade, when he was over in the Tallman building, never dreamed of, nor realized for an instant the fruition of this moment. He was not in any sense building for the future, but doing what the ever-present required of him to do. And that ever-present characteristic culminated in what we see tonight. The young man may go as the moth to the taper and meet a glorious death in the business world today, but the one who rose up from the ranks, having remembered all the various duties of the business relating to printing and publication, having undergone and experienced all its varied changes and moods, cannot help but deserve success. He alone has right standards, and approvable purposes.

"AN INSTITUTION WITH A SOUL BEHIND IT."

Rev. Paulson, in speaking of the paper in response to toast, "An Influence for Good," said:

Now, I was only a boy in knee trousers when I became acquainted with *Grit*, although I am a comparative stranger in this locality. I was away up in the Northwest, on the edge of civilization. I remember when I was a boy of ten years old I picked up a copy of *Grit*. At that time the name struck me as rather peculiar, and I puzzled over big words the then editor used. But that was my first acquaintance with *Grit* out there in the Northwest among people who were clearing the woods, who were turning up the virgin soil and who were planting the first crops. I never expected to have closer acquaintance with *Grit*. I never expected to be in this part of the world. But why was it I found it there in the wilderness? It was there simply because the people on the forefront of civilization found something in that sheet—something that put energy into their arm, courage into their will. This something was gotten out of the man who was behind that paper. *Grit* has never lost its personality because there has been a man behind *Grit* who has had a personality to put into that paper. It has always been an institution for the furtherance of good, and a desire to be of some help to any man whom that paper might reach, whether it be in the Far West, East, North or South. There is one thing that men will never mistake in their fellow men, and that is good will, earnestness, helpfulness, and that is something that they will always recognize, whether it shine out in the man's face, or whether it is put down in print upon paper.

TESTIMONIALS—"PRIDE, PRINCIPLE AND PLUCK — THE THREE MUSKETEERS OF SUCCESS."

In addition to these responses from which we have made brief extracts, there were many personal tributes from employes:

Speaking for former employes, John Budd, of New York City, dwelt upon the intimate relations that exist between Mr. Lamade and his co-workers, relations that ripen into closest friendship. Mr. Budd said:

If there has been one force and one example that has entered into my life and contributed to any measure of success that I have made, I want to say right here and right now before all of you, it has been gotten from Dietrick Lamade. If all of you can get from this man, Dietrick Lamade, what I know is in him to get—the mental and moral processes by which he arrives at his clean-cut, honest conclusions; if you can get the same pleasure from your association with him as I have, it will be a big and valuable thing to you.

I see a little quotation from Emerson in the menu tonight. It is remarked here that Emerson said something about it taking a quarter of a century to know what was in a man. It did not take a quarter of a century to see what was in Dietrick Lamade. Another thing Emerson said: "An institution is the lengthening shadow of but one man." I want to say that I who knew what *Grit* is from the inside

and from the outside, and can compare it with other newspapers and other newspaper propositions scattered over this mighty country—I want to say to you that Emerson knew what he was talking about if he had any reference whatever to *Grit,* and if he did not have any reference to *Grit* it is a most excellent example of his remarks. This institution is not necessarily a lengthening shadow, but is and always has been Dietrick Lamade. His policies have not dominated but have permeated it; three prominent characteristics—pride, principle, and pluck. They were called the three musketeers of success, and I think Dietrick Lamade has all three. Pride must be laudable. Principles that stand the light of day any time you want to turn it on them. Pluck—it is not necessary for me to say anything about Dietrick Lamade's pluck.

SOME EARLY STRUGGLES.

John D. Klein, mechanical superintendent, among other things, related some of the early hardships as follows:

During the early period of *Grit's* existence the general manager never slept at home Friday and Saturday nights. It was his usual custom about 1 or 2 o'clock Sunday mornings to get out his cot and place it between the stove and make-up stone in the composing-room (I don't mean composing-room, but that end of the room where the newspaper forms were made up, for then the Business, Editorial, Job and Composing departments were all in one room not any larger than this Assembly Hall) and there he would sleep until the pages went to press, when he was called to start out the carriers and ship papers. And then, too, he would await the return of the newsboys and settle up with them. For it was necessary for him to get all he could from the city sales for on the city sales depended the success of a pay day. But one thing must be said of Grit Publishing Company, that whatever money came into the till was first passed out to the employes, even if the proprietors were compelled to make a guess as to how they were to go to market.

* * * * * *

I have seen him in cheerful and troubled moods, but I never have seen him despondent. His hopefulness was ever a strong characteristic, his temperament even, and his moods were always contagious. When difficulties arose, he always had a remedy at hand or availaable, and the entire *Grit* Family, in those days when personal contact each with the other was a necessity at all times, became imbued with the same spirit of push and energy that was the principal factor in the building up of this phenomenal success

There is record of much more that is of interest, but enough has been given here to show any live newspaper man the path, and to point him on the way, to success.

It should be remembered that *Grit* is a weekly paper, started in 1888, as the Saturday evening weekly edition of the daily paper, in a conservative, interior Pennsylvania city with a population of less than thirty thousand. The paper now has a circulation of a quarter of a million copies each weeek.

Department Commander, E. D. Coe of the Wisconsin G. A. R., for forty years editor and chief owner of the Whitewater *Register,* member of the Executive Committee of the National Editorial Association in 1886, ten years pension agent of the Milwaukee pension district, president of the Wisconsin Editorial Association for several years, and a former chairman of the Republican state central committee, died at White, water, Wis.

THE NEW ENGRAVING

One who was familiar with the Engraving business of even so short a time as a decade ago, would be surprised at what varied changes have taken place in that time in some few of

the larger Engraving establishments. Formerly an artist was regarded as second rate if he were not able to draw anything from a portrait to a locomotive, but the modern demands for excellence worked for specialization and now an art de-

partment of an up-to-date engraving plant includes artists on Fashions, on Machinery, on Illustrations, on Posters, on Designs for Labels, Headings etc.

On Machinery this classification has been still further sub-divided, and we find specialists in Photo-retouching, Pen Drawings, Wash Drawings and, in a few of the highest class houses, Mechanical Artists who specialize on making pictures

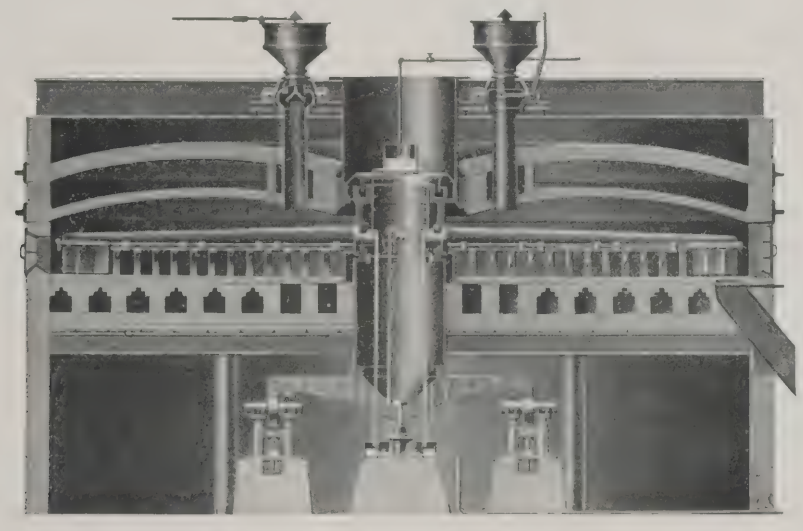
with photographic effect from the blue prints or shop drawing from which a machine is to be built.

The samples shown herewith illustrate what a diversity of work is executed by the well known firm of Gatchel & Manning, Philadelphia, who maintain a large force of "specialists" under salary, in their own plant.

Another distinctive feature of this enterprising firm's work is their operation of two new processes, one for the production of high grade "Three" and "Four Color Process" Work and the other a method of hand etching which guarantees exceptionally deep, clean printing plates. This latter is an especial boon to printers for two reasons; viz—

They require but little "cleaning up" while on the press and Electrotypes made from them are also sharp and clear. Messrs. Gatchel & Manning issue probably the greatest variety of educational advertising literature sent out by any Engraving house in the country and are glad to send any of it on request.

John M. Edson, for more than thirty-five years editor-in-chief of the A. N. Kellogg Newspaper Company, died suddenly at the home of a son, John. M. Edson, Jr., at Jacksonville, Fla. Mr. Edson, who was seventy-seven years of age, had received his training as a country editor, He joined the Kellogg staff in 1867, retaining his position with that firm until five years ago, when he retired. Since that time he had made his home with his son, W. F. Edson, at Morgan Park, Ill. He was born in Warren County, Pennsylvania, in 1832, and worked on a number of country papers in the east before going to Chicago in 1860.



ROCK HILL, S. C., April 10, 1909.

Mr. B. B. Herbert, National Printer-Journalist, Chicago, Ill.

DEAR SIR:—I am very fond of the N. P.-J., and read it eagerly. I am a union printer and read with interest your recent controversy. Though adhering strictly to union principles, I do not believe in friction between employer and employee, and think if more consideration was given to the employers' interest by many union men their pay envelope would be heavier and fewer strikes the result.

Again thanking you for past courtesies, I am,

SAMUEL G. WHITE.

PROGRAMME OF TWENTY-FOURTH ANNUAL CONVENTION, NATIONAL EDITORIAL ASSOASSOCIATION, SEATTLE, WASHINGTON, FINE ARTS HALL, ALASKA-YUKON EXPOSITION, WEEK OF JULY 19TH TO 25TH, 1909.

MONDAY, 19TH.

10 A. M. to 10:30 A. M. Band Concert by Administration Band.

10:30 A. M. to 12 A. M. Opening Business Session.
Invocation.
President's Annual Address.
Reports of Officers and Committees.
Announcements.

2 P. M. to 4 P. M. Addresses of Welcome by Hon. E. M. Hay, Governor of Washington, Hon. John F. Miller, Mayor of Seattle, Hon. J. E. Chilberg, President Alaska-Yukon Exposition.
Kenneth C. Beaton, President Seattle Press Club.
Responses by Hon. B. B. Herbert, *National Printer-Journalist,* Chicago, Hon. P. V. Collins, *Northwestern Agriculturist,* Minneapolis, Gov. A. B. White, Charleston, W. Va.

WILL H. MAYES, President

4 P. M. to 6 P. M. Automobile ride about the city.

8 P. M. to 11 P. M. Theatre entertainment.

TUESDAY, 20TH.

10 A. M. to 12 A. M. Business Session. Appointment of Committees.
Address—"Seeing Things in the West," Edith Tozier Weatherred, *Western Tours,* Seattle.
Address—"Individuality in Newspaper Work," Henry J. Allen, *Beacon,* Wichita, Kansas.
Address—"Telegraph Service for Small Dailies," Lon F. Chapin, *News,* Pasadena, Calif.
Address—"Gathering News on Country Dailies," G. W. Ridgway, *Express,* Kirksville, Mo.

1 P. M. to 6 P. M. Viewing the Exposition.

6 P. M. to 8 P. M. Dinner at Exposition Grounds.

8 P. M. to 11 P. M. Visiting Attractions on "Pay Streak."

WEDNESDAY, 21ST.

10 A. M. to 12 A. M. Business Session.
Address—"Editing the Small Country Weekly," Miss Caroline A. Huling, *Bookseller,* Chicago.
Address—"The Newspaper as a Factor in Town Promotion," Frank D. Throop, *Journal,* Muscatine Iowa.
Address—"University Training for Journalists," Prof. Merle Thorp, University of Washington, Seattle.
Address—"Relation of the Country Paper to the Metropolitan Daily," Leon Westmoreland, *Democrat,* Greenwood, Arkansas.
Address—"Journalists and Common Newspaper Men," T. A. McNeal, *Capital,* Topeka, Kansas.

2 P. M. to 6 P. M. Boat Ride to Navy Yard and Inspection.

8 P. M. to 11 P. M. Reception and Entertainment at Hotel Washington.

THURSDAY, 22ND.

10 A. M. to 12 A. M. Business Session.
Address—"Starting a Daily Paper in a Small Town," Miss Goldie Perry, *Sun Sentinel,* Winchester, Ky.
Address—"Handling Circulation of a Daily Paper," R. P. Habgood, *Star,* Bradford, Pa.
Address—"Handling Ciculation of a Weekly Paper," Edwin C. Funk, *Democrat,* Rogers, Ark.
Address—"Developing Advertising Business on a Small City Daily," Carl Roe, *Union-Statesman,* Walla Walla, Washington.

2 P. M. to 5 P. M. Closing Business Session.
Address—"Stopping the Leaks," H. G. Taylor, *Nonpareil,* Central City, Neb.
Address—"Foreign Advertising," W. L. Tobey, *Republican,* Hamilton, Ohio.
Address—"Profitable Side Lines for Newspaper People," Omar D. Gray, *Leader,* Sturgeon, Mo.
Address—"Profitable Recreation for Newspaper Workers," Will G. Steel, *Steel Points,* Portland, Oregon.
Election of Officers.
Reports of Committees.
Adjournment.

8 P. M. to 11 P. M. Seattle Press Club Smoker.

FRIDAY, 23RD.

9 A. M. Take Steamer for Tacoma.
Automobile ride about city.

Luncheon at Point Defiance Park.

Ride on Railroad Toward Paradise Valley to view glaciers, mountains, canyons, waterfalls and forests.

Dinner at Tacoma and return to Seattle in evening.

SATURDAY, 24TH.

9 A. M. Take Steamer for Victoria.

Automobile ride about this quaint English city.

Dinner and arrive Seattle about 10 P. M.

10 A. M. Parties for Alaska trip, take Steamer "Northwestern" of Alaska Steamship Co., for 18 or 20 days trip to Southeastern and Southwestern Alaska.

ON THE WAY TO THE CONVENTION

The plans for the trip to the Convention at Seattle have not been entirely perfected, but the following may be taken as substantially the program of the Itinerary and entertainments en route:

WEDNESDAY, JULY 14TH.

Rendezvous at Chicago, with headquarters at the Sherman House.

2 P. M. Auto and tallyho drive through city parks and boulevards.

6:30 P. M. Course Dinner at the White City.

8 to 9 P. M. Viewing the wonders and added, new attractions of this greatest of the World's Amusement Parks.

9:30 P. M. Return to Headquarters.

10:45 P. M. Take special train of Pullman cars over the Chicago, Burlington and Quincy R. R., at the Union Depot, corner Adams and Canal Sts., Chicago.

THURSDAY, JULY 15TH.

12:15 P. M. Arrive at Council Bluffs and Omaha for dinner and drive around the cities. Here the party is to be joined by delegations from Minnesota, South Dakota, Iowa, Kansas, Missouri and other Central and Southern States.

2:25 P. M. Leave Omaha.

4 P. M. Reach Lincoln, Neb. Pass three hours in viewing city, visiting the Home of Hon. Wm. J. Bryan, partaking of refreshments.

7 P. M. Start West.

FRIDAY, JULY 16TH.

5:35 A. M. (Central Time). Arrive at Alliance, Neb. Here the special sleeper carrying the delegates from Texas, Oklahoma, Arkansas, Colorado, leaving Denver at 7:15 P. M., Thursday, and reaching Alliance at 3:10 A. M., Friday, will be attached to the special train.

4:50 A. M. (Mountain Time). Leave Alliance.

7:15 P. M. Arrive at Billings. Here it is expected that the party will be joined by delegates from Montana, North Dakota, Northern Minnesota and Northern Wisconsin and other points, who have found it more convenient to go direct to Billings.

8:30 P. M. Leave Billings by the Northern Pacific R. R.

SATURDAY, JUNE 17TH.

5 P. M. Reach Spokane. Drive around the city. Entertainment. Banquet.

Spokane is one of the most interesting cities of the West, with a wonderful water power, many attractions and great growth, and will well repay a visit of seven hours.

12 P. M. Leave Spokane.

SUNDAY, JUNE 18TH.

8:30 A. M. Reach North Yakima. One hour and thirty minutes for viewing the wonderful water power, irrigated fruit and farm lands and many attractions.

A. NEVIN POMEROY, First Vice-President

10 A. M. Leave North Yakima.

5 P. M. Arrive at Seattle.

The Itinerary of the return trip and fuller particulars will be given in the July issue. It is now proposed to return by the Great Northern and the Chicago, Milwaukee & St. Paul Railway. This will give an entirely new route, through regions noted for beauty of scenery. Some of the delegates, however, contemplate taking in the Yellowstone, but we understand that the Secretary has so far only arranged for the outgoing trip.

REVIEW OF JOB PRINTING

BY E. S. HANSON,

Address all communications for this department to 925 Linden Ave., Wilmette, Ill.

THE DUMMY receives considerable attention from time to time at the hands of the trade, and is for the most part frowned upon as as an unnecessary and unjust expense. But it is possible that there are two sides to the question. Did you ever think of the matter this way: If you show a man nothing but figures, he will naturally decide the question solely on the basis of price, and give the work to the lowest bidder; if, however, you can show him a fairly realistic suggestion of what his job ought to look like when completed, one ought to be able to get away from the price basis to some extent, and get the question at least partially onto a quality plane.

In many lines of activity it is necessary to go to large expense to bid on work, extending many times into the thousands of dollars. The architect will often spend much time and money in preparing a set of drawings which he hopes may bring him a return. The dummy is simply a part of the sales expense. And it ought to more than pay for itself by exciting the interest of the custom and getting a better price than otherwise.

The subject of date lines on stationery is one which seems to need a little elucidation, judging from the wide variety of treatment in the samples which have reached me recently. The paper on which I am writing, for instance, says, "Scranton, Pa. ———— 190," a style which I prefer myself, and which seems to be given preference by the best usage. Literally, I suppose, it would be correct to print it, "Scranton, Pa., ———, 190," and occasionally I get something printed after this fashion; but it presents an unnecessarily broken appearance. One might almost as well scatter a promiscuous lot of punctuation marks over a sheet of ruled paper, and expect the writer to do his writing to fit them.

It seems necessary, also, to emphasize the fact that the line should more properly be a straight rule rather than dotted, and that it must by all means line up exactly with the type. This may mean the use of cardboards where the justification could otherwise be made with leads; but if we are not willing to go to a little trouble to have our work right, we had better get out of the business. The thought just occurs to me in this connection of a Chicago lawyer—and not an obscure one, by any means—who is so exact that he will walk several blocks merely to verify a punctuation mark in a court decision. But in law, a punctuation mark will sometimes make all the difference in the world. And so will the placing or misplacing of a line or a character in a printed job. "If a thing is worth doing at all."——etc.

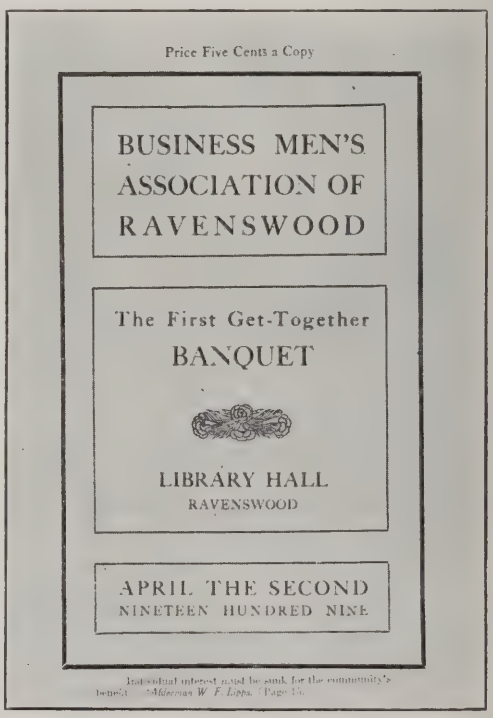
A document, gotten up in legal form, is sent out by *The News* of Mansfield, Ohio, to prove that it is the best paper covering its territory. It consists largely of fac-simile letters of commendation from people of the town, and serves, for the purposes of this department, to emphasize the advantage of zinc reproductions for testimonials over the same letters when type set. Printers should induce their customers to use the zincs on this class of work as often as possible.

Here is a little bit of wisdom from *Character*, that delightful little publication put out by the Griffith-Stillings people:

> If you buy a coat that doesn't suit you, you can sell it to the second-hand man or give it to the janitor. But if a job of printing doesn't suit you, it's no good to you or anybody else on earth. Pick your printer carefully.

Sometimes a booklet is issued primarily for the illustrations, such as the one just received from the Carson-Harper people of Denver, intended to show up the beauties of Pine Crest, a Rocky Mountain resort. In such a case as this the text is very appropriately thrown into a secondary place by being run in a "diluted" which is little more than tint. This permits of the full strength of the halftones being brought out.

This cover, by the Ravenswood Press, Chicago, is a good example of what can be done with a limited



number of fonts of a series. It would have been somewhat improved by making the upper panel smaller and the middle panel larger.

The Cleveland Trust Company has, in my opinion, sent out many better pieces of printing than the last one which has come to my notice. The pages are all after the same design as those here shown, making

BANKING STANDARDS

Directors Who Direct

IN recent years the public has learned to view the responsibility of directors in a new light. As a result, the expression, "Directors who Direct," has become a hackneyed phrase. Directors of the highest ability are of little use to a bank, if, through neglect of their duties, the bank is unable to reap the benefits of their talent.

NEARLY all the directors of The Cleveland Trust Company attend meetings twice each week, at which all matters of importance are brought to their attention.

BANKING STANDARDS

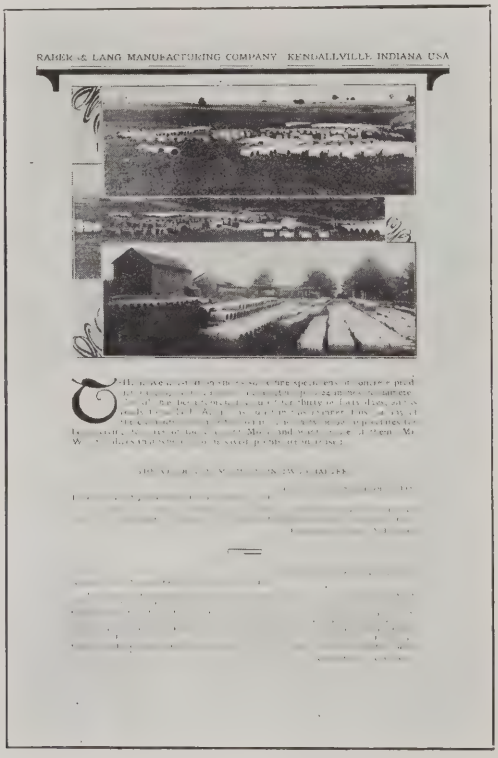
Conservatism

A conservative policy in managing the affairs of a bank adds to the security of its depositors. Likewise the eventual success of every bank from the stockholder's point of view depends upon acquiring public confidence and thus increasing business. In no way can these results be accomplished more certainly than through acquiring a reputation for conservatism.

THE conservatism of The Cleveland Trust Company is evidenced in every page of this booklet

paragraph in a larger size, to more nearly fill the page, and set the small paragraph at the bottom in italic, without the initial.

The Scott-Miller Company of Indianapolis, are designers and printers of the piece of advertising matter a page of which is herewith shown. The noticeable feature about it is the bracket at the top of each page, giving the suggestion of a border to the illus-



trations, and lending finish to the pages and giving them the uniformity and harmony which a job of this kind—necessarily much broken—often lacks. The illustrations are in black and the type matter in brown. The book is encased in a light-brown cover, embossed in a darker shade of the same color.

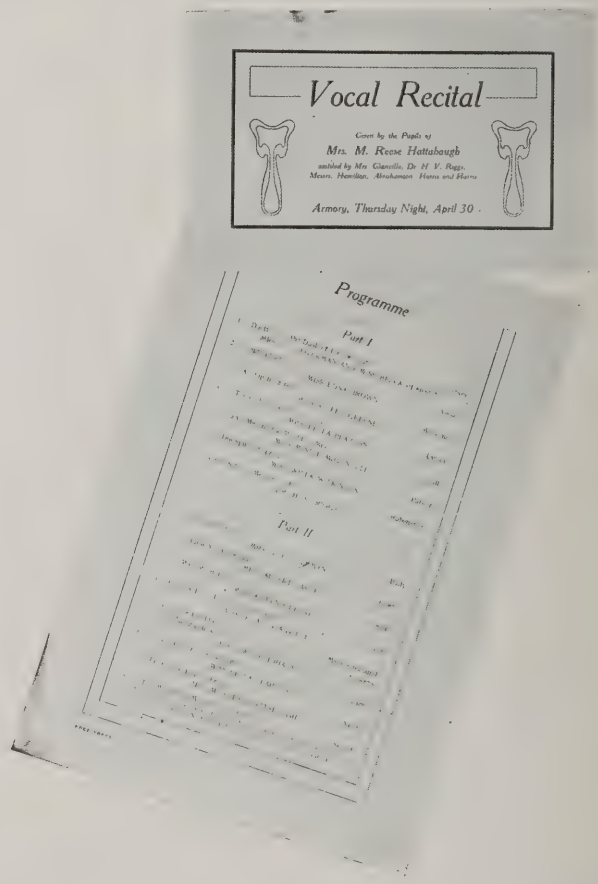
The New York *Sun* recently made editorial comment on a matter which will be of interest to readers of this department. It said:

It is a curious fact that many of the newest improvements have been invented by studying the ancient and almost forgotten processes of the past. More and more inventors are reaching backward for their suggestions. There is no doubt that we have almost reached the limit of machine-made art. Individuality is the hobgoblin of the modern printer just as it was the genius of the old-timers. There is no doubt, also, that the work turned out by the old-timers was sometimes much better than modern work. But this was because the old printers personally went over their output, a step which would be impossible in the printing shop of today, owing to the increased production.

For instance, the present three-color printing goes a long way toward representing the colors of the spectrum. But it is done by machinery and naturally is not equal to the hand-coloring of former days. And thus the commercial spirit has in some respects proved an evil to the printer, that is, to the artistic printer, although his trade is peculiarly dependent for its existence on that very commercial spirit.

Yet the results attained in an artistic sense today by means of machinery are simply wonderful. With an annual output that far surpasses any other nation, the printers of the United States enjoy a reputation for artistic excellence that is unequaled. Qualitatively as well as quantitatively they head the list.

A program which breaks away delightfully from conventionality is sent in by L. A. Wisener of Grangerville, Idaho. It has a short fold at the top, on the



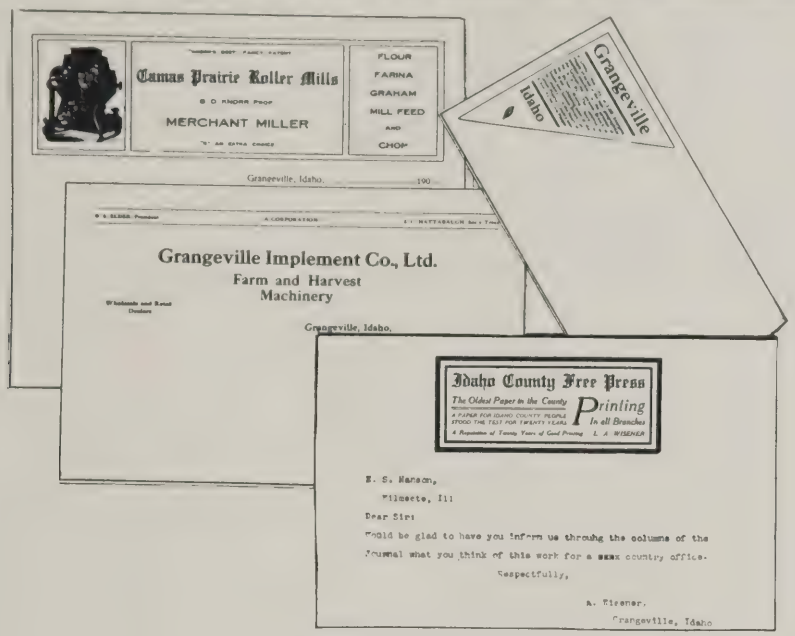
outside of which is printed the heading, with the program attractively set on the long fold. It is printed on heavy linen-finish stock of a slight maroon tint.

In sending in his samples, Wisener refers to them as the product of a "country" office. But if that statement was intended as an apology it certainly was not necessary. The worst thing I notice about them is a lower-case "w" for "m" in an Old English line. Typographically the letter head of the *Idaho County Free Press* on which Mr. Wisener writes, and of which he is proprietor, is a work of art. It is in four colors, and will not show all its fine points in reproduction. But I should like to see it give the name of the town and state. And just as I am about to lay it down I notice a fatal error in the Old English line again—the very

first letter in the line. I am writing this in the early morning hours, when most of the world is asleep; but my eyes are assuredly open wide enough to see that that is most certainly a "J." Great are the mysteries of a text letter, unless one takes a half-hour and settles down to a careful study of the font. And then he will never be perplexed again.

this department, after an absence from it of several years, and I most certainly hope he will do so.

I find the very same error in Old English in the next lot of specimens I examine, which are from W.W. Browning & Co., Ogden, Utah, and which are otherwise most excellent. The offending job is a card

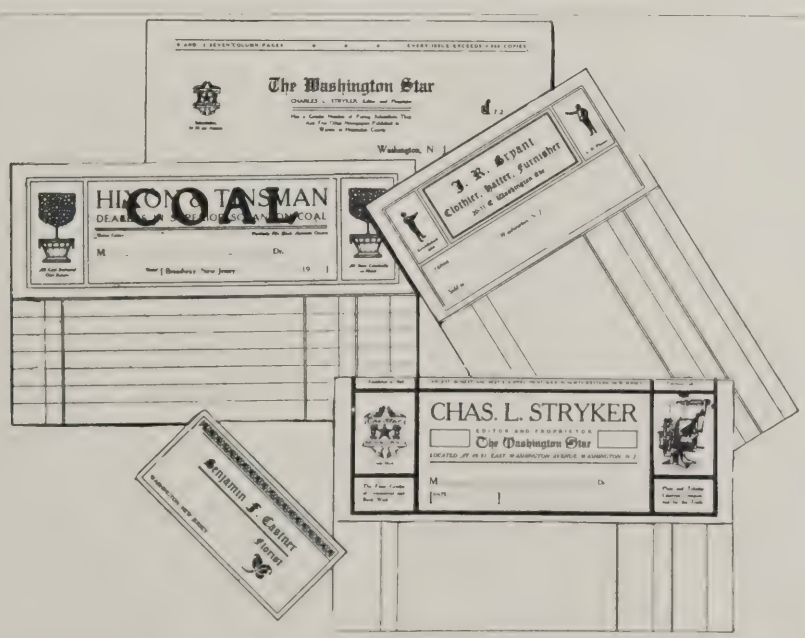


The letter head for the roller mill is spread out somewhat more than is conducive to good appearance. This was, of course, done in order to accommodate the cut; but it might better have been disposed of in a panel by itself, or in some other way which would not require the rest of the head to be balanced up against it.

for the "Herrick Ice Cream Co." The Falker & Child letter head is the poorest job in the lot; and I object to it, not on account of its plainness, but because the matter is concentrated too much in the center. I am showing several of your jobs, which I consider practically faultless, with the exception of the wrong font letter in the head for the Utah Construction Company.

Herbert R. Smith, Washington, N. Y., shows a fondness for the darker shades of stock, but he handles them well for the most part. He is with the *Washington Star*, which claims to have the largest, busiest and best equipped print-shop in northwestern New Jersey, and this work looks as though that claim ought to hold good. Mr. Smith promises to contribute frequently to

There are few printers who will take as much pains with a poultry circular as is shown on one which recently came from S. H. White of Rock Hill, S. C. It is a delightful little creation and would surely tend to induce me to go into the poultry business, were I not in it already. A bunch of other good stuff along with it, too.



THIS YEAR AT THE MISSOURI UNIVERSITY SCHOOL OF JOURNALISM

(An Address delivered before the Missouri Press Association at Fulton, Mo., May 14, 1909, by Walter Williams, Dean of the School of Journalism of the University of Missouri.)

THE School of Journalism of the University of Missouri is a child of the Missouri Press Association. It is my privilege to give to the Association today the story of the child's first year—to render an account of my stewardship.

Thirteen years ago the Missouri Press Association upon motion of W. O. L. Jewett, then and now editor of the Shelbina *Democrat,* urged the teaching of journalism in the State University. At the same meeting, Henry W. Ewing, then Editor of the Jefferson City *Tribune,* now numbered among our lamented dead, referred to his establishment of the *University Missourian* with Eugene Field and himself as chief editors, which paper he said had not a little to do with his career afterwards. Before and since 1896, the year of Mr. Jewett's resolution, the Missouri Press Association favorably considered training for journalism. At its last annual meeting in Excelsior Springs the Association adopted without dissent the report of a committee consisting of William Southern, Jr., of the Jackson *Examiner,* J. R. Lowell, of the Moberly *Democrat,* and C. M. Harrison, of the Gallatin *North Missourian,* which said:

It is with special pleasure the Missouri Press Association knows that the curators of the Missouri State University have voted to establish at the University a School of Journalism. This Association has endeavored ever since its organization to be an educating influence among the newspaper men of the State of Missouri and we look forward to the establishing of this School of Journalism as a continuation and elaboration of our own work. We, therefore, express our indorsement of this action of the board of curators of our State University and pledge our support and encouragement of the work to be undertaken and to the new dean of the school."

With such parentage, indorsement and pledge of support, the School of Journalism began.

THE ENROLLMENT.

The first year's enrollment of students has far surpassed the expectations of even the most sanguine friends of the school. There was general demand for the training that such a school could give. It was expected that in its first year twenty or thirty students would be enrolled, as had been true in the first years of the teaching of law and medicine. Instead, there have been enrolled this year in the University School of Journalism ninety-seven students. Of this number seventy-four are primarily in journalism, candidates for the degree of Bachelor of Science in Journalism in a four-years' course. The others—twenty-three in number—are students from other departments of the University taking one or more courses in Journalism. Fourteen of the total number are women.

The faculty of the school is composed of instructors from the College of Arts and Science of the University, with three others added. Of the three, one is a graduate of the University of Nebraska and the Kansas City *Star,* another of the University of Missouri and the St. Louis *Republic,* and the third of a Missouri high school and a country newspaper office.

How are the students trained? Courses are given in the History and Principles of Journalism, the Ethics of Journalism, in Newspaper Administration, in News Gathering, in Reporting, in Editorial Writing, in Correspondence, in Newspaper Jurisprudence—the Law of Libel—in Illustrative Art, in Comparative Journalism, in Newspaper Making—which includes all branches of newspaper work. Courses are given in history, English, sociology, economics, political science, government, psychology. While all knowledge is helpful to the journalist, that which best trains for the most effective leadership in his profession is emphasized.

THE UNIVERSITY MISSOURIAN.

The distinctive feature of the Missouri University School of Journalism is the *University Missourian,* which affords a laboratory course in actual newspaper making. Upon this small, but well-balanced afternoon daily newspaper all the work, other than mechanical, is done by the students of the school, under the direction of the faculty. This is applying to training for journalism modern methods of education. As the hospital gives bedside instruction in training physicians, the practice court in trainng lawyers, and the practice school in training teachers, so this newspaper is used for the training of makers of newspapers. That it is not a model newspaper is manifest. It is entirely the work of freshmen journalists, of cub reporters. If they could in their first year make a model newspaper, the school would have succeeded even beyond the most sanguine hopes.

The course in journalism covers four years. It leads to one undergraduate degree, Bachelor of Science in Journalism. It is not supposed that the awarding of this degree makes a journalist any more than the conferring of a diploma makes a lawyer or a doctor or an engineer. It is expected, however, that the man or woman who pursues faithfully the courses of instruction given at the University of Missouri will at the end of four years be better equipped for high service than the one who has not had such training. How far success has been attained in the first year's teaching is difficult to determine. The result of the teacher's work is not determinable by weight or measure. Certain it is, however, that the students in the School even with only a few months' training are the better prepared to be members of the great teaching profession of journalism than they were when they entered the school. The students may themselves give testimony to any who may ask. The metropolitan press, as well as the county press, has recognized this fact by the tryouts given the more experienced students and by the calls which have come for them.

PLAN COPIED BY OTHER SCHOOLS.

It is no longer a question whether journalism may be taught or, if you please, whether there may be training for journalism. It is simply a question whether the University of Missouri has adopted the best method. It has been the pioneer among American state universities in this regard. Its example has been thought worthy of imitation. A half-dozen great state universities have followed its lead and others are preparing to do so. Two universities in Great Britain have adopted similar plans of organization and from far off but progressive New Zealand comes the suggestion of a similar school there.

The difficulties in the way of the school's success were not unforeseen. It was to occupy a new field. It was to meet doubt and distrust from some, misapprehension from others and destructive criticism from a few. The organizer of the school must expect personal opposition from those who prefer complaint to achievement. Most of the criticism has been constructive and kindly. For it all, much thanks!

He who was chosen from your own membership to lead in this new public service, through no self-seeking of his own, has not felt called upon to make, to any, critical reply. His time has been fully occupied in laboring for the school's success. Some criticisms have been upon the expenses of the school and of the *University Missourian.* This expense has

been less than one-third the amount which the critics have seized upon for condemnation. No school or department in any American university of first rank is maintained at as small a cost per student as the School of Journalism of the University of Missouri. No just criticism lies here.

CONCERNING A MISAPPREHENSION.

The necessities of the first year compelled the adoption of a plan which was unfortunately seized upon as the State competing with private enterprises. While it was proper for the State in training for dairymen to sell butter, and in training for physicians to sell hospital space, and in training for farmers to sell cattle and corn and wheat, it was not regarded as proper for the State in training for journalism to permit the business men of Columbia to pay for the support of such public enterprise. The competition was not large, if it really was competition, the total receipts of the *University Missourian* from local paid advertising being scarcely more than $1,500. But it was sufficient to be used to create feeling against the school, based mostly upon misapprehension. Any other course than that pursued in the first year would have been impossible. It was, therefore, from the standpoint of public economy and the highest good of the commonwealth, entirely defensible. I am glad to be able to say, however, that criticism based only upon this ground, will hereafter have no basis in fact. The *University Missourian,* however, will continue, and be more valuable to the University than before.

I was to speak of the first year of this child of the Association. It has had the troubles of childhood, painful but not permanent. I may not assay the role of prophet for the child's future. It will, I am persuaded, grow and increase in usefulness. Next year the courses in the school will be developed and strengthened, the student enrollment will be larger, its work will be better understood.

SCHOOLS HERE TO STAY.

Schools of Journalism—to employ the old phrases of the newspaper office—"fill a long-felt want" and are "here to stay." They are coming to be generally accepted as a specialized form of higher education. Natural aptitude makes for success in any calling, but training must accompany natural aptitude to bring about the highest success. The journalist is born and made. To the natural bent toward journalism must be added education, training. The only position in this age which can be successfully filled by the simple accident of birth is that of idiot. Self-education, the hardest and most difficult, fits some for their life work, while the education of the schools trains others. Shakespeare—the myriad-minded—wrote Hamlet, his greatest play, after he had written eighteen others. If the mere accident of birth makes great, why did he not write Hamlet first?

The schools of journalism will, I trust, prevent newspaper offices from being, as some unfortunately are, hospitals where the untrained novice practices with the weapons of the press upon the body politic. They will raise the standard of journalism, make it indeed a learned profession, as schools of law, and schools of medicine, and schools of theology have done for these professions.

WHAT THEY WILL TEACH.

They will confine commercialism to the business office, its proper place. Every editor can not be the proprietor of his newspaper, but every editor can be the proprietor of himself. They will teach English. The journalist must plan to write as the painter must learn to draw. He will learn to select his words with loving care as the painter learns to pick his colors. Accuracy, clearness, terseness and forcefulness will sum up his English style. The schools will teach law, not merely the libel law, teaching how the newspaper publisher may escape punishment for misdeeds, real or fancied—but the principles of law fundamental in society. They will teach ethics, which after all constitute the very heart of the matter, above news and business, type and press work. In the last analysis, the ethics of journalism—undefined as journalistic ethics may yet be—determine the character of journalism by determining the character of journalists. The schools will teach literature, give breadth of vision, the use of reference books, history—which is the background today—the fledgeling science of sociology—the relations of man with man—economics, languages and, for exactness, science. Newspapers will be studied. The master general of modern times learned the art of war in the College of Brienne and by the study of the greatest battles and battlefields. The production of each issue of a newspaper is in itself a battle. Great newspapers will be studied—newspapers great and small—the conditions of their production. The principles of journalism will be taught. As the successful teacher must know the principles of education, so must be studied the principles of journalism. The values of news will be emphasized—the gathering, handling, presentation of news, with comment thereupon, which is the framework of the newspaper and into which the journalist, who is creator of the journal, breathes the breath of life.

And why the schools of journalism? That young men and young women may be better prepared for their vocation in life. Certainly this is reason sufficient. If the State is to train teachers and farmers and engineers and physicians and lawyers, should it not train journalists, who teach through the public press teachers and lawyers and farmers and engineers and physicians? A second reason exists and a greater one for the maintenance by the State of schools of journalism. They systematize the work and raise the standard of the profession of journalism—the profession which touches humanity at all points and every way. The State by education and legislation aims to raise the standard of the medical profession in order to protect the lives, health and well being of its citizens, and the standards of the legal profession in order to protect the property rights of its citizens. How much more in the new civilization is it necessary for the state to assist in raising the standard of the journalistic profession which promotes and protects the morals of its citizens—morals which are more important than health or property rights or life itself.

A LINCOLN STORY.

In the dark days of the Civil War a deputation of New York business men and politicans called upon Abraham Lincoln, the great President of the United States, at the White House in Washington. "We do not like your conduct of the war," said they. "You have stopped our trade with Southern ports by your blockade; you have made appointments in New York we do not like. We doubt your success and distrust your methods, though we wish you well."

Mr. Lincoln with the patience characteristic of the man, heard the long speeches of the visitors, and made reply:

"You know Blondin, the gymnast? Suppose Blondin had in a basket a treasure of great value to you and to your country, carrying it accross Niagara's flood, walking a rope for narowest roadway. Should it reach the other shore it would mean much to you and to the republic. Would you, when you saw him started upon his journey, jostle the guyropes, throw rocks at him, shout doubts at his success, or cry out 'Blondin, don't do it that way.' Would you not rather seek to strengthen the ropes, to give cheer and encouragement, hoping that he would cary across to safety the burden of value to the republic?"

And thus I come back to the point of beginning—my thanks and appreciation. I am profoundly grateful that in the discussion of this new movement in education—a movement which I confidently believe is to be of large usefulness to our profession and through our profession, to the State at large—

the man who was selected to lead the movement should have received at your hands such kindness of treatment, such generous courtesy.

Though we may differ as to methods, we may all, interested in the profession of journalism—the noblest and most potential profession known to our present civilization—and interested in the welfare of our great commonwealth, seek to promote the interests of this profession and the welfare of this commonwealth in every honest, legitimate way and to give to every man, who thus seeks the highest interests of the profession and the largest welfare of the commonwealth, aid and comfort.

FOR SERVICE OF THE STATE.

Yet a third and greater reason for the State's maintenance of schools of journalism exists. They are, in the last analysis, for the service of the State. Above all other professions, journalism is the profession of public service. The newspaper is the textbook of the masses, the university of the common people. The masses are to determine whether tomorrow the government of the constitution, the equality of citizens before the law, the purity of the administration of justice, the equal chance, is to be preserved, not giving way in this republic before the tyranny of millions or the tyranny of the mob. Upon the training of the masses depends the future of the State. Here must the journalist do his largest public service. Here is the chief argument, the unanswerable reason for provision by the State for schools that shall train for the highest, most helpful journalism.

Is it visionary thus to speak? I recall that when lawyers had their first lessons in the law copying bills of cost, and physicians their first lessons in medicine sweeping out doctors offices, that schools of law and schools of medicine were regarded visionary. Thirty years ago to have said that news would be flashed from Yokohama to St. Louis by lightning and printed before it happened, that in the daily newspapers side by side would be dispatches of the same date from St. Petersburg, Tokio, Korea and Karnak, that one's friends could be heard through a copper wire from Portland, Oregon, to Portland, Maine, that newspapers on ships in the Atlantic Ocean would publish news brought on invisible waves a thousand miles from land, that 25,000 American newspapers would send out annually 1,500,000,000 copies, a veritable flood, such statements would have been thought too incredulous for belief. Is it visionary to assert that the people will seek to train for the service of the people the handlers of this great news force, the directors of the omnipresent press—next to omnipotence itself—the most potent agency for good—or ill—in all the universe today?

The *Republican* of Auburn, California, was recently sold by C. M. Palmer, Newspaper Broker, 277 Broadway, New York, to Mr. A. E. Welsh of Chippewa Falls, Wis.

We are under obligations to the Chicago, Burlington & Quincy R. R., to the genltemanly Passenger Traffic Manager, Geo. S. Eustis and his able assistants, in the advertising department, for the excellent halftones illustrating some of the attractive buildings and statuary of the Alaska-Yukon-Pacific Exposition and of points of interest, used in this issue of the NATIONAL PRINTER-JOURNALIST.

South Bend, Ind., newspapers are assisting in advertising a home-coming week which South Bend will have from Oct. 3rd to 9th inclusive, and the prospective event has already attained wide publicity. During that week Indiana's great manufacturing center hopes to entertain all one-time residents of South Bend and St. Joseph County.

N. E. A. EXCURSION TO ALASKA

When the 24th annual convention of the National Editorial Association shall have been but a little more than a pleasant memory, some fortunate attendants will never tire of telling and reiterating the picturesque and thrilling experiences of their Alaskan excursion. The Seattle Press Club has succeeded in inducing the Alaska Steamship Company to put forth every available privilege and comfort for the convenience and pleasure of the Editors and their ladies.

The commodious and luxuriously appointed and electric-lighted passenger steamer, the "Northwestern," 336 feet

Omaha Depot

in length, will be the home of those members of the editorial party who decide to take the Northern excursion. She will steam away from Seattle at ten o'clock on Saturday morning, July 24th, immediately after the adjournment of the annual convention.

About twenty days will be occupied in covering a magnificent tour of Southeastern and Southwestern Alaska, and will inaugurate a new excursion route. A member of our Association who has made this trip several times, states that he has every confidence that all members of the convention

European Building, Alaska-Yukon-Pacific Exposition

who avail themselves of the privileges of this splendid excursion will afterwards declare that it was the most enjoyable and instructive trip they had ever taken.

The route from Seattle along the coast of British Columbia and Alaska amongst the thousands of islands that lie along the coast north of the Strait of Fuca, is through Active Pass into the Gulf of Georgia and thence northward for nearly 500 miles through British Columbia waters and across the International Boundary in the Dixon Entrance and along Re-

villagigedo Channel and Tongass Narrows to Ketchikan, subport of entry, and the first port in Alaska, 662 miles north of Seattle.

At Ketchikan commercial Alaska begins—mines, forests and fisheries, churches and societies, courts, newspapers and stores. It is like a thriving city of the Western United States. But the totem-poles, shore line, wooded hillsides and

Oriental Building, Alaska-Yukon-Pacific Exposition

beautiful Salmon River belong to Alaska alone and the tourist will find unique interest for every moment of the stay in port.

After the stop in Ketchikan, the vessel returns southward for a few miles along Tongass Narrows and Nichols Passage to Metlakahtla, the most progressive Indian town in the world, located on the west shore of Annette Island. Here a warm greeting is given by "Father" Duncan, who will conduct the party through an interesting inspection of training school, stores, sawmill, cannery and library, industries owned and operated exclusively by Indians, and in the great church listen to a few words by Mr. Duncan, whose devotion has made this community of a thousand Christian souls from what was formerly a savage horde.

From Metlakahtla the trip continues northward to Juneau, 900 miles north of Seattle. Before reaching there a view is had of the pictureque Taku and Windom Glaciers, situated closely together in Taku Inlet. The bold vertical

Looking towards Lake Union, Alaska-Yukon-Pacific Exposition

frontage of Yaku Glacier is over 200 feet high and a mile wide. The ice is of a beautiful intense blue glacier that no other glacier possesses. The front reaches into fifty fathoms of water and is continually discharging bergs with thunder-like roar.

Juneau, like other cities on the Southeastern coast, has enjoyed a steady growth for years past, and is the principal business center of that section of the district. Juneau has daily newspapers, banks, an opera house, electric lights, modern hotel buildings and merchandise stores where large stocks are carried. Juneau has a population of about 2,500 people, and is one of the oldest cities in Alaska. It is a mail distributing center for points to the westward, and small steamers run from there to Sitka and Skagway and points on Lynn Canal. There are extensive mining operations in the vicinity, and the quartz properties are rich. Juneau is also the capital of the Territory, where are located the Court House and other Federal buildings.

Just across from Juneau is Douglas Island, upon which is located the largest quartz mills in the world. Here at Treadwell, the Editors will see nearly 1,000 stamps in operation, pounding out gold. No trip to southeastern Alaska is complete without a visit to this very interesting mine. A glance down into the "glory hole," an enormous pit in the mountain, and the mine workers will be seen scattered along

Spirit of the North, Alaska-Yukon-Pacific Exposition

the precipitous sides putting in shots for the great blasts that go off with a report like the loudest peals of thunder.

Thus far the "Northwestern"has sailed through what is termed the "inside passage". It will prove to be one continuous and ever-changing panorama of pine clad hills, towering snow capped mountains, countless islands, wonderful glaciers, fjords, and beautiful cascades leaping into the sea. The scene is enlivened by numerous whales playing here and there, and schools of sportive porpoises racing with the ship and crossing her bow, now to the starboard and then again to the port.

But after leaving Treadwell the steamer will turn off to the westward, passing out through Icy Strait and Cross Sound into the open ocean. It is about thirty hours run across to Cape Hinchinbrook. The ocean trip will be a novelty and a great attraction to many of the party, and the scenery to the westward is worth crossing a sea to see. The coast line to the north, while the ship is crossing from Cross Sound to Prince William Sound, is composed of a most magnificent, rugged chain of mountains, including Mt. St. Elias and Mount Wrangle (the latter a smoking volcano), inlaid with numberless glaciers, including the great Malaspina Glacier, one of the largest, if not the largest in the world.

An idea of the grandeur of the scenery of Prince William Sound can be gained by this comparison. The "inside pas-

sage" to southeastern Alaska is along and through the edge of a mountain chain. Prince William Sound and its various and numerous channels and bays cut right into the heart of a range of high mountains.

The first big town reached will be Cordova, the sea terminus of the Copper River and Northwestern Railway, which

Spirit of Pacific Fountain, Alaska-Yukon-Pacific Exposition

is being built by way of the valley of the Copper river to the Yukon and tapping enroute the valleys of the Tanana and White rivers, with branches, to the coal and oil fields at Kayak and the extensive copper mines of the Chitina. This is one of the newest, but most progressive of growing and modern Alaskan towns.

When the "Northwestern" enters the port of Cordova the editorial excursion party will be greeted by M. J. Heney, the famous rapid railroad builder, and other officials. A special

Sitka, in the land of the Midnight Sun

train will be in waiting to give the party the thrilling experience of a ride 56 miles long over an interior Alaska railroad, that is being constructed at a cost of many millions of dollars, and is to be extended an additional 150 miles this year. The railroad passes directly in front of two immense glaciers, the Miles and Childs Glaciers, and through Abercrombie Canyon.

Valdez, the next port, is a well settled town, built at the very foot of an immense glacier. Stages operate from here during the winter season to Fairbanks. It is a supply source and starting point for miners and operators who are developing the great copper deposits over the mountain range.

Latouche and Ellamar are small mining towns where short stops will be made.

The next port is Seward, a railroad terminus. From this point the Alaska Central railroad is building northward to the Tanana river, fifty miles of road now being in operation.

A short run to the westward from Seward and the "Northwestern" party is landed at Port Graham on Cook Inlet, the transfer point between ocean steamers operating from Seattle and smaller steamers operating on Cook Inlet. A start is then made on the return trip, with stops at most of the points previously visited.

EXCURSION ITINERARY.

Leave Seattle 10 A. M. July 24th.
Call at Metlakahtla July 26th.
Call at Ketchikan July 26th.
Call at Taku Glacier July 27th.
Call at Juneau July 27th.
Call at Treadwell July 27th.
Call at Cordova July 29th.
Trip over new Copper River Railway out of Cordova July 29th.
Call at Valdez July 30th.
Call at Latouche July 30th.
Call at Seward July 31st.
Call at Port Graham July 31st.
Call at Columbia Glacier August 1st.
Return to Seattle with stops at Seward, Latouche, Valdez, Ellamar and Cordova, reaching Seattle about August 12th.

NOTES.

Regular fare for above trip to Alaska $110. N. E. A. delegates pay for each ticket $60 cash and give $50 in descriptive writeup of the trip. This rate includes transportation, meals, berth, excursion on Alaska railroad and all necessary expenses.

Headquarters in Seattle—Washington Hotel.

Business Sessions—Assembly Hall, Chamber of Commerce, Central Building.

Addresses of Welcome—Hon. E. M. Hay, Governor of Washington.

Hon. John F. Miller, Mayor of Seattle.

J. E. Chilberg, President A. Y. P. Exposition.

Kenneth C. Beaton, President Seattle Press Club.

Entertainment at Tacoma by Tacoma A. Y. P. Exposition Committee.

Entertainment at Victoria by Vancouver Island Development League.

Entertainment at Exposition by Department of Exploitation A. Y. P. E.

Arrangements at Seattle under direction of Seattle Press Club.

AMONG THE ASSOCIATIONS

"IN UNITY IS STRENGTH"

THE Illinois Daily Newspaper Association which held its convention at Springfield, Ill., on May 18th and 19th, made a radical advance in the adoption of a set of resolutions to appear as an appendix to their constitution and by-laws. It is the first action of this kind by any association of newspaper publishers. The resolutions adopted, are only the beginning of a regular code to provide for more uniformity of action on many mooted questions in the newspaper business.

These resolutions demand absolute adherence to rates with no secret rebates, concessions, free space, or gratuities of any kind. An extra charge for special position under any and all circumstances. The elimination of objectionable phrases in medical advertisements. Designate railroad time tables as advertising matter to be paid for and not free space. Declare against personal attacks in their advertisements of one advertiser upon the name or business of any other advertiser or other person. Disapprove the practice of any newspaper publishing the name of its competitors in comparison of the number of inches of advertising carried, or in any other manner discourteous to its competitors. Declare that advertisers are entitled to a full knowledge regarding the circulation of any and all newspapers, how and when they are distributed, etc. Demand that in the examination of circulation by any association, or for any other purpose that the examination shall be made by at least two persons, one representing the examiners and the other the newspaper with provision for arbitration in case of dispute. Declare against the so-called return privilege of unsold copies. Demand the elimination of the press or publicity agent and they cover a number of good ideas all in the right direction.

The officers are H. M. Pindell, *Peoria Journal*, President. Verne R. Joy, *Centralia Sentinel*, Secretary.

* * *

The Oklahoma Press Association held a very successful convention at Claremore, on May 14th and 15th. The Altus *Times* says:

The meeting was called to order by President P. P. Duffy of El Reno, Friday morning, in the auditorium of the athletic building, a splendid structure which would do credit to many a larger town than Claremore. His opening remarks were responded to by Mayor Mood in a cordial address of welcome, John Golobie of Guthrie speaking in behalf of the Association. T. L. Brown, district judge, also welcomed the visitors in a splendid speech, and President Duffy then delivered his annual address. Adjorunment was taken until after dinner.

Harry Gilstrap being absent, the time he was to have put in on "A Year's Experience of Joint Statehood," was given over to the editor of the *Altus Times*, who discussed the unfair and exorbitant freight rates from Wisconsin mill points to Oklahoma, and also existing locally within the state on printers' material. Sidney Suggs, of Ardmore, discussed the two main essentials in the making of a newspaper—"Brains and Money"—in an address which kept the entire audience in a roar of laughter. "Government Stamped Envelopes" was the theme of U. S. Russell of Shawnee.

At night an elaborate ball, banquet and reception were tendered the visiting newspaper men by the hospitable people of Claremore at the Athletic building, which had been transformed into a veritable bower of beauty by the deft fingers of the ladies.

It is impossible to give the second day's program in detail, but much that was profitable and interesting to the members was gone through as outlined. As most of the editors had to leave at 12:45 for home, much of the program and a large part of Claremore's entertainment had to be cut short. This included the fish fry by Geo. Wible at a lake eight miles south of town, which everyone regretted much to miss. The election of officers for next year resulted as follows:

U. S. Russell, Shawnee, president; J. P. Renfrew, Alva, first vice president; Mrs. A. L. Cates, Claremore, second vice president; Horace W. Shepard, Altus, third vice president; Edgar Bronson, Thomas, secretary-treasurer; Sidney Suggs, Ardmore, national committeeman.

Resolutions adopted demanded that the government cease its unfair competition with the country printers by furnishing stamped envelopes at less than the cost to the printer of an unprinted envelope of equal grade; and called upon our representatives in congress to support measures now pending for the abolishment of this evil. Equalized freight rates were demanded of the Oklahoma corporation commission. The people of Claremore, officers of the association were thanked, and the historical society endorsed.

* * *

Spokane, May 8, 1909.—Sixty-four representative newspaper men of eastern Washington, British Columbia, Idaho, Oregon and western Montana met here today and formed the "Inland Empire Press association," electing the following officers:

Eugene Lorton, Walla Walla, president; Arthur Hooker, Spokane, secretary, and C. A. Froesman, Lewiston, treasurer. The organization is formed to boost for the sections they represent.

* * *

PORTLAND, ORE., JOURNAL, MAY 16, 1909.

The annual meeting of the Women's Press Club was held yesterday afternoon at the residence of Mrs. R. A. Marshall, of 658 Multnomah street, at which members only were in attendance. Reports for the past year were read and officers elected for one year. The following officers were chosen, the former officials declining to serve another term, believing in the club principal of rotation in office: President, Mrs. M. L. T. Hidden; vice-president, Mrs. Lucia Faxon Addison; corresponding secretary, Mrs. Julia LaBarre; recording secretary, Mrs. John E. Aitchison; treasurer, Miss L. G. Richards. County vice-presidents to represent their sections in the state organization were selected as follows: Multnomah, Mrs. Emma Sekle Marshall; Clackamas, Mrs. Eva Emory Dye; Lane, Mrs. Lichen M. Miller; Clatsop, Dr. Owens Adair; Jackson, Mrs. M. G. Worrell.

* * *

THE MISSOURI PRESS.

The Missouri Press Association had a successful convention at Fulton, May 12th, 13th and 14th. The opening session was held Wednesday evening and a hearty welcome was extended by the Mayor, to which President Childer fittingly re-

sponded. Hon. Ewing Herbert of the Brown County *World* of Hiawatha, Kansas, furnished the literary part of the program in an eloquent speech worthy the occasion.

DOING JOB PRINTING.

A number of instructive papers were presented, discussions had and questions answered, Thursday and Friday. Among the rest there was an able paper by Dean Walter Williams of the School of Newspaper Making of the University of Missouri. It was in the form of a report of the first years' work by the school. He made a very satisfactory showing. This paper is published in full elsewhere in this issue.

Mr. R. E. Douglas of the Charlestown *Enterprise,* treated, in a practical and helpful manner, that important branch of business to almost all newspaper establishments in cities of a population of five thousand to two hundred thousand, where the two branches of business are nearly always combined, that of "Doing Job Printing." Mr. Douglas said that he had found that "nothing makes a printing office show up better than to have everything neat and tidy—a place for everything and every thing in its place." Among the other necessities to success, next to orderliness, he placed "saving of time; keeping in stock a good grade of paper, plenty of type, sufficiently large fonts, if fewer of them, an abundance of furniture and reglets, rules, leads and slugs, cut to measure demanded, good paper and good ink etc." He said:

All you need to successfully compete is a good grade of paper, enough furniture, leads and slugs to do your work, and of course you need type, but not a foundry, and then a printer and pressman who know how to keep things in order and who also know how to turn out neat work on time. The neatness of a job depends more upon the pressman than the compositor.

Philip Ganz of the Macon, Mo., *Republican,* read a paper on the "Selling of Ad Space." He said among other things:

The most potent factor in soliciting and securing and retaining a good advertising patronage is the publishing of the best newspaper you can get out each week. The better the news part of the paper, the greater will be the demand for space in its columns for advertising. So I say, make it your chief aim to get out the best possible newspaper in your field. Don't make the largest possible revenue from your advertising columns your main object. First of all get all the news and make all else secondary to making your paper as valuable as possible to your subscribers The more you succeed here the more anxious the advertiser will become to have space in your paper.

Proper attention to make-up, neat and attractive display and generally clean and clear print all count.

NO FRONT PAGE ADS.

Avoid creating the impression that you are publishing a paper in order to sell advertising space. In fact and in all appearances let it be clear that you are getting out the paper in the interest of your subscribers. Let the advertiser understand that the news features and the interests of your readers are paramount. Without being cranky. don't let the advertiser dictate. For instance, it is a good thing to reserve your front page for reading matter and refuse to run any advertising on this page. Live up to it and it will make your paper more attractive and the advertiser more anxious to have a space in its columns. And having a good newspaper and a valuable advertising medium, do not cheapen it by accepting advertising at a rate that does not leave you a reasonable profit above cost of space printed. Don't cheapen your paper by the unwise generosity of publishing for nothing what ought to appear only as paid-for advertising. Every line of type that goes into your paper ought to be in one of two classes. Either the matter should find space upon its merits for its news or literary value, and if not in this class, it ought not to be published except as paid-for matter.

CHARACTER OF ADVERTISING.

Another "don't," and one of importance: Be particular as to the character of the advertising that you accept. Don't take everything offered, even if sure of cash payment. The best class of advtrtisers and the ones you most want are very apt to be impressed unfavorably with your paper if a few questionable or objectionable advertisements have gotten into its columns.

Mr. Ganz advocated a simple scale of advertising rates and gave the following as one that he had used successfully, on space to be used within twelve months:

First	50 inches	at 20	cents
Next	50 inches	at 18	cents
Next	100 inches	at 16	cents
Next	200 inches	at 14	cents
Next	600 inches	at 12½	cents

Mr. Ganz wisely argued in favor of being on friendly terms and co-operating with competitors for mutual good, and that of the community, city and county.

STUDENTS OF SCHOOL OF JOURNALISM PRESENT.

One of the interesting features of the convention was the presence of thirty students of the Missouri University School of Journalism, headed by Dean Williams. These students had an opportunity of finding out how much there is to be learned in the calling of newspaper making by listening to the papers, and discussions, the questions and answers by men who had been in the calling from ten to forty years and were earnestly endeavoring to master the details of the business and to teach one another the way, and how to solve difficulties that constantly arise. These students will have the advantage over those who have had to learn the whole in the very difficult and costly school of experience. They will enter the business with the rich knowledge and experience of the men who teach from both long study and experience that have brought success. Their presence brightened up the sessions and awakened a new interest in the ranks of the veterans on the program.

The work at the school for the past year had given the students such an earnestness, such a desire to know, as to make them most pleasing auditors. Their work on the paper, the *University Missourian,* published for their department as a sort of laboratory of newspaper-making, has also shown that they possess the proper ability and zeal in the work The success has been such that the paper is to be taken over next year by the students. to be run as a student daily without any cost or charge to the State or the University. In this connection the following at the head of the first column of the first page of the *University Missourian* of May 19th will be of interest to all newspaper makers as showing the school's usefulness:

The *University Missourian* will appear next year as a student daily under the editorial control and financial management of the students of the School of Journalism.

The success of the first year's work in the school has been such as to warrant the students undertaking on their own account and responsibility the publication of a daily newspaper. This will make unnecessary the publication by the university, as during the present year, of the *University Missourian.*

Nine directors were elected by the students of the school at their meeting last night in Academic hall. The first board of directors is: Harry E. Ridings, Meadville, Mo.; F. W. Cooke, Healsburg, Cal.; J. B. Powell, Quincy, Ill.; Charles A. Harvey, Maysville, Mo.; Gordon Fisher, Helena, Mo.; E. R. Childers, Troy, Mo.; Herman Hoelke, St. Louis, Mo.; J. F. Williams, Joplin, Mo.

This board will have general control of the *Universtiy Missourian,* and will be responsible on behalf of the students of the school for its publication and the direction of its policies.

The directors of the newspaper are to be chosen annualy by the students on the second Monday in May of each year. Of the nine directors at least three at each annual election are to be chosen from the retiring board.

* * *

THE ARKANSAS EDITORS.

The Arkansas Press Association has been very successful in its recent conventions by reason of the practiccal methods adopted to secure an interest and to render the sessions useful as well as successful. Last year a number of valuable prizes were given for a variety of different lines of job printing and newspaper work.

This year the convention was held at Fort Smith and the Press Club of that enterprising city raised and expended $800 for the enjoyment, entertainment and improvement of the editors in the way of filling them up with new ideas as to how to build up a town. The *Western Publisher,* coming out, as it does, every week, got the lead on us in giving an account of this convention, but then we do not seek to be a newspaper for editors but rather a technical or professional journal for printers, publishers and newspaper makers, to teach the practical things for those in these useful callings—better and more profitable methods, the successful ways, through discussions, papers and related experiences; the obligations, ethics, rights, equities; the duties, relations, and usefulness to individuals, to the industries, worthy institutions; to education, local improvements, to politics and religion, to the community, city, county and state and Nation, in the giving and interpreting the news and forwarding all worthy undertakings for higher productiveness of fields, shops and factories, better, more equitable, profitable and increasing trade or commerce. We believe, too, that no printer, no publisher and no editor does justice by himself or his calling who does not take, read and so far as possible, study the publications devoted thereto. The man who seeks only to exist, who does not intelligently and persistently endeavor to improve, to be useful and who is not actuated by the desire which we used to hear so frequently expressed in Methodist class meetings by the brothers and sisters; God bless their memories—"to so live that the world may be better for *their* living in it," are unworthy to live and better never have lived at all. Whoever lives with no efforts for doing good is sure to be found at best a mere cumberer of the ground and is generally a doer of evil—an active agent of the genius of wickedness, whether called the Devil or unnamed.

Well, we did not intend to sermonize, just here, but let it stand. There is an education in all news and we can not reach all the associations directly, so we are glad to give the following, as to the work, and incidents as to the lives of the Arkansas Editors—with whom we met at Texarkana and of whose conscientious devotion to the calling we learned over twenty years ago—as recorded in the *Western Publisher* of May 19th:

J. B. McDonough, for Mayor Johnston, delivered the address of welcome to the representatives present. He complimented the newspapers, and said they were all interested in the upbuilding of this great state, in the development of its resources and its general prosperity, in building for the right and the tearing down of the wrong, and bade the visitors welcome to Fort Smith.

W. B. Folsom of the Brinkley *Argus,* responded on behalf of the association and said the newspaper men regard Fort Smith as the warmest proposition on the map when it comes to doing things. He said the papers were keeping tab on the growing city that was out of debt and had $80,000 in the treasury.

W. W. Folsom of the Hope *Gazette,* moved that the public generaly and the ladies especially be tendered an earnest invitation to attend all the metings of the association. The motion was adopted unanimously.

Col. Adam Clark, the nestor of Arkansas journalism, accompanied by his wife, was one of the prominent figures of the press meeting. Mr. Clark has been continuously in the newspaper business in Arkansas for 52 years and holds the record for the longest continuous service in the state. In 1856 he bought and published the *Southern Standard* at Arkadelphia. Mr. Clark is 74 years of age, and is hale and hearty.

W. W. Folsom of the Hope *Gazette,* is another one of the "boys" of the association. He has owned and edited newspapers in Arkansas continuously for 31 years, his labors beginning at Brinkley, where he edited the *Times.* Mr. Folsom has for many years owned and edited the *Gazette* at Hope.

Claude Colburn of the Ozark *Democrat,* with his wife, were among the members of the association in attendance. Mr. Colburn has grown gray in the service, but apparently is good for a number of battles in the newspaper field yet.

Another veteran of the association is S. B. Baird of the Ashley County *Eagle.* He has been the editor of the *Eagle* since its inception. The first copy, printed at the close of the war was published in Monroe county, Alabama, under the head of *Monroe County Eagle.* In 1877 Mr. Baird moved to Eldorado, this state, and there published the Eldorado *Eagle* until 1888, when he moved to Hamburg, the paper being rechristened as the *Ashley County Eagle.* For 40 years Mr. Baird has published the *Eagle,* has prospered, is a good citizen and a splendid newspaper man.

The home of W. B. Folsom of the Brinkley *Argus* was blown away in the recent cyclone which did so much damage there, entailing a loss of $2,000. Mr. Folsom will rebuild at once.

The Wednesday session of the association was called to order in the circuit court room at ten o'clock by S. B. Baird of the Ashley County *Eagle.* E. R. Steele, pastor of the Central M. E. Church, opened the session with prayer.

Hon. O. C. Ludwig, secretary of state, one of the old-time newspaper men of the state, was the first on the program, his subject being "Recollections of Former Press Meetings." He met with an enthusiastic reception.

A resolution was unanimously adopted asking the Arkansas representatives in congress to use their influence to have stopped the practice of the government of furnishing printed envelopes to the business firms of the country, as it was a losing game for the government and took legitimate business from the newspaper and job printing firms.

W. W. Folsom, P. S. Carden and C. C. Colburn spoke in an interesting manner on "Reminiscences of the Arkansas Press Association," and their remarks were greatly enjoyed.

A particularly interesting paper on the "Relation of the Newspaper to the Development of Arkansas" was read by J. H. Hand of the Yellville *Echo.*

R. C. Hite, as the oldest practical printer and editor in the state, was elected as an honorary member of the association.

The editors got to work early Thursday morning and put business through with a rush, as nearly all of them expected to go on the excursion over the railroads of the state.

The first order of business was the appointment of the committee on legislation, which is Frank Robbins of Conway, chairman; H. R. Lucas of Star City and A. M. Ward of Clarksville.

The election of officers was the next order of business. There was a spirited contest for the office of president, the candidates being S. B. Baird of Hamburg and J. H. Hand of Yellville, the ballot resulting 18 for Baird and 17 for Hand.

R. E. Bradford of Lonoke was elected first vice-president by acclamation.

The following officers were chosen by acclamation: Arthur Livingston of Russellville, second vice-president; J. H. Hand of Yellville, third vice-president; Earl Hodges of Little Rock, corresponding secretary; T. R. Pound of Danville, recording secretary; P. S. Carden of Malvern, financial secretary; Miss Meah Merritt of Fayetteville, poet.

A resolution of sympathy was unanimously extended W. B. Folsom of the Brinkley *Argus*. Mr. Folsom met with serious loss in the recent cyclone which devastated Brinkley.

The veteran members of the association pronounced the banquet at the Casino the finest ever tendered the editors of Arkansas by any city. One of them stated it was faultless, in menu, appointments, decorations, toasts and location.

LOUISIANA. EDITORS.

The Louisiana Press association held a most successful three days' session at Covington, La., May 4, 5 and 6. The editors were together really four days, for on their return from Covington via New Orleans they were treated to a most sumptuous breakfast by the *Times-Democrat* at New Orleans at the St. Charles hotel, and in the afternoon visited in a body the new battleship Mississippi, which had been anchored at the wharf shortly after four o'clock the previous evening.

During the meeting, excursions were taken by trolley, steamer and rail to Mandeville, Houltonville and Bogalusa and especially enjoyable was the trip on beautiful Lake Ponchatrain from Mandeville to Houltonville, where the Houlton Bros. entertained the editors in a lavish manner to one of the most delightful feasts of the occasion. The visit to Bogalusa gave the editors the oportunity to see the largest sawmill in the world and the banquet and other features of entertainment extended by the Great Southern Lumber Company will long be remembered.

The three days' session concluded with the banquet at the Southern hotel at Covington, given by the citizens of Covington and a most elaborate spread it was. Secretary L. E. Bently of the Press association acted as toastmaster and the speeches that followed the feast were all appropriate and entertaining.

Especial mention must be made of the untiring efforts of W. G. Evans, chairman of the Covington reception committee, to make the Covington meeting the enjoyable success that it was.

Officers were elected for the ensuing year as follows: President, E. D. Gianelloni, Napoleonville *Pioneer;* first vice-president, Robert Roberts, Jr., Minden *Democrat;* second vice-president, Mrs. Lottie Aite Weir of the New Orleans *Daily States;* secretary, L. E. Bentley, Donaldsville *Chief;* treasurer, Albert Bienvenue, St. Martinville *Messenger.*

Opelousas was selected as the next place of meeting.

The resolutions adopted included in addition to those condemning the printing of return cards on evelopes by the government were as follows:

"That we heartily endorse the educational campaign now being carried on by the Louisiana Anti-Tuberculosis league, promising it our support and assistance in the dissemination of information for the prevention of the spread of the white plague.

"That we would ask the state board to enforce a strict compliance with the law requiring the gathering of vital statistics in the country parishes."

The association agreed to the plan of appointing a comittee of five to act as a sort of clearing house for the newspapers in the smaller towns in the staate, to fix advertising rates, see to all contracts and attend to the collections of the same. Several other of the state press associations have adopted this plan of handling the patent medicine advertisements and other kinds and found that the idea works successfully in every way. The committee as appointed by the president was as follows: C. J. Lecoq, New Roads, chairman; Elrie Robinson, St. Francisville, F. J. Whitehead, Port Allen; J. T. Payne, Dodson, and James von Lotten, Donaldsonville.

Charles E. Schwing of Plaquemine, publisher of the Iberville *South* and chairman of the libel committee, submitted a comprehensive draft of a new law to be recommended to the state legislature embracing, as he says, many of the best features of the libel laws of other states, and after some discussion it was referred back to the committee for certain amendments, then to be printed and mailed to every member for his perusal and investigation before the next meeting.

A FOURTEEN MILLION DOLLAR PRINTING CONTRACT

A copy of the Akron, Ohio, *Daily Times* of May 17th, has reached this office and contains an announcement of a printing contract, awarded to the Werner Co., of that city, that probably has never before been equaled in all printerdom since the world began. The contract is for $14,000,000, for the manufacture of a series of books of a national historical character. The *Times* says:

Only once before in the history of any book-making concern on the American continent was a book manufacturing contract closed involving a sum so large as $2,000,000. This was done by the Werner Co. of this city in 1893.

During the past years, new machinery and new facilities of various kinds have been continuously added to the local plant, making its equipment adequate for the undertaking of a work of such an enormous character.

While ordinarily it is extremely difficult to obtain from the Werner Co. any statistics regarding the volume of the company's business, the immensity of this contract is so marked that Akron people will be much interested to learn what a book manufacturing contract of this magnitude means.

The following will constitute some of the requirements:

1. There will be five million volumes of books, each of about 1,000 pages.

2. Twenty millions of pounds of book paper, of high-grade, will be required, which is equal to about 650 carloads.

3. Five millions of pounds of book-binders' boards will be required, which is equal to about 170 carloads.

4. One million of full animal skins will be required, which implies the slaughter of one million heads of cattle, equal to about 100 carloads of leather.

5. Five millions of sheets of wrapping paper will be required, equal to 30 carloads.

6. One hundred thousand pounds of ink will be required, which is equal to 4 carloads.

7. Twenty millions of leaves of pure gold will be required to embellish the covers and edges.

8. Fifty carloads of other miscellaneous supplies, not enumerated, will also be required.

9. 400,000 large wooden boxes will be required to pack and ship the books, representing four millions of square feet of lumber, or about 260 carloads of lumber.

10. The total number of carloads of raw material required to execute this contract will be 1,300; or, in other words, 42 trains of 30 cars each.

11. If one of the largest printing machines of the Werner Co. would be obliged to execute the printing of this tremendous contract it would require this machine, at the rate of nine hours a day, to run for 16,000 working days; or, in other words, for about 51 years.

A DAKOTA HOME COMING.

R. E. Dowdell, a well known member of the N. E. A., and Past-President of the South Dakota Press Association, has been chosen chairman of the Board of Publicity of the joint Home Coming for the States of North and South Dakota to be held at the city of Aberdeen, South Dakota, June 16, 17 and 18, 1909.

It is expected that this will be one of the largest gatherings ever held in the State. The gathering has a triple purpose. First to bring back the one-time residents of Dakota Territory, now residents of other States. Second to bring together the citizens of North and South Dakota, who were residents of the territory at or prior to division, and third, to celebrate the 20th anniversary of division and statehood.

The city of Aberdeen, through its enterprising Commercial Club, is making great preparations for the meet. With its splendid new hotels, the open hospitality of her home-owners, access to her school and other public buildings, and the use of the tents and other paraphrenalia of the state militia, all who come will be well cared for. The press of both States is taking an active interest in the gatherings, and many members of the National Editorial Association will give it friendly mention. A press headquarters will be open in the city during the three days, and a royal welcome will be given all members of the South Dakota Press Association in the city on those days, which would give the members a grand chance to meet old-timers.

Reduced rates have been secured on all lines and will be in vogue on those dates. These home-comings are getting to be very popular gatherings, and Dakota citizens have got the "push" to make the Aberdeen meeting this month a grand success.

THE COMMON SENSE PARTY

Here is the basis of the common sense party: Cheerfulness, courtesy, kindness, industry, health, patience, economy.

There are two ways to live—just two—one right way and one wrong. If your life benefits humanity you are on the right track; but if you are a bother,a worry, a menace and a burden to the world you are on the wrong route and will soon be "up against it.'

Everybody and everything will have it in for you, because you will have it in for yourself. Then, when you begin to repine, your bodily health will wane, and inertia and weakness will seize you hand and foot.

Weakness is the only slavery. Freedom is the supreme good—freedom from self-imposed limitations.

It is the law of nature that the world helps every person who is trying to help himself. If you want to be well and strong, work with nature, not against her, and she will make you well and strong and keep you so, barring collision with a benzine buggy. Nature is on your side, if you prove that you are on hers. Ye should always be in partnership with nature.

If you are sincerely trying to do your share of the necessary work of the world, nature will reward you with honors, money and power.

Keep goodnatured. Do not look for slights or insults. If you can't get the job you want, then take the one you can get. The only way to get a big place is to show that you are not ashamed to fill a little one.

Common sense folks do not borrow trouble—or small sums of money, anticipating pay day. They live within their means, pay their debts, accept what comes, and are thankful that things are not worse.

They are cheerful losers, and cheerful losers are always winners.

Folks who belong to the common sense party, are healthy, hearty, happy and always have all the money they need—even it not all they want. They attract confidence, love success, and they succeed because they just can't help it.

Common sense culters know that every duty well done makes the next duty easier to do. They also know that folks who never do any more than they get paid for, never get paid for more than they do.

Come, get in line and join the common sense party! Be one with the people Kipling tells of, who do their work and hold their peace—a part of the time, at least.

Are you with us?

If so, open a saving bank account and deposit the dues of the common sense party—a dollar a week or more to your own credit—and watch the account grow. It is yours. Remember, you are the center of your own local center, also its president, secretary and treasurer. You are the captain of your soul. However, you are always to give the high sign and co-operate with all other common-sense party centers, knowing full well that you can only help yourself as you help others.—*Trade Review, N. Y.*

WANTS THE CITY DESK DEPARTMENT REVIVED.

To the Editor, National Printer-Journalist, Chicago, Ill.

Dear Sir:—I have been a subscriber, through a bookseller, to your valued journal for some years. It is brimful of features of interest, but there is one feature or department that I miss—"The City Desk," I think it was called, by Will Owens. It was a most useful newspaper work, and I have written to you in the hope that you may be able to revive the department or give us something on the same lines. Failing that, perhaps you can give us a report of a lecture on paragraph writing or leader writing, illustrated by examples of actual work. You were good enough to act on a suggestion of mine on model papers some years ago—hence my boldness in writing to you now. Of course, you have the schools of journalism, but then we can't all reach them—there are none in this Dominion.

I remain, yours sincerely, John Ward.

We are going to try to comply with the request of our New Zealand friend. The department was discontinued because there did not seem to be sufficient interest awakened thereby, but there is now much more attention being paid, than was the case a few years ago, to the subject of better newspaper methods, writing and work. This is in a measure evidenced by the splendid success of departments of journalism in the state universities. There is need for improvement.

—*The Editor.*

LIVING UP TO THE CONSTITUTION AND BY-LAWS OF THE N. E. A.

Sturgeon, Mo., May 29, 1909

Mr. B. B. Herbert,
Editor National Printer-Journalist,
Chicago.

Dear Sir:—

Replying to your letter I send you one from Treasurer Curtis, who says I sent him the first check to pay per capita tax of delegates.

You ask for names of delegates. Our president appointed five. You know Missouri pays for delegates named whether they go or not. We believe this is right. We are willing to pay our part always. If delegates appointed do not go we will select others in their places. Pres. H. F. Childers at the last meeting held at Fulton, appointed delegates as follows:

S. A. Clark, Republican-Record, Carrollton
E. L Purcell
W. W. Waters, Southeastern Missourian, New Madrid
Lewis Moore, Telephone, Hume
Ovid Bell, Fulton

Yours very truly,
Omar D. Gray.

The manufacturers of the Boston Wire Stitcher (see advertisement on another page) have now ready, for the No. 3 size, a work-table extension, which makes available the entire space back of the regular work table. The American Type Founders Company, selling agent, will forward, to those interested, literature descriptive of these excellent wire stitchers.

A. F. Wanner & Co., Chicago, have been appointed selling agents for the Scott Drum Cylinder, in the states of Michigan, Indiana, Illinois, Wisconsin, North Dakota and northern Minnesota.

Do you trade with our advertiser, Wesel? If you do not, it is probably because you seldom see a salesman from Wesel's. Wesel's salesman are all experts and work mainly on definite propositions. They are not drummers, but rather advisers and planners. However, as to salesmen, it must be remembered that the printer pays for everyone of them. The more of them who tell you the latest story and pass you a cigar the higher the tariff is to you. It is figured in the price, or is often substracted from the quality. The reason that Wesel quality is the best quality is that it is all there, and not in the salesman's expense books. What you want is value and not to pay for what is in the expense books of the genial salesmen. If you send a few orders to Wesel you will only be in danger of getting the Wesel quality habit and losing a few of the salesmen's cigars. Send for Wesel's catalogue—it, too, is different from the average catalogue in its contents. Wesel makes composing sticks, galleys, brass rules, bodkins, tweezers, and everything in the material line up to automatic, self-inking, self-feeding proof-press. To know what Wesel is doing is to be in line with the elite of printerdom.

A BOOK EVERY PRINTER SHOULD BUY.

For the asking you can have a 246-page book containing all the new type faces, borders, ornaments and decorative materials produced during the past three years by the leading type foundry of the world. It leads not only in output but, more important, in the beauty and utility of its type faces and designs. Everything in this exceedingly attractive book is new—everything is original. For fifteen years it has been the world's leader of type fashions. Its specimen books are the only ones in which the printer finds nothing but originality. It has kept many of its esteemed competitors so busy making colorable imitations of its type designs that they have found little time in which to be original.

The principal Specimen Book of the American Type Founders Company was issued in 1906. It is entitled "American Line Type Book," and has 1181 pages. This Supplement does not in any wise traverse or duplicate the main book, except when series have been considerably enlarged since 1906. Both books are absolutely essential to the equipment of an up-to-date printer or advertising manager, and may be procured from any branch of the Company.

We are particularly impressed with the snappy character of the ornaments, borders and decorative material, all cast in type moulds, some of them the largest ever cast on type machines. There are several brand new series, ranging from the most delicate to the most masculine. Many Gothics and Antiques are shown, but all entirely remodelled and made wonderfully attractive.

Many of the new type designs are exhibited in practical forms in a most attractive manner, affording a treasury of ideas to both compositors and advertising men.

This Supplement again convincingly proves the superiority of the American Type Founders Company's product, especially in the most essential quality, that of handsome and original designs of the greatest range of utility.

The record of the Acme Staple Company of Philadelphia has been one of progress, growth and improvement. The products of the company, staple binders and wire staples, have become "staple" to the trade and are handled by all dealers in printers' and binders' machinery, material and supplies. An enormous increase in the business of the factory has demanded better accommodations and more room for the necessary improvements and enlargement of the plant in general, and on this account the Acme Staple Company, Limited, has moved from its long-time location to 112 North Ninth Street, Camden, N. J. In this, the recent tendency of manufacturing industries, to get out of the conjested centers in our large cities, has been followed.

WESEL AND WESTINGHOUSE.

In connection with the introduction by the F. Wesel Manufacturing Co., of compressed air for operating Matrix Drying Tables and electricity for heating them, a marked advance in the stereotyping art, it is announced that the Wesel Company has combined with the great Westinghouse Company of Pittsburgh in the manufacture of Matrix Drying Tables, the Westinghouse Company supplying its patented electric heating apparatus exclusively to the Wesel Company for this purpose. The superiority of the Westinghouse electric heating apparatus is admitted and has caused other manufacturers of Matrix Drying Tables to state that they can supply the Westinghouse apparatus to their tables. This, we are authoritatively informed, they cannot legally do.

Last year the American Type Founders Company made a large addition to their central plant at 300 Communipaw Avenue, Jersey City, and contracts have just been awarded for still another addition, which is to be completed ready for occupancy in September. This is already the largest and most complete type founding plant in the world and this latest addition has been made necessary by the growth and increase of business. Printers visiting New York will find much of interest to repay a trip to this foundry, which is only fifteen minutes from New York via the Liberty Street Ferry and the Central Railroad of New Jersey to Communipaw Station. The Typographic Library and Museum contains books and records pertaining to typography, typefounding and printing of value to everyone interested, and the collection includes many rare volumes.

POST OFFICE RULINGS.

On account of a ruling by the Post Office authorities we were not permitted to mention the name of the paper used for printing our insert in the May issue, showing our Doubletone Cameo Brown and Doubletone Cameo Green. On application either to us or Messrs. S. D. Warren & Co., Boston, Mass., the required information will be given.

SIGMUND ULLMAN CO., N. Y.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . . . .

LEAGUE BALL RESULTS FOR MORNING PAPERS, $1.00 per week. General news for evening papers. Special correspondence. Yard's News Bureau, 166 Washington St., Chicago, Ill.

THE VAN BIBBER ROLLER CO., Sixth and Vine Sts., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

A COLD SIMPLEX STEREOTYPING OUTFIT, $17.00 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

"WRITE TO SANDERS ST. LOUIS"

SANDERS

The Name that stands for The Best in Engravings

We produce every style of engraving for making catalogues and advertising attractive. The cost of the engravings is one of the small items of expense, but they are the strong feature for attracting attention to selling qualities.

Let us tell you more about why SANDERS' ENGRAVINGS have the greatest selling qualities.

SANDERS ENGRAVING COMPANY
LON SANDERS, PRESIDENT
221 OLIVE STREET, ST. LOUIS, MO.

Important Notice

We wish to announce that we have taken hold of the **Unitype Typesetting Machine**, and shall place it upon the market in extraordinary numbers.

This we are enabled to say because of certain recent, and extremely valuable, developments with respect to this machine, which our *thorough* knowledge of the machine composition situation has enabled us to bring about.

The new Unitype will not be offered until July 15th; but one may be seen in operation at our offices on and after July 1st.

The Babcock Optimus
The Babcock Optimus

The forms will be very heavy, requiring fine manipulation of abundant color, exceedingly powerful impression and the best of register. You tell the customer that you can print his catalogue as it should be done. Really, with the limitations of your old press in mind, you are only hoping that you can.

The old press was even worse than you thought. The customer is disappointed; thinks job almost useless. It is only fair if he leaves it with you. And you have told him in the most effectual way not to come again with that sort of work. When he gives it to someone else it is reasonable to expect his other work to follow.

How different if you had an Optimus, even an old Optimus! It makes the hard work easy; gives satisfaction; keeps the business. For heavy, exacting, fast work it is absolutely matchless. It is the machine for the big shops, and altogether best for the small ones.

Facts beat fancy and prejudice. Ask for the truth about the Optimus.

The Babcock Optimus

Main office and factory, 70-80 Cranberry St., Brooklyn, N. Y. New York, 10 Spruce St. Chicago, 329 Dearborn St. Philadelphia, 712 Mutual Life Building.

Originality

Once upon a time a Little Company was formed with the sole purpose of making Machines to Cast and Compose Type.

Now, in that long-ago time the Printing Trade used nothing but Slugs, and no Printer needed Type.

This Little Company grew and prospered through the support of its Customers and waxed lusty on Repeat Orders.

Thereupon arose a great cry in the land—the lamentations of the Sluggers over the folly of those who used "home-made" Type.

And after that, when the Sluggers saw that "home-made" Type had arrived to stay, they adopted into their interesting family—A TYPE CASTER.

MORAL No. 1

When in doubt, take an Agency.

MORAL No. 2

Has-made-good beats just-as-good.

THE MONOTYPE

Both Makes and Sets Type

COURTESY AND PROMPTNESS

HAMILTON'S MODERNIZED PRINTING OFFICE FURNITURE

ITS RECORD AS AN ECONOMIZER

The name Butterick is a household term throughout America. If our printer friends do not know about this concern, let them ask their wives.

This immense establishment is devoted exclusively to doing their own work of printing patterns and pattern magazines, including the *Delineator, Designer, New Era,* etc. The immense composing-room contains nearly 12,000 feet of floor space, and is filled with Hamilton's Modernized Printing-office Furniture throughout.

More than 60 Cabinets of the Masterman type are arranged in a single group, all equipped with foot-rails. There are modern Stone Frames and Letterboard Cabinets, and many other pieces of economical Composing-room Furniture.

Here is what the Butterick Co. says about the results obtained by installing this new equipment:

NEW YORK, June 23, 1908...

The Hamilton Mfg. Co.,

GENTLEMEN:—*The sixty Cabinet Frames that we bought from you some time ago have given us full satisfaction. We believe that there has been a saving in space to us of about 25 per cent over the old frames which we discarded at the time of putting in your frames.*

The Cabinets look almost as good as they did when first installed. We can say the same about the Imposing Stones and other Furniture that we have bought from you from time to time.

Should we be in the market for anything in your line in the future, you may be sure that we will call on you.

Yours, THE BUTTERICK PUB. CO., LTD.
Per H. Horton.

There is nothing unusual in the results obtained in the Butterick establishment. As good or better results can be obtained in any composing-room not equipped with modern furniture.

We can show how to do MORE business in SMALLER quarters. And it isn't space alone that can be saved. With modern, compact furniture, the equipment is *at the workman's hand.* Interference between workmen does not occur. Millions of useless steps are avoided in the course of a year. Lost motion means lost profits. Why not save 10 to 25 per cent of your labor cost by installing modernized furniture in your composing room? You will be repaid the entire cost of installment in less than one year.

If you are interested in this very large question of printing-office economy, fill out the coupon on this page and let our representative show you what can be done with your office. Remember, it is *up to us* to *show* you.

THE COUPON can be sent to us or to any dealer handling Hamilton Wood Goods.

SEND FOR A COPY OF "COMPOSING ROOM ECONOMY." It will show you what has been accomplished in thirty other representative offices.

We are interested in the question of Modernized Furniture and we would like to have your representative show us a floor plan of our composing-room as you would re-arrange it, with a view to our installing such furniture as you can show us would soon be paid for in the saving accomplished.

American Type Founders Co

Megill's Patent Automatic Register Gauge

The sheet as shown, is fed short of the gauge and yet it will register. When the press closes, the "Automatic" extends forward and gently pushes the sheet to exact position. It does not bite the sheet and prevent it from registering. It never pushes it out. It registers cardboard or paper. The ordinary gripper operates it. No extra fixtures. The gauge simply forms a stop for the sheet and then registers it. Feed ordinarily, but as fast as you like.

The Automatic Register Gauge, including a pair of the Double-Grip Gauges for the bottom, to your door for $5.95. *Testimonials and booklet.*

NATIONAL PRINTER JOURNALIST

A Journal for printing and Allied Trades.

Volume Twenty-seven | Chicago, July, 1909 | Number Seven

HIGH STANDARD OF PREPARATION FOR JOURNALISM

THERE are very few more discerning writers, very few men in the broad field of journalism, who can get through all the conventionalities, all the outward bark and wood of appearances and pretentions, into the pith and core of truth and motives, as can Samuel G. Blythe, who writes the "Who's Who" page of the *Saturday Evening Post*. We know of no other one who can more entertainingly or impressively tell the story of what is found in men's characters, incentives and lives.

Recently Mr. Blythe delivered an address before the third annual convention of the Intercollegiate Press Association, held in Bloomington, Indiana, and what he said, while not altogether flattering to the calling or encouraging to the neophytes therein, showed a broad understanding thereof, and a deep appreciation of its demands, possibilities and rewards, and gave very excellent and sound advice. He did not consider newspaper work a road to wealth but a way "to live a big, broad life." He said, after depicting its difficulties and hardships, and declaring: "There is no other business in the world where the hours are so long, the work so exacting, the discipline so rigid and the sense of responsibility greater":

If you want to get rich, keep out. There is no chance. But if you have a desire to live a big, broad life, to be in touch with all that happens, to be in the thick of it, to engage in the most fascinating work in the world, the newspaper is the place to go if you have the stuff in you and can get it out.

If you are a clean, decent, honorable man, you will not do unclean, indecent, dishonorable work and will not work for anybody who requires you to. That is all there is to it. Newspapers are just as human as the men who make them. The press of the United States is not so venal or corrupt or easily influenced as some people who have run against it would have you imagine. It is a human institution, subject to human limitations and it is doing its job in pretty good shape.

I wasn't fortunate enough to go to college and I cannot speak as to the value of a college education in newspaper work from personal experience, but I do know that it is the duty of every man who contemplates entering journalism to get all the knowledge he can. There were no courses in journalism when I broke in. We began in the newspaper office and had it beaten into us.

There is one thing I do contend, though, and that is that no person can teach a man to write. You can be taught the principles of writing, the grammar and the rhetoric and all that, but you must teach yourself to write. The mere facility of writing correct English doesn't mean anything. There are scores of persons around newspaper offices who can write correct English. The trouble is they haven't any ideas to anglicize correctly.

The man who goes into journalism and who desires a big success must specialize. After his experience as an all-around reporter on all the assignments, he shall pick out one subject and specialize it. Likewise he should try to make his stuff as different from the stuff of other men on the papers as he can. I found that out early, and when I was a cub reporter I tried to write every item in a way the other reporters wouldn't think of writing. The results were disastrous in instances and I had a lot of trouble with city editors and copy readers, but I finally got into the place that whenever there was a story they wanted handled in an unusual way that didn't strrt, "There was a meeting last night," etc., and so forth, I got it.

It took years, years when I was beaten to a pulp by men who couldn't see it as I did, but I won out. And in looking over the ground I determined on my specialty early. I chose people—folks. People want to read about other people. If you will allow me I will advise you young gentlemen who are interested in journalism to specialize on folks. That is the greatest, the most interesting, the most pliable, the most numerous, the most fascinating, the most unusual, the most satisfying subject in the world—folks.

And if you have anything like a sense of humor, for heaven's sake nurse it. Humor is the scarcest commodity in the United States. It is extinct elsewhere, almost. Don't let the serious-minded persons tell you anything about dignity and all that sort of rot. If you can write funny stuff write it, and you'll be riding in your own automobile when the serious-minded person is writing serious protests to the paper against pay-as-you-enter street cars.

The day of the reporter who got drunk and fell down on his assignment is gone, never to return. Those guzzling gen

iuses were great folks, no doubt, but they always had to take up a subscription when they died. Besides, newspaper men will not stand for it now. Therefore keep sober, although you will have more opportunities than any other person to get drunk at slight expense, and keep honest. That's all there is to it. Keep sober, be honest in your writing as you would with your mother's money, get a different slant on things, tell your story your own way, not the other fellow's; slide in some humor if you can and you will have a happy time, have a lot of fun, see many strange things, live more in your life than the ordinary business or professional man would in ten, and, probably, die in honored and virtuous poverty.

A FEARLESS NEWSPAPER SAVES ITS CONSTITUENTS $30,000 ON THEIR COAL BILLS.

A special from Watertown, N. Y., on June 2d, to the *Editor and Publisher* made the following showing of how a newspaper "unawed by power and unbribed by gain" had saved its patrons $30,000 in their coal bills:

The people of this city have just had the most convincing illustration in years of the power of a newspaper, and it is the commonest subject of talk in this city.

On April 1 the coal dealers failed to make the usual April reduction, giving as a reason the unsettled conditions in the coal regions. The Watertown *Daily Standard* waited ten days for a reduction to be made, and at the expiration of that period began a systematic attack upon the coal dealers. Daily until May 11th the assault was continued, and on that date the *Standard* published a full-page summary of an investigation that covered every point in the state and the conditions existing at the mines.

The price demanded during April was the winter schedule of $6.90 cash delivered. April 27th the price was reduced to the usual April circular of $6.50, but the coal combine still existed. The day following the page expose, which charged the local dealers' combine with responsibility for an overcharge of 25 cents, and the excessive freight rates for $1 and which maintained that the people of Watertown were paying $1.25 a ton more for their coal than they should, a leading dealer announced that he would sell coal at $6.15, and all the other seven followed suit.

In addition, the coal traffic manager of the New York Central has announced that a reduction of 15 cents a gross ton on freightage of coal from Scranton, Pa., to Watertown, was being considered, with likelihood of success in the near future. The local dealers state that they will give the consumer the advantage of this reduction, which would net Watertownians 50 cents a ton, meaning an annual saving on an estimated consumption of 60,000 tons of $30,000.

LIKES NEWSPAPER CRITICISM DEPARTMENT.

DUSHORE, PA., June 5, 1909

National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Herewith is my check for subscription to the N. P.-J., to June, 1910. I take pleasure in following the Newspaper Criticism Department, by Mr. Copper, and, in the near future, I will try to send him a few copies of the *Review* for him to pass remarks upon. Of whatever nature, I assure you they will be of benefit to me.

Trusting the N. P.-J. will continue to brighten up, I remain, Yours truly,

L. R. TAYLOR.

A WEST VIRGINIA EDITOR'S VIEWS ON THE POSTAL DEFICIT AND PARCELS POST

WEST VIRGINIANS are noted for patriotism and love of home and State. The press is outspoken, clear in judgment and bold in statement, and we have been pleased to read the following two articles, that appeared, respectively, on May 27th and June 3d, in the West Union, W. Va., *Herald,* though we do not entirely coincide with all that is contained therein, especially as to a local parcels post, which we believe could be made very useful, a great convenience and profitable withal, and be entirely freed from any danger of extension:

There is much ado these days about the postal deficit and there has been much said in the public print as to its cause and as to a suitable remedy for it.

One remedy suggested was to visit the calamity upon the press of the country, by curtailing certain privileges that have been secured to it from time immemorial.

Much inquiry into the business of the publishers of the country has been made by the department in order to locate the seat of the trouble, and, in the estimation of its promoters, to place the blame where it belongs.

Every one who knows anything of the financial condition of the newspaper man will not question for a moment his ability to make up the deficit. No one who is acquainted with him (the paper manufacturers, ink dealers, sheriffs, etc., of course, excepted,) will question in the least the propriety of making him bear this burden and in addition also the exacting from him the expense of building of the navy, maintaining the army and other small governmental expenses.

No one can blame the government for printing envelopes in competition with "millionaires of the rural districts," for the rich are those who are oppressing the laboring class—especially the class who claim to be running the postal department.

But a few sidelights might be interesting here. Did you ever stop to think that the express companies are carrying each year large amounts of matter that should be handled by the department and which they are strictly forbidden to carry by the constitution and certain congressional enactments? A section in the Revised Statutes of the United States makes it unlawful for any one to establish a private express for the carrying of letters or packets over any post roads of the United States, and yet this abuse is and has been going on day after day, and year after year.

Would not the great amount of revenue derived from this large amount of business that the law says shall go to the department soon liquidate the deficit if the law were enforced?

This accounts to some extent for the twenty-four million express company dividends and the fifteen millions and upwards of the postal deficit.

This is one great leak, to say nothing of the millions lost to the treasury department yearly by the unwise extension of the franking privileges, which allow senators and congressmen to send almost everything conceivable from a threshing machine to an elephant through the mail for which the dear people must pay.

This postal deficit is a great big bugaboo, but its solution is easy and it rests in the hands of those that are today trying to twist the affairs of the press of this land so as to make it responsible for the mismanagement of the heads of the department.

The solution is: Correct the franking abuses; enforce the law forbidding the competion of express companies in transporting the mail; reduce the salaries of the employes of the department to a figure that will compare favorably with the salaries paid for similar service in private places; require every man in the service to stand on his merit and not on his political prestige; put the postal system on a strictly non-partisan basis; then require every patron of the service to bear his just share of the burden, and in Cleveland's memorable expression the postal deficit will sink into "innoxuous desuetude."

GREAT DANGER TO RURAL DISTRICTS IS PARCELS POST.

The question of the establishment of a parcels post system in this country has been a subject of discussion for several years past.

Parcels post is a pet measure of the great mail order houses and those residing in the great business centers who cater to the rural trade of every state in the Union.

The design of the parcels post is the free delivery by the postal department to the homes of the citizens of a community residing along specified route articles of merchandise for which a minimum rate of postage has been paid.

Senator Dolliver, who has made a study of this question is firmly convinced that the damage that it would do to every country town would out balance every possible good that could be derived from the measure.

We can not live simply for ourselves. In this country the law that will give the greatest good to the greatest number will build up the country at large.

The chief danger of our civilization lies in the concentration of the population and business of a community in the cities.

We have reason to rejoice that the great state of West Virginia has built up no great cities, but instead a large number of flourishing towns and villages scattered throughout our borders.

It would be fatal to our farming interests to disturb the prosperity of these little villages and towns.

Since the design of parcels post is to foster and build up the interests of the large corporations in the cities doing a mail order business, everyone with half business sense can foresee the disastrous effect that it would have on the merchants of the smaller places and of the rural section.

These smaller cities are necessary not only to the comfort but to the material welfare of our farming population.

Many of the products of the farmers would be totally lost if it were not for the market thus afforded by the home merchant.

But take from the home merchant and home business men the home trade by the enactment of a parcels post and you destroy the markets which these people make for their products of the farm.

Senator Dolliver does not think that it is for the welfare of any community in the rural districts or for the Government of the United States to convert the postoffice department into a machine for the distribution of merchandise purchased in New York, Boston, Chicago and St. Louis to the detriment of home merchants, upon whose solvency the prosperity, the growth and even the life of the country town depends.

Further on the Senator says: "If a few of us took advantage of the alleged bargains that are advertised by the department stores and left off patronizing home merchants, it may be that we could make a little in that way, but if the whole community took the same view it is obvious that the home town would be totally destroyed, its business ruined and now where we have hundreds of little thriving towns we would in time find ourselves surrounded with shiftless and backward village populations, wholly out of line with the progress of which we are so proud. The immediate effect of conditions would be to depreciate our lands and fatally injure our people.

"I have thought that it would be a good idea to establish a delivery of merchandise on the rural route, confining it, however, to parcels originating in the town from which the route starts, or from one station to another on the route. Even this proposition which has been strongly urged by the postmaster-general, meets little or no favor in Congress, the fear being expressed that it is only the "opening wedge" for carrying out the program of the great department stores and will end in turning over the business of each locality to outside merchants and killing the progress and stability of the small towns."

Loyalty to home and home interests is the highest type of good ethics. No community can succeed unless its various business interests are one, pulling together, patronizing each other, shunning as dangerous those things which divert the local expenditure of money from local to foreign channels.

The establishment of a parcels post would break this plan of rural peace, contentment and prosperity. It would sow business revolution, financial peril and distress right in our midst, while the large concerns of the metropolis would reap from our discord and unhappiness large financial rewards.

Let every citizen that loves his home; that loves his local community; that has his money invested in local enterprises or local property set his foot on this proposed radical enactment at once.

Let every farmer who raises poultry, vegetables, or any other article on the farm that finds a market with his local dealer, fight the enemy of his livelihood—the establishment of the parcels post.

ITEMS OF INTEREST

Mr. Boughner, of the Minneapolis *Tribune,* has offered to give a course of lectures on journalism during the next two years at the University of Minnesota. The regents are investigating and may accept his offer.

At Des Moines, Ia., announcement is made of the sale of the *Grand Army Advocate* by H. M. Belvel to D. H. Caldwell, publisher of the *Iowa Unionist* and the *American Economist.* The paper will continue to be published.

Batavia, Ill., has a new newspaper. It is called the *Fox River Star,* and is published by Editor Marley, who also owns and publishes the Batavia *Herald.* The *Herald* is published every Wednesday, while the *Star* will be published every Saturday.

Frank R. Wilson, an old Sioux City newspaper man, has bought controlling stock in the Sioux City *News,* from the Clover Leaf syndicate, and becomes publisher of the paper. He has been editor of the *News,* and will retain that position while he takes the active management of the business end also. Mr. Wilson is a graduate of the University of Iowa, and began his newspaper work on the Sioux City *Journal,* working also on the Council Bluffs *Nonpareil.*

At the annual meeting of the Illinois Woman's Press Association, these officers were elected: Cornelia Templeton Jewett, president; Mary Badollet Power, first vice-president; Mary E. Power, second vice-president; Mary Moncure Parker, third vice-president; Margaret Handy, recording secretary; Grace Schofield Holmer, assistant recording secretary; Leona Mabel Dufford, corresponding secretary; Ophelia E. Llawrence Blair, assistant corresponding secretary; Salina Sheets Martin, treasurer; Mary Howe Stewart, historian; Ida Hamilton Munsell, librarian.

THE IMPORTANCE OF THE EDITORIAL FUNCTION.

IN a paper before the Louisiana Editorial Association, at the Covington meeting, of which notice was given last month, Hon. Robert Roberts, publisher of the Minden *Democrat,* in an address on the "Press and Public," adopted an ingenious method of illustrating and enforcing the high value, as a means of usefulness and the influencing and winning the public, placed upon the newspaper vocation by leaders of thought and the champions of good government. Mr. Roberts said, in part:

It's a great thing to be the editor of a great newspaper. In point of honor, influence and power for accomplishing good in this country, the editor of a good newspaper ranks next to the President of the United States. Any man who may happen, by chance or otherwise, to become President of the United States, will be ex-officio, for the time being, a personage of unrivalled power and influence, without regard to whether, or not, he may be possessed of an extraordinary personality. The great editor must be a great man intrinsically and independently of the position he holds.

The most able and most popular public men of to-day recognize the truth of my statement, that the editor ranks next to the presidency. During the past twelve years, Mr. J. W. Bryan has been the leading Democrat of the United States. During the past seven years Col. Theodore Roosevelt has been President of the United States and at the same time the leading and most popular Republican in the country. Nobody will deny that both Mr. Bryan and Col. Roosevelt are men of great mental ability and political acumen. Whenever the judgment of these two popular leaders coincides on any proposition, it is safe to say that their judgment is the judgment of the American people. Mr. Bryan could probably have anything in the way of public office he might choose excepting the presidency. Most people will agree with me, I believe, in the assumption that the office is his first choice. Next to the presidency he evidently prefers to be the editor of the *Commoner.*

LURE OF EDITORIAL WORK.

Col. Roosevelt has served seven years as President of the United States. During this period he has greatly enjoyed himself, and during a great portion of the time has kept the whole country in a sate of ecstatic delight by the dexterity with which he has whacked undesirable citizens over the head with the big stick, and also by the zeal and assiduity he has displayed in promoting the membership of his Annanias Club. In the mean time, he has accomplished many useful governmental reforms, and inaugurated others which will be of untold benefit to the American people. Undoubtedly upon his retirement from the presidency, Col. Roosevelt could have had any position of trust or profit he might have chosen. Manifestly he prefers above everything else to become one of the editors of the *Outlook.* Mr. Bryan and Col. Roosevelt are, then, evidently in accord in their appreciation of the field of opportunity offered by the newspaper press. They agree that, with the exception of the presidency, the editorship of a newspaper offers most effective means of reaching and holding the attention of the American public and of impressing upon the people their ideas of what is needful and proper in the way of governmental reforms.

The mighty hunter seeks big game; big men look for big opportunities; that is why Mr. Bryan and Col. Roosevelt have sought the newspaper field. That is why Senator La Follette has started up a publication. Having added to the dignity of the senatorial toga the higher dignity and higher public function of the editorship of a newspaper, we shall probably see Mr. La Follette ere long blossom out into a candidate for the presidency of the United States.

PRESS HAS QUICKENED PUBLIC CONSCIENCE.

Some one has said, that the present is an era of conscience. It is so, and that it is so, is in a very large measure due to the newspaper and magazine writers of the country. The pulpit has, of course, been a potent factor always in quickening the public, as well as the individual conscience. Public men like Mr. Bryan, Col. Roosevelt, Gov. Folk, Gov. Hughes, Senator La Follette, W. S. Uren of Oregon, and others I could mention, have contributed largely to the present healthy moral tone of the American public. Philanthropists like Spreckels of California and the various civic organizations throughout the country have contributed something to this moral awakening, but more has been accomplished by the newspaper press than by all other agencies combined.

Social and political reforms can be accomplished no faster than the public is educated to appreciate their desirability. The task of educating the public along these lines falls upon the newspaper.

Good government, in my opinion, is as much a matter of sentiment as it is a matter of law. Laws not sanctioned or demanded by public sentiment are generally more honored in the breach than in the observance. The people of this country are clamorous enough for the enactment of good laws, but they are not clamourous enough for the enforcement of the laws.

GOOD AND BAD EDITORS.

In giving the editor the right rank to which I have assigned him in this discussion, it will, of course, be understood that I am speaking in the abstract. I would not be rash enough to commit myself to the proposition that all editors are either good men, or great men. They have their limitations and imperfections, as all men have. I have known some editors who by their conduct, and by the use made of the columns of their papers, entitle themselves to be ranked in the "undesirable citizen" class. In exalting the profession I have reference, not to individuals, but to its possibilities for accomplishing good.

The editor who will prostitute the columns of his paper to purposes of willful and malicious slander either against private individuals or public officials, ought to be scourged from the profession, even as the money changers were scourged from the temple, and then sent to jail and kept there until he has a more correct appreciation of the high duties and responsibilities of journalism

---

Des Moines newspaper men have organized a press club. A committee of five was named to perfect the organization and have charge of it for the remainder of the year. Club rooms will be rented and supplied with all the appointments of a modern press club. There are about 150 active newspaper men in Des Moines and about as many magazine writers all of whom are eligible to membership. The first board of directors and officers consists of the following: W. T. Buchanan, managing editor *Daily Capital;* S. H. Cobb, manager American Press Association; Frank Lyman, state editor *Daily News;* Joe Hill, city editor *Tribune* and *Register* and *Leader;* Frank Moorehead, magazine writer for the *Homestead.*

The Rhinelander, Wis., *Herald,* the only Democratic newspaper in Oneida county, which has been conducted by Mrs. A. W. Shelton since the death of her husband last November, has been purchased by C. F. Barnes and H. E. Osborne.

EDITORIAL NOTES AND POINTS

FEW papers, in cities of sixty thousand, or even of a hundred thousand population, outrank the South Bend, Indiana, *Tribune*. On May 28th, this excellent paper—a model as to news, editorials, magnificent make-up and mechanical execution — reached its thirty-sixth anniversary, with an average daily circulation of 8,980 copies. This member of the *Tribune* family is intensely local and intelligently devoted to home interests in both news and editorial columns. It lives up to the correct idea of reaching the people and advertises, having forty-two places in the city where the paper is kept on sale by dealers, placing the paper within easy reach of all who may, by any possibility, be missed by circulators or newsboys. Thirty-six years ago the *Tribune* was a small sheet of four pages, printed on a small cylinder press,—then up-to-date,—at the rate of a few hundred copies an hour. Now the paper has grown for size to one of metropolitan proportions with from ten to twenty-four great seven-column pages, printed on a modern printing machine at the rate of two hundred copies a minute or twelve thousand copies an hour, all folded and counted ready for distribution or mailing. Here is an illustration not only of the great improvement in printing machinery, but nothing else better shows the development of a city or country than the wonderful advances made by such a paper, with its columns bearing hundreds of advertisements of local mercantile and manufacturing establishments, great in proportions and enterprise. The advertisements in this *Tribune* show that the business in all lines, largely promoted by the paper, has kept even pace. The secret of this is told by the following words printed in the first editorial of this issue:

"From its inception it has been the constant aim of the publishers to improve the *Tribune*. This is still and always will be the aim, in the belief that the people of South Bend, Mishawaka and wherever else the *Tribune* circulates are entitled to the best the publishers and editors can produce."

Here is a specimen, in this same number, an example worthy of emulation as to how the *Tribune* helps and pushes forward every local undertaking—in this instance it being that of a home-coming week that appeals alike to sentiments of friendship and local pride and civic loyalty:

To-night's meeting in the lobby of the Y. M. C. A. to begin active preparations for South Bend's home-coming celebration, October 3 to 9, should be attended by accredited representatives of every fraternal, civic, social, military, literary and other organizations in the city. It will also be open to the public.

The importance of this meeting should be appreciated by all delegates, for upon it will depend to a great extent the success of the projected undertaking scheduled for the first week in October. Co-operation will make the home-coming a notable affair, advertising South Bend throughout the United States, but without co-operation it cannot be made the success its importance and the advancement of the city deserve. It is hoped, therefore, that there will be no absence of cordial working together with one great aim and that the success of South Bend's home-coming.

* * *

There is a great movement, becoming world-wide, in which the press of this Nation should not only be intelligently interested but aggressively active. It is that in favor of the abolishing of war and securing a world peace. We do not believe in "crying peace when there is no peace." Peace can only come through the abolishing of ignorance, hate, suspicion, injustice, oppression and wrong. Mutual understanding, the recognition of mutual interests and rights must be at the foundation. The great prophets of old, Isaiah and Micah, when they foretold of a time when nations "shall beat their swords into plowshares and their spears into pruning hooks," placed first judgment among all nations and a religious righteousness common to all peoples. To disarm or not to be prepared to meet aggressive injustice or war, before "righteousness covers the earth as the waters cover the mighty deep" is only to invite attacks and to be the cause of war. The establishment of civic righteousness and the recognition, full understanding and respect for the rights of all should be the aim and work, then should follow the establishment of courts of justice that can be relied upon rightly and fearlessly to stand for justice and equity, fully and rightly interpreting the laws, city, state, national and international, backed by a power, in the executive department, able, and willing to enforce the findings, decrees and righteous judgments of the courts, without bias or favor," unawed by power, unbribed by gain." Internecine or civil war will cease when monopoly, injustice and all wrongs, or inhumanities of man to man, shall cease, or be made impossible, and when all shall receive equal and full protection under the laws. We are a long way from this condition today. Our courts have been used to protect wrong and wrong-doers, to screen and free great sinners against the lives, safety and property of the many and of the weak, and the sworn officers of the court, the attorneys and counselors-at-law, instead of seeking to keep their oaths of seeing justice done between the people and the evildoers, between the court and their clients, have won highest remuneration and greatest glory by their skillful and successful efforts to fool and befog courts and juries and to free their criminal clients from the results of their chicanery, thievery, oppressions and out-breaking violence, assaults and murders. It is a sad condition, when the success, fame and the money-winning power of lawyers depend largely upon their ability to defeat the ends of justice, to free the rich and powerful, the great corporations and trusts, and the great criminals, the wreckers of homes, assassins and murderers, from punishment, instead of the seeking to uphold the enforcement of the laws which in their official oaths they have solemnly sworn before high Heaven to support.

When we come to the case of the great nations, even those called Christian, designs for advantage, gain and power, through force or intimidation, rather than equity, still control. A great step toward peace will be made by the firmly establishing an international tribunal, founded on righteousness and intelligence, by the laws of which all civilized nations agree to abide.

* * *

It is needless for us to state here that we are strongly in favor of local organizations of newspaper-makers and printers. Twenty-five years ago, we advocated the formation of such associations in Minnesota and further suggested, that State associations be composed of delegates from the city and county organizations, believing that a better and more general attendance, representing all parts of the State, would, in this manner, be secured and that more valuable, effective and intelligently useful work and accomplishments would result, through these delegates who would come up from the consideration of interests, principles and questions in their home organization that were of a like importance to all other places. The progress toward the accomplishment has been slow, but there has been progress, and we were glad to read the following in a paper presented by Harry S. Jacks, of the Montgomery, Mo., *Standard,* before the recent convention of the Missouri Press Association, as to "County Press Organizations":

Every county should have a press organization, fix uniform subscription, advertising and job rates. There is absolutely no excuse in the world for country papers to be continually cutting each other's throats in the matter of competition for competitive job or advertising work. With uniform rates throughout a county, the paper to which a certain class of work legitimately belongs will get it, and nobody is hurt. All eventually will get their share. We have a press association in Montgomery county, one of the smallest counties in the state, by the way, but with the largest number of newspapers in proportion to the population. By means of our organization we have now uniform rates on job work and on legal publications. It must be admitted, however, that it is no child's play to hold together, and recently one of the members kicked over the traces for some fancied wrong, and secured the printing of the county receipts and expenditures at but little more than one-third the regular legal rate. Professional jealousy, suspicion of unfair dealings and fear of favoritism, are difficult to overcome in competitive contemporaries.

There is nothing that is desirable in this world that is not difficult and the only danger is that of yielding on account of the difficulty. If a local city or county organization, based on justice,—on the principle of securing what is right for the members, for the calling and for the public,—holds firmly together and persists in the necessary work of education, of the promotion of right views inside and outside of the organization, recalcitrants will, in time, be brought to reason, be forced to a realization that what is best for all is best for each.

The Winnemac, Ind., *Democrat* is to have a new $6,000 building, two stories, 34 x 100 ft., plans for which have just been made.

PAST-PRESIDENT JAS. R. BETTIS A NEWSPAPER MAN ONCE MORE

WHEN the National Editorial Association was organized, Mr. Jas. R. Bettis was the manager of one of the best job printing and daily newspaper offices in all the Southwest. He was also President of the Arkansas Press Association, and, in 1888, at the San Antonio Convention was elected President of the National Editorial Association, succeeding in the office, his warm, personal friend, Gov. A. B. White, of West Virginia. He presided over the very successful, enjoyable and in every way, memorable convention at Detroit, Mich., in 1889.

Two papers by Mr. Bettis, one on the "Arrangement of a Job Printing and Newspaper Office," and the other on "Conducting a Model State Press Association," printed in early issues of the NATIONAL PRINTER-JOURNALIST, attracted wide attention. They were eminently practical and resulted in much good to employing printers and newspaper-makers, and to the conductors of press associations. Mr. Bettis, being an all-around printer and newspaper man of broad experience, was a most effective and enthusiastic worker in press organizations. He subsequently entered the printing and publishing business in St. Louis, and later a manufacturing and mercantile business, in which business he has been engaged for many years. He is once more in touch with his old calling as shown by the following letter:

ST. LOUIS, MO., June 10, 1909.

Mr. B. B. Herbert, care National Printer-Journalist, Chicago, Illinois.

MY DEAR HERBERT:—I am sending you under another cover a copy of the Webster Groves *Times.* If you will read the marked announcement you will see that I am back into the newspaper business again, not only as a stockholder in the paper but conducting a department editorially. It is a pleasure to think that I am once more in the ranks with my old friends.

I regret that I am not in good enough health to undertake so strenuous a trip as the one to Seattle and Alaska. Hope you will go and have a happy time as usual. If you do go, will you not kindly extend to the Past-Presidents especially, my kindest regards and remembrances on any occasion when you may be formally together.

With best wishes, Yours truly,

JAS. R. BETTIS.

All his old friends will regret his ill health and that he cannot attend the approaching convention. The trip to Seattle and to Alaska would make a young man of him again, if his health could permit him to take the journey.

The new paper, with which Mr. Bettis is connected, is the Webster Groves, Mo., *Times,* and he conducts a department under the caption, "The City's Welfare." We like the name and certainly every home paper ought to have such a department.

Webster is a suburrb of St. Louis and has its own neighborhood interests to conserve. Our great cities

have many matters common to the whole city, but there are numerous neighborhoods that have distinct local interests and support local papers. Chicago has a score of such papers, and for the past five years, we have been publishing, in connection with the other publications and business, a weekly paper, *The Ravenswood Citizen,* issued every Saturday morning, and serving a large part of the Twenty-sixth Ward of Chicago, with a population of some thirty thousand.

Recently, Mr. E. B. Fletcher, at one time Corresponding Secretary of the National Editorial Association, has established a very successful newspaper at Hyde Park, on the South Side of Chicago, called the *Saturday Evening Call.* His field embraces a territory with a population of some eighty thousand. These papers are similar in character and purposes to the local papers throughout the country, so that we conduct country newspapers though residents of a metropolis.

AN ECHO FROM TWENTY YEARS AGO.

As a conclusion to this somewhat rambling talk, we feel that we can not do better service, on this near approach of the twenty-fourth annual convention of the N. E. A., nor do greater justice to the past and to the work that the Association inaugurated and has been carrying forward during all these years, than to quote the following from the President's Annual Address by Mr. J. R. Bettis, twenty years ago, in Detroit:

The subject of the "Progress of Libel Law Reform" is of the highest importance. In connection with this reform the National Editorial Association has shown its ability to inaugurate and promote a great National movement of practical value to the profession. Our Association can justly claim the credit of having set the wheels in motion which, under its watchful care, will never stop until the antiquated and unjust statutes, which are only of use to restrict the proper freedom of the press—a freedom that is solemnly guaranteed by the organic law of all the States —shall have been changed to meet the conditions of modern times.

The papers touching upon "Discounts to Agents" and "Newspaper Directories" will lead to the consideration of our relations with the agents. In view of possible action by the National Association of Newspaper Advertising Agents, as suggested at their last meeting, this subject—always a live one at editorial gatherings—may become of even greater importance than at present.

A thorough discussion of the topic, "How May Our State Association Meetings Be Made Most Interesting and Valuable," should give us some practical ideas which will be of value to the organizations we represent. The subject is especially adapted to this meeting, for at no other time can there be so excellent an opportunity for an exchange of opinions among those most experienced in Association work.

The other topics on the program are of equal interest, and have been given out to those believed to be best fitted for suitably presenting them. Our attention will also be engaged by two distinguished members of our profession —Col. Elliott F. Shephard, of the New York *Mail and Express,* and Mr. W. J. Richards, of the Indianapolis *News,* who will address us along professional lines.

The subjects of printing-office insurance was discussed at the meeting of the Executive Committee, and it was understood at that time that a practical plan for remedying any evils that may exist in this connection would be presented for your consideration at this meeting.

If we set ourselves seriously to the consideration of the subjects named, and others that will doubtless arise during our session, we shall surely gain many practical ideas. We may, perhaps, set in motion some new reform that shall demonstrate again to the home Associations the practical value of this organization.

* * * * * * *

Our Association held its first meeting in the extreme Southern State of Louisiana; the second in a Central State, Ohio; the third in the West, at Denver, the fourth in the Southwst, at San Antonio; the fifth here, in the Central North; the East is yet unvisited. Without at all intending to discriminate between particular points, it is suggested, if suitable arrangements can be made, a meeting in one of the Atlantic States would tend to increase the interest of the numerous strong Associations located there in our organization. It is very desirable that the many able and influential journals of that section not now represented in our Association should give it their earnest kindly co-operation. A meeting in one of the principal cities of that part of the Union would doubtless tend greatly to such a result.

President White, in his address to the San Antonio convention, proposed the publication of a general newspaper directory, under the auspices of this Association. The suggestion was considered premature at that time, and may be so yet. The idea is a good one, however, and should not be lost sight of. I would recommend its further consideration at this meeting, with a view to ascertaining just what conditions are required in order to make such an enterprise a success.

The most pressing need in the publishing field at present is for a uniform standard of prices for advertising space for papers of 3,000 circulation and less. Such prices should be founded, like other values, upon the cost of production with a fair profit added. They should be computed for papers of 500 circulation and less, and rising by amounts of 250 to 3,000, cover all the intermediate ground. To get the required basis for such rates, careful and accurate statistics of the cost of running weeklies in all parts of the country should be gathered, the results compared, and therefrom the final tables made. Such standard prices, published and endorsed by the National Association, would doubtless be accepted as correct by a very large number of publishers, and the effect upon rates could not but be favorable. It seems to me that this would be a very appropriate task for this Association to assume.

I believe the time has come to consider whether our Association, in confining its action to the three or four days of its annual sessions, is doing all that is in its power for the welfare of its members; whether it is not feasible to establish a permanent headquarters with a permanent secretary, who shall keep alive and carry on throughout the year the work begun at our conventions. There are possibilities of great good in connection with such an enterprise. I recommend the subject to your careful consideration.

I desire to acknowledge the invaluable assistance given me, in the work incident to arranging for this meeting by the National Journalist. Also, to warmly second the recommendation made by President White, at San Antonio, that this journal receive the hearty endorsement and support of our State and National Associations, as well as individual publishers of the United States. We print

something like seventeen thousand newspapers on this continent, devoted editorially to the advancement of every earthly interest except that of their owners. We fight everybody's battles but our own. This journal is the organ of the organs—our own champion. Since its establishment, and largely through its means, the cause of co-operation and fraternity among publishers has advanced with rapid strides. I believe that by promoting the welfare of this journal this Association will best assure its own prosperity, and I trust that before our adjournment some plan may be suggested whereby the more general and active support of this publication by the State organizations may be assured.

Special acknowledgments for valuable services rendered are also due to several individuaal members. To ex-President B. B. Herbert, who has been a most energetic, though, self-constituted, missionary of our Association, presenting eloquently its cause at numerous State conventions, and winning it many friends; to Vice-President Stanley, for assistance at the South; to Treasurer Lowrie, for valuable work outside the line of his official duties, and to Mr. J. A. Sleicher, of New York, who improved the opportunities offered by his residence at the metropolis to render timely and valuable assistance. That Secretary Fletcher has faithfully fulfilled the duties devolving upon him must be patent to all attending this meeting, but to none is it so well known as to myself, who have seen the characteristic energy with which he pushed the details of his work.

We seek, in this National Association, no other end than to carry forward, on a broader scale and with wider application, the work begun in the State organizations. We aim to concentrate and unite, for the advancement of our profession, the wisdom and strength of all organized bodies of newspaper publishers. Our profession is a peculiarly homogeneous one. The publisher in Maine, in Georgia, in Arizona, in Oregon, labors under substantially the same difficulties, and seeks by practically the same means to gain a common end. There is no apparent reason why we should not act in perfect harmony in those causes which require our united strength. Those who have observed the progress of editorial association work know that never were State Organizations so numerous or so flourishing as at present, and that those most prosperous are the ones which have been prominent in this National body. A few State societies have hesitated to join us, fearing, perhaps, some limitation of their liberties. Let such read carefully our constitution, and see how entirely lacking is any assumption of such powers. Others have scouted the idea of our being able to accomplish any practical results. These we may point to our work in the cause of libel-law reform, before referred to—itself alone sufficient to justify our existence. There is much that remains to be done and to be enjoyed by the delegates to the National Editorial Association conventions. We, who have an interest in the advancement of our profession, have an abiding assurance that we are working the right way to reach righteous ends. Let us go forward, thanking God and taking courage.

The Iowa College Press Association elected H. W. Wagner, of Calamus, Ia., editor of the *Iowa State College Student*, as president, and George A. Clark, of Grinnell, college secretary.

The Indiana Harbor, Ind., *Sentinel* has changed hands. W. W. Moberly made a deal whereby the weekly has become the property of two St. Louis men, W. M. Malone and G. E. Barrows.

THE MODEL BUILDING OF THE RED WING PRINTING COMPANY.

(CONTRIBUTED)

THE new building of the Red Wing Printing Co., publishers of the *Daily Republican* and the *Weekly Republican*, which has just been completed, is one of the model structures of its kind.

To begin with, it has a splendid location, next to the well-known Sheldon Memorial Auditorium, across the street from the Carnegie-Lawther Public Library, and near the new Federal building, which buildings cluster about Broadway Park. It has vacant space all around it varying from 40 to 100

New Fire Proof Building Erected by the Red Wing Printing Company

feet or more so that sunlingt and fresh air find free access to every department, from the basement to the upper story.

The building is 40x80 feet and consists of a high basement and two stories. It is constructed of paving brick and Red Wing sand-lime brick, and hes re-inforced concrete floors and roof and iron stairways throughout.

The various departments are separated by iron dooors and door frames, with wire glass. The elevator has iron shutters

Office of the General Manager, Jens K. Grondahl

which close automatically when the temperature reaches a certain height and there are other minor devices to prevent the possibility of fire, if it should ever occur, from spreading from one department into another.

Facing the street, on the main floor, are the offices of the accounting department, the advertising department and the stenographers, together with editorial rooms and the managers office. Further back, the office of the job department, the linotype machines, the composing room, the make-up department, etc., occupy the balance of this floor.

The press room is in the basement and a more delightful, convenient and economical place for turning out press

Office of the Job Printing Department

work is nowhere to be found. On this floor is also a room devoted to the newsboys, with entrance from the outside, a spacious vault of modern construction, the heating plant and toilet room. In the rear, where goods are brought in and out, there is an ante-room closed off by brick walls and iron doors, and from which access to the elevator is had, this arrangement having been decided upon to prevent cold from coming into the press room and affecting the temperature in winter, an to shut out dust and wind in summer, when the large doors at the rear entrance are open.

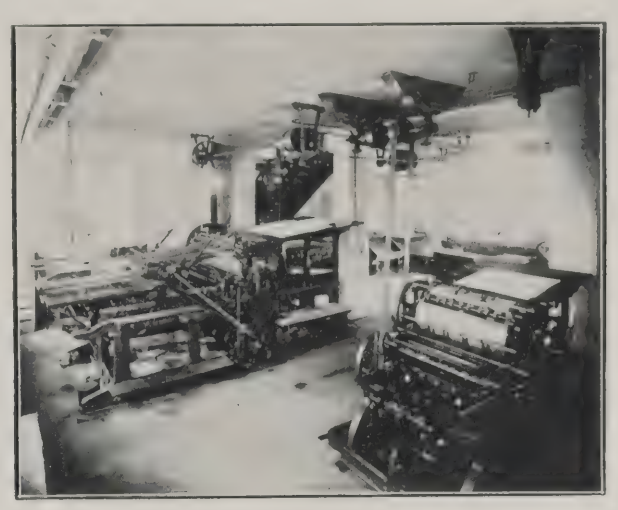
The top floor is devoted to bookbinding and blank book manufacturing and is one of the lightest and most attractive work-rooms imaginable.

A Corner of the Composing Room

On account of its fireproof construction and the distance from other buildings, no insurance whatever is carried on the building itself.

Each department is fully equipped with every possible convenience for carrying on the company's large business in an economical and efficient manner. The saving on light and insurance alone will pay the interest on a considerable sum of money, to say nothing about the quantity of stock which is saved from injury from vermin and other causes.

The effect of the well lighted and well ventilatted building and the very agreeable surroundings is sure to be beneficial to the health of employes and add to their comfort and satisfaction, resulting in more and better work with



Partial View of Press Room

less fatigue. The owners of a number of printing establishments in other cities have already viewed the Red Wing Printing Company's new plant and have concurred in the opinion that there are few, if any, similar establishments in the country so complete in their appointments and so beautifully located.

The National Editorial Association, when in Red Wing last year, dedicated the building which was then under construction, and local members spoke favorably of placing a tablet on the building commemorating the fact that Mr. Herbert, while editor of the *Republican,* called the meeting when the N. E. A. was organized, and served as its first president. The Red Wing Printing Co. was founded or organized by Mr. Herbert in July, 1877, and the *Daily Re-*

Looking from the Business Office toward the Advertising Department. Enclosure to the right is for the Stenographer.

publican was established by him in October, 1885—his company, of which he owned two-thirds, having purchased the weekly *Republican* in 1880, and continued its publication, together with the *Advance* as a semi-weekly until the establishing of the *Daily Republican.*

NEWSPAPER CRITICISMS

By O. BYRON COPPER

Address all communications for this department to De Soto, Wisconsin.

WITHOUT taking up much time and space with introduction this month, I just want to congratulate Editor B. B. Herbert of this magazine upon his excellent handling of the stamped return envelope subject in the May number. Perhaps you have all noticed that Col. Herbert possesses a wonderful perennial mind. Like good wine, it improves with age, and seems never to lose that enviable power to penetrate to the very heart of the subject and carefully and unerringly pick out the golden threads of truth. His treatment of this question of the U. S. Government's practice of printing stamped envelopes, forms the most fair, clear and able discussion of the matter that has come to my notice. It ought to convince any jury that the department is wrong.

Roswell H. Fadden, of the Morris, Manitoba, *Herald,* answering a personal letter of mine, writes me as follows:

DEAR FRIEND:—* * * With regard to what you say about Rex Lampman, I believe you are right. All the world loves a good fighter, and as he has not been the agressor in this case, I think he is perfectly justified in the course he is taking in exploiting the "mail order" houses.

You will undoubtedly notice that I am following the instructions of the department conducted by you in making up the paper, and in setting the ads, insofar as I am capable. I enclose two specimens, not for criticism, but to find out if they are in accordance with the principles you advocate. In the large one I have made the changes outlined in your last installment, with the exception of taking out the underscore and setting the main display line in lower case. Thirty-six-point Gothic is the largest extended letter we have in the plant, and thought it best to make a full line. We have a very limited supply of type in the office, and very often I find it impossible to set an ad as I would like.

As I intend to take up the subject of Rex Lampman and his political boycott elsewhere during the course of this installment, therefore, I need not touch upon it here; but confine myself exclusively to the subjects pertaining to Brother Fadden and his own work. By referring to my May department, it will be seen that this advertisement (Exhibit 1) to which Friend Fadden refers in the foregoing letter is not exactly the same as that reproduced in the former installment, although of course there is a resemblance. This last effort, too, is an improvement. However, the under and over-scores in the head and tail of this specimen do not assist its commercial or esthetic value; forsooth, they are detrimental to both. Hitching the two couplets of panels together with those bits of brass rule that resemble the ligament that bound together the Siamese twins, was unnecessary and a veritable injury to the optical effect. These spaces between the two panels should have been left pure white, and the space above and below the line that divides the two panel couplets equi-distant to them. It is seriously questionable whether it were necessary to make the main display line a full one, or the signature full. I certainly should have preferred the signature, at least, set to the center, with a normal nut-quad space between words, than spread out abnormally to eke out the line. The jaunty air lent by the flanking cuts gives the compositor of such a specimen license for very normal work, only, whereas, Brother Fadden has achieved a strained, stiff effect by spacing for full lines, dropping in underscores, etc.

No. 1

MARCUS, IOWA, May 20, 1909.

Mr. O. Byron Copper, De Soto, Wis.,

DEAR SIR:—We are, under separate cover, sending you a few copies of the *Marcus News.* We have been in the publishing business only a few months, and the ad composition and makeup of the paper is the work of a boy of 20 years who has had only about two years of experience and that mostly while he was making his way through school. We are aware that there are many defects in style and workmanship, and desire that you give us such pointers through the columns of the NATIONAL PRINTER-JOURNALIST as may suggest themselves to you.

Thanking you in advance for this criticism, we are,

Very truly, FREEMAN & SON.

Under the circumstances it is beneath me to be too severe with the Marcus *News,* a big seven-column quarto on ready-prints. The contents of the paper are good, and the feature of keeping the displayed advertisements off the front page is highly commendable. The make-up may be materially improved by following out my injunctions as reiterated over and over again from month to month in this department: Get the larger ads to the bottom, with the little ones graduating toward the top of the pages; and all pushed to the righ-hand side of the page. Quite as simple as falling off a log, isn't it? About the only thing that the *News* is doing that is unbearable is the way it is having its double-deck heads set. The heading over the Civic Commercial League meet, in the issue of May 13, is the best heading in the entire budget of copies at hand, and ought to be adopted by the office as the proper style, and adhered to without deviation. The three words in the title of this sheet are too widely separated to look well; one almost fails to realize that they are connected or related in any way. I would cut off the period and close the three words up to the center. This would leave ample space at both ends

for a live little ad for the paper or the town. The boy's ads show that they are the work of an amateur, all right, but let us hope that they will improve as the boy studies the columns of this magazine and all other examples of good printing with which he may come in contact.

ALMENA, KANSAS., May 16, 1909.

MY DEAR MR. COPPER:—Am sending a few copies of recent issues of the *Plaindealer* and hope to have the honor of your judgement on same.

Almena is a small town, the shop is not supplied with material that, to my idea, one would select for himself.

I am trying to handle all of the mechanical work and any suggestion from you will be greatly appreciated.

Wishing the N. P.-J. the best of success, I beg to remain,

Yours truly, D. B. McKAY.

The Almena *Plaindealer* is a five-column quarto printed wholly in the home office. The front page is neatly made up and absolutely clear of displayed advertising matter. The local news-service offered through the columns of this little sheet is excellent. The local reportorial service is good and that is supplemented by news-letters from correspondents located in surrounding communities, which is one of the best

No. 2

subscription-getters and one of the best means of holding subscribers that I know of. DeVinne is the letter predominating in the displayed columns; long-time readers of this department know pretty well what I think of that grand old type-face for advertising purposes; but it doesn't seem to me that the compositor of the ads in this publication understands just exactly how to use it to best advantage. De Vinne, like the Gothic family, must be dealt with lovingly, carefully, sparingly, naturally—it is a clean-cut letter, but graceful and legible to a degree, and must therefore be combined only with clean-cut, graceful borders. Round-cornered brass rules (in the various bodies) are ideal for conjunctive use with DeVinne. These give the curving black masses of harmony. But DeVinne is black—don't forget that fact—and that's where the care comes in: Surround each line or mass with plenty of white, and you'll learn to love DeVinne. Don't try anything freakish with DeVinne; it is too dignified to be so exploited; it won't stand the insult; just follow plain, decent, dignified, normal schemes, and you'll soon begin to understand my affection for this popular old type-face. I wish the make-up of the other pages

of the *Plaindealer* were half so good as that of the initial page: So many newspapers give their whole attention to making the first page all right, but neglect entirely the rest of the paper. I think it is quite as important that the back page should be neat and attractive as that the front page should be so, and also quite as important that the inner pages should be neat and attractive as that either of the first mentioned should be so. I not only think this and recommend it to others, but I practically apply it in my own paper, as I here prove by reproductions 2 and 3, the first of which is from an inner page and the second the back page of the same edition. Persons who wish to learn how to make up a paper right will do well to study these two exhibits carefully.

It affords me pleasure to acknowledge receipt of a little blotter from the Mountaineer Printery, Walhalla, N. D., with the compliments of Walter R. Lee. The

blotter has the month of June calendar printed upon it—that month of brides and flowers—and appropriately calls the recipient's attention to the Mountaineer Printery's facilities for properly handling wedding stationery orders. Good, live advertising for a print-shop.

CADILLAC, MICHIGAN, May 9, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I will greatly appreciate any criticism you may have to offer. I set this page ad in the composing room of the Cadillac *Evening News* of which place I am "unsotled." If it passes your expert criticism, I shall feel that it is a perfect piece of work.

Thanking you for past favors, I beg to remain,

Very respectfully, L. H. CURREY.

I can't read all of Brother Currey's letter as presented above, so have shoved the job of deciphering it off upon the poor compositor; but I make out the gist of it. In Exhibit 4 is the advertisement to which the brother has called my attention, and on which I am pleased to place my O. K. as *one of the finest ads that ever came to this department.* Which is an additional proof of a former statement I made in these columns, that "a good hand-write is no mark of a good printer." The compositor of this advertisement knows about all there is to know of good advertisement composition. I don't wish to flatter him, nor to spoil him with pretty speeches, but it ought to do him good to know that

I think that a man who can set so perfect an ad deserves a high place in his calling. The original of this ad was printed in two colors, red and black, and, while a very good register was attained, yet in some instances the lines in red were slightly dislocated. To make up such a big form as this for two colors is no small undertaking, and, therefore, that some of the red prices did not hit just exactly the right spot is not surprising. Outside of that this is "a perfect piece of work," indeed.

TRAER, IOWA, May 15, 1909.

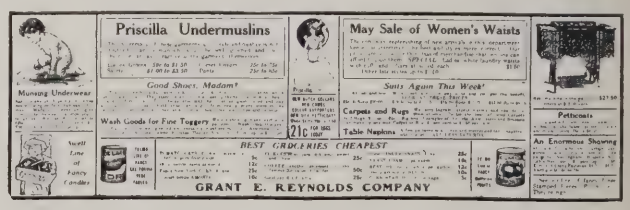
O. Byron Copper, De Soto, Wis.

DEAR SIR:—I send you by this mail copies of our first two issues of the new *Star-Clipper,* as enlarged to a seven column quarto, all printed at home without the use of any plates, in a town of 1,500. I would be very glad to hear your opinion of the paper. It comes nearer to my ideal than anything I have been able to get up heretofore. I have an honest circulation of a little over 3,000 copies, in fact, the average number printed the last year is almost 3,100. I have about fifty township correspondents. Very truly, E. E. TAYLOR.

Some readers may sometimes wonder why I persist in quoting these letters which I get from contributors, although the explanation is right in the letters themselves. Now, here's this one from Brother Tay-

No. 5

lor, which, I am sure, contains more in its brief lines than I could say in twice the space—more because it carries the conviction that rightly belongs to the narrative of fact, true and tried. Just think of it: In a town of 1,500 people, and that town not a county-seat, and having an average weekly circulation of 3,100 copies, which is conceded the world's record in the *Star's* class. And now then look at Brother Taylor's letter again: Almost in the same breath that he tells of his big circulation he hastens to add that he has "about fifty township correspondents." Is that enough for you, Mr. Grumbler against the little country news-letter? There's more fun made at the expense of the country correspondent, perhaps, than over anything else journalistic; and hundreds of editors and newspaper men join in cursing the things as silly and obnoxious abominations, but just the same the country editor who is wise enough to get just as much of that



No. 6

sort of thing into the columns of his paper as he can accommodate is the wise-guy that's making good nowadays. I know to the average cultured writer the average country news-letter is nauseating; I sometimes find the task of proof-reading doubly irksome just on account of the news-letters they contain; but there are exceptions to the news-letters and little or no exception to the public's appetite for them. The *Star-Clipper* is now a model country weekly and a remarkable model at that. I wish you could have read the editor's review of the paper's past thirty-one years of existence, as exploited in a late issue. Up-to-date composition,

make-up, (including clean front page), editorial work, and presswork, are all up to high standards. Exhibits 5 and 6 are two samples of the ad composition.

PATEROS, WASHINGTON, May 17, '09.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I am sending you a copy of the first issue of the Reporter for criticism.

Hoping you will see a little good in it, I am,

Yours fraternally,

ARTHUR R. DODD.

Well, now, Brother Dodd, I should say it were not hard to find much good in the Pateros *Reporter*. It's a nice, neat, clean, newsy, progressive little paper—little now, being a six-column all-home-printed folio—but destined, methinks, to grow. Brother Dodd (I take it he is responsible himself for most of the good points, mechanical and otherwise, about the *Reporter*) is a good printer and understands how to get things

up in tasteful, attractive shape. Exhibit 7 is a picture of the front page. The paper is well printed, well patronized, and generally well gotten up. May its success be limitless!

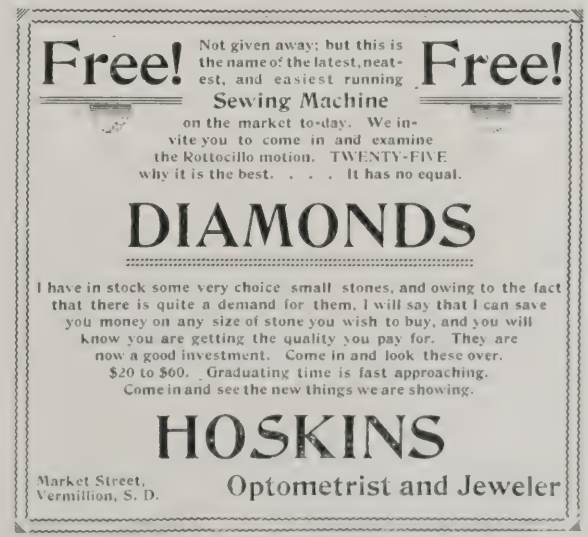
Rex H. Lampman needn't think he's the only pebble on the beach—nor the only young country editor who has a political squabble on his hands. Editor H. C. Chappell, he of the romantic periodical of the mountains of Hyden, Kentucky, called *Thousandsticks*, is unfortunate enough to entertain a desire for good, clean local government and good, clean, fair and square public officials, and, as a result of some criticism on his part growing out of that aforesaid desire, in which some rather shady-looking actions of a certain county judge are overhauled and aired, Editor Chappell and his *Thousandsticks* are now facing a $5,000 libel suit. But Brother Chappell is evidenly one of those kind of men that, according to the hackneyed saw as quoted by Brother Fadden in a letter given in the earlier part of this installment, "the whole world loveth"—he's a fighter; and nothing daunted, he's going right after the alleged grafter stronger than ever. And to cap the climax, Mr. Chappell is a candidate before the Republican primaries for the nomination of clerk of Leslie county court. I don't approve of a country editor getting into politics (if he can help it) nor into public office; but, just the same, I can't forego wishing Brother Chappell success in both.

The mail that has just come in at this juncture brings me another copy of the Morris, Manitoba, *Herald*, in which I find the same ad which I have

No. 8

reproduced as Exhibit 1 in this installment, with the underscores removed, and I must say the improvement is appreciable. If the signatures had just been fixed as I recommend above, it would now be a very presentable ad. (Exhibit 8.)

By gosh! I'm tickled! The Dakota *Republican*, that grand Willey & Danforth creation from Vermillion, S. D., comes to me as I write these lines with a front



Free!
Not given away; but this is the name of the latest, neatest, and easiest running

Sewing Machine
on the market to-day. We invite you to come in and examine the Rottocillo motion. TWENTY-FIVE why it is the best. . . . It has no equal.
DIAMONDS
I have in stock some very choice small stones, and owing to the fact that there is quite a demand for them, I will say that I can save you money on any size of stone you wish to buy, and you will know you are getting the quality you pay for. They are now a good investment. Come in and look these over. $20 to $60. Graduating time is fast approaching. Come in and see the new things we are showing.
HOSKINS
Market Street, Vermillion, S. D.
Optometrist and Jeweler

No. 9

page perfectly free from the displayed ads to which I so long and persistently objected. The paper looks thirty per cent better—is thirty per cent better. That was

about all the *Republican* lacked to make it perfect. Exhibit 9 is one of the *Republican's* striking ads.

And here is one of my own state contemporaries, the Rock County *Banner*, published by F. R. Helmer, at Clinton, Wisconsin. It is a newsy, six-column quarto with ready-printed interior, but I am sorry to observe that it has not yet joined this department's clean front-page club. Ads on the front page is not the only respect in which the *Banner* does things wrong—but doubtless it knows that as well as I can tell it. Some newspaper men do; but they, like the rest of us common sinners, always have excuses abundant as to why they do so; so, what need of criticism?

Another state contemporary of mine is the Belleville, Wisconsin, *Recorder*, a five-column quarto weekly on ready-prints, by E. R. Adamson, whom I have mentioned on several proper occasions in the past. On April 30 last, Brother Adamson celebrated the third anniversary of the founding of the *Recorder* at Belleville, and judging from the fact that within that three years the brother has installed over a thousand dollars' worth of improved, labor-saving equipment, everything is indicative of present prosperity and many times three years more of life. As I have remarked before, Editor Adamson gets out a pretty decent little paper, although at present he's carrying just a little bit more plate than a paper the size of the *Recorder* will stand. He maintains a clean front page, makes his paper up pretty nearly right, and is far from a failure as a newspaper man.

E. Kennedy, of the office of the *Daily Chronicle*, Centralia, Washington, sends me this page advertisement,

L. A. KNOX & CO.
Oldest and Most Reliable Dry Goods Store

Don't forget when shopping in Centralia to shop at

Knox's, 525 Center Tower Ave., Centralia's oldest and most reliable Dry Goods store, housed in the handsomest building of its kind in the city. For nearly a quarter of a century our reputation for combining quality and low prices has been steadily growing. We would like to number you among our patrons.

We've a Grip on the Dry Goods Trade.

This establishment has long been known for the excellence of its Dry Goods, the reliability of every article of merchandise it sells and its ability to show always the latest styles. We hear daily such expressions as this: "I always come here for my dress wears because I have perfect confidence in the house." It is on account of our reputation as a square Dry Goods House that we do an exclusive business. A trial will convince you.

We Have Placed on Sale Ladies' Suits

Fine Tailored, the latest fabrics in handsome spring shades. A perfect fit guaranteed. The fabrics are fine summer weights worsteds, serges, prummellas in nobby stripes and plain colors, showing an assortment of two-piece suits and Princess suits

It is worthy of no further comment, and certainly not worth the space it occupies here, but is shown simply as a courtesy to Brother Kennedy's request.

A May issue of the Robinson, Kansas, *Index*, a bright, six-column quarto, was swelled beyond its usual size—yes, doubled in size—on account of the biggest advertisement that has ever been heard of in a Kansas country newspaper, the same being four

If you should see some good dollars lying in the street you'd pick them up; that would be an easy way of getting money wouldn't it? Well the dollars you can make by saving them on these clothing bargains is added to your bank account with as little effort.

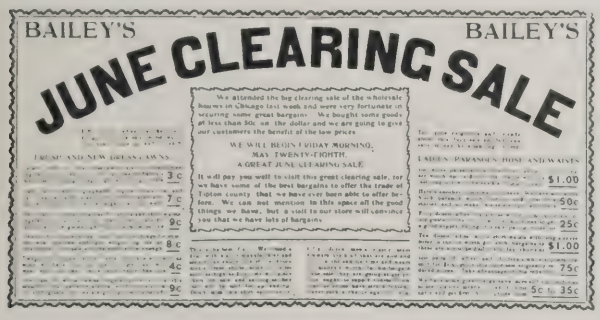
pure-reading-matter. If there was anything else more preferred in position, doubtless the advertiser would have been accommodated. It is a fairly neat-looking

ad, but is nevertheless not without flaws: For, instance: The college yell at the top should have been set in caps of a smaller face much to the betterment of the thing. And the heads over the matter in the four panels ought to have been included within the panel instead of cocked up over them. That way it takes a good deal of figuring on the part of the reader to "savvy" that the heads appertain to the matter that follows. The dinky leaders at the ends of the two lines flanking the signature, together with the underscores, are all useless and detrimental. It took time to get them in there which was all wasted.

Friend Tom Mc-Gregor, that ad-genius of mine with the *Leader* at Covington, Tenn., drops me a postal calling my attention to the advertisement which I here reproduce as Exhibit 13. He adds: "You will notice that I did not use any leaders in the price list, this privilege being granted by the advertiser." By reference to the said reproduction the reader will note how



No. 13

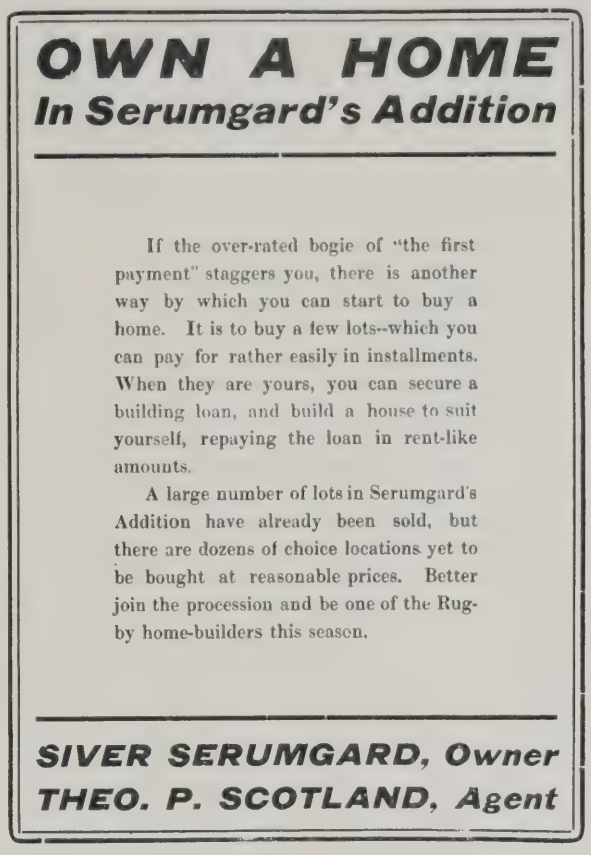
adroitly the use of leaders was avoided. I trust no one will gainsay me when I declare that the ad is a beauty. Curved lines form an antiquity that many of us today cannot even recall as popular, and shops supplied with curved quads are those that have been in existence for at least a few years; but even though we have all agreed that curved lines have fortunately passed for *good,* we cannot help agreeing also that curves can be made mighty effective at times, just as Tom McGregor has made them in this ad. This ad is a clever piece of work all through and not at all impractical.

Maybe a printer ought to be allowed a little more than common license in setting up an ad for a painter—

No. 14

and probably that is the way the Walhalla *Mountaineer* ad-man felt about it when he conceived this rather fancy specimen (Exhibit 14.)

Here (Exhibit 15) is an ad from the Pierce County (Rugby, N. D.) *Tribune* that's worth while. Observe



OWN A HOME
In Serumgard's Addition
If the over-rated bogie of "the first payment" staggers you, there is another way by which you can start to buy a home. It is to buy a few lots--which you can pay for rather easily in installments. When they are yours, you can secure a building loan, and build a house to suit yourself, repaying the loan in rent-like amounts.
A large number of lots in Serumgard's Addition have already been sold, but there are dozens of choice locations yet to be bought at reasonable prices. Better join the procession and be one of the Rugby home-builders this season.
SIVER SERUMGARD, Owner

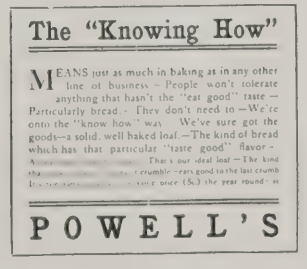
the dignity, the neatness and elegant whiting out in evidence in this specimen.

The Hinsdale, Ill., *Doings* ad-man is a fine mechanic, but in nearly every one of his creations there's a flaw in detail that spoils the whole business. For instance: Specimen 16 just lacks a two-point lead be-



No. 16

tween the underscore and the display line to make it right; and did you ever realize that an ad with a single rule around it as a border would not stand a double rule underscore in it of the same face as the border?

I have before me a big bunch of the Garland, Texas, *News,* in several copies of which many of the ads and much other matter is marked with a lead pencil; and I am going to forego any criticism thereon until I get some enlightenment by mail—until I hear from

the person who made those marks and get a little information as to what they mean.

The Glidden *Graphic,* that excellent Iowa sheet which I took just occasion to compliment in this department recently, used the comment doubtless to good advantage in its own columns of a subsequent issue, illustra-

John Deere and Fuller & Johnson Machinery

We are prepared to meet your every want this year in the way of all farm machinery and implements. We have the Fuller & Johnson plows, planters, and cultivators—the old reliable line. The John Deere plows and planters—none better made. The Fuller & Johnson Gasoline Engine—a dandy. The St. Louis buggies and the U. S. Cream Separator—all good ones.

H. C. Carpenter, Ralston, Ia.

No. 17

ting the same with the cuts employed in the review in this journal. Exhibit 17 is one of the lesser ads from the same edition of the *Graphic* which is both neat and pleasing.

An all-home-print five-column quarto weekly is the *Independent Herald* of Bertrand, Nebraska. It is a bright little paper with a clean front page and a very liberal advertising support. Typography is neat and impression good.

Editor Lyman E. Stoddard of the Wynnewood, Oklahoma, *New Era,* don't have the pages of his excellent paper made up right mechanically, but when it comes to a brilliant department of editorials, he's strictly in it. He's a very able writer and gives his readers full benefit.

Along toward the beginning of this installment I promised to tell you something more of my friend, Rex. H. Lampman, editor and publisher of the *Chronotype* at Neche, N. D., (against whom through the instigation and influence of one Senator Judson LaMoure, who owns a couple of stores in Neche, and who came within eighteen votes of losing a senatorship and his exalted position as a political boss, all on account of Rex, the local business men and merchants instituted a boycott, simply because Rex saw through a cleaner set of eyes than they, had higher ideals, and therefore helped ferret out and expose the corruption of certain politicians and a local political clique)—and I shall have to do it quick, or entirely break my promise. It seems that the local business men, headed by LaMoure himself, withdrew their support from the paper all at once and straightway began doing all within their power to ruin its young publisher and starve or drive him from the field. But Rex. H. Lampman is made of the mettle that is not easily driven. He is a natural born newspaper man and wields a pen far mightier than a dozen two-edged swords. He knows a lot about the mechanical side of the calling to which he was born, too. He came back at his local boycotters by accepting advertising from the big mail order houses. Chicago, and Grand Forks merchants clammored for *Chronotype* advertising space in which to make a bid for the business of the farmers in the vicinity of Neche. No sooner, too, had the attempted boycott against young Lampman become generally known than the state press from border to border (with one or two insignificant exceptions) threw all partisan feeling aside, and, with true fraternalism, took up the support of Brother Lampman, scoring Neche's pin-headed business men and denouncing Judson LaMoure's alleged part in the boycott. The natural result thus far has been that Neche as a town and Judson LaMoure as a politican have gotten a state-wide—more than a state-wide-newspaper advertising that has shown them both up in their true light and given them a beautiful "black eye" from which neither need ever hope to fully recover. And there's no newspaper man in the United States of America who will not say it serves 'em both right. And as for Rex. Lampman, the genius who has

been the cause of this double *denouncement,* it is exactly as the editor of the Rapid City, Manitoba, *Reporter* puts it: "They may compel him to move, but it will be only when he finds life in a graveyard untenable, and the companionship of the dead unbearable." As an appropriate coda to this war song, let us join in admiring this ad clipped from the columns of the *Chronotype,* and which goes to show how beautifully Editor Lampman is taking care of his mail-order advertisers. (Exhibit 18.)

BRAIN LEAKS.

The size of the house is not the true measure of the home.

Perhaps there would be less talk of equal rights if the wrongs were more equally endured.

The enjoyment of a meal depends about as much on who's around the table as what's on the table.

A lot of men who think they can manage the finances of the Government complain about the difficulty of financing a furnace.

The creeks that were powerful big streams when we were boys are mighty small rills when we return to them as middle aged men.

A lot of men are always demanding license in the name of liberty.

Ownership of money is vastly different from ownership by money.

—*From Wm. J. Bryan's Commoner.*

F. E. Andrews of Bloomer, Wis., chief clerk of the Wisconsin Senate, has been appointed secretary of the Wisconsin Press Association, to fill the unexpired term of the late R. W. Cheever of Clinton, postmaster of the Assembly, who died. Mr. Andrews is now engaged in arranging the program for the annual meeting of the association, to be held June 28, 29 and 30 at Superior.

THE SCHOOL OF PRINTING

CONNECTED WITH WINONA TECHNICAL INSTITUTE, INDIANAPOLIS.

VERY editor, employing printer and craftsman connected with the printing business should interest himself in the trade school movement. Those who have made a study of the situation realize that it is through the trade school alone that the ever-increasing demand for skilled labor can be satisfied and this only through the active and hearty cooperation of all whose interests are immeditely effected.

Among the several schools of printing throughout the country none, perhaps, enjoys more favorable advantages than does the School of Printing connected with the Winona Technical Institute, at Indianapolis. In point of extent, quality and value of its equipment, this school unquestionably leads all others. Its faculty, comprised of four specialists in their respective departments, has been chosen with great care and a system of instruction of high order has thereby been insurd. The environments of this school are exceptionally conducive to the moral, physical and material uplift of its student body.

Its central location is in its favor, and the extent and beauty of its grounds, its substantial and commodious buildings and the completeness of its arrangements for the health, comfort and morals of its patrons are at once a revelation to its friends and visitors. In order to obtain an appreciable conception of these conditions as well as of the progess made at Winona, one must visit the Institute and become familiar with the work accomplished there. From the time the visitor enters the "Gateway of Opportunity" until the last trade school has been visited, his interest will increase and he will go on his way a convert to the trade school plan.

The grounds, which were formerly occupied by the Government for arsenal purposes, are situated in an attractive residential section of the city and comprise sevnty-six acres, partially covered with native forest trees. Vines, shrubbery and flowers add their attractions, while walks and drives of permanent construction wind through the grounds in graceful curves, the whole forming a campus of unusual extent and beauty.

Prominent among the several massive buildings which house this family of trade schools is the Graphic Art Building, the home of the School of Printing, which occupies the entire first floor. Free of partitions, this great room econtains over 16,000 square feet of floor, is lighted and ventilated by twenty-nine large double windows and is equipped with the most modern machinery and appliances possible to secure. The visitor is at once impressed by the order and cleanliness which pervade the place. Then the system and thorough discipline under which the work is done claims his attention, and he remarks the fact that while the discipline appears perfect, it does not seem to be that of force or coercion but, instead, the result of real interest and enthusiasm which the student has been led to feel in his work. As the visitor inspects the work being done in linotype composition, typography and presswork he is astonished when specimens of artistic printing are laid before him and he is told that they are the work of young men who but a few weeks before were wthout any knowledge of machine composition or had been ordinary "strait matter" compositors and press feeders. Evidence, indeed, that each boy's disposition and capabilities had been carefully studied, latent abilities recognized and concentration fixed upon those practical qualities which promised most—proof conclusive of the superiority of carefully planned, constant and systematic instruction over the haphazard kind of the commercial office.

Winona is purely a training school, no regular line of commercial printing is persued. The practice for students is that used in connection wth Winona enterprises, or work especially designed for practice. With the exception of linotype, the students are not formed into classes at this school, instead, each student is trained individually according to his especial needs. If his education has been previously neglected, he is first given a thorough drill in English, punctuation, spelling or other necessary studies, interspersed with sufficient practice work to fix the principles and their application in his mind. In this manner he is advanced as rapidly as is consistent with comprehensive understanding. Instruction in each department is direct and personal, given by instructors selected not only because of their superior abilities as craftsmen but because of their successful experience as teachers.

In addition to the school work proper, the student has the benefits of lectures from time to time, delivered by prominent visitors upon art, travel, etc. These are frequntly illustrated by lantern slide pictures.

There are no party lines in the School of Printing. Any student who is ambitious to learn and to raise himself above the common level is admitted, regardless of his affiliations. No distinction is made except upon moral and educational requirements. The gate of opportunity is wide open to whoever may seek knowledge.

Every student who enters must come of his own will and accord, and must agree to obey the rules while attending school. No printed forms of rules are in use. The rules might be summed up in these two words: *Reverence* and *respect*. Reverence God, respect yourself, your instructors and the Institute.

The graduates from the various departments of the School of Printing have almost invariably made good. Many of them are now holding responsible positions over men who have spent years in an effort to pick up the trade.

The General Course in Printing covers ninety weeks, divided as follows: Preparatory, twenty weeks; Junior, forty weeks; Senior, thirty weeks. The Preparatory Course is for young men who have had no experience in printing. During this term the rudiments are taught, attention being given to simple forms in composing and press rooms. The Junior Course includes two terms of twenty weeks each. The first term is for young men who have had one or two years' experience in printing, and covers display hand composition and presswork of the variety found in the majority of cases making up the every-day run of commercial work. The second term takes up advanced composition, imposition and presswork, with much of the time spent in practical shop work.

The Senior Course consists of a term of thirty weeks. It provides special work for the student in the branch of printing for which he is best fitted.

Special courses are also offered in Typography, Presswork and Linotype. These are open to all printers who wish to specialize on some particular branch or who wish the higher branches only. In the press department students may study halftone and vignette make-ready, three and four-color process work, color mixing, color harmony, handcut and mechanical overlays, etc. The length of these courses is optional with the student.

The Linotype Machinist-Operator Course consists of eight weeks' instruction. The School of Printing not only teaches its students how to operate the Linotype, but also makes machinists of them, so that they may take care of the Linotype when repairs become necessary. In the School, the Linotype machines are taken apart by the students, the parts are carefully studied, and the machines are re-erected under the direction of a competent instructor. That the linotype may be successfully mastered, one should have some knowledge of hand composition. Students who have this knowledge are at once admitted to the Linotype class, but

those who have had no previous experience in printing are required to take a short preparatory course in the composing room of the School. Over one hundred young men and women have already graduated from the Linotype Department of the Winona Technical Institute School of Printing. The per cent that have made good is very high, proving that the Linotype instruction at this institution is thorough, and a guarantee of success to any student who has an aptitude for the work, and applies himself faithfully.

UNRESTRICTED SELFISH UNIONISM, A MENACE TO THE NATION, A CURSE TO MANKIND AS APPLIED TO LABOR

DESTROYS COMPETITION, BREEDS MONOPOLY, INCREASES THE COST OF LIVING, PREVENTS A SQUARE DEAL AMONG WORKERS, DECREASES PRODUCTION, DENIES INCENTIVE AND PROPER REWARD TO THE EFFICIENT, DRIVES THE OLD OUT OF WORK AND TO A CONDITION OF WANT AND PAUPERISM.

AMONG the incivilities, by which mankind or individuals provoke and irritate each other, selfishness finds itself in extraordinary proportions.

Capital, through oppression, has given birth to Unionism. Unionism through her false sense of justice, has given birth to a condition that will exterminate both. It is of the latter that requires some attention, the former will experience the value of this attention.

The primary causes of Unionism is to demand of Capital that which Capital refuses to give—higher wages. Suffice to say, higher wages come.

Unionism does not confine itself to one industry, or two, but includes every industry that manufactures or produces commodities for the existence of mankind.

The Plumbers' Union cannot say to the Clothes Cutter, "You cannot form a Union," or to the Electrical Worker, "You cannot form a Union," or to the Miller, "You cannot form a Union." Unionism is very liberal. If one industry has the right to form a union all industries have the same right, therefore, the Cutter forms his union, the Electrical worker his union, the Miller his union, the Butcher his union, the Shoemaker his union, etc., for the primary purpose of demanding higher wages for their members.

The Plumbers' Union, in demanding an increase for their members from Capital, cannot deny the same privilege to the rest of Unions.

Capital, upon the demand from the Plumbers' Union, says: "If we grant this increase we will of necessity have to raise the price of our production to the consumer.

Plumbers answer: "We care not what you charge. Raise your price, we are not buying plumbing. Let those who need plumbing pay for it."

Likewise the Electrical worker, the Cutter, the Miller, the Butcher, the Shoemaker, etc.

Is it possible the plumber is so blind that he cannot see that he is paying for plumbing every time he buys bread, or clothes, or any other commodity he requires?

Have not the Unions discovered that the price of commodities have been on the increase since the birth of Unions to such an extent that through their selfishness they have demanded further increases from Capital?

Have not the Unions overlooked the opportunity Capital has had by increasing the prices to the consumer in excess to the increase demanded of them for labor?

Can Capital and Labor conceive in the above arrangement anything but destruction of competition in foreign markets?

Therefore a menace to the nation

Justice cannot mean the right of Capital to do a harm to Labor, and, for an adjustment of same, Labor to do an equal harm to Capital. This arrangement but placed the one as pace-maker and if continued will kill both.

The reverse of this arrangement can but mean the right of Capital to do good to Labor, and for an adjustment of same, Labor to do an equal good to Capital, and the pace-maker will allow both life.

Having just glanced at a condition bordering on insanity a more serious charge finds its birth in Unionism.

Mankind chooses for its own a people, not only young, but old, not only intelligent, but ignorant, not only thrifty, but thriftless. Likewise Unions claims all these in moderation.

The young, after serving an apprenticeship and gaining a knowledge of a certain industry or trade, are admitted to a union with the advantage of a physical condition over the old.

The old, after serving an industry, a Union, and as a teacher for the young, finds as he ages his inability, through a natural physical condition, to compete with the young. Capital recognizes this truth and discards the old for the young. Capital cannot say to the old "although recognizing your faithful services in the past, we can no longer afford to pay you the scale demanded by the Union because of your inability to compete with the young, but will pay you for what you can produce in comparison with the work of the young."

Unionism will not allow this arrangement—the one is a scab, the other an oppressor.

But for the old he must either seek some new vocation, of which he is less qualified, and uncontrolled by Unionism, or resign himself to the good graces and expense of the Union, which disqualified him. This Union which assumed and relieved Capital of the responsibility of his support for which Capital justly offered.

A, B and C, all members of the Engravers' Union, employed by the same employer, all doing the same class of work, all enjoying the same minimum scale of wages: the ability of A allows him to produce a certain number of cuts per day. B's ability allows him to produce a greater number. C's ability allows him to produce a still greater number than A or B.

"With justice to myself," says C to his employer, "in comparison with the amount and quality of work of A or B, I feel entitled to a greater compensation than A or B receives. I can turn out more and better work than either."

"Right you are, C. I have noticed that. What, in your opinion, should you receive?" asks his employer.

"If I can turn out one-half again as much as A," says C, "I believe I am entitled to one-half more pay, am I not?" "Upon second thought, C," says the employer, "I find A and B are not up to your standard. It is not true that I am not paying you enough, but that I am paying A and B too much."

The Union does not allow the employer to decrease A's or B's wages, nor can it force the employer to pay C more for his services without increasing A and B. The employer has the right if in his judgment he can secure from the Union in place of A and B two such as C; but experience teaches him mankind are not all alike, and he finds consolation in the thought that although A, B and C are not producing alike, their combined production compensates him for the salaries demanded of him by the Union, in other words, he strikes an average of the production of the three. Through this arrangement C becomes dissatisfied. He ceases to produce more or any better than A, likewise B.

What incentive is there for C to become any greater or to produce more than A?

What is this system that places the inferior as a standard for the superior? What is the system that destroys the moral fibre of man by her teaching of superstition? That destroys the incentive for man to become great? That destroys the individuality of mankind—Unionism.

Therefore a curse to mankind.

E. L. Sabey. 2503 Hermitage Ave., Chicago, Ill.

REVIEW OF JOB PRINTING

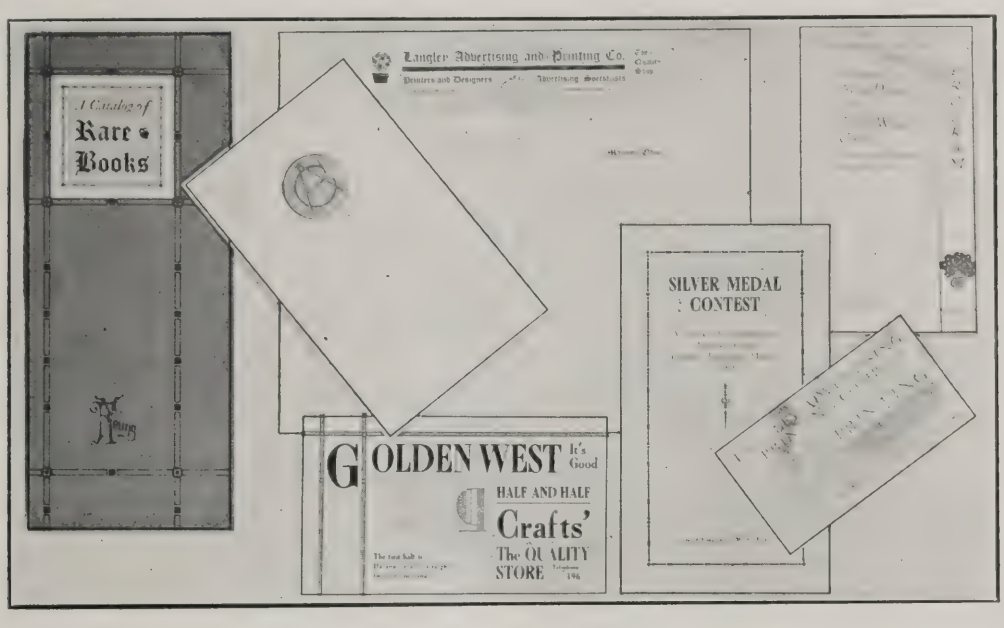
BY E. S. HANSON,

Address all communications for this department to 925 Linden Ave., Wilmette, Ill.

THE letter head contest, while not developing as many contestants as was hoped, was at least successful to the extent of finding for the publishers of *The Cement Era* a letter head exactly to their liking. The lucky contestant to secure the order for 5,000 heads is our old friend Howard C. Hull of Asheville, N. C., whose work is reproduced on our colored insert in nearly full size. It is in black and red, on linen-finsh Textile bond. It will be noted that the head is entirely in one series of type, and that series of a design somewhat closely approximating the style of headnig used by *The Cement Era*. This type is especially appropriate for a publication devoted to technical topics, machinery, etc. The display is very well balanced, bringing out strongly the name of the publication, yet not allowing it to stand completely alone. In other words, the head is a unified whole, of which the name of the publication is the most prominent component part. And this is as it should be. The ornaments are especially adapted to a publication whose purpose is to disseminate knowledge. The only possible criticism to be offered on the job is that the rule across the top is somewhat heavy. There are several ways in which this objection may be overcome, possibly the best being to use a narrower rule for the red, closing the black rules up against it. Another method would be to use a narrower red rule, leaving the black as it is now, thus throwing two lines of white between the red and black on either side. This might, however, give too much of a "barber pole" effect. Still another remedy would be to use a lighter shade of ink; but this would of course lighten the rules and ornaments in the center of the head, which are now very well balanced against the black.

Second and third choice is given by the *Cement Era* to specimens submitted by Winfred Arthur Woodis, Worcester, Mass., and S. H. White, Rock Hill, S. C., respectively. Mr. Woodis has printed his specimen on Woronoco bond, with the main line in a deep orange. The lines below it appear to me to be too prominent. They might have been set in a smaller size, making the lines somewhat shorter. The word "to" should not be capitalized.

Mr. White has his on plain London bond, with the background in a light blue tint. It is a very good piece of work, but would be improved by having the initials in a larger size, giving a cap. and small cap. effect.



Specimens by L. H. McNeil, Marion, Ohio.

Hull submitted three other entries, two of which are exceptionally meritorious. The paneled head I do not take a fancy to. It includes too many styles of type, combined with too much rule work and ornamenation.

Mr. Woodis also submitted another specimen. The color used was a light blue tint, so that the reproduction does not show the true balance of the original. On first glance the head gives one an impression of being bare and unfinished around the main line.

It is of interest to note, as I have done in the separate proofs submitted, that the specimen from W. G. Moore presents a much better appearance without the color, leaving white space where the color is printed.

Mr. Wietlispach has given us a good head, but it was rejected as being too decorative for a technical journal.

I should like to show and comment upon all the entries, but cannot do so for lack of space.

In Class 2, composed of those who have never before won a prize in any contest, the honors go to F. A. Van Gelder, Lima, N. Y.; Warren S. Dressler, Camden, N. J.; and Richard Hartman, Centralia, Wash., in the order named.

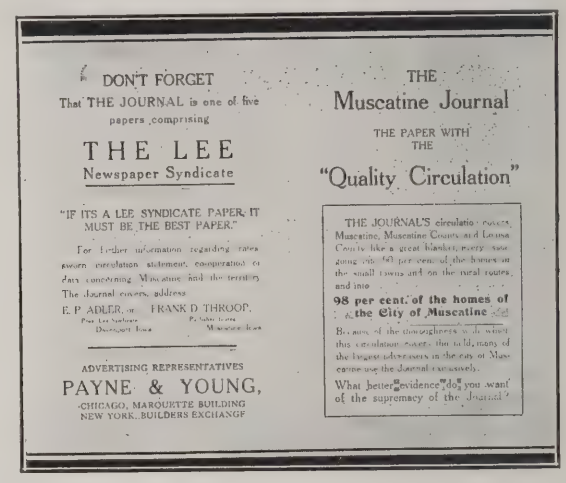
Mr. Van Gelder gives too much prominence to the office addresses of the paper. Mr. Dressler would have a very satisfactory head if it were somewhat reduced in size. Mr. Hartman has gone to the other extreme; he might well have used a larger size of text for the name of the paper, using the same length of line, without letter spacing.

W. R. Howe, Beebe Plain, Vt.—There seems to be a tendency toward rather too heavy display in your letter heads. In fact, I think a large part of printerdom needs to call itself to a halt in this direction and calm down somewhat. A letter head is neither a signboard nor a newspaper advertisement, and should have a different treatment from either of these. Primarily its purpose is to let the recipient of a letter know at the outset who the letter is from. This does not require any undue amount of black ink; in fact, such a display is not consistent with the dignity which should attach to a letter from one man to another. We may all of us with propriety look to our work with a view to improvement in this regard.

This is a little blotter which Howard C. Hull sends out in an envelope addressed to "Mr. Modern Business Man, Asheville, N. C." In the same envelope

is also a little folder telling some plain facts on "The correct use of Type, Ink and Paper." Hull also sends me a bunch of good letter heads, among them his latest design for his own shop, which is here shown. The ornaments and rules across the top are in light blue, the line "Good Printing" in red, and the rest of the head in dark blue. It is printed on azure bond, and makes altogether a very satisfactory head. Mr. Hull's modesty led him to put his name in a size rather smaller than the circumstances might justify.

This little folder, issued by the *Journal* of Muscatine, Iowa, is reproduced simply to call attention to the finish which a border of this kind gives to a job. Run in this way, it gives the effect of being woven into



DON'T FORGET
That THE JOURNAL is one of five papers comprising

NEW YORK, BUILDERS EXCHANGE

the paper rather than printed on it. Especially is this true if a light shade of ink is used, and none of the type matter is run in the same color.

D. B. McKay, Almena, Kan.—You would have done better to get out a neat, well printed job in one color than to rush through a job in two colors and a line of bronze. More care could then have been given to the presswork, making a much more satisfactory piece of work in this respect. If the display type for the front page was the best you had for the purpose, I should have put the lines closer together and lined them up on the left. The banner effect of your type design is rather antiquated and is scarcely compatible with the embossed figure in your stock.

I was down within a few miles of Asbury Park the other day, and wanted mightily to run down and see J. Albert Hood and his famous factory for the production of pleasing printed things. He is still doing his best stunts, as some recent cards from him testify.

Did you ever get a handsomely printed invitation or booklet, in which was enclosed a cheap-looking return post card printed on a poor grade of manila board? Such a thing often happens, and it tends to cheapen the whole affair. The Ben Franklin Club of Chicago, being composed of printers, would naturally not make any blunder of this kind. In fact, I have been prompted to write this paragraph by seeing an invitation to a dinner which this club recently sent out.

Where The Boy Has a Chance

AMONG the several schools of printing throughout the country none, perhaps, enjoy more favorable advantages than does the School of Printing connected with the Winona Technical Institute at Indianapolis. In point of extent, quality and value of its equipment, this school unquestionably leads all others. Its faculty, comprised of four specialists in their respective departments, has been chosen with great care and a system of instruction of high order is thereby insured. The environments of this school are exceptionally conducive to the moral, physical and material uplift of its student body.

Its central location is in its favor, and the extent and beauty of its grounds, its substantial and commodious buildings and the completeness of its arrangements for the health, comfort and morale of its patrons are at once a revelation to its friends and visitors. In order to obtain an appreciable conception of these conditions as well as of the progress made at Winona, one must visit the Institute and become familiar with the work accomplished there. From the time the visitor enters the "Gateway of Opportunity" until the last trade school has been visited, his interest will increase and he will go on his way a convert to the trade school plan.

The grounds, which were formerly occupied by the Government for arsenal purposes, are situated in an attractive residential section of the city and comprise seventy-six acres, partially covered with native forest trees. Vines, shrubbery and flowers add their attractions, while walks and drives of permanent construction wind through the grounds in graceful curves, the whole forming a campus of unusual extent and beauty.

Prominent among the several massive buildings which house this family of trade schools is the Graphic Arts building, the home of the School of Printing, which occupies the entire first floor. Free of partitions, this great room contains over 16,000 square feet of floor space, is lighted and ventilated by twenty-nine large double windows and is equipped with the most modern machinery and appliances possible to secure. The visitor is at once impressed by the order and cleanliness which pervade the place. Then the system and thorough discipline under which the work is done claims his attention, and he remarks the fact that while the discipline appears perfect, it does not seem to be that of force or coercion but instead the result of real interest and enthusiasm which the student has been led to feel in his work. As the visitor inspects the work being done in linotype composition, typography and presswork he is astonished when specimens of artistic printing are laid before him and he is told that they are the work of young men who but a few weeks before were without any knowledge of machine composition or had been ordinary "straight matter" compositors or press feeders. Evidence, indeed, that each boy's disposition and capabilities had been carefully studied, latent abilities recognized and concentration fixed upon those practical qualities which promised most—proof conclusive of the superiority of carefully planned, constant and systematic instruction over the haphazzard kind of the commercial office.

Winona is purely a training school, no regular line of commercial printing is pursued. The practice work for students is that used in connection with Winona enterprises, or work especially designed for practice. With the exception of linotype, the students are not formed into classes at this school, instead, each student is trained individually according to his especial needs. If his education has been previously neglected he is first given a thorough drill in English, punctuation, spelling or other necessary studies, interspersed with sufficient practice work to fix the principles and their application in his mind. In this manner he is advanced as rapidly as is consistent with comprehensive understanding. Instruction in each department is direct and personal, given by instructors selected not only because of their superior abil-

ities as craftsmen but because of their successful experience as teachers.

In addition to the school work proper the student has the benefit of lectures from time to time, upon art, travel, etc., delivered by prominent visitors. These are frequently illustrated by lantern slide pictures.

There are no party lines in the School of Printing. Any student who is ambitious to learn and to raise himself above the common level is admitted, regardless of his affiliations. No distinction is made except upon moral and educational requirements. The gate of opportunity is wide open to whoever may seek knowledge.

Every student who enters must come of his own will and accord, and must agree to obey the rules while attending school. No printed forms of rules are in use. The rules might be summed up in these two words: *Reverence* and *Respect.* Reverence God, respect yourself, your instructors and the Institute.

The graduates from the various departments of the School of Printing have almost invariably made good. Many of them are now holding responsible positions over men who have spent years in an effort to pick up the trade.

The General Course in Printing covers ninety weeks, divided as follows: Preparatory, twenty weeks; Junior, forty weeks; Senior, thirty weeks. The Preparatory Course is for young men who have had no experience in printing. During this term the rudiments are taught, attention being given to simple forms in composing and press rooms. The Junior Course includes two terms of twenty weeks each. The first term is for young men who have had one or two years' experience in printing, and covers display hand composition and presswork of the variety found in the majority of cases making up the everyday run of commercial work. The second term takes up advanced composition, imposition and presswork, with much of the time spent in practical shop work. The Senior Course consists of a term of thirty weeks. ' It provides special work for the student in the branch of printing for which he is best fitted.

Special courses are also offered in Typography, Presswork and Linotype. These are open to all printers who wish to specialize on some particular branch or who wish the higher branches only. In the press department students may study halftone and vignette make-ready, three- and four-color process work, color mixing, color harmony, handcut and mechanical overlays, etc. The length of these courses is optional with the student.

The Linotype Machinist-Operator Course consists of eight weeks instruction. The School of Printing not only teaches its students how to operate the linotype, but also makes machinists of them, so that they may take care of the linotype when repairs become necessary. In the School, the linotype machines are taken apart by the students, the parts are carefully studied, and the machines are re-erected under the direction of a competent instructor. That the linotype may be successfully mastered, one should have some knowledge of hand composition. Students who have this knowledge are at once admitted to the linotype class, but those who have had no previous experience in printing are required to take a short preparatory course in the composing room of the school. Over one hundred young men and women have already graduated from the Linotype Department of the Winona Technical Institute School of Printing. The percentage that have made good is high, proving that the linotype instruction at this institution is thorough, and a guarantee of success to any student who has an aptitude for the work, and applies himself faithfully.

The School of Printing has made a particularly good showing this year, having graduated eighty-six

students, as follows: typography, 20; linotype, 55; presswork, 11. Seventeen states were represented in the student body. Pennsylvania, Virginia, Florida, Texas Colorado, Utah, Minnesota, Michigan and Ohio form the radius from which the students came, most of them being from Indiana, Ohio and Michigan.

Every student has been supplied with a position as soon a he was ready to leave the school, and in many cases graduates were engaged weeks in advance of the time when they had finished their schooling. That a printer or one who aspires to be a printer, may obtain practical training in school is found in the fact that over 95 percent of those who have since it was founded left the school at the Winona Technical Institute as graduates have made good at once in commercial shops. A number have gone into positions paying from the start $25 a week. This showing robs of force the argument advanced by many that men from technical schools have plenty of theoretical knowledge but too little of the practical.

The Winona School of Printing stands for the proposition that workmen must first learn the right way, then learn to be rapid, and sufficient practical work is given to students to develop these vital characteristics. Diversity of treatment in their work is a noticeable feature of the Winona graduates and this quality is due entirely to the method of instruction. The student, and not the class with which he works, is the unit. The individuality of each student is studied separately and each one is trained so as to develop artistically and most variously his own individuality. Adaptation, the final stroke of genius, changes novices into profitable workmen.

The School's Physical Equipment

The equipment of the department of machine composition consists of ten linotypes of various models, including the double decker and junior machines. One machine is used solely for knock-down and erection, giving students the opportunity to become familar with the mechanical principle and manner of construction of every part of the machine. Machine keyboards for beginners, an ample supply of well assorted matrices and machine parts, work benches and all necessary tools for repair work are other items of the equipment of this department.

The department of typography, or composing room of the school is, because of the quality and completeness of its equipment, a source of inspiration to the student and an object of admiration to visiting craftsmen. Here a wide range of the latest type faces together with liberal quantities of labor saving material of every needful kind are at the student's disposal. Triple Polhemus, Porter steel run and Wisconsin type cabinets; ink, electrotype and script cabinets; a Mastodon cabinet with full brass lined banks holding over 2,000 pounds of leads and slugs and fitted with end drawers, sort drawers, indexed electrotype cases, letterboards and galley cabinet; numerous imposing stones, including a large Dorsey combination stone with labor saving furniture, reglet and chase racks; large form rack; Wesel "make-up" and galley cabinet and Dorsey compositor's working cabinets, are features of the up-to-date equipment of this department, all of which were specially constructed for the school and given a Flemish Oak finish, harmonizing with the director's office and other departments. A Reliance proof press, Wesel power saw and trimmer, mitering and rule cutting machines are other important accessories.

While not large the plant of the press department is most efficient. Two Miehle cylinder presses of latest type, a John Thompson number six and two Chandler and Price jobbers comprise the press equipment.

The larger of the Miehle machines is equipped with a Cross paper feeding machine, which just now is being used on a run of 170,000, effecting a saving of considerable time over hand feeding.

This product is being satisfactorily handled by a Dexter book and job folding machine, fitted with a Dexter automatic feeder. A 55-inch automatic clamp Seybold paper cutting machine, a Sam'l Crump roller washing machine, Koerner's interlocking drying racks, platform paper trucks, rubber-tired form trucks, ink and roller cabinets and the Gilbert-Harris metallic overlay machine are other labor-saving features of the press-room.

The bindery equipment includes the Latham power stitching, perforating and punching machines, Brown and Carver paper cutting machine, Donnell board shears and backing machine, standing presses, hot stamping press, round cornering machine and other necessary appliances.

An interesting feature of the bindery is a Boston stitching machine permanently mounted on trucks and carrying an electric motor, which enables the operator to move the machine around at will and operate where most convenient by effecting an ordinary con-

nection with the socket of any of the numerous electric drop lights.

The machines in all departments are mounted on zinc plates and are driven by individual motors having speed controllers.

The Institute has its own heating, electric lighting and power plants, as well as a private water plant which evidences the completeness of the physical equipment of the institution.

The shop is conducted as nearly like a commercial plant as possible, and the responsibility for profitable results which fall on all the student workmen is the same as that in a well regulated commercial plant. Each student must carry his own load, and responsibility is increased until each becomes an independent workman, is conversant with every process of the work, and a specialist in some one particular line of it. This method is especially beneficial when one considers that workmen as a rule do not have an adequate conception of the expense aside from their own salary which attaches to every piece of work.

To those familiar with trade schools, there is no longer any doubt of their advisability and practicability so far as they relate to the printing business. The question of what disposition to make of the product of the practice work has also been settled at the Winona school. The Winona enterprises at Winona Lake and Indianapolis use all of the product from the School of Printing, thus the business of no regular commercial printing establishment is disturbed through the existence of this trade school and the stumbling block in the way of so many industrial schools is removed.

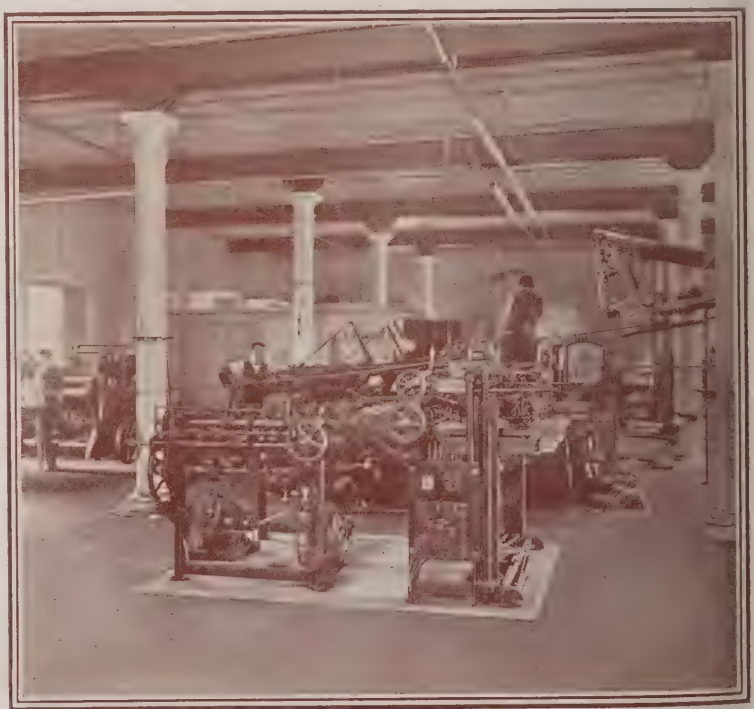
Every editor, employing printer and craftsman connected with the printing business should interest himself in the trade school movement. Those who have made a study of the situation realize that it is through the trade school alone that the ever-increasing demand for skilled labor can be satisfied and this only through the active and hearty co-operation of all whose interests are immediately affected.

In further evidence of the successful work being done at the School of Printing of Winona Technical Institute, the following extracts from letters from successful graduates are appended. These are taken at random from the several hundred letters which have voluntarily been sent in recognition of the great work the school is accomplishing.

I believe this school to be the best in which to obtain proficiency as an operator and machinist.—J. A. Lyons, Chicago, Illinois.

Let me congratulate you on the good work that is being accomplished in the Winona Technical School of Printing. I want to thank you and your able instructors for the volume of information and opportunity for learning that have been tendered me during the past eight weeks. The school is certainly a splendid one, and deserves the hearty support of the printing fraternity, employers as well as those who are seeking a life vocation. —D. O. Thomas, Louisville, Kentucky.

The Institute through its able corps of instructors in the different printing departments, is doing a grand work for technical education. If the student does not get "a run for his money" the fault lies with the student.—Frank J. Vincent, Harrison, Ohio.

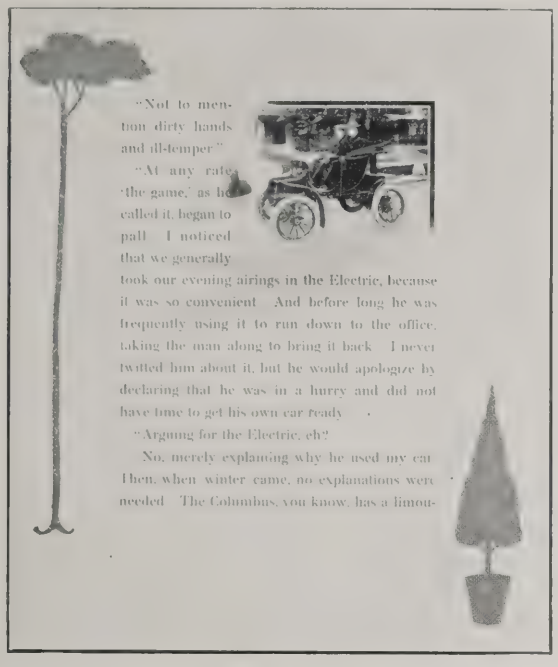


Thanks to the instructions I received in the School of Printing, I am having no trouble in operating a linotype. There is no better school for instruction in its mysteries than Winona.—Harry L. Tyler.

The return card is printed on the same dark gray stock as the invitation, though, of course, in a heavier weight, and in the same color of ink. The effect is certainly most satisfactory.

L. H. McNeil, Marion, Ohio.—A bunch of specimens with the true artistic touch. They are models of good printing, both in design and execution.

This booklet page is taken from a collection of samples sent out by the Russel M. Seeds Company of Indianapolis, Ind. It is well done, and decidedly novel; but I am not sure that sufficient attention is allowed to center on the automobile, which seems to



"Not to mention dirty hands and ill-temper"
"At any rate, 'the game,' as he called it, began to pall. I noticed that we generally took our evening airings in the Electric, because it was so convenient. And before long he was frequently using it to run down to the office, taking the man along to bring it back. I never twitted him about it, but he would apologize by declaring that he was in a hurry and did not have time to get his own car ready.
"Arguing for the Electric, eh?
No, merely explaining why he used my car. Then, when winter came, no explanations were needed. The Columbus, you know, has a limou-

be the main object of the publication. The ornaments might much better have been worked in a tint. The coarse halftone effect was no doubt intended to throw them somewhat into the background, but that purpose has not been sufficiently attained.

Imus Brothers, Kalama, Wis.—Your booklet is very satisfactory, considering the fact that it was printed on a Gordon press twenty years old. And this, too, with several halftones. Of course the type matter shows some light spots, but that was to be expected under the circumstances. The side heads might have looked better had they been lined up at the outer margin, instead of being centered. The appearance of the matter might also have been improved by running a 6-point slug between paragraphs, where the side heads occur.

APPRECIATED MORE THAN EVER.

ELMORE, MINN., June 1, 1909.

National Printer-Journalist, Chicago.

GENTLEMEN:—I am an ardent reader of the NATIONAL PRINTER-JOURNALIST, and find its money's worth in every issue. You are getting out the best printer's journal, to my notion, that is published in the United States.

I have sold out my paper and a stock company now owns the business here under the name of the Elmore Printing Co., and I am the foreman. I received and appreciated your papers of late more than ever. W. A. BRUSS.

ITEMS OF INTEREST

CHICAGO, ILL., June 21, 1909.

AT the meeting of the north country newspaper men at Marinette, Wis., officers of the Lake Superior Press Association were elected as follows: President, F. L. Baldwin, Escanaba *Journal;* Vice-President, Thomas Flynn, Negaunee *Herald;* Secretary-Treasurer, P. O. O'Brien, Iron River *Reporter;* Executive Committee, Frank Russell, Marquette *Mining Journal;* George E. Holbein, Manistique *Pioneer Tribune;* Thomas Conlin, Crystal Falls *Diamond Drill;* George C. Youngs, Florence *Mining News,* and R. A. Douglas, Ironwood *News Record.*

Owners and publishers of daily newspapers holding membership in the Inland Press Association will patronize the open market for print paper instead of getting their material by contract, under a decision of the association reached last week in Chicago. The representative of a Canadian print paper mill asserted he would furnish paper at a figure which the representatives of rival concerns declared was lower than the cost of manufacture in the United States.

At Mason City, Iowa, the *Republican* will build a $25,000 building on East State Street.

Ezra W. Clark, city editor of the Chicago *Inter Ocean,* was married at Crown Point, Ind., late one night last week to Miss Gertrude Van Elers-Howsley of Chicago, by Rev. Dunlevy, pastor of the M. E. church, in the presence of a number of Chicago newspaper men who had got wind of the affair. The couple will be at home at 7919 Forrestville Avenue, Chicago, after July 1.

Employes of the mechanical departments of Chicago newspapers have organized the Cosmopolitan Press Club. The following officers were elected: President, Peter Tatge; Vice-president, William Schenck; Secretary, J. B. Johnson; treasurer, A. C. Rice. The club is organized for social purposes and promoting athletics, and has club rooms at 112 to 118 Fifth Avenue.

Mr. and Mrs. A. B. Moffatt at St. Joseph, Mich., announce the marriage of their daughter Helen Marion to Theron Malcolm Sawyer, at their residence, June 26, 8 P. M. The couple will be at home after July 15th at Ludington, Mich., where Mr. Sawyer is editor of a paper.

Daniel P. Munn, for the past three years connected with the editorial staff of the Sterling, Ill., *Standard,* has severed his connection with that paper and will take a position as editor of the Moline *Mail and Journal.*

Iowa's youngest reporter, Miss Ruby Rinehart, aged 12, distinguished herself by working on the Junken case at Centerville. Miss Rinehart is the daughter of Editor Rinehart of the Centerville *Journal,* and her reports of the trial were read with interest by many who followed the celebrated case slowly. She has the womanly knack of telling facts directly and tersely and entertainingly.

Fred D Edwards has purchased the Fond du Lac, Wis., *Independent,* a weekly paper formerly managed by C. E. Broughton.

The Aledo, Ill., *Times-Record,* a largely circulating weekly, recently put in a Duplex press. They also have a Linotype.

CHICAGO, JULY, 1909

Nothing is expedient in this free Government that is not absolutely right, equitable and fair to all. On any other basis this would not be a Government of the whole people, for all the people by all the people, and not a free Government at all, but an oligarchy for the benefit of the few who rule directly or through their corrupted or subsidized agents. He who pretends to serve a free people and then serves only certain interests and classes, or a part of the people, is a hypocrite, a fraud and, in so far as he is disloyal to the best interests of all of the people, he is a perjured traitor, unless he acts in ignorance, and he is then only a little less guilty, for it is criminal for one to undertake to perform duties for which by reason of his ignorance or dullness he is unfit. If a surgeon kills a man through malpractice, he can not plead ignorance, a lack of knowledge of his calling, in his own defense. The violation of the rights of all the people, through levying of duties that impose unjust or unequal burdens, that are for the benefit of the few, with no corresponding benefit to all, or that cause a loss to the many, and tend to limit opportunities and create monopolies, is not only inexpedient but criminal. In like manner are all regulations or practices wrong and indefensible that prevent the equal and free carrying on of business or a trade, with equal opportunities to all, as the Government having envelopes printed free or at a price that cannot be met by the trade, to the injury of printers and envelope manufacturers, to sell only to those who are able to buy in large quantities, with the only result of increasing the ouput and profits of the company holding the contract for the work from the Government.

* * *

We print elsewhere in this issue, at considerable length, extracts from a letter of Pres. H. C. Stiles, of Washington, D. C., to the members of the Photo-Engraving craft, for the reason that the information and arguments given therein are so instructive and convincing as to the value of organization among the followers of that and every other calling or trade. We hope that, all editors, publishers, employing printers, as well as engravers, will carefully read and consider all that is so well said by President Stiles and then apply the same to themselves. Mutual interchange of views, protection of rights and a square deal, and acquaintance, social intercourse and friendships are of incalculable value to the members of all callings. Through such means come not only knowledge, greater efficiency, the establishing proper business regulations and connections, gaining full recognition and the enforcement of rights, but as President Stiles puts the matter in his closing statement: "It is not all of life to dig and delve, to plan and contend (all contention is waste of time, of vitality, of substance and power—Ed.) to scheme and circumvent, that we may triumph in material things. The social nature needs attention. The man or woman is broadest in this life who is in contact with the social lives and experiences of other men and women." Social broadening out and winning of affability and the power of approaching and understanding others, while to be valued in themselves, are also helpful in the way of business success and the relieving the daily round of work of tediousness, and making the performance of the same a constant joy.

* * *

Louisville was the Mecca, this year, for the meeting of the Imperial Council of the Ancient Arabic Order, Nobles of the Mystic Shrine, from June 7th to 11th. Everything connected with the convention of the representatives of the several Temples throughout the United States was handled in a most enterprising, pleasing and satisfactory manner by the Louisville *Evening Post.* The cartoons relating to the Shriners were not only novel and hilariously amusing, mixing up the caravans of these Arab tribes, in their picturesque costumes, the camels and their riders, with automobiles, bicycles, air ships and involving them in many adventures and accidents, intensely ludicrous, but of a character to portray all the paraphernalia, and emblems of this Arabic Order.

The separate portraits, and group views, in excellent halftones of the "Divan," caravans, patrols and patrol bands, faithfully portrayed the manly, intellectuality—stamped features of these strenuous "Nobles," who had journeyed to, and found, so pleasing an oasis awaiting with a welcome hospitality that cheered the heart of every sheik and tribesman.

The story of the whole affair, together with the history of the Order, its character and its establishing—and of the leading Temples and a directory of the assignment or camping place in the city of the members of each Temple from New York to Honolulu, and biographies of Past Imperial Potentates, and present sheiks and other officials and accounts of the doings, the patrol drills and the parade, formed a most pleasing and complete symposium each day. The *Post,* in every

issue, gave an excellent example, replete with suggestions as to the possibilities of making much of such an event or of any kind of a convention, so as to make the same of live local interest and win the interest and goodwill and the loose shekels of the members—visitors from abroad—and do good and effective advertising for a city. Many papers signally fail to appreciate the gatherings of those from abroad with which their cities are honored and to make them, for the time being, a part of the home interest and life.

Another attractive feature of the *Post* during the Council, that showed thoughtfulness, kindliness and wise enterprise, was an arrangement by which sixty-five newspapers, covering all the big cities and many of the large towns, and nearly every large place where a Temple of Shriners is located, entered into a contract to supply the *Post* with important home news. This was published in a bulletin in the *Post* each day. In this way each visiting Shriner from Los Angeles, and New Orleans to Boston and Portland from Atlanta to Winnipeg and Honolulu and all intervening points, having Temples represented at the Council, could see, at a glance, what happend at his home city. The news appeared in tabloid form, under the heading of each paper that furnished it, together with the name of the city from which the service came. Distance from home added to the interest of Shriners in the home news and the presence of representatives of these several cities in Louisville made the same of a certain increased and sort of local interest to the residents. Herein was displayed good newspaper sense or instinct as well as a generous spirit and kindly thoughtfulness.

We have known cities to secure conventions at the cost of a good deal of work and no small outlay, to have the same so indifferently and shabbily treated by the local press as to make the members to feel that if the newspapers represented, as they should, the prevailing sentiment of the people, their presence was not wanted, or else that the people were narrow, inhospitable, and grasping, caring nothing for guests except what little could be gotten out of them in the way of hotel bills and other expenditures—in this way the press nullified all the enterprise of the citizens and business men, bringing the city ill-repute instead of good-will. The Louisville *Evening Post* furnished an excellent illustration of the true course and afforded, as well, object lessons as to means by which a newspaper may not only serve the best interests of the city on such occasions, but win a greater interest, broader fame, enduring goodwill as well as legitimate profit to itself. Always make a paper of which the guests of the city will be proud, and of which they will want to buy liberal numbers of copies to send to their own homes.

The *Post* advertised Louisville, while it served Louisville's guests, and the attendants at this Council will always remember the city with kindly feelings by reason of the considerate and hospitable treatment received at the hands of the newspaper men as well as at the hands of the people. Kind words when printed last for a long time and reach great distances in their influence, and in the appreciation that they bring. Broad men at the head of the newspapers of a city bring constant and enduring blessings, narrow men bring ill will and disgust.

* * *

Hartford, Indiana, presented another excellent example of special newspaper work in the issue of the *Evening News* of June 24th. The occasion, that afforded the enterprising newspaper man the opportunity, were the dedication of a Masonic Temple and the meeting, on the same day, of the Annual Convention of the Northeastern Indiana Firemen's Association. The manner in which the *News* handled these local events is an excellent object lesson to newspaper men everywhere. The accounts showed that E. E. Cox, Editor and Publisher, is a newspaper man of broad views, in sympathy with his people and intensely loyal to his city. We do not know whether he is either a Mason or a Fireman, and it makes no difference, and should never make any difference with a newspaper man who should ever put himself in entire accord and sympathy with the worthy events he is called upon to handle and with all engaged or interested therein. The *News* man did this. Interesting, human-interest stories were developed as to the realization of the dream of the members of the local Masonic lodge for the fulfillment of which they had worked and waited; of the bequest of a deceased member that helped forward and made possible the building of the Temple; of the description of the building and of the visit of the members from eighteen surrounding lodges to take part in the dedication, not forgetting an account of the program and dedicatory exercises. A "Welcome Victory, Brother," in verse, appeared on the first page, with the square and compass over it printed in blue. An article entitled, "Masonry in the Civil War," showed incidents of the firmness of "The Tie that Binds"; while there were stories of the "Oldest and Youngest Mason," of the Order of the Eastern Star," and so on. We give so much in detail, to illustrate how much, in every way, was made of the occasion. There were editorial welcomes to both the Masons and the Firemen. A cartoon of a fireman, in full uniform, sounding a trumpet, from which hung a banner of welcome, was showed at the top center of the first page, while the traditional goat clothed with a Masonic apron, held aloft the Masonic welcome, at the top center of the other section. Firemen were further recognized with pictures of engines and hose carts with horses, all in red, driven across the two outside columns of the first page, and accounts were given of the different companies and their work, of the convention proceedings, fire exhibitions, "Water Battle," etc. The paper was well illustrated throughout with halftone portraits. This was all accomplished in twenty six-column pages.

THE PRESERVATION OF SENTIMENT

BY J. R. RANSOME, DAILY ENTERPRISE, CLEBURN, TEXAS.

I AM often accused of being a sentimentalist, of loving to listen to the songs of birds, the hum of bees and the ripple of running water, in preference to engaging continually in the struggle and strife incident to a modern active business career. I plead guilty to the charge. And more than that, I say, God pity the man whose heart songs of olden days no longer echo and golden dreams are pictured nevermore, whose life is a continual quest for power and coin.

The preservation of sentiment is most important. Sentiment should be nurtured in every home. The husband needs the tender caresses and fond solicitude of a loving wife, the wife requires the parting kiss and the warm embrace of the husband. The little children demand the sincere heart interest and tender affection of both the father and mother. In the home the cares of business should be banished, where it is possible, and the dearest, sweetest moments passed, moments in which memories are stowed away for future days, when the dim of old eyes shall look out from deep set sockets, and the wrinkled brow and furrowed cheek tell of the hard fought battles with the grim destroyer of youth, who never lost a battle. The soft caress of baby hands, the sweet coo of

J. R. Ransom e Jr., Cleburn, Texas

tiny lips, baby's clinging arms, the wonderful light in the beautiful eyes, the perfect trust of the little heart—these are matchless miracles that help us to have faith and to hope and encourage us to have patience with the weaknesses of human nature, and to radiate the sunshine and the happiness of Billikens. Happy indeed is the home where sentiment is paramount and baby is king.

The most of us miss many opportunities to add to our happiness. We search in vain for the angel of contentment, all the while he is nestling in the corner of a sick friend's home whom we have neglected to visit, or he is hiding in the closet of a neighbor whom adversity has overtaken. How vain the quest for the joy and the peace, that passeth understanding, in the banquet hall, in the whirl of social pleasure, or in the gratification of one's own desires. Happiness is found in doing something for others, and just in that ratio that we give of our time and do for others do we attain happiness that is abiding.

This age is money mad. Men go on year after year, piling up great fortunes that they cannot use, leaving behind them millions of dollars for relatives to quarrel over and children to squander to their ruin and degredation. The best heritage that any one can leave a child is a strong body, a head full of useful information and a heart full of love and human sympathy.

I do not mean to intimate that there are not many great and good men who become rich through the exercise of their faculties, leaving to the world a heritage of valuable achievements and noble acquirements. The men who are using their money building great railroads, equipping immense factories, developing the mineral annd the agricultural resources of the country, laying ocean cables, sending huge vessels across the deep, enlarging commerce and expanding trade, are men in whose hearts true sentiment is enshrined. Their lives are given over to deeds. Their days should be days of happiness, for they have done so much for others, opened new occupations and given to the world a larger field and broader view.

The preservation of sentiment is the safeguard of the nation. The closer we get to the brotherhood of man and the more we feel the sorrows and the sufferings of others, the nearer we approach the ideal, and the securer is our hold upon happiness that is everlasting. While it is quite appropriate to remember the departed, I am an advocate of giving most of our flowers to the living, and speaking cheerful words of commendation to friends while their hearts can pulse and their eyes look into ours annd they can feel our interest in them. Dead hearts throb not at sweetest songs or words of highest praise. The perfume and the rich colors of the rarest flowers ravish not the senses of those whose work on earth is ended.

Many a person has fallen in life's hard battle because of the need of a warm handclasp and the knowleldge that there was some one in the wide world who really cared for them. Many a drooping spirit could be cheered into courage and many a smouldering flame could be fanned into life by the manifestation of genuine heart interest and the help of a loving friend.

The majority of us are so busily engaged in attending to the duties that administer to our physical and material welfare that our neighbors and our friends die and are buried without a single visit from us or an offer of help. We intend to go tomorrow, but tomorrow finds us just as busy again. So our resolutions never reach realization.

Life is so very short that every person should strive in every way to scatter as much sunshine and happiness as he can. There are so many ways that this can be done with very little effort, that it seems that no one has a reasonable excuse for neglecting to do so. Kindness, love and sympathy is cumulative. The human heart is a wonderful instrument. A doll to a child, a few moments devoted to the old and the decrepit, a cheerful word to the sick, a warm handclasp to the downcast, a few flowers to those who cannot buy them, a little self-sacrifice and the heart expands and as the little ministrations send back their sweet vibrations they grow and reach out just like the ripples made upon the surface of a limpid stream by the dropping of a beautiful blossom from a bending bough.

One of the best ways to preserve sentiment is to commune oftener with nature, the source of all that is beautiful and best. The competitive business of the city tends to dry up the sympathies and to tighten the bands round the heart. A day in the woods is a wonderful restorative. There is rest and comfort. A sequestered nook where the tall trees shake shimmering shadows down, where the perfume of flowers

steals in upon the senses, where the love songs of the birds and the hum of insects creep through the tangled wildwood, and the glint and the gleam of the sun on the back of the striped bass as he leaps to catch the careless fly—these are nature's panaceas for a calous heart and the decline of sentiment. Thousands upon thousands of unfortunates in the great cities know nothing of the glorious peace and joy of the flower-clad prairies across whose undulating bosom sweep the summer winds, perfume laden with the honeyed breath of many flowers, rich in the tonic that soothes the tired nerves and rests the dust-clogged brain. From the day of their birth to the time of their departure they are witnesses to the noise of hurrying vans, the screech and scream of whistles, the rush and scramble of elevated trains, and the tumult of restless, surging, ceaseless business. Every nerve is strained, every brain cell alert, every sinew taxed. Man seems pitted against man, like the wild animals of the forest only it is delicately veiled by paint and light and music. It is the survival of the fittest. There is little to inculcate love and sympathy. There is no time for such nonsense, while there is trade to be acquired and competition to be conquered. They need our sympathy. We are so much more fortunate, who have all around us the fields, the streams and the forests, freedom from the dirt, the grime and the grind of the city and the sullen roar of its mighty traffic sounding like the boom of the waves of the sea on its rugged shores. Those who are bound down by the burdens of the city long for the rest and the peace of the country. Then let us who can, while we can, take our dear ones by the hand, look into their eyes where the love light is mirrowed, go out into the evening, while the sky is shot with golden red and royal purple blushing from the kisses of the fast-declining sun, and after communing with nature, refresh our fund of sentiment, return home after the wonderous stars have come from their hiding-places, where they were driven by the amorous advances of the king of day, and as we journey toward the lights of the city, look up where the inspiration awaits the garnering, and praise the Divine Creator who has been prodigal in his many blessings. Then I am sure that we will return home more keenly alive to the importance of doing those things that increase love for the good, the beautiful and the pure, ready to impart to the fallen brother some of the glories that are ours and some of the peace and happiness that ought to be his, knowing that it never decreases but ever expands and grows stronger as we lift the fallen and raise up those who have stumbled where the road was rough and rugged.

Every moment of this meeting should be happy and sacred. Where our friends are, there should our hearts be. Today we can feel each others hearty hand-clasp, and look into each other's eyes. Today we can hold that indescribably sweet communion known only to good, honest, earnest friends. We can speak those words of cheer and comfort and praise, and souls can exchange greetings with souls, unsullied by a single thought of gold or gain or greed. Here sentiment can be cherished, nurtured and fostered, and memories sweeter than the first kiss of the first sweetheart's tender lips and as beautiful as a new born babe nestling on its mother's breast, stowed away to be recalled in future years. Miss not this opportunity.

(Delivered before the Texas Press Association, Marlin, Texas, May 28th, by J. Ransome, Jr. Vice-Pres., Cleburne, Texas.)

Harold E. Brady and Clara A. Ruth, both of Crandon, Wis., recently were united in marriage. The groom is junior editor of the *Forest County Republican* and the bride one of Crandon's comeliest and most popular young society women. They will make their home there after a short honeymoon.

THE PASSING OF EDITOR ALEXANDER K. M'CLURE

The passing of Colonel Alexander K. McClure, at his country home in Wedingford, Pa., on Saturday, June 6th, removes almost the last of the great editors who figured in the agitations and events preceding and during the war for the Preservation of the Union. We recall no other editor of this country now living, excepting Henry Watterson, whose personality stands out above the newspaper in conducting which personal reputation has been won. In this day of the greatest newspapers known to the world, the personalities of those conducting them are entirely lost or hidden in the publications. A great newspaper is no longer the work of one man, no longer reflects the opinions and sentiments of one individual but of the many. All views as well as the news of the world are to-day fully given in the one newspaper. In the days when Col. A. K. McClure first won fame, every newspaper reflected the man, his sentiments, aspirations, and convictions. Alexander K. McClure entered the newpsaper field in 1847, only six years after Horace Greeley started the New York *Tribune*. Mr. McClure, like many others who have won success on metropolitan dailies, commenced life on a country newspaper, the Juniata, Pa., *Sentinel*, Whig in politics. Having disposed of the *Sentinel*, on which he had served a seven years apprenticeship in journalism, he purchased, in 1850, an interest in the Chambersburg, Pa., *Repository*, and become its editor. It was one of the strongest anti-slavery papers in that strenuous time, and its talented editor quite naturally, a little later on, became one of the organizers of the Republican party, and was elected to the State Legislature two terms, and to the State Senate. He was a delegate to the Republican National Convention, 1860, and was thrown into close relationship with the great leaders of those times, and is said to have taken a large share in inducing the Pennsylvania delegates to vote for and in securing the nomination of Abraham Lincoln, of whom he became a warm, personal friend, and of whom he afterwards wrote most ably, instructively and feelingly in his book, "Lincoln and Men of War Times." It was as editor of the Philadelphia *Times* that Mr. McClure's full powers as an editor were brought to play and made widely known. He was editor of the *Times* for a quarter of a century and his stlye of writing was such as might be classed as literary, and his editorials as literature, showing erudtion, deep, conscientious thought, carefulness and refinement. Besides his most noted work above referred to, "Lincoln and Men of War Times," he wrote three other books: "Our Presidents and How We Make Them"; "Recollections of Half a Century," and "Old Time Notes of Pennsylvania." In the later years of his life he delivered a number of able and noted lectures and addresses. He was born in Perry County, Pa., in 1828 and hence was eighty-one years of age at the time of his death. He had been in failing health

of late, and had left his room on the Sunday of his death for the first time in a week and while seated in a chair, on the front porch of his home, talking with his brother-in-law, Alfred Gratz, suddenly dropped dead. Nature had run its full course and the end came without pain, and natural as the falling to sleep of one who is weary.

DELEGATES TO NATIONAL EDITORIAL ASSOCIATION

AS REPORTED BY THE SECRETARY UP TO JUNE 24TH.

ALABAMA PRESS ASSOCIATION—Jacob Pepperman, *Southern Odd Fellow,* Montgomery; R. H. Walker, *Democrat,* Athens; J. C. Lawrence *Breeze,* Union Springs; J. J. Smith, *Ledger,* Birmingham; A. B. Kennedy, *Advertiser,* Montgomery; R. E. L. Niel, *Times,* Selma; J. B. Stanley, *Advocate,* Greenville; F. L. McKenzie, *Tri-County Weekly,* Talassee; Tom Garner, *Gazette,* Tuscaloosa; C. G. Fennell, *Democrat,* Guntersville; Frank Crichton, *Banner,* Clanton; J. H. Hard, *Journal,* Bessemer; W. T. Hall, Dothan *Eagle,* Dothan; W. S. Smith, *Headlight,* Lineville; R. L. O'Neal, *Mercury,* Huntsville.

ARKANSAS—W. W. Folsom, *Gazette,* Hope; Erwin C. Funk, *Democrat,* Rogers; Leon Westmorland, *Democrat,* Greenwood.

CALIFORNIA SOUTHERN—J. P. Baumgartner, Santa Ana; H. G. Tinsley, Pomona; L. M. King, Redlands; E. P. Clark, Riverside; R. C. Harbison, San Bernardino; Edgar Johnson, Fullerton; J. J. Penny, Long Beach; H. A. Perkins, *California Cultivator,* Los Angeles; Paul W. Moore, *The Facts,* Redlands; Sam T. Clover, *The Graphic,* Los Angeles; E. F. Howe, *The Standard,* Imperial; Otis B. Tout, *The Chronicle,* Calexico; T. W. Stork, *The Independent,* Santa Barbara; F. E. Upholz, *The Record,* Ontario; Dr. Louise Harvey Clarke, *The Press,* Riverside.

COLORADO—L. M. Wilcox, *Field and Farm,* Denver; Geo. E. Hosmer, 1542 Milwaukee, Denver; Otto Wangelin, *Tribune,* Boulder; E. A. Newton, *Independent Journal,* Alamosa; John Barkhouser, *Denver Democrat,* Denver.

Continued on Page 482

INTERNATIONAL ASSOCIATION OF PHOTO-ENGRAVERS

PHOTO-ENGRAVING has become, with every year, during the past two decades, of increasing importance to all branches of printing, magazine and newspaper-making. Through the wonderful developments and improvements in this art, illustration has become universal, and as enlightening, artistic and pleasing as it is general. Through photo-engraving the works of the masters, besides the most enchanting and inspiring scenes in nature, have been brought, in wonderful beauty and perfection, to every home, and the arts and trades and all branches of human industry, including horticulture and agriculture, have been wonderfully aided by bringing to the eyes of the workers perfect pictures of all devices or things to help or to render more perfect the processes of production.

The advance of higher ideals as well as of the industries, in no small way, is now dependent upon illustration by pictures that impress, interest and teach at a glance and help to a more perfect understanding than would otherwise be possible. We are all interested in our photo-engravers and their achievements. As a rule, they are interesting in themselves, intelligent, progressive men, companionable and, all in all, princes of good fellowship and lovers of the beauties of nature, as indicated by the place chosen for the annual gathering.

The Convention of the International Association of Photo-Engravers is held this year on Tuesday, Wednesday and Thursday, July 6, 7 and 8, at Hotel Kaaterskill in the Catskill Mountains, and, in anticipation of the delights to be enjoyed and the new attainments to be reached, the members are recalling the convention at Put-in-Bay, a decade ago, when first steps were taken toward adopting a system, that would put the prices to be charged on a sensible and just scale.

President H. C. C. Stiles, of the Maurice Joyce Engraving Company, Washington, D. C., in addressing members of the craft with regard to the Convention this year, said among other things:

"From correspondence I have had with engravers throughout the country I am convinced that this will be the best attended convention in the history of the organization. Those who go will be well repaid. In addition to the general topics which will come up for general discussion, among the members of the Association, a number of men prominent in our industry and in allied lines have accepted my invitation to be with us and address us upon topics of interest and of educational value. This is a new idea in Association work and the information which will be derived on technical subjects and upon matters pertaining to the business office will be of the utmost value.

"I wish to extend to you my personal invitation to be present. This letter, going as it does, to every photo-engraver in the country, will reach non-members as well as those who belong within the Association fold, and to those who are not members of the Association and who have not at any previous time attended any of the conventions of the body, I wish particularly to impress with the idea that they will receive very tangible returns upon the slight investment of time and money which they must make in attending the Catskill Convention. The fact that the recipient of this letter is not a member of the Association does not affect the force of this invitation to attend. During the business meetings of the Association, we shall not expect to admit to our sessions any but those who are members, but to all of the addresses and lectures any person interested in photo-engraving will be gladly welcomed.

"Photo-engravers not members of the Association who may be in attendance upon the convention, will be welcomed into the organization and we will be glad to have them take up membership with us either at this time or in person at the Catskill meeting. Membership in the Association carries the obligation to perform no duty whatever, the detail work involving entirely upon the officers and the only expense incident to membership is the slight fee comprised in the amount of dues, viz.—$10.00 per annum.

"In addition to the business and educational features of the meeting, there will be numerous forms of enjoyable entertainment provided and the whole country surrounding the Kaaterskill Hotel is so picturesque and beautiful that the members will find a few days spent in the mountains will be highly beneficial."

ORGANIZATION.

I hardly think there is a member of the craft, anywhere, who is really at a loss to know why photo-engravers should organize. I am going to make a suggestion or two, however, and do it briefly. And these suggestions will not be made, either, for the special benefit of members of the Association, but in the hope, rather, that they may reach a few, at least, of that great multitude, who, manifestly see no profit in organization since they persistently refuse to become part and parcel of co-operative effort.

At a glance there seem to be three good and substantial reasons why engravers should stand together.

First, for mutual benefit from mutual interchange of experiences.

Second, to protect the craft against inimical and selfish competition.

Third, to get acquainted and to establish a social intercourse in the absence of which men and women become selfish, sordid and pessimistic.

It will scarcely be disputed that there is an advantage in exchange of experiences. Every man's experience is in some respect like that of the other man. Since the days of Ben Franklin it has been well recognized that regardless of our position, there is still something to be learned from the other fellow, which may be applied with profit in the grind of the shop and in the comfort of the home.

It is just possible that the benefits accruing to active members of organizations can be best illustrated by calling to mind those that remain unidentified with craft associations. I shall not go so far as to say that any engraver is a back number, who, for mysterious reasons, refuses to join with the brethren in union of effort. A man is sometimes an exception to the general rule. Just as a man may be successful in any business by a kind of natural instinct, so a man may be a progressive and successful engraver by the same token. But, the men in the world today are not the kind who separate themselves from their fellows. Men are naturally gregarious. Instinctively, they get together that they may learn of one another. The progress of the world is the sum total of individual effort and experience. One idea develops another. The most tremendous, magnificent and useful machine in the world

today is the result of co-operation and association. The best intellectuality and morality are produced by organization.

But trades should maintain organization for protection. And why? In the first place, the local engravers should be organized for business. Otherwise there can be no getting together for mutual business protection, as a result, they are at the mercy of the customers, who are shrewd enough to appreciate the weakness of ununited forces.

That is the situation in a nutshell. The engraving business is shorn of its strength in a business way when the engravers do not stand together. If the engravers were organized as they might be, and as they ought to be, and were represented in conventions as they should be, when occasion demanded; with every engraver true and faithful to the interests of the craft, we should soon come into our own; and the engraving business would be promoted to a plane of actual independent usefulness and success concerning which we have only been dreaming. With the engravers of the country thoroughly organized and faithfully represented in all councils of the craft, standing shoulder to shoulder in their demands for a "square deal," asking for nothing not honorable and fair and just, its influence would be irresistible, and there would be no further cause for complaint.

And, finally, there is the social phase of organization. I doubt very much, indeed, if there is a persistent active member of the International Association whose acquaintance has been extended throughout the U. S. who would be willing to exchange that acquaintanceship for the time and money, incidentally spent, in promoting it. It is not all of life to dig and delve, to plan and contend, to scheme and circumvent, that we may triumph in material things. The social nature needs attention. The man or woman is broadest in this life who is in contact, now and then, with the social lives and experiences of other men and women. He or she is invariably narrowest in this life who constantly refuses to know personally and socially the men and women whose life-work and purposes are in common with his own. Organization, has enabled the writer to promote personal friendships and personal confidences, inestimable and invaluable, and I have yet to find an engraver who has ever expressed a regret that his acquaintonceship had been extended to engravers and their families in other portions of the country.

If organization had no other purpose than that of social intercourse, it would be worth while. I have no fear that this statement will be contradicted. It is not in the nature of things that it should be.

The real practical need of the world is a closer getting together, a nearer relationship and acquaintanceship, a world-wide, social intercourse which puts well-meaning, well-purposed men and women on the level of mutual helpfulness and forever destroys all the distinctions other than those not in harmony with the eternal fitness of things.

The following gleaned from Bulletin No. 7 of Secretary Frank H. Clark, Cleveland, Ohio, will be found of interest and instruction to all who are looking to enjoyment and accomplishment through organization and the holding of attractive, instructive conventions at desirable localities, for nearly all therein applies to members of the newspaper, printing and other callings as directly and strongly as to that of the Photo-Engraveres:

JULY IN THE CATSKILLS.

The Kaaterskill is one of the very best hotels in all of the Catskill region and occupies a superior position at the brink of the mountain and from its porticos may be had one of the most comprehensive views of mountain and valley that can be obtained anywhere in the country. Unlike the usual mountain formations, of which most of the members are doubtless familiar, the Catskills rise suddenly from an almost level plain so that looking from the Hotel Kaaterskill the eye might sweep over the level land extending to the Hudson River ten miles away and upon which steamers and sailing craafts are distinctly visible and across the Berkshires beyond, a distance of forty miles or more. Up and down the river the view is equally extensive. All about is wild forest country which years ago was inhabited by many species of wild animals but which ,on account of the construction of the summer hotels, have been almost totally exterminated and driven away. In the

Prominent Members of Photo Engravers' Association.

rotunda of the hotel there is exhibited in a case, many specimens of these former denizens of the forest, among them being deer, mountain lion, wild cats, porcupines, etc. Some of the members will, however, be glad to learn that the mountains are said to be practically free from reptiles of any character.

It is planned to make this convention highly educational. Already, Mr. N. S. Amstutz, the well-known authority on photo-engraving has agreed to be present and address the Association, taking as his subject, "Science and Money in Photo-Engraving." Mr. Arthur Fruwirth, a New York expert, will speak, addressing us on the subject "Focusing, Old and New" bringing out a number of features that are absolutely unique and original on this line. His address will be a very comprehensive one and will merit the closest attention. It is also a great pleasure that we are able to announce that Mr. Will Bradley, Art Director of *Collier's Weekly* will be present to deliver an address on the subject, "Design and Color." The sessions

during the period of the convention will be arranged for the forenoons, and with a brief meeting for the afternoon, leaving the evenings free for social intercourse among the members.

The surroundings are so delightful and the situation one of such charm, that it is desired that members will bring their wives and daughters with them. It is planned to arrange various features of entertainment for the ladies, among them, visits to nearby points of interest, drives down the mountain side, strolls through the mountain trails, etc. There are numberless forms of outdoor amusements and the ladies may feel certain of a most charming visit to the mountains.

A recent writer had this to say about this section:

"What impressed my friends most was the originality of the view. Familiar with the best European scenery, they could find nothing with which to compare it. As my movements during this journey are guided entirely by their wishes, I was glad when they said 'Let us stay here another day.'"

A TEXAS NEWSPAPER WOMAN

Texas is a mighty State, equal in extent of territory to all New England, New York and Delaware with a good part of Pennsylvania thrown in to fill out. She possesses a people who do things and a press noted for push, intelligent enterprise and co-operation not alone in the State, but in the National Editorial Association.

Among her editors, equal to any in up-to-date methods and management, is Mrs. B. F. Hart, of the Quanah *Observer*. Her husband leased this paper in 1903. His health being very poor, Mrs. Hart helped him run the paper, first by learning to do the mechanical part of the work and then dipping into the editorial end of the business. Gradually as her husband's health failed she assumed complete management of the work. Then at his death she was able to make a living for herself and two children. She bought the *Observer* printing plant and has continued in the newspaper work. Mrs. Hart is a town booster.

Her experience is another illustration of woman's ability to rise to an emergency and fill with energy and capability a place left vacant by the death of her husband.

Mr. Hart died in 1905. Since then Mrs. Hart has had the entire direction of the paper. She writes all the local and editorial copy, solicits advertisements and collects the bills. So well has she managed the plant that during the last two years she has equipped the office with an engine and other new machinery and has built a substantial office building. Mrs. Hart is a native of Texas, having been born in Ellis County.

An article recently published in the *Globe-Democrat*, of St. Louis, says of her and her work:

When any one around Quanah wants to start anything they usually hunt up Mrs. B. F. Hart, editor, proprietor and manager of the Quanah *Observer*, and find out what she thinks about it, because in the few years that Mrs. Hart has been in the business the Quanah people have come to look upon her as what is sometimes called "an important factor in local affairs."

In the first place, Mrs. Hart is the only woman in Texas who edits, owns and manages her own newspaper. To go a little further, she is the only woman in a good many States who does the job so well that it is hard for an outsider to realize that no man has a hand in the work.

In between times she has found much opportunity to do a great deal of boosting for Quanah. In fact, the Quanah Commercial Club was organized as a result of Mrs. Hart's initiative. Business men had been talking for some time about the organization of a club, but no one had taken the responsibility of calling a meeting for the purpose. Through the columns of her paper Mrs. Hart editorialized at them without avail. One day she decided a club had to be organized. She hired a band to play on the principal streets for a few minutes one afternoon and then marched to the opera house and into the auditorium, where she got up and told the business men that she had called them together to organize a commercial club. She presided over the meeting, saw that officers were elected and then went back to her work in the newspaper office. The club is still in existence and is still doing good work for Quanah. Mrs. Hart is an active member and is chairman of the Board of Directors.

Mrs. Hart will help boost Texas at the N. E. A. Convention in Seattle and expects to take the Alaska trip. Reading the National Printer-Journalist has given this Texas editor the Seattle fever and she will join the band of "Texas Boosters," and will do quite a bit of advertising for her section of the State. She writes that Texas should feel honored at having the president of the N. E. A. and Texas editors should make special effort to attend this meeting at Seattle.

THE REAL EDITOR

FALSE OPINIONS REGARDING — THE GENUINE EDITOR WILL BE FIRM AND CANDID—A BUSINESS MAN—INSISTING ON LIVING PRICES—CAREFUL OF THE APPEARANCE OF HIS PAPER, MAKING IT UNIFORM AND ATTRACTIVE, AND GUARDING AGAINST IMPOSTERS AND FRAUDS—HE WILL BE FEARLESS, INDEPENDENT, FIRM, COURTEOUS, AND A MANLY MAN ALWAYS.

UPON the theme, "What is a Real Country Editor?" G. W. Hughes, of the *Register,* Clinton, Illinois, delivered an address before the Illinois Press Association Convention, at Ottawa, that was replete with thoughts and principles valuable to all makers of newspapers, whether metropolitan or country. All newspapers are joined in work, methods and objects by a common bond, and the greatest publishers, in the larger cities, have been graduated from papers in the smaller cities, where they have come to understand all departments of the business and feel and know, from a direct contact with the people, the readers and advertisers, the permanent results of the lines of action pursued and the methods adopted.

Mr. Hughes, whose subject might just as well read, "What is the Real Editor?" said:

"What is a real country editor?" is more easily asked than answered. There may be many answers to the question, and each of them seems to be true until the matter is given more than passing thought. Some one would say the real country editor is one who makes a financial success of his paper, but that would be no nearer true than to say the one who makes the most money is the best type of an American citizen. Some might say he is one who builds up his paper, does all he can to build up his town and never ties of returning good for evil, but this would not be a correct answer. Others might say he is one who makes no enemies, never grumbles at acts of ingratitude and smiles when every thought tells him he is a fool for not doing as his conscience dictates.

The idea many have of a real country editor is that he should wear a long face, a long coat and always use a Sunday school pencil when he writes for his paper. There is another class who would have him use the most of his columns for horse racing, baseball and other sporting news. There is another class of very brave people—which, for the good of humanity, is larger than it should be—who always enjoy reading severe things that are said of others, and to them the editor who does not punish others is a failure. Yet these same courageous cowards when asked to write and put their names to bitter articles for publication refuse to do so. Many other answers that would satisfy certain ones could be given, but they would not be correct.

NO REAL COUNTRY EDITOR.

People judge country editors as they do all others—by their own peculiar ideas, which too often are not broad enough to cover one little corner of the extensive field of wisdom in thought. The more a true answer is thought for the more it seems there is no real country editor, if humanity in its present state of ability to judge is to give the answer. The more we hunt for him the more it is evident that if he ever existed he has escaped and cannot be located. There appears to be not even one who can safely be pointed out as the real article, with the name blown in the bottle and the cork securely wired in.

The real country editor will not be a tiresome fool or a continuous liar—one who, regardless of their truth, says nice things about people. The editor who deals out chunks of taffy regardless of the facts may have some singing his praise, but the number who condemn him will be much larger. If editors oftener told the truth about people there would be more good citizens. As long as a devil can be advertised as a saint he does not worry about what the people think of him. Writing nice things about those who do not deserve them is like a church giving to a member it desires to be rid of a letter to another church recommending him as a fit subject for its "Christian love and oversight." The editor who lies to make others feel good will feel bad when the death angels are urging him to quit breathing and "come on."

MUST BE BUSINESS MAN.

In a business way the real country editor will be a business man in every sense. He will allow others to suggest or advise, but never to dictate, what he shall or shall not do. He will not allow others to fix his prices, which should always be reasonable and the same to all. He will not accept starvation prices because some penurious would-be patron tells him it is all he will pay. He will not allow advertisements regardless of the appearance of the paper till the columns remind one of a well developed case of smallpox. He will have a style of uniformity that is neat and attractive. He will not allow a three or four-inch display across the top of a page or put black faced pay local among news matter. He will not put display ads on first page of paper. He will not give patent medicine or other foreign ads such positions as "top column next to reading matter," "first ad following and next to reading" or "among home news." He will not fear starvation or a sheriff's sale if he fails to get the patronage of some unreasonable and perhaps unreliable advertiser. He will know it is better to be a man than a piece of putty. He will not insist on merchants taking space in his paper until they feel that patronizing him is an act of charity. He will not give a dollar's worth of advertising for a twenty-five cent complimentary ticket, so-called, for the special privilege of being called a "deadhead." He will not be liberal in reference to those who for "ethical" and other reasons claim they do not believe advertising pays, yet are always anxious to have mention of their doings if it is not unfavorable to their business. He will not accept work at price that mean no profit to prevent his competitor from doing it.

A MAN ALWAYS.

The real editor will not give or sell the influence of his paper to the support of one who is not worthy of that support. He will not be among those who believe a dun canine on one ticket is better than a white man on another ticket. He will not be mean and vicious in what he says of those who differ with him politically or otherwise. He will not allow his paper to be used as a sewer through which may be run the waste and the filth of thought which some would have him give outlet. He will not allow what he publishes to be anything other than clean and wholesome. He will not do many other thiings that many country editors do every day. In short, he will be a man of ability, courage and honesty, straightforward and sincere in all he does; firm, yet reasonable; courteous at all times and ever ready to do good; always an instrument of progress, but never a tool; a man always, a "thing" never.

HOSPITAL NUMBER OF THE WINONA, MINN., REPUBLICAN-HERALD

THE delayed copy of the Hospital Number of the Winona *Republican-Herald,* of which mention has heretofore been made, has reached this office. It is a great paper of seventy-two pages devoted wholly to news, editorial, local advertising and matter pertaining to Winona and to the cause which this issue especially represents. There is no padding with picture or other supplements. It is a model paper, worth waiting for in order to examine and review. One gratifying feature, apparent at the first glance, is that the paper has followed the rules, for advertising make-up, laid down by and so frequently urged in the NATIONAL PRINTER-JOURNALIST. Another noticeable fact is that this issue of this excellent Republican paper is edited by a Democrat. There are no division lines of party or creed in this country when it comes to the promotion of benevolences or the providing for the proper care of the sick or injured, and there never have been. We remember, in our earlier newspaper days, of having this matter pleasingly brought to our attention by finding a subscription list for raising a fund to care for the families of soldiers, away back in 1863. The paper showed that the largest subscription was by a Democrat who had been denounced by many as a "Copperhead," and who was, by no means the richest man in the community. It is interesting to us to notice, too, that this Democratic editor, for this one time editor of a Republican paper, is the editor, who away back in 1865, forty-four years ago, severely criticised the editor of this paper, then principal of the Rochester, Minnesota, Seminary, for admitting an ex-union soldier of color to a seat in the school, and to recall how earnestly the Rochester, Minn., *Post,* then owned and conducted by David and Cyrene H. Blakely, later of Chicago, came to our defense with the claim that a colored man who had been good enough to serve as a volunteer American soldier in the army for the preservation of the Union and thereby saved some reluctant Democrat from being drafted into the service, ought not to be deprived of his only opportunity to secure a little education. Time cures all wounds and smoothes away all differences and causes all to meet on common ground as men and brothers, ever equally lovers of this great country, with all its noble institutions, and of a common humanity. W. J. Whipple was always a noble-hearted man and ever highly esteemed in Winona, where, though his party was the minority party, he was honored with being elected to the position of Mavor and served with credit and to the city's benefit. So much by way of reminiscence.

The Winona *Republican-Herald* must surely have gained largely upon the gratitude of the good people of Winona, and won a still warmer place in their hearts and awakened to activity a broader goodwill by this Hospital Edition. It was made a means, not only of raising funds for, and uniting all the people in, a noble benevolence, but it was also utilized in a way to become a powerful agency for arousing enterprise, reviving city love and awakening city pride.

One of the important departments was that of "Interesting Letters from Former Winonians." Winona has sent out many noble men and women all over the country, and it is well for the local press to bear them in remembrance and to keep them alive, as well, to Winona's interests and growth.

The views and kind words of former residents furnish not only interesting reading but are frequently instructive and inspiring. In this symposium we notice the following from a former resident of Winona, who is now a member of the Merchants Loan and Trust Co., Chicago:

The thirteen years that I lived in Winona covered the period in which the greatest impressions are made on a man's life and character. Practically all of my school education was obtained in the Winona public schools, and assocations made and friendships formed in the earlier life are closer and more lasting than those which come later on. While a larger city has afforded greater opportunities, it has its corresponding disadvantages, and I am often inclined to envy those who are able to find a satisfactory business life among the pleasant surroundings of the Minnesota city.

Are not such words encouraging and inspiring to the stay-at-homes, tending to make them more contented, more loyal and serviceable citizens?

Then here are extracts from letters written by two ladies, both writing from their present home, New York. City. Mrs. Lois C. Akers:

The natural beauties of your city, the noble, majestic bluffs, the mighty river so full of traditions—filled us with wonder when we first came westward so many years ago.

* * * * * * * * *

If I should begin to give expression to what we found in way of sympathy and loyal friendships, I should only tax your patience beyond all bounds. But this I must say, that we are positive that never were there such tender, generous, long-suffering and helpful people as are to be found in Winona. Their constant faithfulness and sweetness was a marvel to us. Coming from associations so much more formal and conventional, it opened a new phase of life, and I hope has made us more spontaneous and helpful, so far as in us lies, toward those about us, and whom we come up against in the worry and hustle of daily living.

Mrs. L. D. Frost:

A Nurses' Home! What a fine addition to the hospital plant. We selfish mortals who are not restricted or bound by certain rules, for certain hours of every twenty-four, forget that nurses possess the same desires and needs for social relaxation as ourselves; and very many hospitals fail to provide suitable accommodations for nurses when off duty, where they may either rest, relax or enjoy.

* * * * * * * * *

In securing a home for nurses, Winona will be in advance of many larger cities; and will gain anew that name she already has, for the generous care of her people in comfort, pleasure, and improvement, as evidenced by her Hospital, Public Baths, and Free Park Concerts

We give these quotations that the editors of home newspapers, in our smaller and medium-sized cities, may realize, in their work for promotion of home comforts and attractions, what things, when looked back upon, are dearest to the memories of former residents, as well as to show how blest is the lot of one who is permitted to live and work in such a city, where every resident counts and every one receives consideration, sympathy and loyal friendship.

A letter from the son of the temporary editor of the *Republican-Herald*, Arthur J. Whipple, writing from the National Bank Building, Chicago, Ill., was filled with pleasing reminiscences of boyhood days in Winona and closed as follows:

Winona, it is indeed a dear old town. To one whose early life was so closely allied with its growth, its character, its natural beauty, the nobillity of its citizens of the earlier day, no memory can be sweeter than that which takes him back to "Auld Lang Syne."

Well, here is to beautiful Winona: "May she grow bigger and bigger until Homer shall have become the seat of population on the East, and Minnesota City on the West."

This from. "Bud" Whipple.

There are letters from all parts of the United States and from men and women in all the different walks of life. The benevolent object of this special issue appealed to all and awakened noble sentiments as well as happy memories.

"Winona's Home Coming," on August 30 to September 4, was also most appropriately featured and the statement made:

Probably in no previous week in the history of Winona will there be so many people within the walls of the Gate City as there will be during the week of August thirtieth to September fourth this year. During this week Winona will celebrate a Home Coming and Re-Union of former citizens and no efforts will be spared to make this occasion the grandest ever held in Winona and an event long to be remembered.

It has been carefully estimated that fully fifteen thousand former citizens of Winona have left this city and now live in every part of the United States.

No more potent agency could have been devised to fill former residents with desires to visit the old home, than this magnificent special issue showing the great growth of the city, and the kindly spirit of the people.

In the same section is an article that ought to be of instructive interest to all editors who are giving proper attention to the home schools and to the new and practical methods of teaching, that seek for an even and proper development of both the bodies and the minds of the children. The old proverb, "A sound mind in a sound body" has been too long neglected in modern education. This article is "About Manual Training as Directed by Prof. Sandt in the High School," and tells of the good work done and the methods pursued. The schools furnish a fruitful field, if properly cultivated, for entertaining, useful news stories, that will appeal to all right-minded members of the community, for all such are interested in the schools and in the children, the future managers of, or workers in, all the commercial and industrial institutions and the directors of the destines of city, state and Nation.

We can not give a complete review of all the departments. The churches, industries, commercial establishments and schools receive proper consideration and naturally the City General Hospital is fully described, with illustrations; its history given with portraits of the officers and directors.

The wonderful advertising patronage given this issue, is the one thing most in evidence and speaks much for the citys high business prosperity and and for the liberal, benevolent spirit as well as for the enterprise of its business men and manufacturers. We believe that a permanent increase in advertising will be realized, at least this has been our experience in the past, as the result of getting non-advertisers started in on attractive special issues that helped to begin the advertising habit.

The fifty-sixth annual convention of the Wisconsin Press Association will be held in Superior on Monday, Tuesday and Wednesday, June 28, 29 and 30. Among those who will be on the program for "shop talks" during the meeting are O. F. Byxbee, business manager of the *Inland Printer*, Chicago; S. C. Theis, special newspaper representative, St. Paul, Minn.; F. R. Huth, Grantsburg; Assemblyman Merlin Hull, Black River Falls; Mrs. Ada R. Markham, Independence; Charles G. Starks, Berlin; Judge H. S. Comstock, Cumberland, and Frank Hamill Spooner. A feature of the program will be the reading of an original poem, "The Song of the Press," by its author, R. E. Berager, editor of the *News*, Prentice, Wis. A large attendance is anticipated at the convention and elaborate plans are under way for the entertainment of the visitors.

The Cedar Falls, Iowa, *Gazette*, one of the oldest newspapers in Iowa, has suspended publication and foreclosure proceedings have been started. The plant was sold to the highest bidder on June 26th. This paper was started before the Civil War and has a most interesting history. During the earlier years George D. Perkins, now editor of the Sioux City *Journal*, was the editor and publisher and for thirty-five years E. A. Snyder owned and published the *Gazette*, making it a strong paper politically. He disposed of it eight years ago, when he was appointed postmaster, and during the past five years it has changed owners several times. For many years it had been a semi-weekly issue.

R. M. Andrews, editor of the Menominee *Herald-Leader*, will be the orator of the day at the Fourth of July ceremonies. at Marinette, Wis.

"THE BEST ON EARTH."

Ennis, Texas, June 18, 1909.

National Printer-Journalist, Chicago, Illinois.....

Dear Father Herbert:—Enclosed find check No. 129 for $2 covering one year's advanced subscription for the National Printer-Journalist, the best publication on earth for a real newspaper-man.

With kind regards and trusting I will have the pleasure of meeting you at Seattle next month, I am,

Fraternally yours,

J. P. Chambless.

ILLINOIS EDITORS AT OTTAWA

ADVERTISING, of a most attractive character, was fully tested in the securing the attendance of a goodly number of representative editors and publishers at the forty-fourth annual convention of the Illinois Press Association in Ottawa, June 16th to 18th. Invitations, visitors' cards to the Ottawa Boat Club, a nicely designed key to the city, of the up-to-date Yale Lock pattern on silver cardboard, picture cards showing historic points and splendid views, seconding the circulars and programs by Secretary Page, were sent out, from week to week, to the members. The attendance secured, considering the time of the year and the fact that it was the week of the closing of the schools in many cities, was large, much above the average of recent years.

The effectiveness of good advertising was apparent; all parts of the State were represented. We could not fail to notice the absence of many of the more elderly members and were forced to the conclusion that the "boys" are really getting or feeling old. However, a goodly band of the veterans were there and among the other notables of the profession in Illinois, General Smith D. Atkins of Freeport, who has been steadily in the service for a half century or more, less the years that he served his country gallantly as volunteer soldier and officer in the great Union Army. He has also been postmaster for three decades or more, combining the two functions, like our first great editor, Benjamin Franklin.

Editor C. W. Bliss, who is always bubbling over with geniality and humor, was absent, possibly addressing and inspiring with happy views of life some graduating class of girls and boys, and Gen. Atkinson filled his place at the convention, in making response in a pleasing and gratifying manner to the happy address of welcome by Mayor Farrell, who tendered the freedom of the city and said:

"During the next three days Ottawa belongs to you. You have the keys that will pass you to any section of the city, and as you are in full possession here, you are cordially welcome to make yourselves right at home."

The key was much in evidence, worn and showing very prettily its silver scheen by the side of the purple badge of the Association, and acting as an "open sesame" to all entertainments and excursions. It ought not be omitted to state that the convention was opened with an appropriate invocation by Rev. J. L. Albritton. The editors today are not unmindful of the higher duties and obligations of the newspaper calling and recognize and gladly serve the cause of true religion, though free from any narrowness or creed.

President S. K. Strother, editor of the *Courier,* Taylorsville, delivered an able address in which he extolled the

EDITORS AS PROMOTERS OF CIVIC RIGHTEOUSNESS

and contrasted the newspaper with other callings, placing this profession in usefulness and power above all others. He said:

The position of the editor is a higher one in moral dignity and power than that occupied by the minister, or the lawyer, or the physician, and it is our fault if we do not sustain it properly. The editor in every community is more or less criticised, if he makes himself felt at all, for everything he says, and he should have something to say on the right side of every question affecting the welfare or morality of his community. Not the narrow morality of the decalogue, but the morality of civic government—the practical equities of life. To enable him to do this he must possess a stiffer moral fiber than the average ministers, many of whom are paralyzed, at critical times, by liberal pew-holders who have "axes to grind" and who do not hesitate to enter alliance with the worst influences to get what they want. The lawyer in too many cases is enlisted in the side of the selfish interests, whose representatives are often the liberal pew-holders who keep the minister in meek subjection. The minister, mindful of his job, keeps a discreet silence, while a fat fee, or a seat in congress or the legislature, holds the lawyer and gives him a chance to sell his vote and influence, and along with them his manhood. The physician consciously and unconsciously bends to the same influence, and thus we have the educated force of the community—the diploma and the sheepskin class—in an equivocal position in nearly every contest waged for the betterment of human conditions.

Upon the editor of the newspaper rests the brunt of the fight for civic righteousness. Besides the moral stamina of the preacher, the ability of the lawyer, and the skill of the physician, he must possess courage, for the powers of unrighteousness, whether in the form of anti-local option, a new issue in Illinois, or special privilege, or what not, are strongly entrenched and vindictive, and the editor of the newspaper which assails them faces certain business losses, and even bodily harm.

DUTY BEFORE MONEY.

The average editor occupies a higher position than the average minister, lawyer or physician, because, unlike them, he is not deterred by fear of "losing his job," or of bodily harm from using the great influence of his position to advance the cause of moral progress and increase the sum of human content by striking at special privilege in the manifold forms in which it presents itself. The true editor, one who is in love with his profession and who is putting his soul as well as his brain into it, pays no attention to the modern Iago when he says, "Put money in thy purse." The true editor puts private conscience and public duty and honor before money.

Therefore, brethren, is the editorial profession the noblest of all professions, and I congratulate you, members of the Illinois Press Association, because you belong to it. None know better than you the extent of the hypocrisy with which the so-called higher professions are honey-combed, and how little sincerity and value there is to the criticism which they are so free to aim at you.

Coming to the business side of this meeting, I presume I am expected to say something about memberships, parcels post, publication of laws, postal regulations, tariff on print paper, and the printing of envelopes by the government. All my predecessors have covered these points, and they did it well, and eloquently.

TARIFF REVISION.

Committees have been appointed, and resolutions adopted, but the special session of Congress called to revise the tariff has revised it in the interests of the

paper trust, and all other trusts. It occurs to me that the newspapers of the country, metropolitan, provincial and rural, must agree that the tariff is not a political question, to be wrapped up and saved in political prejudice, but an economic question affecting the welfare of every man, woman and child; and to get at the root of the matter we should go after the Senator or the Congressman who stands for the trusts, and against the people. For instance, Aldrich should be removed from the Senate, not because he is a Republican, but because he is the unblushing servant and advocate of special privilege. Bailey should be removed, not because he is a Democrat, but because he stood with Aldrich in favor of the lumber tax. Until the people stand for themselves, uninfluenced by political prejudices, the trusts will always get the better of them. The trust has no political prejudices; neither has the liquor dealer.

THE PARCELS POST.

The parcels post evil I consider not imminent. It will not become a dangerous question until the metropolitan representation in Congress outnumbers the country representation. The postal laws and regulations will never, in my judgment, become burdensome to the legitimate newspaper in this country, and as to the publication of laws and constitutional amendments, I am informed that the committee authorized at the Champaign meeting last year will have a report to make, and when this report is made the matter can be taken up and discussed thoroughly and the association take what further action it may think wise or necessary. Personally, I think all general laws, controlling in any way the actions and conduct of the citizens of the State, should be given the widest possible publicity and the full text of all constitutional amendments should be published in every county.

ENVELOPE QUESTION.

The printing of envelopes by the Government is an undoubted evil. It is a gross injustice to the thousands of printers throughout the country who have invested their money in material with which to do this work, and it is an unwarranted invasion of a legitimate business field, which is nothing short of socialistic, too, from the standpoint of a mighty government, in a very small way.

It may be contended in support of the Government's position in the matter, that the Government does the work cheaper than the individual printer can do it, and the consumer benefits from it, which is true. The individual printer cannot compete with the Government in the printing of envelopes. The consumer saves a very little money by buying Government envelopes, but who will have the hardihood to defend the Government printed envelopes on that account? The Government could lower freight and passenger rates by owning and operating the railroads; it could sell coal cheaper to the people by owning the coal mines; it could give all the necessities of life much cheaper to the people if it would take away from the trusts all protective tariff duties. And why not all of this if the Government is to set up a gigantic printing office for the purpose of destroying private business initiative as represented in thousands of printing offices in all parts of this country?

I hope this Association at this meeting will take vigorous action on this matter. Other state associations are going after the Government in no uncertain terms, and Illinois editors and printers should be at the front of the fight. A committee ought to be appointed at the beginning of this session and instructed to draw up resolutions reciting the evil, and calling upon the representatives from Illinois in the National Congress to introduce and push to passage a bill denying the Government the right to print a business card of any kind on its stamped envelopes. These resolutions should be passed unanimously by this body and the secretary instructed to mail a copy to each Senator and representative from Illinois.

UNITED TYPOTHETAE OF AMERICA

ANNUAL CONVENTION AT DETROIT, MICH., WEDNESDAY, THURSDAY AND FRIDAY, JULY 14TH, 15TH AND 16TH.

ANNOUNCEMENT of the Convention of the United Typothetæ of America this year causes a reminiscent state of mind and a feeling not untouched by sadness. The recollections of the occasions and happy associations enjoyed and friendships formed are most pleasurable, but the remembering that so many, who, during the years since 1888, when we first met with the Typothetæ in New York City, took a prominent part in these conventions from year to year, have passed away, touches with sorrow every incident of which these genial and faithful followers of Franklin's Art formed so large a part. Scores have gone over into the mysterious unknown and an enumeration of these here is impossible, but the mention of a few of the score, who have filled the position of President, recalls many others and serves to impress the thought of the extent of the harvest that has been reaped by the angel of death: Andrew McNally, of Chicago; Col. Horace J. Rockwell, of Boston; William A. Shepard, of Toronto; William H. Woodward, of St. Louis; John R. McFetridge, of Philadelphia; Cyrene H. Blakely, of Chicago, and Ezra R. Andrews of Rochester; over one-third of those who have served as Presidents have passed away.

These men were all vigorous, full of life, hopes and joyous activities twenty years ago, as were a proportionate number of members who have also fallen. They were noble men and while it is right to seek all that is bright and that affords in intelligent pleasure and that contributes to wellbeing and hopefulness among the living, for the better meeting difficulties and carrying forward successfully the useful work of the world, it would be most fitting that a session of the coming Convention should be devoted to recalling the lives of the departed and to honoring their names. It is proper to remember military heroes, but nevertheless, not those alone who risk or give up their lives on the battlefield, live and die for their country and their fellow men.

Every man who worthily, bravely and faithfully performs the duties that come to him, in all the sacred relations of life, is worthy of equal honor and remembrance, and such remembrance is generally more useful to society and to good citizenship, more helpful and inspiring to those who must meet like duties and responsibilities.

Some of the Members of the United Typothetae of America at Boston Last Year.

Detroit is a model city in which to hold a convention and there is no doubt but that the one to be held at Detroit from July 14th to 16th, this year, will be equal in enjoyment and usefulness to any of its memorable predecessors, held at Chicago, New York, St. Louis, Boston, Rochester, Milwaukee, St. Paul and Minneapolis, Kansas City, Philadelphia, Cincinnati, Niagara Falls, Atlantic City, and other points. They have all been grand occasions, and the cities visited, with their attractions and hospitalities, have made them memorable.

The meeting at Detroit will be held in the Convention Hall of the Cadillac Hotel, which is to be headquarters. The Executive Committee meets, as usual, on the Tuesday preceding. In the evening an informal smoker will be held and reception for the ladies. Wednesday morning, July 14th, at 10 o'clock, the Convention opens, continuing into the afternoon, with intermission for luncheon, and that evening it is expected that a cost lecture will be given. Thursday morning, at 9:30, the Convention meets in Executive Session for one hour and a half, after which follows the regular open session. In the afternoon a River ride up the Detroit River and back, dinner being served on board on the return trip. Friday morning the closing session, with election of officers, etc. Wednesday afternoon an automobile ride has been arranged for the ladies.

We have enjoyed the hospitalities of Detroit in convention with the members of the National Editorial Association, and fully appreciate the delights of a visit and stay in that city and a trip on its splendid river in the summer time.

We fully corroborate the following that appears in the Secretary's Bulletin, and give the names of officers found therein as a matter of valuable information:

The Cadillac is one of the largest and handsomest hotels in Detroit, and is run on both the American and European plans. The members attending the convention will have no difficulty in being made comfortable. Arrangements have also been made with other nearby hotels for the overflow and for those who prefer smaller and quieter quarters. Requisition blanks have been furnished local secretaries, descriptive of the different hotels, rates, etc., and it will be well for those expecting to go to the convention to make their choice and reserve rooms early. Detroit is a popular convention city in the summer months, owing to its cool and delightful climate and is pretty sure to be crowded. The convention is also likely to be largely attended and it is the desire of the local committee to make every one, whether delegate, alternate or visitor, as comfortable as possible.

A departure from the usual programs followed in former conventions will be one or two afternoons devoted to local secretaries, when reports from cities will be offered showing trade conditions and suggestions for the advancement and improvement of the organization. Papers will also be prepared, and read at this time. on the work of the local secretary and what is necessary to make his work successful in the upbuilding of his organization locally.

The program of the convention is particularly interesting both in entertainment and work. The selection of Detroit on account of its geographical location is a good one, and delegates and others are sure to be well repaid for the time and money expended.

The following are the present officers of the United Typothetae of America: President, E. Lawrence Fell, 518 Ludlow St., Philadelphia; Vice-president, Wilson H. Lee, New Haven, Conn; Treasurer, A. M. Glossbrenner, State House Square, Indianapolis, Ind.; Acting Secretary. Franklin W. Heath, The Bourse, Philadelphia.

Executive Committee: Wilson H. Lee, New Haven, Chairman; A. R. Barnes, Chicago; Issac H. Blanchard, New York; George M. Courts, Galveston; J. Stearns Cushing, Norwood, Mass.; H. K. Dean, Grand Rapids; George H. Ellis, Boston; John Stovel, Winnipeg, Canada; Wm. J Golder, Pittsburg; Franklin Hudson, Kansas City; E. C. Tanger, Rochester, H. W. J. Meyer, Milwaukkee; L. T. Davidson, Louisville; Samuel Rees, Omaha; Robert Schalkenbach, New York; C. M. Skinner, St. Louis; Fred L. Smith, Minneapolis; Edward Stern, Philadelphia; E. M. Watson, Jersey City, President and Treasurer Ex-Officio.

INVITATION AND OFFICIAL PROGRAM, TWENTY-SECOND ANNUAL CONVENTION OF UNITED TYPOTHETAE OF AMERICA.

OFFICE OF THE SECRETARY.

PHILADELPHIA, PA., June 18, 1909.

MR. B. B. HERBERT, National Printer-Journalist, 1319 W. Ravenswood Park, Chicago, Ill.

DEAR MR. HERBERT:—I am enclosing you, herewith, program for the Detroit Convention. I trust that you will be with us that week. Very truly yours,

FRANKLIN W. HEATH,
Acting Secretary.

PROGRAM

JULY THIRTEENTH

Tuesday Afternoon—2 P. M. Meeting of Executive Committee. Filing of Credentials with Credentials Committee.

Tuesday Evening—Informal Reception and Smoker in the Hotel Parlors. The Detroit Typothetæ will have a man at the Hotel Headquarters who will be pleased to furnish information to delegates and visitors concerning points of interest in and around Detroit, directions for reaching various points, and in fact any general or special information which may be required for the convenience of our guests.

JULY FOURTEENTH.

Wednesday Morning—Formal opening of the Convention in the Convention Hall at the Hotel Cadillac, at 10 o'clock. Short Address of Welcome by Mayor Breitmeyer of Detroit. Also a short talk by John Trix, President Employers' Association of Detroit.

Wednesday Afternoon—3 P. M. Secretaries' Meeting with reports. Special order of business. Automobile ride for the ladies of the Convention, through the park system and various places of interest in and about Detroit. Automobiles will start from Hotel Cadillac at the Boulevard entrance at 2 o'clock P. M., weather permitting.

Wednesday Evening—8 P. M. Lecture on Cost of Production, with lantern slides, to which *all printers* are invited.

JULY FIFTEENTH.

Thursday Morning—9:30 A. M. Executive Session, delegates only admitted. 11 A. M., Regular Session, open to alternates and visitors.

Thursday Afternoon—Session of the Convention.

JULY SIXTEENTH.

Friday Morning—9:30 A. M., last session, election of officers, etc.

Friday Afternoon—A water trip on the Steamer Pleasure to the Flats, the Venice of America, and down the Detroit River to "Bob-Lo."

Boat leaves foot of Woodward Avenue at 1:30 P. M., for a trip up through the Detroit River, Lake St. Clair, the Ship Canal, and the Flats—a ride that is a little different than any other boat trip in America.

Dinner will be served at "Bob-Lo" at 6 o'clock. You can not afford to miss this trip.

Visitors will be admitted to all meetings except the Executive Session, Thursday morning, which lasts for an hour and a half, after which they will be welcome.

ILLINOIS EDITORS AT OTTAWA.

Continued from Page 487

The association may authorize the President to appoint this committee, or it may be appointed by the association itself.

NEED OF CENTRAL PRESS ORGANIZATION.

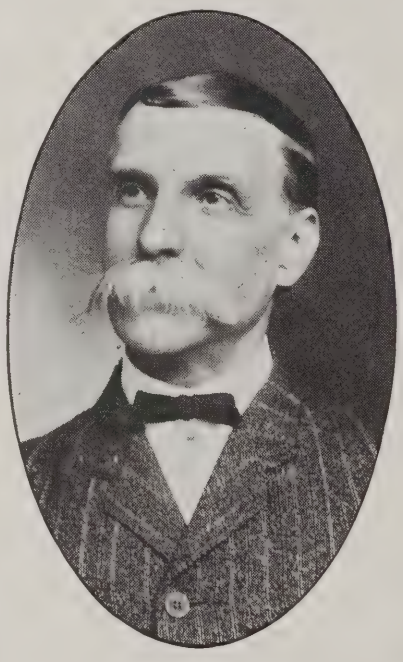
The membership question is a difficult one. There is a tendency to combine in smaller groups and by class. But the children of the parent organization should not leave it. There can be no objection to county organizations, or district associations or daily newspaper associations. They can accomplish much good, but they should become a part of a powerful central organization. All of them should be a part of and auxiliary to the Illinois Press Association. There is nothing incongruous in the idea of all the newspapers of Illinois, weekly and daily, large and small, united in one powerful body for the common good. There are fundamental principles and interests common to all, and all should unite in the common behalf. I would like to see this Association make a move in the direction of enlarging its scope and power by enlarging its membership so as to include all the newspapers of the State—those printed in villages, and those printed in the larger towns and cities—daily, weekly, semi-weekly or monthly. How to go about it is the difficult thing. As a preliminary, I think it would be a good idea for this association at this meeting to address a letter to all the various newspaper associations of the State, setting forth the plan we have in view, and asking for their co-operation. This letter could be prepared by a committee, or by our able and versatile secretary, and by him mailed to the secretaries of the other associations with the request that it be brought up for action and reported on to this body. The reception the proposition meets with will demonstrate whether it is feasible or not and whether it will be worth while to carry the matter further. There can be no question, however, that one strong, powerful, harmonious organization can accomplish more good than a dozen or a hundred scattered bodies having the same aims and objects in view.

"PRINTING GOVERNMENT ENVELOPES"

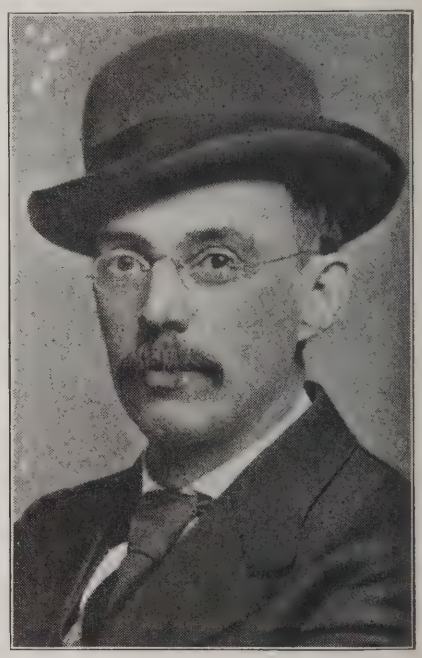
was the first subject on the program, and an able paper was presented thereon by Charles W. Warner, editor of the *Chronicle, Hoopeston.* He is also a postmaster and "hooped" it up for the Government side. A lively discussion followed. The editor of this paper, on account of many other pressing duties, was not present at this session, but our information is that the two postmaster-editors taking part therein, were extremely loyal to the idea and plan of the Government printing the envelopes, for which printing the postmasters are agents, thereby swelling the receipts of their offices with the possibility of adding a $1 or more a year to their salaries.

Yet we do not wish even to intimate that any mercenary motives influenced these editor-postmasters, though, it is stated that one of them charged his brother-editors with a sort of disloyalty in being against this long-settled practice of the Postoffice Department of our great and free Republic.

Wm. T. Bedford, Publisher of LaSalle Tribune.
Newly Elected President of the Illinois Press Association.



J. M. Page, Jerseyville, Ill.
Secretary



Eugene L'Hote, Milford, Ill.
Treasurer

State Senator J. B. Castle of the Sandwich *Argus,* presented the following preambles and resolution and the matter was finally laid over until Thursday morning, when the resolutions were adopted:

Whereas, The Government of the United States through the Postoffice Department, is entering into unjust competition with the printers of the country without benefit to itself and to the great detriment of the printers.

Whereas The Government derives no profit from the printing of the envelopes and it must necessarily sustain loss which has to be borne by the general public in the making up of this

deficit; and the Government charges no more for a stamped envelope with a printed return card thereon than it does for the stamped envelope without the return card. And,

Whereas, The practise is not only unfair to the printing business but it is an unjust burden upon the people who have to bear the expense of making good the loss sustained by the Government in doing this class of work. And,

Whereas, We believe that it is against the fundamental policy of our Government to come into competition with the individual activities of its citizens and that the statute permitting this injustice to one of our most patriotic and enterprising class of professional and business men, should be repealed and the business returned to its local communities.

Therefore, Be it Resolved, That we, the members of the Illinois Press Association, in meeting assembled at Ottawa, Ill., June 16, 17 and 18, 1909, are opposed to the United States Postoffice Department printing the return card upon envelopes in competition with the printers of the United States, and we hereby respectfully request that our Senators and Representaatives in Congress from Illinois do all in their power to secure legislation which will do away with the competition of the United States Government with the printers, and that the secretary of this Association mail to our Senators and to each Representative in Congress from this State, a copy of these resolutions.

On Wednesday evening, Hon. W. H. Stead, Attorney-General of Illinois, delivered before the editors and citizens the annual address.

Thursday morning, the members of the Association boarded the street cars and were taken over the city to the Federal Plate Glass Works, where they had an opportunity to witness the process of making plate glass. There is no glass factory in the United States where a better quality of plate glass is made than in Ottawa. In fact, expert judges claim that no superior glass is made anywhere. The visitors were taken through the entire works and the process of glass making was witnessed, the kinds of sand used, the machinery, etc. This visit to the factory proved one of the most interesting features of the day to the newspaper men. Returning to the city again the members of the party, which through the courtesy of the *Western Publisher,* we are able to show herewith, lined up in front of the Ottawa theatre and a photograph taken of the group.

The only business session of the day was held at 10 o'clock in K. of P. Hall, a short program being given. Vice-President G. W. Hughes of Clinton, presented a paper on, "The Real Country Editor." Mr. Hughes is well qualified to discuss this subject and his dry humor made the address doubly interesting. Following this was a lively discussion of the "Printing of Government Envelopes." The discussion against the adoption of the resolution was led by Postmasters Bedford of La Salle, and G. W. Warner of Hoopeston. The arguments of editors Bedford and Warner proved to have little effect upon the other delegates, and the resolution against the printing of envelopes by the Government were adopted.

Thursday afternoon the members of the Association boarded a special interurban and made a trip to Marseilles, where they were escorted to the Marsatawa Country Club, where a reception was held and the guests served with a buffet and cigars. An address of welcome was made by Editor J. F. Schureman, of the *Commercial Poultry Journal,* and responded to by a member of the Illinois Press Association. A short talk was also given on "Marseilles and the Deep Waterway" by ex-mayor Ebin J. Ward. An orchestra furnished music. An inspection of the dam was made and then the visitors were escorted to some of the leading industries of that city.

Returning from Marseilles to Ottawa they were escorted to the Ottawa Tent Colony where a banquet was served and they were shown over the beautiful grounds of the colony, which company has been organized for the treatment of tuberculosis.

Returning from the Tent Colony they became the guests of the Boat Club, where they were treated to a stereopticon lecture on "Starved Rock" by Horace Hull of Ottawa. This lecture is unusually interesting and was greatly enjoyed by the newspaper men, Mr. Hull being an excellent and entertaining speaker and has a happy faculty of presenting his subject in a very realistic style.

This was followed by a reception and ball which was largely attended and proved a most interesting and enjoyable affair.

Friday morning the final business session was held. The question of typesetting machines was ably discussed, reports of committees received and resolutions adopted and officers elected

President, W. T. Bedford, *Tribune,* La Salle; First Vice-president, H. F. Dorwin, *State Journal,* Springfield; Second Vice-president, W. H. Freeman, *Signal,* Chicago Heights; Third Vice-president, J. M. Sheets, *Oblong Oracle,* Oblong; Secretary, J. M. Page, *Democrat,* Jerseyville; Treasurer, Eugene P. L'Hote, *Herald,* Milford.

The finale to the convention was Friday afternoon, when a trip was made to the historic and most famous Starved Rock, and was the most enjoyable trip made during the convention. The trip was made down the Illinois river on boats, and as they moved down the stream the editors of Illinois were given the opportunity to view the most beautiful river scenes in the State.

A 92-page special edition was issued by the Spokane *Spokesman-Review,* June 17th. The number commemorated the 25th year of its publication as a daily paper, and showed in picture, article and interview the wealth and development of its field, the Spokane Country. Copies of the paper were sent to thousands of eastern addresses. Towns tributary to Spokane took advertising space in the edition to exploit the attractions of their localities.

SUCCEEDS DESPITE "A BADLY BROKEN LEFT ARM."

(From the Morristown, Tenn., *Sun,* June 21st.)

The *Sun* is rounding up its first year of existence, during nearly all of which time the editor and manager has suffered, more or less, from the effects of a badly broken left arm. But, notwithstanding all this, we are proud to truthfully state that the paper has been a success from the very start, having been accorded a good advertising patronage and secured a subscription list that any paper should be proud of. It will continue to "shine" brighter than ever from now on and hopes to continue to be favored with the patronage of an appreciative public.

E. M. Hardy is manager of the *Sun.*

THE EXPOSITION AND WHAT IT AIMS TO DO

SEATTLE is ready to play actively her part as intermediary between Occident and Orient. She introduces the great and fully developed world of the West, to the great and practically undeveloped world of the Far East and to the knowledge of both she brings the vast domain of the North, Alaska, that they three may thereafter get together for their profit and advancement.

In a word, through the agency of the Alaska-Yukon-Pacific Exposition, the tremendous developmental energy of America is ushered into the theater of the world's work during the centuries that are to come.

It is the first congress of the nations that lie on the western seas, such a congress as the world has never known, for participating in it are nations and races that have only just awakened and felt the fire that moves to national endeavor and accomplishment.

The China that was asleep and is now awake is making preparations to outdo, if that be possible, her lusty, wonderful neighbor, the Mikado. Siam and Anam and Burma, aroused by the unheard-of racket of preparation being made by their erstwhile somnolent parents, are also up and doing as fully determined to show to the world their capacity for its tasks.

Uncle Sam is spending a quarter million to give to the American people a correct knowledge of the much-misunderstood Filippino and his tremendous capacity for production and industrial excellence, and there are exhibits also from those island neighbors to Luzon, Sumatra and Java, and with them also Ceylon and Borneo and the other spice islands of the Straits Settlements, with a characteristic display from Singapore, with the whole Malay Peninsula included. Penang has sent its women, its spices and its incense, with all else that throws glamor over equatorial existence.

Japan's exhibits at the exposition is far the most elaborate that Nippon has ever made. Not since the day Uncle Sam quietly shook the land of the rising sun by the shoulder and wakened it from the sleep of ages have the Japanese answered to the industrial call as they have answered to the invitation of Seattle. The first and always the staunch friend of the natives of Nippon on the Pacific Coast, Seattle's request has been considered a command by the home government, and as a result the whole life of Tokyo is taken up and transplanted to the northwestern shore.

Not only the commercial life of Japan is shown, but the home life of the people, their daily habit of life and dress—the way they are today, the way they were 100 years ago when the Samurai lorded it over all the land, and the man of business and affairs commercial ranked with the scullion and the petty thief. Japan does not plan to show only the great things it has today, but its whole romantic, startling story.

Australia, all Australasia in fact, and this includes New Zealand and whole battalions and regiments of islets and islands that lie under the southern cross, have made as complete a showing as any other nation or colonial government. Had that not been assured before, the visit of the American fleet to Sydney would have made it certain. It has taken in as dead earnest "hands across the sea" when Sperry and the armada sailed in past Sidney Heads, and it's a good-natured question down that way whether the land of the kangaroo owes fealty to King Edward or Teddy Roosevelt.

Alaska's exhibit, or better, exhibits, will be a revelation to the hundreds of thousands who strangely know little or positively nothing of the world's great treasure box. The exhibits are such that there will no longer be ignorance. It is Alaska as it is, even to the romance of the trail; mysteries of the blizzard and the hardships of the great white silence. It is shown by constant mining operations how it is that Alaska, in ten years of work, has leaped to second place in the gold production of the world. It is being shown why the millions of Morgan and Guggenheim are expended like water to overcome physical obstacles which, until the present, were considered insurmountable, that they may lead railroads to the most enormous deposits of copper the world has to offer.

Alaska's fisheries, which although half-developed, are still factories for turning out millionaires, are shown in full operation, and the other trading possibilities of the never-ending Alaskan coast are completely demonstrated. The Esquimaux, the Siwashes, the Indians of the Yukon and the giant aboriginals of the farther north, the Gens du Large with their sled dogs, which are half wild wolf, their Klootchmen and their children, their birch canoes, and the kiaks in which the coast huntsmen chase the walrus and the whale are also shown, as also is the big game with which Alaska abounds.

All the states of the West and many of those of the East and South have buildings of their own within the Exposition reservation. Canada and Yukon have whole divisions, for they have as much to show and as much to develop as has any other exhibitor.

The state of Washington alone is spending a million of dollars that its wondrous resources may be amply shown. Its vast stores of timber, grains, fruits and mineral and its remarkable fisheries are arrayed as they are.

And that all of things may be shown, and that Seattle may do properly and well the great big thing which it has set its hand to do, twenty millions of dollars have been spent in the one way or another.

The Exposition city has been builded in a virgin forest, upon which Mount Rainier looks down from a height of 15,000 feet. Its palaces, many of them of permanent brick, rise among firs and cedars and hemlocks. Its grounds are tangles of bloom and woodland greens. The site slopes to two lakes, that set like gems in the woods, and upon the water, thee life and beauty of Venice will be produced

In the buildings there are all the beauty and attraction of Oriental curve and graceful towering pillar. The structures are grouped in a series of circles surrounding a central court, in which rises the imposing Alaska shaft, and down which plunge the magnificent cascades to Geyser Basin. Around the central court, in a semi-circle, are the splendid buildings that have been erected for the United States government to house the exhibits from Hawaii and the Philippines and the government's Alaska exhibit

The out and out amusement features of the Exposition are said to excel anything produced at any world's fair down to this time. At Chicago it was the "Midway," at St. Louis it was the "Pike," and at the Lewis and Clark Exposition it was the "Trail." At the Alaska-Yukon-Pacific Exposition it is the "Pay Streak," and upon it are only such amusements as are the "last word" in their lines. There is, of course, the usual Oriental village, with its caravans, theaters and cafes, but it is no stock production. On the contrary, a special commissioner was sent through the Oriental countries to gather at first hand the leading amusement features and everything else that would serve to show every day life of the peoples. Turkey, Greece, the Levant generally, have been laid under tribute.

The illumination of the exposition grounds is on a magnificent scale. In the decorative feature of the grounds alone one million eight-candle power incandescent lamps are used, and by night every building on the grounds is brought out in blazing outline. The cascades are illuminated with powerful submerged electric lights of various colors and the Geyser Basin is a lake of liquid fire. The Alaska shaft is also lined with lights, and the shore waters of Lake Union and Washington, which lie upon the exposition city, are made beau-

tiful from below, as well as above, by the same system. On Lake Union the government carries on experiments with submarine torpedo boats, and at night the operation of the craft may be plainly seen by means of a myriad of lights placed under the water.

Enough electricity is used for both power and light on the Exposition grounds to supply the needs of a busy city of 40,000 population.

In most part the Exposition city has been permanently constructed. Several of the buildings are of stone and pressed brick over steel construction, and these will revert to the State University after they have served their purpose with the Fair. A complete and modern sewer system has been installed and also a water system, which is connected with the city supply. All of the electric wiring has been done underground, not a surface wire showing anywhere above. All of the boulevards, streets, plazas and walks have been heavily paved in bitumen and cement, and the gardens which lie between have been planted as a permanent state institution.

Splendid boulevards have been builded along the lake fronts of the grounds, and these all lead to the general passenger depot outside the enclosures, at which six lines of electric urban and interurban electric lines will deliver passengers. Other passengers are delivered on the lake front by the "mosquito fleet," a cloud of small power craft, and many large ones, which ply on Lake Washington between the various stations.

Seattle itself is well able to care comfortably for no matter how large a crowd may be attracted by the Exposition. It has many excellent hotels and restaurants and its associations of hotel and eating house men have held meetings and pledged themselves to abide by their usual scale of prices throughout the Exposition period.

Should the capacity of Seattle be at all pressed the city of Tacoma is only an hour and a half away by a splendid interurban trolley service, and it, too, offers the best to be had of hotel accommodation. All around Puget Sound, for a matter of that, are cities which boast first-class hotels and which are connected with Seattle by almost constant boat service over one of the most beautiful bodies of water in the world.

The larger towns of the Dominion are also close at hand; so much so that one may in a day go sightseeing in either Vancouver of Victoria, to the remarkable coal mines on Vancouver Island.

To the sightseer these side trips from Seattle offer such scenery as may be had nowhere else. To the sportsman two hours' journey from the city will provide him with bear or deer shooting and unexcelled trout fishing at all seasons of the year.

An exhibit of live specimens of the big game of both Washington and Alaska is one of the most interesting features of the big fair.

The Forestry Building will be the largest log house ever built, and about the front of the structure will be 124 logs, each forty feet high and containing 6,000 feet in board measure. The weight of each one of these great logs is estimated at 50,000 pounds. The dogs used in the exterior of the building are being left in the rough, while those used in the interior will have the bark removed.

One of the ornate buildings on the Exposition grounds is the music pavilion. This building is of colonial architecture, with many of the characteristics of the French style, carrying columns modeled after those surrounding Washington's old home at Mt. Vernon. In the frieze about this building is a musical staff and other decorations of a similar nature.

The home of the Arctic Brotherhood on the Exposition grounds is typical of the houses in Alaska and the north of Finland and is built of logs. The landscape features about this building represent gardens seen in the north. The structure to be equipped by the Japanese and Chinese will be strictly Oriental in general chartcer. On the Pay Streak, the Exposition amusement street, many of the structures will follow Japanese architecture, and the entrance to the gayety boulevard is of Jap-Alaskan design, so called because the main arch will consist of totem poles supporting curved roofs.

A large number of structures are of the free American style of architecture, but have been so located as to make a complete picture, with the buildings in the main group following the French renaissance design.

Surrounding the Exposition is a forest, and much of the natural verdure has been left. The formal gardens approaching the Manufactures and Agriculture palaces are similar to those in the public parks of Versailles and are French in design. From the standpoint of the lover of the beautiful the Pacific Exposition will rival if not excel any world's fair in history. The first consideration has been the landscaping, floral display, illumination and sculpture. This combined with the mild climate of the Puget Sound country, the beautiful mountains, lake and woodland scenery and the central location of the grounds will result in the Alaska-Yukon-Pacific Exposition being one of the most beautiful and attractive ever planned.

The principal work of sculpture is the Exposition monument, at the head of the Cascades. It is seventy feet high and stands on a pedestal twenty feet in height. About the base of the pedestal are three seated female figures symbolical of the Northland, the South Seas and the Orient. The Column is of Corinthian design and carries a globe showing the signs of the zodiac. Surmounting this globe is a huge American eagle.

The animal groups about the Geyser Basin are an elk, bear, timber wolf and cougar, all representative of the Northland. Ornamental vases, carrying the official emblem of the Exposition staff, circle the entire central court around the Cascares and the Geyser Basin and in front of several of the larger buildings. These vases will contain many varieties of flowers, and the pergolas about the front of the buildings will be completely covered with climbing roses. The electroliers on the grounds are of French Renaissance design and the settees of Roman design. The decorative light standards provide for a large sphere of light, each containing sixty thirty candlepower light.s

The 1909 Exhibition will be well lighted, and thousands of lights will be used in the illumination of the buildings. On the Manufactures and Agriculture Buildings will be a total of 17,000 lights for the exterior decorations, and it requires more than 5,000 each to outline the Mines and Fisheries Buildings. On the Fine Arts Building will be 4,000 globes, and the auditorium will require 5,000 lights. In the Geyser Basin are more than 1,000 lights, and 1,500 will be used in the electrical decorations under water about the Cascades, illuminating the falls with the colors of the rainbow.

In the greenhouses owned by the Exposition company are more than 1,000,000 plants of every description to be used in building beautiful floral designs and sunken gardens. When the Exposotion opened climbing roses, geraniums, rhododendrons, cactus dahlias and many other varieties of flowers were found massed in profusion about the big structures, giving forth color and perfume from every conceivable nook and corner.

THE SCENIC SETTING OF THE EXPOSITION.

Standing by the Cascade fountain in the Exposition grounds and looking a little east of north down Rainier Ave-

"PRINTERS' ESTIMATES WHY PRICES VARY SO MUCH"

"THE PRINCIPLE OF MAXIMUM AND MINIMUM" AS APPLIED TO NUMBER OF PRINTING FORMS AND ELECTROS.

IN a recent issue, the *Business Man's Bulletin,* of 140 Nassau St., New York City, the following somewhat novel and none the less suggestive treatment of the matter of economy in the duplicating of forms by electrotypes for the saving of presswork, deducing a rule as to the extent of the same, will prove profitable and useful:

The general run of printing consists mainly of three distincts parts, namely: composition, press work and "make-ready." Composition, whether it be done by hand or machine, can be duplicated by means of electrotyping. By press-work we mean the number of impressions of the press it takes to complete the job. "Make-ready" is the time it requires to get the type form ready for printing after it is delivered to the pressman.

In order to save in presswork it pays to duplicate the type forms up to a certain point; after this point the cost of additional duplicate electros will offset the economy in press-work. Every printer knows this. But he doesn't know where the dividing line is. It takes him some little time to try to find it in different ways, and often, to avoid tiresome figuring, he is satisfied with a guess—or, what is still worse, goes according to the first available stock size of paper he can think of.

The result is that the consumers pay for the printer's ignorance or negligence, while the printer is not a winner, because he increased the cost of producing the work.

If the reader was familiar with the principle of maximum and minimum (the application of the differential calculus in higher mathematics), he would know at once that the minimum cost on this particular line of work—i. e., the most economical combination of number of electros and press-work—would be *when the total cost of the electrotypes or composition is equal to the total cost of the presswork.* As all of our readers are not versed in higher mathematics, the sentence in italics is a good one for them to remember.

The original cost of composition does not change the matter—this is self-evident. The variation in the cost of the make-ready for a few electros, more or less, will not effect the above rule, as the cost of make-ready can easily be added proportionately to the cost of each duplicate, or considered separately, while in a good many cases it can be overlooked altogether without materially affecting cost.

The only handicap to a general application of the above rule is in securing a suitable size of paper for the proposed number of duplicates.

To illustrate further: Supposing that the bill from your printer for 100,000 copies of a certain circular reads like this:

16 electros at $1.00	16.00
6,250 impressions at $1.00	6.25
Total	$22.25

As the cost of electros in this case exceed considerably the cost of the presswork, it is seen at once that the total amount could be reduced by decreasing the number of electros. Applying the first rule laid down to this particular job, it will be found that when the number of electros is ten, the total cost is reduced to the minimum, while for practical purposes nine or twelve are nearly as good.

Cost of electros	$ 9.00	$10.00	$12.00
Cost of presswork	11.00	10.00	8.33

If you can't save $2.25 on paper—and the chances are you can't—you are actually throwing this money in the street. There is scarcely any satisfaction in knowing that it will not be a printer who picks it up.

While this illustration shows only the principle of the problem, without going into the details of the print shop, it gives a basis for an intelligent understanding of the question. In some cases the saving on a single job may amount to several hundred dollars, particularly when there is time to have paper made to order to the special size needed to print the job to the best advantage.

ILLINOIS WOMAN'S PRESS ASSOCIATION ELECTION

The Illinois Woman's Press Association closed its twenty-fourth year June 3rd with a most successful annual meeting. The reports of officers and committees showed the most prosperous in the annals of the club. Mrs. Mate Palmer, the retiring president, had reason to be proud of her administration which closed most auspiciously. The programs of the monthly meetings during the past year have been noted for attractiveness and excellence. The program of the last meeting, May 6th, was appropriately designated as "An Indian Evening." It was held in Fullerton Hall, of the Art Institute, with an attendance of about 500. The affair was arranged by Mrs. Margaret Handy of the *Railway Record,* chairman of the reporters' section, she claiming that the American Indian was the first reporter.

The treasurer, Mrs. Estelle R. Snyder, reported a total of over $700 in the treasury, of which about one-half is a permanent fund to establish a hospital bed for indigent women writers. The historian gave a recapitulation of the beginnings of the two organizations and the librarian told of the number of volumes in the library.

The philanthropic work includes annual entertainments to the inmates of the Model Lodging House for Women, and those of the Home for the Aged on Indiana Avenue. This year another will be inaugurated in memory of Mrs. Fanny M. Harley, who passed away last summer.

The election of officers resulted as follows, every one being elected without a dissenting voice: Mrs. Cornelia T. Jewett, editor of the *Union Signal,* Evanston; Vice-presidents, Mrs. Mary B. Powell, Mrs. Mary E. Power (Mt. Vernon, N. Y.), Mrs. Mary Moncure Parker; Recording Secretary, Mrs. Margaret Handy; Assistant Recording Secretary, Mrs. Grace S. Holmer; Corresponding Secretary, Miss Leona M. Dufford (*Union Signal,* Evanston, Ill.); Assistant Corresponding Secretary, Mrs. Ophelia L. Blair; Treasurer, Mrs. Selena S. Martin; Historian, Miss Mary Howe Stewart; Librarian, Mrs. Ida H. Munsell. The chairman of the various sections are: Authors, Agnes Deans Cameron; Correspondents and Contributors, Miss Emma Clark; Editors, Miss Mary Eleanor O'Donnell; Poets, Miss Hattie Summerfield; Publishers, Mrs. Frances A. Woods; Reporters, Mrs. Addie Farrar Andre. The heads of the committees are: Auditing, Mrs. May K. Holmes; Courtesy, Mrs. Alice Stoll; Finance, Mrs. Annie Myers Sergel; House, Mrs. Mary D. Holden; Literature Extension, Miss Eliza W. Bowman; Manual, Miss Caroline A. Huling; Membership, Mrs. Ida A. Nichols; Program, Miss Ada M. Krecker, Social, Mrs. Florence A. Gebhardt; Work and Workers, Mrs. Mary Helm; Hospital Bed, Miss Hattie Summerfield; Celebration of Twenty-fifth Anniversary, Miss Caroline Huling.

The delegates to the National Editorial Association (meeting in Seattle, July 19) are: Miss Caroline A. Huling, Executive Committeeman; Mrs. Estelle R. Snyder, Mrs. Cornelia T. Jewett, Mrs. Sallie M. Moses and Mrs. Jennie M. Kemp.

The Illinois Woman's Press Association has been affiliated with the National Editorial Association since 1887 and has been represented in that body every year since that date. Its members from an active organization of literary workers and two meetings are held monthly except in July and August, one being an open, program-social gathering in the evening, the other being a business meeting, which is held in the afternoon, but frequently in connection with a most enjoyable social function. In the twenty-four years of its existence it has not missed a single regular meeting. The year-book shows a membership of one hundred and thirty-seven members. Six of these are over eighty years old; one, Mrs. Julia Ward Howe, an honorary member, has just celebrated her ninetieth birthday.

Caroline A. Huling.

"WHEN GOD MADE BUDD"

The Mulvane, Kansas, *News,* of June 17th, rhapsodizes over a visit from and the perfections of an old printer associate and friend:

Last Sunday for a few hours we had the pleasure of a visit from "Col." M. E. Budd of Burlington—one of the best printers that ever stepped foot in Kansas. For seven years he worked for the writer while we were an employing printer in Wichita, and never did he fail to meet the demands made on his time and skill. He was faithful to every trust, conscientious in the performance of every duty, and phenomenal in the amount of work he could and did do. With him printing was an art. No picture so beautiful as the skillful arrangement of type on the well-printed page—unless we except the picture made by the living faces of the children he loved so well. Generous, yes, to a fault—so generous that the boys interpreted his initials as "Most Easy," a sobriquet he upheld with everybody but himself. Modest, unassuming, unambitious, he is the same old Budd, with a slightly grayer tinge across the temples, and a new wrinkle or two—the love-marks of time. The two-day vacation he had treated himself to, after months of faithful service, was already growing irksome. Before he was in town an hour we knew he was hearing the call of the shop—was wondering how the boys were getting on with the work; and long ere this is printed he will be back in the harness again printing his life away. Such men are scarce in these days, and as we grasped his honest hand to say goodbye we were tempted to paraphrase a line from Riley and say: When God made Budd I'll bet he didn't do anything else that day but just set around and feel good."

FIFTH ANNUAL CONVENTION ASSOCIATED ADVERTISING CLUBS OF AMERICA

August 25-26-27.

"I'll be there, will you?" is the slogan for the Fifth Annual Convention of the Associated Advertising Clubs of America which will be held in Louisville Ky., August 25-26-27.

It originated in the Louisville Ad Club a year ago as a catch phrase for boosting what was termed "Greater Louisville Day," which was celebrated on July 22 at one of the suburban summer resorts, where one of the largest assemblies ever seen in one place in the Falls City, gathered in response to the call. It was immediately adopted by the delegation that was sent by the Louisville Club to Kansas City last August, where it was seen and heard on every hand, having much to do with capturing the convention for Louisville this year.

The Louisville Convention Committee and the officials of the national body are determined to make the coming convention notable for practical results—memorable for bringing into closer relationship the buyer, seller and writer of advertising where every phase of the subject may be discussed by expert authorities. In addition, the Louisville contingent are preparing to make the event memorable for the dispensing of genuine old-fashioned Kentucky hospitality, all of which suggests some very strenuous times down in Louisville on August 25-27.

This suggests work, too, burgoo and barbecue out in some shady grove of elm and oak, where the rich fragrance from near-by mint beds and broad fields of blue grass perfume the refreshing breezes from the distant hilltops; it suggests watermelon, canteloupe, roastin' ears, sunset and moonlight excursions up and down the golden Ohio, auto races on the famous Derby track by Kentuck's fleetest where will flock thousands of the fairest of the fair. All these, and more, for which the "grand old Commonwealth" is noted, are embraced in the plans for gladdening the hearts of the ad men on that occasion.

Col. R. S. Brown, a real live Kentucky colonel, who heads the Louisville committee, invites correspondence from everyone who may desire to attend the convention.

FIRST FELLOWSHIP IN JOURNALISM

ESTABLISHED BY ALUMNI OF UNIVERSITY OF WISCONSIN IN CONNECTION WITH COURSE IN JOURNALISM AT THAT INSTITUTION.

Madison, Wis., June 26.—The first graduate fellowship in journalism ever offered in any college or university in the United States, has just been established at the University of Wisconsin in connection with the course in journalism in that institution. The fellowship, which amounts to $400 a year, has been given by an alumnus of Wisconsin through the Alumni Association. It is to be held by a college graduate who is preparing to take up some form of journalistic work, and who desires to do graduate work in preparation for this career.

Part of the work of the fellow in journalism is to consist in practical experience as assistant editor of the University of Wisconsin Alumni Magazine, and will include the preparation of news matter, the writing of editorials, the editing of copy, making up the magazine, and writing headlines to supplement the advanced instruction given in the course in journalism. The holder of the fellowship may become a candidate for the degree of master of arts or doctor of philosophy like other students of the graduate school.

Louis P. Lochner, Milwaukee, a member of this year's graduating class in the course in journalism at the University of Wisconsin, has been appointed to this fellowship for the ensuing year. Mr. Lochner was a reporter on the Milwaukee *Free Press* last summer, and was editor this year of the *Cosmopolitan Annual,* the official publication of the Association of International Clubs, consisting of the foreign students in nineteen American colleges and universities. He was associate editor of the *Spectator,* an intercollegiate publication, and has been a contributor to the *Review of Reviews,* the *Independent,* and other publications, during his college course. He was the organizer and the first president of the Association of Cosmopolitan Clubs, and was a speaker at the recent Peace Conference at Chicago.

NEWSPAPERS, SHOWMEN AND OTHERS

THE SHOW WORLD REVIEWS THE ACTION OF THE IOWA ASSOCIATED DAILIES AND GIVES SOME INTERESTING STATEMENTS AND VIEWS FROM THE SIDE OF THE SHOW PEOPLE, AS TO READING NOTICES FOR TICKETS.

A TENDENCY is very general of late years among publishers to place the newspaper in all its branches on a strictly business basis. A movement has become very common at press conventions for the elimination of the practice of exchanging advertising space for tickets to entertainments, and in favor of demanding cash for all services rendered and paying cash for all that is received. In times past, a small advertisement or a little job printing was expected to command unlimited space for the very best kind of advertising, in the shape of reading notices.

Many associations of publishers have declared against such a practice, and recently the Associated Iowa Dailies, in a convention at Des Moines, resolved not to run news stories regarding circuses excepting at advertising rates. Now comes E. E. Meredith, writing in *The Show World*, and giving the other side, not so much criticising the resolution, as showing how the abuse had been fostered and throwing no small amount of the blame on those inside the newspaper offices. It is well to learn from those on the other side of all business questions, and much that Mr. Meredith has to say has a broader application than as to circus advertising.

The tendency has been among those connected with newspapers, as well as among the supporters thereof and contributors therto, to appropriate the advertising power of the press to the doing of favors with personal business or political ends in view. Among other things, the writer in *The Show World* says:

If the rank and file of Iowa newspaper publishers stand by the resolutions adopted by the Iowa Associated Dailies at Des Moines recently, circus press agents will have a hard time of it hereafter in that state.

These resolutions recite that, inasmuch as circus money flows into the coffers of the newspapers in drib-drabs, while circus "dope" finds its way into the news columns in great quantities through the ingenuity of the press agent, there shall be a cessation of the practice of giving "notices" for tickets.

Hereafter, if the resolutions are adhered to (which, of course, they won't be) nothing but money will be accepted in pay for advertising and the "stories" of the circus press agent will be cast into the waste basket.

One newspaper in reporting the proceedings of the convention says that the newspapers have been receiving "tickets galore." This statement is interesting inasmuch as it gives the point of view of the publisher. When a circus press agent calls on a paper he seldom comes in contact with the real "boss" and the men he meets complain that the circuses are stingy in regard to tickets instead of being as liberal as "tickets galore" would indicate.

Perhaps one publisher wishes to make the others believe that he is "slicker" than the rest in obtaining tickets. Either that or circus managers are more liberal in Iowa than they are in other states.

MANY COMPLAINTS.

There have been many complaints this season that circuses were penurious with their complimentaries when dealing with the press. Many editors have criticised the judgment of those who direct the policy of the enterprises in regard to publicity on the ground that niggardliness governed their action and that "courtesies" were rarely appreciated.

The publisher of a newspaper doesn't always know how many tickets have been given out in his office. The "boss" does not know the levers used by the business manager, circulation manager, advertising manager, reporter, office boy and even the editor to secure an extra allotment of tickets for personal use. If the "boss" realized that the circus was being imposed upon by his employes it might lead to a reform were it not for the fact that those connected with the editing, printing and circulation of a newspaper are generally underpaid and the publisher does not always know where he can secure a $30-a-week man for half that sum.

The worst grafters found around newspaper offices, according to circus press agents, are the advertising managers and the circulation managers. These two individuals have nothing whatever to do with the policy of the paper regarding amusement matters, have nothing to do with the editorial treatment of any proposition, yet they are the most aggravating factor with which a press agent must contend.

After the bill has been paid at the business office, the press agent wanders up stairs, where he is informed that the business office expects the editorial department to secure its own tickets. While this is unfair and often contrary to the agreement made with the business manager, the editorial department is too important to overlook and the press agent "falls" for twenty or thirty or even fifty more tickets.

When he arrives at the "lot" he receives a personal call or a note from the business manager or circulation manager requesting for "six reserves" and couched in such language that he cannot well afford to disregard it if he is unfamiliar with the small prestige these "managers" have in a newspaper office.

The advertising manager does business with the advertising manager of a department store and when circus day comes the latter wants half a dozen circus tickets. The circulation manager is constantly receiving favors from various parties who make a similar request. He has gotten these tickets from circuses for so long that he has come to look upon them as his right.

PRESS AGENT "TRICKED."

The advertising manager of a Johnstown (Pa.) daily represented that he had the largest circulation in that city and actually secured twice the amount of advertising for a circus which appeared there last summer as did the opposition paper, which in reality had three times the circulation of the paper he represented. The advertising manager resigned his position last fall and actually laughed at the easy way the circus agent had been tricked when discussing the matter, after his connection with the paper was discontinued. Not only that, but he obtained six tickets from the contracting press agent and as many more from the press agent back with the show. The circulation manager of an Evansville (Ind.) paper has a habit of requesting half a dozen extra tickets. These are isolated cases. There are hundreds of others.

As long as the publisher is unfamiliar with the details of the conduct of his newspaper, present conditions will prevail. If six tickets dished out to the city editor or a reporter will do more good for the circus than $20 spent in the business office, why should the circusman be inclined toward liberality?

The reports of the Des Moines gathering say that "old men in the business declared that they now collect only about one-third as much money from circuses as they collected fifteen or tweny years ago." That circuses are reducing their advertising bills to an alarming extent cannot be denied. The leaders in this movement, it would appear, are courting the enmity of moulders of public opinion by this retrenchment, by what may be false economy in the distribution of their advertising appropriations.

Certain it is that the friendly relations which formerly existed between metropolitan newspaper men and circus managers is perceptibly cooling and the ever-increasing rumble of discontent in the business offices and editorial rooms of newspapers is not to be wondered at.

THE PUBLISHERS' IDEA.

The Des Moines publishers declared that the press agent has perfected his business to such an extent that he can secure the publication of valuable advertising in the form of news. They figured it out that the wily circus publicity getter, who labors for a salary greater than most publishers in Iowa receive, is collecting the shekels that should rightfully be paid to the newspapers as legtimate returns for their advertising space.

Accordingly, the resolutions referred to were only drawn and adopted. Though they are not binding and carry no penalty for failure to comply, they are regarded as a "gentlemen's agreement." Neither can they come under the provisions of

the trust laws, as they are couched in terms no stronger than "recommend," and the closest scanning fails to reveal the word "agree."

The newspaper men regard it as their right to protect themselves against the incursions of the press agent. They have space in their publications which is for sale, and that space is their stock in trade, they say, the same as salt and sugar to the grocer and muslins to the dry goods merchant. They do not regard it as fair to other advertisers when they accept tickets instead of cash for the advertising space, and they are following the lead of Illinois publishers in taking the step which means trouble for the gentle-mannered, but persuasive circus press agent.

MISTAKEN IMPRESSION.

The publishers evidently believe that the press agent receives a large salary, when the fact is that circuses are curtailing expense in this direction as well as in others. There is no press agent who receives more than $100 a week, for thirty weeks' work. Deduct from this $1,000 a season for hotel expenses and incidentals not included in his contract, and you will find his salary amounts to about $2,000 a year. Must the public believe that publishers in Iowa cities only get $2,000 a year out of their plants? If so, they are not competent to conduct newspapers, for they do not realize that a newspaper in a city of 10,000 or more which does not clear this sum annually is poorly managed indeed.

The circus spends money because it courts the good will of the newspaper. If this good will can be obtained for "jolly" and free tickets, it would be poor buisness to seek a large space in the advertising columns. If spending money does not carry with it the good will of the paper, then what is the use of spending money, more than to pacify the publisher when he looks over the books at the end of the week?

When the contract is made, the business manager is not so uneasy regarding the amount to be expended as the number of tickets to be secured. The press agents see this. They take advantage of it, as they should do if they seek to give value received to their employers.

When the publishers cease to tax amusement enterprises three or four times what they charge other advertisers, the circus manager will be convinced of their sincerity to have reform in this line, and then, and not until then, will the publicity promoters take advantage of the advertising columns and not depend upon "working" the editorial department for the advertising necessary to attract the crowds to a tented enterprise.

It is wonderful how widely the practice, in the face of action to prevent the same, of securing free advertising in the press, has become. An International Newspaper Bureau exists for the purpose of securing profitable publicity under the pretense of sending out valuable, interesting and important news. This news is so cunningly devised as to deceive the very elect and is magnanimously sent to the newspapers without charge, but there is a liberal charge to the parties to be benefited by the publication. The cunning and ability required in successfully filching the advertising from the newspapers is considered worthy of liberal payment.

Not infrequently, however, is the supposed recipient of this to-be-stolen publicity badly fooled, these promoters of free advertising not covering one-half the field nor having one-half the success claimed.

The press needs to be guarded against these gentlemen who get into the newspapers and receive valuable advertising under the guise of furnishing the news. The circus people constitute but a very small proportion of the great army of business, real estate, excursion, amusement, entertainment and other promoters, who have "perfected the business to such an extent that they can secure the publication of valuable advertising in the form of news," not so much as giving in return the privilege of seeing the show without pay.

THE EXPOSITION AND WHAT IT AIMS TO DO.

Continued from Page 493

nue, there is what at first seems like a frozen fog on the horizon. It is Mt. Ranier, the highest peak in the United States proper—that means including Alaska—and that great white cone which looks like nothing so much as a heaping dish of ice cream magnified billions of times is in reality a great snow and ice-clad volcano 14,529 feet in height—"the daddy of them all" in the line of beauty and stateliness.

In winter and early spring the great mass of the mountain is pure snow, but in mid-summer the green of the ice begins to show through the mantle in irregular streaks as the snow melts and the eternal glaciers stick their fingers out for a fresh recognition of their supremacy. The great white cone and green mass which fronts Seattle is in fact the tremendous Carbon glacier, and rising from it is the sheer ice of Willis wall—an ice precipice 5,000 feet from botttom to top.

A little to the west, but still looking south from the central basin of the Exposition grounds, there rises another beautiful, snow-clad conical peak. This is St. Helena, also discovered by the Van Couver expedition in 1792, and named after a former British ambassador to Spain. It is much further distant—some twenty miles—and is also about 500 feet less in altitude and therefore seems a pigmy alongside Rainier, yet it is one of the notable mountain peaks of the North American continent.

Looking off to the east and little to the north of the same position one finds the horizon barred by the ragged tops of the glacier peaks of the main range of the Cascade mountains. All along in this direction the foothills and summits of the Cascades from the skyline at a general altitude of about 8,000 feet, but in this paritcular patch the sky is pushed up a thousand feet or more by three great mountains.

The first of these as the eye sweeps the horizon from the south is Filchuck, the second of the Sisters and the third White Horse. They are so close together that mountaineers usually refer to them under their group by the name of Glacier Peaks.

Still further to the north and a little to the east this time rises the white head of Mt. Baker—close up to the British Columbia border. "Kulshan," the Siwashes call it, because in the old days when they drove their canoes about the lower reaches of the Sound and off the mouth of the Fraser river in the annual salmon fishing—wherever they might be—the hoary head of Baker was always peering at them over the tops of the trees, and according to their lights they named this immense thing which was always peering at them "Kulshan"—the Great White Watcher.

This would seem to be enough, but when nature had finished with these snow-capped peaks there was still some material left, and if one cares to look to the west there unfolds the crowning glory of all Seattle rim of snow and ice and towering rocks—because to the west lies the great and glorious range of the Olympics.

Mr. Olympus—the great peak after which the whole range is named—lies in the very center of the peninsula which separates Puget Sound from the Pacific Ocean. It is something over 11,000 feet in height, and was first sighted by Captain Perez from the Pacific Ocean side in 1774.

Yet even without Olympus the Olympic range is in itself something to dream about, and certainly there are no sunsets in all the world to excel the grandeur of the spectacle on a summer evening when the sun drops down behind the Olympics, bringing out every crag of their rugged roof-tree in the dark relief, and painting in a background in crimson and purple and gold behind it.

"THE TRAIL OF THE YANKEE"

ATTORNEY-GENERAL W. H. STEAD, of Illinois, is noted for careful research and for untiring industry in the preparation of his cases in court. In this address before the Illinois Press Association he showed like characteristics and fully maintained his reputation. The editors all over the United States will find it pleasing and profitable to read the following epitome of, and extracts from, his address, for which we are largely under obligations, as well as for the portraits appearing in the account of the Convention at Ottawa to the *Western Publisher:*

Analyzing the beginnings of the American colonies, he showed that, contrary to the popular impression, the North American continent was colonized, not on account of persecution, but for the purpose of commercial government. He illustrated the proposition with the case of the settlement of Virginia, where the original settlers came armed with a pick, and started to locate a gold mine. Two years later an Englishman married a squaw, and together they raised a tobacco plant. Within 14 years the tobacco industry became so important that it outlined political systems by the importation of apprentices and convicts and the reception of slave ships. He quoted Charles II., who said that the foundations of Virginia were laid in smoke. Out of the slaves and plantations of Virginia came conservatism and loyalty.

* * * * * * * * * *

In practice the Puritan was a rationalist. He believed in learning and erected schoolhouses by the side of meeting houses, and shortly after his landing he established Harvard. The inevitable result was the destruction of a theocracy and the enthronement of democracy. Through common dangers, schools, perils and contact, church and state at length were effectually divorced.

THE GET-THERE SPIRIT.

Mr. Stead then took up the predominant traits of the Yankee, showing that they grew out of necessity, hardship, and resistance. Thus was developed that enterprising, shifty, get-there spirit which is prevalent today.

* * * * * * * * * *

Not only did the Puritan prize his church and his school, but he also prized his liberty. In the town meeting, the basic principles of their institutions germinated In such meeting, public affairs were discussed and public policies were outlined, and in tthat meeting all took a part. Out of that training school came self-reliance, courage and true democracy, and through it the idea of representative government grew, until it became a part and parcel of their mental habits.

After two generations, by a common cause, the fortunes of the settlers of New England became linked with those of Virginia and the south, and out of that union came the Yankee. The union was consummated during the last quarter of the eighteenth century—a century of analysis and research.

At this fortunate era the pioneer began his march and blazed his trail through the forests, and started trading posts on the outskirts of civilization. Shortly the trading post grew into a city, and what was once the wilderness became the populous west.

A RACE OF HEROES.

The hardships of the pioneer developed a race of heroes. A prairie fire he fought like a demon, but his arm was puny, and when the sun went down his children were homeless, but the pioneer spirit rebuilt the home and enabled him to start anew.

* * * * * * * * * *

The pre-eminent traits of the Yankee are grit, genius and enterprise. The speaker described the grit of the Yankee in the words of an old darky preacher, who said: "Grit am de sand on de track of life and every sinner got to keep his box full or he can't get up ol' satan's hill or pull his train in de heavenly station."

He spoke of the wonderful progress made and improvements involved.

"Modern machinery lends to an average family the labor of a hundred slaves."

* * * * * * * * * *

"Failure is lack, not luck. Success is achievement, not accident."

* * * * * * * * * *

"Life's crowning success belongs to the humble, to the lowly and poor, to those who brave great trials amid the small duties, keep white their souls and live eternal principles in trifles."

The enterprise of the Yankee has gripped half a continent, fenced it into farms, built it into cities, ribbed it with iron and clothed it with steel.

In speaking of the Yankee's faults, he enumerated among others the following:

One of the problems—the besetting sin of the Yankee—is speculation. "We buy what nobody ever had and sell what nobody ever gets. Now and then we pay the penalty." The speaker then pointed out that the recent panic was neither marvelous nor strange and was simply a penalty paid for the disobedience of the eternal law, that "when you sow to the wind, you will reap the whirlwind." Speculation is the bane of American manhood, because it poisons the mind and raises false hopes. "A day's work is better than a tip on a race. A cow in a clover patch beats a bull in a wheat pit." A hundred dollars in a savings bank, earned by the sweat of honest toil, is better than a fortune built on margins. Eighty acres of soil, that drinks in the rain, sucks up the sun, mixes them with seed, and turns them into crops, is worth more than all of your options and calls.

Another evil pointed out by the speaker was corrupt politics. Scandal, graft, special favors and nerveless officials have come out of it. Political parties, he stated, are essential, and they ought to be bettered but not destroyed. "We hear much today about non-partisans, but outside of a home for feeble-minded, there are none. You might as well talk about non-thinkers."

The evils of politics will be solved only by intelligent citizenship dominating the parties, dictating their policies and exalting their aims. It is apparent that higher purposes are now forming.

Another is yellow journalism. Among the foremost influences which have shaped our national life has been a fearless, free and intelligent press. It is more evident now than formerly. But with the power of the press have come abuses. The papers which do not stand for the things which uplift are threatening the influence of those papers which do. "The rational, decent, progressive journalism of today owes it to itself to wage unceasing and relentless war upon the yellow press." A man is entitled to protection in his character as well as in his property, and the criminal laws should be intelligent and elastic enough to give the citizen a vested right in his name as well as in his house and lands.

The Progress Typewriter Supply Company, Limited, London, England, are the European agents of the Acme Staple Company of Camden, N. J.

We present, in this issue, in an insert, a very fully illustrated account and description, under the caption "Where the Boy Has a Chance," of the School of Printing of the Winona Technical Institute of Indianapolis, besides following the same with an article treating more generally of the claims of the school on the printing fraternity. We believe in trade schools and industrial training as a part of every step in the education of youth. We hope that this broad presentation of the subject will be appreciated and will command the attention and consideration deserved, and that a more general interest will be awakened. All inquiries with regard to this printing department of the Winona Institute should be directed to F. O. Climer, Director of School of Printing, Winona Technical Institute, 1500 East Michigan St., Indianapolis, Ind.

Mr. Robt. W. Leigh, for the past ten years Western Manager of the Unitype Company, with headquarters at Chicago, has accepted a position with Wood & Nathan Company of New York, as Western Representative and will spend most of his time on the road. Mr. Charles M. Leigh succeeds his father as manager of the Chicago office of the Unitype Company. The Chicago office in the future will simply look after installations, repairs and supplies. Mr. Charles M. Leigh a few years ago began as an office boy in the office of which he is now manager.

Sinclair & Valentine Co., the well-known Printing Ink Manufacturers, have promoted Mr. Cliff R. Hunn to the position of Sales Manager of the Western territory, with headquarters at Chicago, of which branch office he will have charge.

The many friends of Mr. Hunn in the printing and lithographic trade from New York to St. Louis and St. Paul will be pleased to learn of his promotion.

For the past fifteen years Mr. Hunn has been selling printers' ink, and his genial personality has made him deservedly popular, as well as one of the most successful ink salesman in this large territory.

The policy of Sinclair & Valentine Co., of promoting their successful salesmen to the position of manager of the various branches which they have established throughout the country, is one which has worked to material advantage to their rapidly growing business, and has made positions with their house greatly to be desired.

IT PAYS A PAPER TO ADVERTISE.

On June 16, 17 and 18, the celebration of the twentieth anniversary statehood of North and South Dakota was held at Aberdeen, S. D., and the *Daily American* issued a souvenir edition, 7½ x 9½ inches, the first page being a facsimile of the regular edition of Sunday, June 6th. The inside contained information about the city of Aberdeen and the Aberdeen *Daily American*. Several thousand copies were given away and requests for more necessitated extra issues.

Special messages from governors of twenty-five States were sent the *American* upon request, and with the special news service, souvenir edition and a handsomely decorated automobile carrying *American* banners made a great impression upon the thousands of visitors and demonstrated the old axiom that "It Pays to Advertise."

HANDSOME SAMPLE BOOK.

The Sigmund Ullman Company of New York have issued an unusually handsome sample book of their L N F Bond Printing Ink. With the idea of producing a complete book fully in keeping with the character of the ink, they have printed it on Old Hampshire Bond, the choicest product of the Hampshire Paper Company, the bond paper specialists.

The L N F Bond shows 139 effects of Red, Blue, Green, Brown, Black, as well as various Tints, in practically all harmonious combinations of the fifteen colors of Old Hampshire Bond.

The printing has been done remarkably well. The register is so perfect that it is difficult to believe that the work was embossed after printing. It looks as though both printing and embossing were done with one impression. The printing stationer is thus given an opportunity to demonstrate samples of work and colors to his customer without loss of time and expense of making special proofs in individual cases. The whole exhibit is so wonderfully attractive that it should not fail to inspire consumers to invest a little more money and get something distinctive—out of the ordinary.

L N F Inks are a series of Black and Colors made of special varnishes and pigments, in order to give them the necessary qualifications for perfect printing on bond and linen papers, for which purpose, it was formerly difficult if not impossible, to get the correct inks. They may be printed and embossed afterwards, or the embossing may be dispensed with. When embossed, they give results in every respect equal to the far more expensive method of die-stamping. They are, in fact, in many ways superior to the die-stamped work, one feature being that whereas die-stamped work, especially when heavy, habitually cracks and rubs off—this is not the case with the L N F Inks.

With proper workmanship and care, there should be no difficulty for any printer to duplicate the work shown in the book, which is printed and embossed on a platen press, a brass plate was used for embossing, cut sharp and with detail. The brass plates are preferable to zinc etchings, as the latter hardly permit of the detail which should be a feature of the work. Essential factors are a properly-made embossing plate, accurate feeding and careful register.

In short, it is the aim of the L N F Book to increase the demand for the better class of printing that pays better by its demonstration of the best inks and best paper for this class of work.

LOUISIANA PRESS ASSOCIATION.

Editor National Printer-Journalist, Chicago, Ill.

The officers of the Louisiana Press Association, elected at the thirtieth annual session held at Covington, La., May 4, 5, and 6, 1909, are as follows:

President, E. D. Gianelloni, Assumption *Pioneer*, Napoleonville.

Vice-presidents, Robert Roberts, Jr., Minden *Democrat*, Minden; Mrs. Lottie Aite Weir, *Daily States*, New Orleans.

Secretary, L. E. Bentley, Donaldsonville *Chief*, (Address, P. O. Box 152, New Orleans).

Treasurer, Alfred Bienvenu, *Messenger*, St. Martinville.

Nevt session to be held at Opelousas, La., probably in April, 1910.

Fraternally yours,

S. E. Bentley, *Secretary*.

WOOD & NATHAN TAKE OVER THE UNITYPE.

BECAUSE OF RECENT DEVELOPMENTS IN THAT MACHINE A SURPRISE IS PROMISED THE PRINTER.

It is announced that the Unitype Typesetting Machine has been placed in the hands of the Wood & Nathan Company. This will be somewhat of a surprise to the trade, as well as to the makers of other composing machines.

It has been rumored for some time past that remarkable developments were in progress in connection with the Unitype, but it was not suspected that the astute gentlemen who now announce themselves as its sponsors were at work in its behalf.

The keen scent of Messrs Wood and Nathan for great commercial possibilities, which led them a few years ago to detect the then unknown merits of the Monotype, is a faculty of such precision as to warrant the trade in believing that something of value to the printer is about to occur.

To an inquiry made of Mr. Wood as to whether the Linotype and Monotype machines do not now adequately cover the field, he laughed and replied:

"Wait and see. No field is covered by Tom and Dick so long as money is going to waste that Harry can save," and Mr. Nathan added, "Fashions change with the times."

"For instance, before the panic people could afford more expensive methods of machine composition than they can today. But the printer is now on hard pan, his capital is reduced, and in many cases he can no longer afford to fit up as a type foundry for the purpose of doing his composition when recent developments have made a more economical course the far more profitable one.

"We've seen this change coming, and by putting two and two together have produced a condition which every user of straight composition in the country will gladly welcome. I tell you, low cost and good work are the things today, and the man who expects to sell machines that are luxuries has sized up the times wrong.

"A low-priced machine having high speed that can turn out first-class work with inexperienced help is what we shall offer the printer, and you may take it from us if we aren't posted upon the needs of the times nobody else is; that's all."

It looks as if there is an energetic and instructive campaign ahead, for the good judgment and fighting qualities of the geneltemen who have it in charge are proverbial.—*Newspaperdom.*

Printers who have not received a copy of the attractive little booklet recently issued by the American Type Founders Company should write for one. The title page is unique and has the appearance of a special engraving having been made from a combination of new Strathmore Ornaments shown in the late Supplement to the Type Book.

Specimens are shown of several new border designs which are already finding their way into the advertising columns of the leading dailies and magazines

Newspapers who feature baseball news will be interested in the Baseball Figures shown in 12 and 17 Point sizes. These are pronounced white on black figures, quickly changed and easy to read and adapted to large or small dailies—as em blanks are furnished for papers which stereotype the forms so that the totals can be stamped in after the last forms have gone to press.

Every printer who has railroad printing will note the showing of Footnotes Indicators cast in 6, 8, 10 and 12 Point sizes. The Interstate Commerce Law requires the use of these figures in tariff work where figures appear, and they are equally useful in place of the old-time daggers, asterisks, etc., for reference marks.

The Foundry has made an Italic face as a companion to the popular Lining Cushing Old Style and specimens are included in this showing, also fractions for use with Cheltenham Bold and the Cheltenham Old Style.

The American Steel & Wire Co., Worcester, Mass., have installed in their printing departmentone of the new, heavy, e d Oswego Cutting Machines made at Oswego, N. Y., by Oswego Machine Works.

To one seeking information regarding the agricultural, horticultural, mining and live stock interests of the Rocky Mountain region, as well as its climatic conditions, scenic attractions, hunting and fishing, mineral springs and resorts, the map accompanying data just published by the Denver & Rio Grande Railroad, in folder form, entitled, "The Natural Resources of Colorado and Utah," are invaluable. The route of the Western Pacific Railway, the Pacific Coast extension of the Denver & Rio Grande, now being constructed from Salt Lake City to San Francisco, is shown on this map.

"Among the Rockies," a complete guide to the principal attractions in the Rocky Mountains as seen from the train on the lines of the Denver & Rio Grande system, is an attractive little booklet now being distributed by the Passenger Department of that company

GOOD WORK AND PROMPT SERVICE

NATIONAL PRINTER-JOURNALIST

ESTABLISHED TWENTY-TWO YEARS

THE OFFICIAL PAPER of Employing Printers and Newspaper Publishers in America—The National Editorial Association of the United States, Founded by Its Editor in 1885 at New Orleans, La.

Enthusiastically supported by its readers, and they are *readers* too:—

Right here is an advertising point that many an advertiser overlooks. A trade paper, for instance, may have a great number of subscribers and only a few ***readers***. They look at the pictures and lay it aside "to keep." How much more successful is the advertising medium which compels attention, whose every page is greedily devoured—ads and all!

Circulates in Every State of the Union. A subscriber says: "Every printer and publisher with brains should take it."

And Every advertiser who wishes to secure the attention of printers and publishers should know of its sterling advertising qualities.

2d Announcement

The Unitype

Here is a typesetting machine with which a single operator can set 3500 ems of justified matter an hour.

It may be purchased for but $1500, payable in three years' time; or leased for five years at a small monthly rental.

We have arranged with the largest typefounders in the United States to supply for it the latest and most popular faces, at prices hitherto unheard of; while with the machine we give Four Hundred Pounds of specially cast body-type.

The printer never before has had such an opportunity to make a high-class, high-earning, investment at so small a cost.

With this machine he can set the bulk of his work for less money than is possible with the line or type casting composing machines now in general use; and his product, *being printed from foundry type, will give far better satisfaction.*

Through the transaction we have just completed with important financial and practical interests, we are enabled to offer the trade such a chance to cut its costs as it has seldom seen.

Whatever may have been your past views, it will now be necessary, in the light of what we can show you, to reconsider the entire subject of machine composition.

Wood & Nathan Company

1 Madison Avenue, NEW YORK CITY

"WRITE TO SANDERS ST. LOUIS"

SANDERS

The Name that stands for The Best in Engravings

We produce every style of engraving for making catalogues and advertising attractive. The cost of the engravings is one of the small items of expense, but they are the strong feature for attracting attention to selling qualities.

Let us tell you more about why SANDERS' ENGRAVINGS have the greatest selling qualities.

SANDERS ENGRAVING COMPANY
LON SANDERS, PRESIDENT
221 OLIVE STREET, ST. LOUIS, MO.

The Reason Why

Hundreds of printers have asked why the American Type Founders Company ceased to advertise its type faces through trade papers and practically otherwise during the past year. The answer is solely because its foundries have been so crowded with work that it has had to "back order" extensively, and while working full time last summer and piling up millions of pounds, and working 56 hours all winter, it was not able to keep up with its orders for weight fonts.

It advertised in Boston, New York, Philadelphia, Baltimore, Chicago and St. Louis papers for type foundry employees, and hired every experienced person it could get and is training over 60 apprentices.

It made one large addition to its foundry a year ago; another 6 months ago and will complete 30,000 square feet additional September 1st, and will then add 50 more apprentices.

Over 60 of its machines have been continuously at work on Cheltenham Family alone. In the case of 12 point Cheltenham Bold, it had accumulated last summer 15,000 pounds of this one size, and while running several machines continuously on that size it was compelled to "back order" through the winter.

With the big addition to the plant and the number of type foundry employees it has been enabled to engage and the apprentices it is training, it will again renew its usual amount of advertising in trade papers and otherwise.

Look out for the new faces that are coming along.

AN ECONOMICAL DEMONSTRATION OF HAMILTON'S MODERNIZED COMPOSING-ROOM FURNITURE

When you buy HAMILTON FURNITURE, you get the best equipment any printer has ever used. Wouldn't that be a source of satisfaction in itself?

We stand ready to show any progressive office proprietor that we can save him from 25 to 50 per cent of his floor space and from 10 to 25 per cent in the time of his composition. Isn't that statement worth investigation?

Your floor space is probably worth something like 50 cents per square foot per year; that is about the average in city offices. If you are paying rent, figure it out for yourselves.

A composing-room cabinet actually occupies about 12 square feet of floor space. The alleyways and overhang of cases will take about 36 square feet—a total of 48 square feet, representing a rent expenditure of about $24.00 per annum. A modern composing-room cabinet will cost you about $80.00 to install.

a total saving of $45.80 by installing one modern composing-room cabinet. How does it look to you now? Then there is a saving in material which we will leave out of this calculation. You already have a saving of over 50 per cent each year on the purchase price. It will be more than 100 per cent in many instances. Can you make a better investment?

It will be the same with modern Stone Frames, Storage Cabinets, Working Banks and many other pieces of composing-room furniture.

Let us show you what others have accomplished by sending you a copy of "Composing-Room Economy." Look it over, and after you have grasped the idea ask us to show you what we can do with your composing-room.

Remember it is up to us to *show you*. If we can't make you believe it would be to your interest to install modern furniture,

Let's be conservative and say a compact modern composing cabinet will save you only 20 per cent of your floor space. That would mean a saving of $4.80 in rent each year. Worth consideration isn't it?

Now it will save you, figuring on a very conservative basis, 5 per cent in your labor. That's good for $41.00 each year, making

you will be nothing out. Fill out the attached coupon and mail it to us, and we will have some one show you what can be done in modernizing your office. If we can't make good our claims, we do not want your order. We will get it, however, if you give us the chance we are asking, *because we can make good our claims.*

Results in the home of the Saturday Evening Post and Ladies' Home Journal

THE HAMILTON MFG. CO., Two Rivers, Wis., *Philadelphia, Pa.*

Dear Sirs,—The Composition Bureau of this establishment was furnished throughout with wood goods of your manufacture. By the use of extension front, steel-run cabinets valuable floor space is saved, and, aside from the neat and orderly appearance of the equipment, we have made a decided saving in labor time because of the convenience of the outfit.

Very truly yours, *THE CURTIS PUBLISHING CO.,*
John B. Williams, Superintendent Mechanical Department

We are interested in the question of Modernized Furniture and we would like to have your representative show us a floor plan of our composing-room as you would re-arrange it, with a view to our installing such furniture as you can show us would soon be paid for in the saving accomplished.

The Babcock Optimus
The Babcock Optimus

Speed, register, distribution and strength;
and the Greatest of these is Strength.

No matter what perfections lie elsewhere, rigidity is the first of many qualities required in a printing press. If it does not practically offer inflexibility under impressional strains it must be unsatisfactory on the hard and heavy work now found everywhere. It will give inferiority, and the inferiority will cost more than it should because of the struggle to wrest from the machine something in does not possess.

In our printed matter we illustrate the section through the impression line of an Optimus of medium size. It shows the six tracks, and hints of the size, weight and strength of the center-girt, the main support to impression below the bed, upon which they rest. *Its equal in strength does not exist in a like press*, nor can it be attained. Driving motions and available space prevent.

A two-revolution cylinder must be lifted. The manner of doing it is the difference between superlative and comparative strength. Every other two-revolution has its cylinder boxes *loose in the side-frames.* They slide up and down, carrying the cylinder as it lifts and lowers. Such cylinders are not fixed. Opposed to this the Optimus cylinder boxes are a part of the side-frames, fixed and immovable, and hold the cylinder with great strength and solidity to impression. It is the only way to secure extreme rigidity, and avoid the looseness and flexibility inherent in many parts actuated from below the bed.

Again we refer you to our printed matter where we have space enough to fully explain the above, and to tell you of other things that make for a rigid press; wherein we tell you not only of *the strongest press made*, but of one in which every printing quality is as superior as its strength; we show you by language and illustration just why the Optimus is the best for the fast, hard and heavy work modern methods have made common, and that the qualities that fit it best for this work make it best for all. These reasons you can understand. We are confident they will appeal to you; for only through them can we account for the most satisfactory year in the history of Optimus manufacture now just closed.

Megill's Patent **Automatic Register Gauge**

The sheet as shown, is fed short of the gauge and yet it will register. When the press closes, the "Automatic" extends forward and gently pushes the sheet to exact position. It does not bite the sheet and prevent it from registering. It never pushes it out. It registers cardboard or paper. The ordinary gripper operates it. No extra fixtures. The gauge simply forms a stop for the sheet nnd then registers it. Feed ordinarily, but as fast as you like.

The Automatic Register Gauge, including a pair of the Double-Grip Gauges for the bottom, to your door for $5.95. *Testimonials and booklet.*

NATIONAL PRINTER JOURNALIST

A Journal for printing and allied Trades

Volume Twenty-seven | Chicago, August, 1909 | Number Eight

BRITISH JOURNALIST IN PRAISE OF DEAN WILLIAMS' ADDRESS

Discusses Efforts Being Made in England to Educate for Journalism

EDITOR of the National Printer-Journalist:—As a British journalist who has interested himself rather deeply in the subject of University training for pressmen, I should like to hold out my hand over the seas and congratulate and thank Dean Williams upon the address which is printed in the issue of your journal, dated June, 1909.

A friend of mine in New York has correctly anticipated my interest in the Dean's remarks by sending me a report of them. Journalists on this side are endeavoring to interest their brethren and the public in the influence of a higher educational standard on the part of those whose business it is to mould and record public opinion; and among all that has been said and written upon the matter, Dean Williams' inspiring words must take a foremost place and deservedly so. Would that your excellent and bright journal had a British-wide circulation! But I shall take the liberty of bringing the speech before the notice of the Institute of Journalists and I hope that an opportunity may be found to give, at any rate, a portion of it wider publicity in these Isles.

The differences between American and British journalism are often debated and criticised. And some of the critics say very hard things about Western methods, forgetting that the temperaments and habits of a people in one country differ from those of another, just as the habits of one animal will vary from those of another species. It would be as reasonable to expect a horse to gnaw a bone as to expect an American to appreciate one of our dry-as-dust journals which up to quite recently stood as representative of staid British journalistic respectability.

America has taught the British press many things. Some people hate being taught, but the circulation of our "Americanized" papers shows that the lessons, when assimilated, are profitable to the proprietors. Now-a-days, conductors of live British papers encourage all those things which are comprised in the wonderful phrase "Human Interest." They develop the "nose for news;" they cultivate the head-line, which not only attracts attention but indicates the story; in short, they are learning that the brightly written paragraph, every line of which arouses human interest, is worth columns of mere reproduction of what someone has said upon an occasion of no particular importance.

This is no recital of a catalogue of ideals. The points which I have mentioned are being impressed more and more upon our rising journalist and their acceptance and use may be traced in the columns of any British paper which has any pretense to success. To the influence of the American press are they due and due only. The success which has followed their adoption proves them to be right. There are, of course, other features in connection with American journalism which would be quite unfitted for this country. How far the particular features which are in my mind, really represent the best of your journalism, I am not in a position to say, but I can add this—that there is not a line in Dean Williams' address to which any of my professional brethren here could not say "Amen" with the greatest cordiality.

I happen to be a member of the Council—the ruling body—of the Institute of Journalists, a past-president of which, Major Gratwick, V.D., R. W. O., of Exeter, paid a visit to the states some months ago. May be his name will be remembered by some of your readers. Well, the Institute of Journalists have been seriously occupying themselves in tilling the ground for a movement such as Missouri has inaugurated with so much success. This movement commenced in Dublin at the Institute's annual conference in that city in 1906. The Provost of Trinity College, Dr. Traill, became a whole-hearted enthusiast for the University education of journalists. Had the students and the funds been forthcoming, his college would have formed a school at once. The willingness was and still is there and Mr. Stoddard, of the Irish *Times*, advanced the suggestion that the future journalist-undergraduate of Dublin University might "walk" the daily newspaper offices of the city, just as the medicals "walk" the hospitals. Objections were raised to this suggestion upon grounds which purely affect working journalists, but you in Missouri have found a much better way, to which no possible objection can be raised. I can venture to assert that no British university has a paper of its own comparable with the University of Missouri, and the object lesson which it has afforded may yet be taken as a pattern for the first British university to found a faculty in journalism.

If Trinity College, Dublin, could not give us a school, she has done what she could. A sufficient sum has been guaranteed for a number of years and lectures upon journalistic subjects have been inaugurated. These are given by some of the most eminent working journalists of the day. They

have attracted considerable attention and have been attended by personages eminent in politics and in other departments of state and learning and they have done excellent service in directing the attention of those undergraduates who may be casting about for a future profession to the possibilities of journalism as a calling.

Trinity College, Dublin, then is leading the van. The newer University of Birmingham (the arrangements for the opening of whose new buildings by King Edward on the 7th of July, are being settled as I write) has shown a keen disposition to follow. The principal, Sir Oliver Lodge, is fully alive to the importance of the subject and at his request the late Professor Churton Collins—whose memory will be cherished wherever any knowledge of English literature obtains—drew up a syllabus for courses of lectures for journalists. Just as the matter was materializing, Professor Collins unhappily died, and the scheme is therefore temporarily dormant. Manchester University, Cork University, London and Bristol have all become interested. The seed is being sown and sooner or later, there will be the harvest. Of course, the universal difficulty is that of finances. Our universities are businesses. Their ruling bodies have to cut their coats according to their cloth and we who have been trying to do our share of the spade work are waiting for some philanthropic spirit to start the ball rolling by endowing a "chair" of journalism.

Dean Williams' suggestion as to the responsibility of the state toward journalism touches a responsive chord in the hearts of all who have ideas as to the power and influence of the press. Had I been present at his address, I should have marked the passage with an emphatic "hear, hear" and parenthetically, had I been sub-editing his copy, I would have lifted these sentences to the top of the report and set them in very bold black type. Mr. Carnegie hopes to improve the mental qualities of the British race by dotting the map of Great Britain with free libraries. There is hardly a town of importance in these islands which does not commemorate his name by one of these institutions. However great their influence may be in the direction for which their founder hopes, this influence would have been multiplied over and over again, had the money been expended in endowing "chairs" of journalism at our universities and in founding scholarships to help necessitous students to take a course of instruction which would influence every word they wrote during their professional life.

I hope I have shown that a gradual evolution is taking place in our attitude as a nation toward the subject. It must not be supposed, however, that opinion among journalists is unanimous. We are a conservative race and old traditions and usages withstand attacks against them for many years. But just as British papers have found that catering for the school boy in their columns in the way of juvenile sport, etc., pays because the man of tomorrow sticks to the paper which interested him as a youth, so newspaper makers are looking to the younger generation as the means of carrying out their ideals. The old and established journalist is wont to look upon his profession as one in which naturally born gifts must predominate. In his eyes, the true journalist, like the true poet or the true artist, must be born and cannot be made. The greatest innate genius, it must be admitted, cannot be made. The greatest innate genius, it must be admitted, cannot help being developed by a systematized course of instruction and study. The journalistic student, however brilliant he may be, will always find that his post-graduate course amid the stern realities of a work-a-day world is an essential part of his training; but he will in equal certainty find that a proper training which gives him specific knowledge and an ability to think in an orderly manner, will equip him with a power which would have been impossible with him under dissimilar conditions.

Sometimes the argument is advanced that the period of life between say 16 and 20 or 21 years would be much more usefully employed by the budding journalist in "going through the mill" upon a newspaper rather than in being saturated with academic learning. There is just sufficient truth in this dictum to make it dangerous. Some of our most capable journalists have started life by sweeping the office floor, but just as many, if not more, have either commenced with a university career or have been drawn at a mature age into the profession by a "call" which could not be resisted, because it was found to be the proper bent of the individual concerned. Of the two, I think the last named class will be found the more successful, because they are the better equipped.

Historic Starved Rock from Island on the North. Visited by Illinois Press Association Members in June.

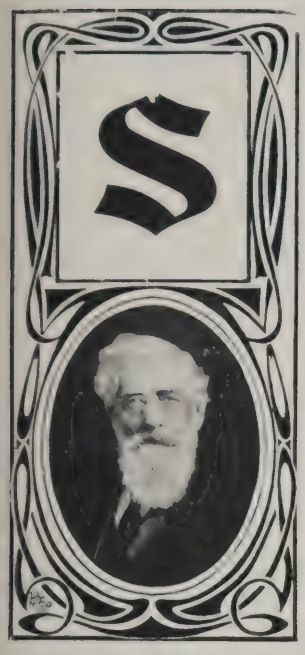
One of my cherished hopes of the future is a visit to your great country and the possibility of a visit to Missouri has now to be added to the influences which attract me. "Missouria floreat!" May every success attend you: 'Tis a noble heritage with which you are endowing those who will follow the noble profession, a heritage which cannot be assessed in dollars, however, almighty they may be. For it must leave an indelible mark upon the people of your country and upon the work of those in whose hands are placed the highest and greatest interests of the state.

Yours fraternally,

Arthur Hatfield Moody.

Editor County Express for Worcestershire and Staffordshire, Stourbridge, England.

VALUABLE HINTS FROM AMONG THE ASSOCIATIONS



STATE Editorial Organizations have displayed a commendable activity this year and many valuable ideas have been presented at the conventions in the different States by men of broad experience as newspaper-men and printers. Mr. J. Lyle Kinmouth, of the Asbury Park *Daily Press*, speaking at the Fifty-third Annual Meeting of the New Jersey Press Association talked instructively as to the benefits to result from editorial conventions. Among other things he said:—

There are things we may know or may think of without the medium of the New Jersey Editorial Association, but if we depend upon getting everything in the school of experience we will be dead and buried before we get even a common school education in the publishing business.

Personally I will gladly listen all the afternoon while a dozen of the editors of country weeklies tell how they handle their country correspondence and what it costs them. Then such topics as the management of the reportorial staff of a small city paper or to what extent classification of advertisements is possible and what character of advertisements should appear on local news pages, what on general news pages, what on the editorial and what advertisements should be refused—such topics would keep me "glued to the carpet." The small city daily is the halfway house in the newspaper publishing business. It is not looked upon as the embodiment of the editor's ideas alone. It is a semi-public institution, but the editor's personality is still part and parcel of the paper. His honesty and the newspaper's honesty are still one, whereas the great city paper's owner, its publisher and its editor are usually unknown to the vast majority of its readers.

EXCHANGE OF VIEWS.

The New Jersey Editorial association means this to the editor and publisher of one small city daily—an opportunity to meet his fellow editors and exchange views. This brings out both the weak and strong points in the business and arouses interest in the paper which otherwise has a tendency to be absorbed by a mass of detail and routine which are undoubtedly the first symptoms of dry rot.

The New Jersey Editorial Association is the medium through which the editors and publishers can speak for more just libel laws, for fairer treatment from politicians, for a fair and uniform price for advertising, commercial as well as legal, based on the service rendered and the cost to the publisher of rendering that service.

The New Jersey Editorial Association is the medium through which the editors of New Jersey are learning to know each other better, to respect each other more and to forget the imaginery line which has so long made a distinct cleavage between the editors of daily and the editors of weekly newspapers. There is no real antagonism of interest; there only appears to be when it is debatable whether a certain territory demands a daily or a weekly newspaper. There can be no permanent competition between the two. A daily cannot live in a weekly field, nor can a weekly exist for any length of time in a daily field. The wise publisher is the one who correctly sizes up the situation and offers the character of service best adapted to the needs of the community. The bitterness which formerly existed between editors is largely a thing of the past. Even with editors whose territories are competitive it is coming to be recognized that the newspaper is an institution and as a competitor would continue to exist even if every man connected with the paper were struck dead and the plant destroyed.

BETTER NEWSPAPERS.

When this fact is once fully conceded, and the New Jersey Editorial Association is one of the strongest factors working toward this end, many economics in production will be introduced, much useless waste eliminated and better newspapers printed. Yes, and our conventions will last a week and be attended by practically all the editors and their families. No, this is not indulging in hyperbole as viewed from the standpoint of the small city daily.

* * *

E. Polk Johnson, who was for many years managing editor of the Louisville *Courier-Journal*, gave the editors of Kentucky at the recent convention in Estill Springs, some very practical advise founded on experience as follows:

If I were the editor of a country newspaper my greatest effort would lie in the direction of all the proper news of my vicinity all the time. I would be more profoundly interested in the building of a new church or schoolhouse than in the fact that "Miss Eliza Perkins visited Miss Jenkins this week." The news of the construction of a new bridge or a good road in the country would transcend in importance the discussion of a tariff bill in Congress or the solving of the problem, "Can a Prohibitionist be a Democrat?" I would constantly din into the ears of my correspondents the fact that there was a continuous and increasing demand for news in the office and a corresponding lack of desire for their opinions on any subject under the sun. The editor alone should serve opinions to his readers, and even he should do this with many mental reservations. A short, pointed editorial on good roads, better schools and a strict observance and enforcement of the law is worth more to a country newspaper and its readers than a dozen editorial columns on national politics colored by the partisan bias of the writer.

MATERIAL ADVANCEMENT.

This is not to say that the country newspaper editor is not to have political opinions and on occasion fearlessly express them. To hold otherwise is to make the editor a nonentity, which no one knowing the splendid individuality of the Kentucky Press Association would dare to imagine. What is meant is that efforts for the material advancement of a newspaper's immediate constituency are of a greater value than attempts to dictate the policy of any political party, whether referring to state or national affairs, but particularly to the latter. There is none among you so young as not to have seen our national government directed by a president representing each of the great parties, and, despite the dire prophecies of ruin which preceded the election of a Democrat or a Republican, each of us devoutly recognizes that "God reigns and the government at Washington still lives," as it will continue to live until time shall be no more, however much we shall from time to time find ourselves out of or in accord with the party in power. Recognizing this fact, if I were the editor of a country newspaper, as I profoundly wish I were, I would leave to our hired men at Washington the important duty of running the government, while it would be my endeavor to run the best country newspaper in the state. I am not sure that my task would not be the harder of the two.

All that I have been trying to say may be stated in a paragraph, for it all means that I would publish a local newspaper—a newspaper for the people about me who read it, a newspaper that contained first the news of the county and the nearby adjacent counties, next that of the state, and then if there were any unfilled space it would be filled with the condensed news of the outside world. This is a general statement. Of course there are times when worldwide interest centers in some great event, and no newspaper man worthy of the name would overlook its importance or fail to give its details to his readers, no matter where the event occurred.

If I were an editor it would be constantly in my thoughts as I wrought my daily task that it was not for myself that the words to be printed came from my pen. I would know that they were to go out into the world to be seen of men and women and that as I thought and wrote and published honestly and truthfully so would the import, the lesson, be to my readers. I once edited a paper at Frankfort which

some of you may remember. There came into my office one day a minister, the pastor of one of the churches in that city, a good man who has long since gone to his reward in heaven. He said to me: "I came here to tell you how your paper is appreciated by me. I read every issue and want to thank you for a cleanly paper. I have never seen in it a word or a line which I could not read aloud to my wife and children." That was very high praise, and it was appreciated as such.

If I were an editor, please God, that is the kind of newspaper I would still publish.

* * *

In his address before the North Carolina Press Association at Hendersonville, June 23-24, Editor R. R. Clarke, of the Statesville *Landmark,* rightly propounded, with brevity and point, the true doctrines of right newspaper-making, both as to matter and form, as follows:—

The space you give to local news—and give as much as the conditions demand, size of paper considered—use to best advantage. Work the town thoroughly and make an item of everything that is worth while. If an important event occurs, don't be content with a passing notice. Write it up at such length as its importance demands and give such details as are necessary to make the story complete—no unnecessary elaboration or sensationalism, but a full account. I have been surprised more than once to see valuable space in country weeklies utilized for stale jokes, while important happenings worth a quarter or a half column received a half dozen lines. Do not be prosy or prolix, but give the facts

Photo by W. H. Osman

Starved Rock from Northwest, showing End of Island.

in the most entertaining manner of which you are capable. The length of the item must be regulated by its importance and the space at command. If unimportant, make as brief as possible.

Having worked the town first, give close attention to the county and such localities in surrounding counties as the news or the business you may do there justifies. Edit local correspondence. Don't allow amateur correspondents to print silly jokes that only two or three people understand or in other ways waste your space. Confine them as closely as possible to news, but remember that personal and social items are as dear in rural communities as in the town and allow a limited amount of these. But this must be guarded with care. It can easily be overdone.

After having disposed of the local matter and written attractive headings that indicate what the story is when the importance justifies—ordinarily an item of ten to a dozen lines should have a head and one of six inches or more a double head—provide a column or so of editorial comment. Brief, pertinent remarks that illuminate the news of the paper and enlighten the reader as to current events are best. If you have space to spare you may give your views and discuss anything you choose at more length.

The local and editorial being in, work your exchanges for all they are worth for news. The editor who neglects his exchanges cannot measure up to the mark, it matters not what his literary qualifications nor how many college degrees he has. You not only get news from them, but you get ideas. Work your exchanges for items of current interest in the state and the country. Condense, boil the facts down, state in your own language, but give the reader who is depending on you for his all a review of the current events and the news of the day.

Let me say in conclusion, having put in type the best stuff obtainable, having arranged it attractively in the form, much of the work and the effect will be lost if the paper comes from the press badly printed. See that the presswork is well done, that the paper is neatly and cleanly printed, that it is neatly folded and neatly wrapped and mailed so that it will get to the subscriber in good condition. You would hardly go to a store a second time if your purchases were so carelessly wrapped that they reached you in bad condition. Keep that in mind when you send out your product to the purchaser.

* * *

In an address before the Wisconsin editors, "How to Raise Advertising Rates," O. F. Byxbee, advertising Manager of the *Inland Printer,* said:—

Any publisher can secure higher rates for advertising simply by having the courage of his convictions, by simply having a little backbone.

The first essential to securing higher rates is backbone. Backbone may be cultivated, and it is in just such meetings as these, where publishers receive the impetus necessary to send them forth with renewed energy and renewed determination, that the groundwork for a stiffened vertebræ is obtained.

LOCAL CO-OPERATION.

The good fellowship which comes from publishers getting together in these state meetings is only exceeded by that

Photo by Horace Hull

Looking East from Summit of Starved Rock, Illinois River, La Salle County, Ill.

coming from publishers getting together locally, discussing local problems and agreeing on a remedy for existing evils and for the general betterment of each other's business.

I have been investigating instances where publishers have increased rates, and I want to say that in not one single case have I found that a publisher lost revenue through such action—revenue, mind you. He may not be publishing as many columns of advertising, he may have lost some lifelong accounts, but the amount of money received has been greater. The publisher who frequently may have been obliged to print a couple of extra pages has found that the extra pages were not necessary and in such instances has not only a larger revenue, but less expense.

He then gave a very convincing instance from personal experience on a daily where there were three other dailies in the city, where advertising rates were successfully raised from 6¾ cents to 15 cents an inch. All old advertisers were given notice that their rates would remain unchanged for one year, after which they would be compelled to pay with all others the full fifteen cents an inch rates. The plan was strictly adhered to and while one old advertiser, who had been running a column and a half a day for ten years

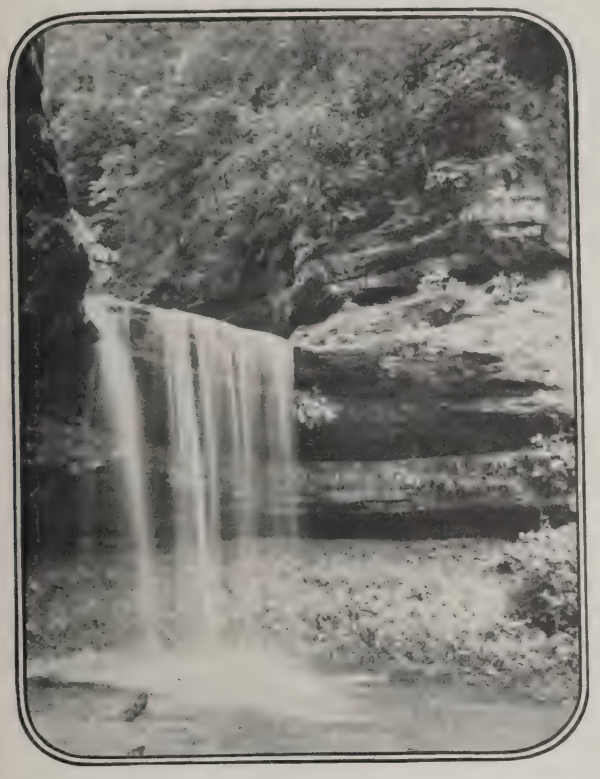
at 6¾ cents an inch, remained out for just 364 days, when the ad appeared again at the new rate and has been running at that rate ever since, the publisher receiving considerably more for the second year than he would have received in two years at the old rate.

* * *

Editor Frank Hamill of the *Advocate,* Spooner, Wis., who had formerly been a locomotive engineer, made a neat hit in his paper on, "The Country Weekly," by comparing his experiences as an engineer with experiences in running a newspaper. His conclusion was with the opinion that to make a success of the country weekly we must at all time keep the throttle wide open. There must be a constant use of the steam as the driving power.

* * *

W. J. Hill, publisher Hannibal, Mo., *Courier-Post,* delivered an address at the meeting of the Northeast Missouri Press Association, held at Moberly, Mo.,



The Falls, Horse Shoe Canyon, Illinois River, La Salle County, Ill.

Friday, June 25, 1909, on the subject of "Advertising the Newspaper." He said:—

The newspaper business like any other legitimate business must be advertised. There are good and poor ways of advertising. Many things at first glance seem profitable, turn out to the countrary. Many things in this business are the same as in other lines, not what they seem to be. There is something, however, that is necessary in advertising newspaper advertising, you should keep a little ahead of those in other lines, see a thing first. Do something considered new to the average business man—or at least has not been seen in your locality. It has been said that there is nothing new under the sun. That may be true in a measure, but many times an advertisement of the other fellow, will suggest something entirely different.

Advertising a newspaper costs money. One thing many newspaper publishers lose sight of is to take their own medicine. They will oppose various advertising schemes and then use them for their own purpose. Be consistent. Advertise your paper in your paper. Use your own advertising to advertise your own advertising. Use your own circulation to get subscribers. There are many people reading your paper who are not regular subscribers. They buy, beg or borrow and in some cases steal it. I believe a man who steals a copy of your paper is paying you a compliment. The thief seldom steals anything of no value. He steals that which he knows has a value and that same value is the foundation of his desire to obtain it. Your advertising in your paper many times brings you a customer. It has another value of far greater importance, it creates confidence in the proposition. If you think enough of the value of your own proposition to use it in advertising itself, then it must be good. The Chicago *Tribune* is known in the newspaper business as "The world's Greatest Newspaper." Scarcely a day passes but that paper contains a lot of advertising about itself. Space in it is very valuable and sells for a high price, but it is not too valuable for its own uses. There are many methods of advertising a newspaper that I consider good, but I feel that there is no way that is so productive of permanent results as using the columns of your own paper. You have many readers who may be advertisers in a short time—probably within a year they will be conducting a business that can be profitably advertised in your paper. If you are advertising to them you are educating them along the right lines. There are a lot of fellows in business that you would like to have advertise in your paper who are not. Many of them would not be convinced if you spent months talking to them. When a solicitor approaches a man to talk advertising there is a tendency to turn him down. He don't want the solicitor to convince him. If he picks up the paper he reads your talk. He is interested. He lays the paper down and may say it will not pay. That's all right. You have planted a seed that may bring you a

Photo by Horace Hull, Ottawa, Ill.
Horse Shoe Canyon, Illinois River, La Salle County, Ill.

good advertiser someday. Talk right straight at him. Solicit him on the same basis—as if you were talking to him face to face.

Certain advertising methods may be termed "schemes." There are the so-called schemes for each department of our paper. There are many ways to advertise your local advertising, there are also many ways to advertise your want ads, your foreign advertising, your subscription, etc.

I advertise my paper constantly in my paper. I not only advertise local advertising, but want ads, newspaper features, etc., etc. Do not understand that I never advertise along other lines, because I do. I advertise to the foreign advertiser by using trade magazines, by writing letters, by calling on him and by having my Chicago and New York representative write and call on him. I endeavor to get personally acquainted with as many of the advertising agency people as possible and to keep in correspondence with them. I get out circulars boosting Hannibal and my paper and send one of them in every letter I mail.

When it comes to advertising to the local merchants, and manufacturers, I put on much stress. A large number of this class of advertisers do not sufficiently appreciate it to handle it properly. Advertising space in a newspaper should bring a good price and then be used carefully like other parts of the business. I run advertising talks in my paper and mail special circulars to the local merchants, solicit them personally and keep the air full of advertising all the time. When employed as an advertising solicitor I would take a list of prospects, and call on each at least once a week. By keeping a regular calling of 25 or 30, I was able to close from 2 to 6 contracts per week. Keep a man thinking of advertising

his business and he will want to. It grows on him. Be a walking suggestion of advertising. I have found the publishing of advertising talks from other papers and magazines, profitable. Some fellow may not be convinced by what you say, but a statement from another paper might. A good proposition is to photograph your advertising man, have a cut made and run this in a big ad. Have your advertising men solicit business in the ad. This gets the merchants and your readers interested. It teaches them to read ads in your paper. They mention it to their friends.

There are many ways of advertising for readers, or subscription schemes. One of the most substantial, however, is publishing a good newspaper and then send your traveling solicitor out to show the people what you have. There are various methods of getting business and getting it fast, but the most profitable and satisfactory way is to convince them that you have a good paper, create a desire for it and have them buy it because they want it. In my ten years of newspaper experience I have tried out and have had occasion to observe the results of the different circulation promotion schemes. I know pretty well what can be done in getting newspaper circulation, but I believe in straight soliciting. It is the slowest method and considered by many the most expensive but when you gain one thousand subscribers you can pretty near figure on holding the greater portion of them. I keep traveling men on the road all the time, most of the time two and at times more. They make a house-to-house solicit.

I publish the news of the surrounding towns and neighborhoods and have regular correspondents in each. When my road man makes a town he takes twenty or twenty-five papers. The next morning he follows up with a solicit. He leaves the papers and personally tells them to read it over, showing them the home news, etc. Last year I put out as a premium more than 1,700 fine mission clocks. This was one of the best things I ever saw. It tied up a lot of money but it was a good proposition. Later in the fall I had a Shetland Pony contest, giving away four Shetland ponies, and four wheeled, rubber tired buggies. This was a most profitable proposition. I am now giving away the *Cosmopolitan* Magazine with each signed order of 12 months for *The Daily Courier-Post*. These orders of course must be good.

I have tried numerous schemes for classified advertising but the most effective was to get the people to read the ads. Whenever you get the most of your subscribers to read the want ads you have no need of soliciting. The people will use them. Of all the little side schemes I ever tried to build up my want ad page, the most profitable was in giving away free want ad dollars. The parties getting the free dollar could find their name in the want columns. When he found his name he would bring the copy of the paper to the office and get his dollar. My want ad receipts were running from $30 to $40 per month before that time.

The first 30 days it doubled and inside of two months it reached $120 per month.

N. E. A. DELEGATES GIVEN ROYAL GOOD TIME ON WAY TO SEATTLE MEETING

The following account of the entertainment is from the *Publishers' Auxiliary*, Chicago:

Delegates passing through Chicago Wednesday, July 14th, on their way to Seattle to the National Editorial Association meeting, found the latch-string out and a royal welcome awaiting them. Open house was kept at the Sherman House, where the Association made its headquarters and where genial-souled Father Herbert made every incoming delegate feel that he had reached the right spot and was headed in the right direction.

It was a busy day into which the visiting delegates found themselves plunged by their kind hosts. Below is given the program as planned and carried out, and one bright little newspaper woman from Mississippi probably voiced the sentiments of all who enjoyed the day when she said that Chicago and Chicago men and women, too, were just splendid—most as good as those in Mississippi. The program follows:

PROGRAM OF THE DAY.

1 to 2 P. M. (after luncheon)—Attend reception by Press Club of Chicago, at new club rooms, 116 Dearborn St.

2:30 P. M.—Leave station of the Illinois Tunnel Company at 179 Monroe St. for trip under the city, on invitation of Vice-President Kenyon, and conducted by Superintendent Callahan. Forty feet under the roar of the surface traffic, there is a network of railway tracks, 60 miles in length, over which 2,500 cars move a large share of the city's freight. Underground Chicago is as mysterious and wonderful as the Catacombs of Rome.

Reaching the retail store of Marshall Field Co., where the party will be personally conducted through the largest drygoods store in the world.

4:30 P. M.—Leave from platform of Marshall Field Co.'s store, corner of Wabash Avenue and Randolph Street, for the White City, by special train tendered by South Side Elevated.

5 P. M.—Arrive at White City.

5:30 P. M.—Banquet in the splendid Casino of the White City, tendered by the hosts, whose names appear on the fourth page of menu souvenir.

6:30 to 9:30 P. M.—Visit the many attractions of the park, under the guidance of Manager Wolf.

9:30 P. M.—Leave for the city, to take the train over the C. B. & Q., at the Union Station, corner of Adams and Canal Streets, for Seattle. Train leaves at 10:45 P. M.

THE BANQUET.

After the trip through the tunnel bore, the miles and miles tramp through the thirty-five acres of floor space of Marshall Field & Co.'s retail store, where guides explained everything to the interested sightseers, and the delightful trip out on the special on the elevated to White City, the company with keen appetites sat down to a splendid menu as follows:

Cream of Tomato.
Olives. Radishes.
Filet of Sole, Victoria.
Cucumbers.
Broiled Milk Fed Chicken.
Rissole Potatoes. French Peas.
Combination Salad.
Fance Ice Cream. Cake.
Cream Cheese, Currant Jelly.
Toasted Wafers. Demi Tasse.

THOSE AT THE BANQUET.

After the banquet Editor Herbert of the NATIONAL PRINTER-JOURNALIST spoke a few words of greeting to the assembled company and was followed by the first vice-president, A. Nevin Pomeroy, Chambersburg, Pa., publisher of the Franklin Repository, who briefly but eloquently expressed appreciation for the kindly hospitality which had been extended to the members of the National Editorial Association by the combined host.

ITEMS OF INTEREST

Editor Henry Barck of the Crown Point, Ind., *Freie Presse*, one of the few German papers in Northern Indiana, has decided to move the plant to Hammond.

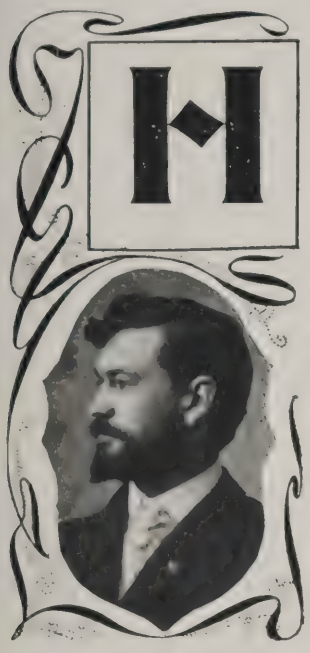
The Waukon, Iowa, *Standard*, one of the oldest papers in this section of the State, has been sold to John H. DeWild, a practical newspaper man, who has for a long time been connected with the office.

The *Butler County Tribune*, the only newspaper published at Allison, Ia., the county seat, was purchased by W. J. Hunt, landlord and proprietor of the Allison House Hotel. The business has been under the ownership and control of H. Folken, cashier of the Farmers' Savings Bank, for some time. Mr. Hunt will not take possession of the property until August 1st.

NEWSPAPER CRITICISMS

By O. BYRON COPPER

Address all communications for this department to De Soto, Wisconsin



HOW to acquire and maintain a large and capable corps of country correspondents seems to be a problem for the average country newspaper-maker; but why it should be so is quite as much of a problem to me. Brother E. R. Purcell, of the Custer County *Chief*, Broken Bow, Neb., has fully mastered the problem, it seems, as evinced in an article from his pen published in this journal some months ago. Personally, as intimated, the subject has never proved problematical to me. I have gotten my correspondents naturally and easily — although, of course, not without effort. Many of my present correspondents, however, have volunteered their services, and, naturally, as Brother Purcell pointed out, too, this class makes the most valuable and tenacious assistant. I have never paid my correspondents any cash for the work, as I do not deem that a practical course for the average country publisher. But I have tried always never to allow an occasion to pass unimproved for showing a deep interest and high appreciation for their work, writing each reporter a letter of encouraging advice, congratulation or appreciation as the case might require and opportunity arose. And scarcely ever does it happen that at least a third, and sometimes fully a half, of the reading matter of my paper is not country newsletters. I have a number of correspondents furnishing my paper with the news today who volunteered their services when I first founded the paper seven years ago. I think the publication of a booklet of general instruction along every phase of country reportorial work, for distribution among one's correspondents, as has been done for some years past by the publisher of the Traer, Iowa, *Star-Clipper*, another devotee of the country newsletter, is an excellent plan, as it furnishes an ideal avenue for the publisher to vividly impress upon the correspondent the latter's utter importance in the making of the paper—which impression, when once vividly fixed, is an all-important factor in keeping the correspondent at work. I do not know that in the foregoing rambling dissertation I have been able to throw much light upon the "problem" mentioned, simply because, as I asserted at the start, it has never appeared problematical to me; but I hope I have devoted a sufficient number of words to at least impress the reader with the fact that the engaging and retaining of an able staff of local reporters is of vast importance in the successful publication of a country newspaper.

GARLAND, TEXAS, June 26, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover am mailing you copies of the *News* for criticism. This is the third effort, but persistence has its own reward, and I shall keep "firing them in" to you till you give me a roast that will quiet my nerves. I think the *News* will compare favorably with papers published in towns of a thousand population, but would be glad to have your opinion of it.

Respectfully, N. A. HOLFORD.

That's the proper spirit, Brother Holford—the spirit that wins. And here's the quietus for your nerves: The Garland *News* is a monster—eight columns, eight pages. Just a little too big, I think. The manner in which it is made up mechanically, with ads scattered to the four corners of the pages and elsewhere, gives an effect that looks like a well-developed case of the smallpox. Let's give the "devil" his due, however, and mention the fact that even this scatter-

No. 1

ing of the displayed spaces is done not without design and shrewd care as to balance. I have so frequently illustrated, both by wordy paragraphs and reproductions, just how a newspaper should be made up to look well and be respectable and proper, that it seems anything further on the subject here is superfluous. The *News* offers an excellent local news service, without resorting to the local reportorial system, however. It gets a very abundant advertising support from local institutions, and in the main handles its advertisement composition in a pretty creditable fashion. Exhibits 1 and 2 will illustrate admirably. In the first the underscore beneath the main line is altogether too heavy. Two-point rule

would have been quite adequate for the purpose. Another improvement would have been to set the subject matter of this ad in a considerably shorter measure with less space between lines, which would have permitted of proper whiting. The matter in the lower panel could have been im-

proved, too, by having centered the portion that ran over and produced the second line, instead of letter-spacing and leadering out on one side to fill the line. Filling this line was not in the least necessary, and Gothic was never improved by the introduction of spaces between letters, especially not if the line preceding or following remained normal. In the second specimen, in which, by the way, I find much merit, the underscoring of the main display lines could have been dispensed with advantageously. This would have permitted the second and shorter portion thereof to run in closer proximity to the upper and longer one; and then the line which reads, "The $3.00 grades now go at $2.50," could very appropriately have been partially enclosed with two-point rules above and below it. The introduction in De-Vinne ought then to have been set in two full lines with the white neatly distributed above and below them. The *News* is set in a large legible face and the impression on each page is a veritable delight.

* * *

ODEBOLT, IOWA, July 11, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under another cover we are sending you copies of today's issue of *The Chronicle* for your inspection and criticism.

We had fourteen changes in ads to make this week—all of them entirely reset—and hence were hurried. These ads were set in two days by Mr. H. L. Legat, assisted by Miss Athelia Russell, and they worked at other things part of that time, also. Could they have had more time the ads would be more artistic.

Odebolt is a town of 1,600 population, and I established *The Chronicle* twenty-three years ago and have conducted it since its birth.

Fraternally yours, W. E. HAMILTON.

To stick at a single post of duty for a term of twenty-three years, I tell you, dearie, in itself is no small achievement, but when the result of such a term of service is a newspaper like the Odebolt, Iowa, *Chronicle*, the man who has so labored has my pardon if he entertains a little personal pride in his success. I want you all to have a look at the *Chronicles'* neat front page, and note its dainty, modest cleanliness. No boldly displayed ads here, nor jarring scare heads, to mar the even tenor of the artist's admiring gaze. (Exhibit 3.) This reproduction will pretty accurately

show the abundance of local news and personal mention gathered weekly, but besides this there is a bright, sparkling department of editorials, and an extremely liberal advertising patronage. This issue is also supplemented with proceedings of the meeting of the county supervisors. Everything mechanical about the *Chronicle* is very satisfactory. All short local matter is tastefully graduated; straight-matter is carefully composed and corrected; heads are neat and modest; all brass dashes are simple and desirable; the adver-

tisement composition is of the highest grade; the typographical features are uptodate and pleasing in every respect; the presswork is delightfully well done. What more could one ask of a country newspaper? Exhibits 4 and 5 are a couple of the faultless half-page ads selected from this issue of the *Chronicle*.

* * *

The Press Club of Des Moines, Iowa, born a few weeks ago in the minds of a number of newspaper men, has already grown to a membership of 80. New members to the number of thirty were passed upon by the executive committee at a recent meeting.

* * *

GRAFTON, N. D., June 21, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am enclosing a copy of the *Walsh County Record*, and would be pleased to have you criticise the page ad on the second page. This is of course only a small office and we were unable to run in series as much as we would like too, and we will value your criticisms very highly.

Yours truly, GRANT S. HAGER.

The Walsh County *Record*, I see from the copy with which Brother Hager has kindly favored me, is an all-home-printed eight-column folio. The advertisement he submits is reproduced as Exhibit 6. While this specimen has been treated, and very properly, too, as one advertisement, in reality, as the reader will observe, it is one composed of many ads. He has asked my criticism. Now criticism is quite as much a judgment of beauties as of faults, and I am

glad of that, because in this instance the former far outweigh the latter. There is nothing in this specimen that is really bad; on the contrary I deem it very creditably done throughout. It is very neat in layout; excellent in display,

No. 6

and despite the fact, intimated by Brother Hager, that it emanates from a small office, the whole is quite harmonious typographically. The *Record* is completed with an excellent impression.

* * *

COOPERSTOWN, N. D., June 23, 1909.

Mr. O. Byron Copper, De Soto, Wis.

Under separate cover I send you a copy of the Griggs County *Sentinel* which I would like to have you pass your opinion on, provided there is room for me. This issue was gotten out in a hurry as there are only two of us, the boss and myself, and at times have to hurry, which we did at this time. This is an average sample of the sheet, both as to reading matter and ads. Your criticisms in the past have proved very beneficial to me and I know that they will also at this time.

Yours fraternally, M. A. JENSEN.

I aim always to be candid with those who seek advice through these columns of the NATIONAL PRINTER-JOURNALIST, and I dare say Brother Jensen does not wish that I should be otherwise in dealing with him. Therefore, I am going to start right in by telling him that the make-up of the Griggs County *Sentinel* is almost absolutely wrong—wrong in every respect. In the first place I find fully three-quarters of the front page space occupied by displayed advertising matter, the ads on all other pages scattered on both sides and at the top, and invariably the larger spaces occupy preferred position. This condition of affairs is merely the result of a fool habit that modern newspaper men are throwing off. The modern publisher runs his own newspaper, especially as regards all mechanical departments, and will not listen to the whimsical dictates of advertisers. The reader is the fellow whom the editor of today keeps in mind. Hence the reader gets the column tops and the left-hand side of all other pages but the first, and that is given up entirely to him. I am free to admit that even with pages of seven columns each, with so large an advertising patronage as that enjoyed by this publication I am reviewing, the problem of keeping the front page clear of advertising matter is a question not easily solved, but I stubbornly maintain that "where there's a will there's a way." I see many a big paper nowadays in which the entire back page is made up of one solid mass of advertising matter just so as not to be compelled to deviate from the desirable clean-front-page basis. And I notice, too, that these very papers enjoy quite as enviable a reputation for giving good returns to their advertisers as do those who grant their patrons' every exaction. It's all an old fogy notion, this thinking that people will not read advertisements unless they are inserted in the most conspicuous, most accessible positions in the paper. It would be quite as consistent to demand of the magazine publishers to make every other page an advertisement, or to put all

their advertising in the middle of the book with reading matter in the front and back, as to ask a newspaper man to run his locals on the back page and give up his front page to advertising matter. There are few newspapers that have as good a print as this Griggs County *Sentinel*, and, considering the fact that the working force consists of but two people, the advertisement composition is extremely well done. (Exhibit 7.) The *Sentinel* does not offer so good a news service as it ought to, possibly due to the fact that the editor is too busy in the mechanical department; it is quite evident that this deficiency is not due to any lack of ability. The running of black face paid readers in along with the local news, to me, is the unforgiveable offense, and the front page of a newspaper is the proper location for the news, not any of the other pages. Editorials are only of secondary importance, for, deplorable as the fact may seem, not over forty per cent of a paper's readers ever look at them.

* * *

OPELOUSAS, LA., June 14, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I read and appreciated the comments on our paper, but prefer waiting until I get the paper in such shape as to get a better comment on the whole before mailing out copies. Thanking you for the comment so as to improve the paper, and assuring you I will do my best, I remain,

Yours truly, AARON JACOBS.

Another copy of the St. Landry *Clarion* at hand shows that that paper is fast improving, especially in point of mechanical makeup. As for contents, I doubt if there is a better weekly in the state of Louisiana. Certainly Brother

Jacobs is making some great strides in the right direction, and I shall be pleased to become a witness to his further achievements.

* * *

HECTOR, MINN., June 14, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I am mailing you a copy of the Hector *Mirror*, and would be pleased to have your opinion of it from both a mechanical and editorial standpoint.

Thanking you in advance for the favor, I remain,

Very truly, A. H. FREEMAN.

Before I enter upon a compliance with Brother Freeman's request, I desire to thank him frankly for the excellent shape in which he prepared his publication for shipment to me. It was quarter folded and laid between two pieces of strawboard of proper size and the whole enclosed in a neat wrapper. It is a well known fact, I believe, among commercial men that an unsightly wrapped package soon brings one's business into ill repute, and this is especially true of a badly wrapped newspaper. Some publishers do not appreciate the value of these little things, like the folding and wrapping of their papers, but if they will take the trouble to test the subject carefully, they will soon learn its importance with respect to public opinion. As might be expected from an office which sends out a paper so neatly wrapped for the mail, the Hector *Mirror* is an exquisitely neat and excellent sheet. The front page is is printed from plate, I take it, else is done at the ready-print house, and is therefore very attractively arranged with a good cartoon occupying the top of the three central columns. In its attractiveness this page is worthy of copying. The four inner pages of the *Mirror* are ready-printed with the balance of the sheet containing the local home-set matter. These home-made pages are beautifully printed, and, while there is a flaw or two in evidence in mechanical make-up, withal, they are generally far above the average in this respect. The advertisement composition is high grade (Exhibits 8, 9 and 10.) and the editorial work cultured. Editor Freeman is a brilliant editorial writer and skilled in gathering news. Throughout I am highly pleased with his work.

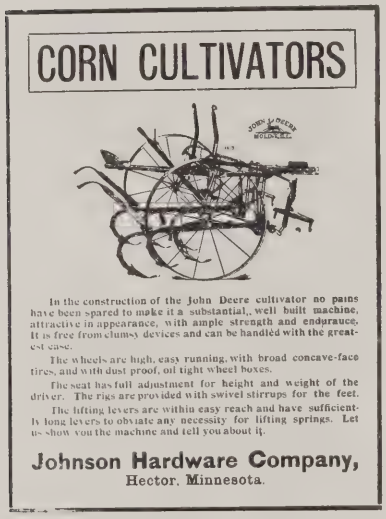
* * *

Several times in the past I have had occasion to remark on the importance and pleasure of any workman learning that his efforts have been appreciated. It is one secret of "keeping" help. You know what trouble the average employer has in keeping his help. I know of printing offices—and many other places where people are employed—that are eternally having their troubles in securing help. Not that men are scarce, but that men are hard to keep. It is not always true, but in a large measure the employer himself is to blame simply because through the fear of causing someone's head to "swell," he guards against letting the workmen know how well he appreciates what they do for him. When a man does a thing well I believe in giving him just praise. There are natures, I'll admit, who can't stand it, just as there are natures who can't stand prosperity; but the average human being can't live without it. I am not above the average in this respect, and therefore I have greatly appreciated this evidence of appreciation from one of you for whom I work:

ELMORE, MINN., June 15, 1909.

Mr. O. B. Copper.

I note your kindly criticism of *The Eye* in the June issue of the JOURNALIST, and wish to thank you for same. I was sole owner of the *Eye* for ten years, but sold to the Elmore Printing Co. last December. Am now foreman. I am not allowed to do as I please in the make-up of the paper, or some things might be different.



CORN CULTIVATORS
In the construction of the John Deere cultivator no pains have been spared to make it a substantial, well built machine, attractive in appearance, with ample strength and endurance. It is free from clumsy devices and can be handled with the greatest ease.
The wheels are high, easy running, with broad concave-face tires, and with dust proof, oil tight wheel boxes.
The seat has full adjustment for height and weight of the driver. The rigs are provided with swivel stirrups for the feet.
The lifting levers are within easy reach and have sufficient-ly long levers to obviate any necessity for lifting springs. Let us show you the machine and tell you about it.

Shall work along the lines suggested by you and in about two months you will hear from me again.

W. A. BRUSS.

* * *

ST. GEORGE, UTAH, June 14, 1909.

DEAR MR. COPPER:—Am inclosing a copy of my last issue. I very much appreciate your department in N. P.-J., and respectfully ask you to criticise this paper for my guidance.

Very truly yours,

JOHN R. WALLIS.

If I mistake not, this is the first publication that I have ever had from the state of the Prophets. I am glad to get it, as I believe it is going to prove a valuable addition to this department's large patronage. Exhibit 11 is a reproduction of the front page of this neat six-column quarto weekly, which, I note, is in its second year of existence. The publisher has chosen a very pretty face for his headings, but for my taste, the eighteen-point is considerably too large for the heads over lesser articles. I know a man of as good typographical taste as I am sure Brother Wallis possesses does not approve of the head over the item about the "turning loose of the slayers of Carter" any more than I do. It looks terribly accidental. I know it must have been set in a hurry at the last minute before pressing—and I even get a vision of the forms being pulled off the press in order to

insert this late scoop. The *News* prints an abundance of reading matter and does not get the advertising support such a bright paper deserves. A good rate is secured, however, which offsets the lack in quantity. It is hard to set anything out of the various members of the Americans' famous Cheltenham Family and have it turn out unsightly—and this is the chief reason why the advertisements in this publication look well—the Cheltenham faces redeem them from mediocrity.

* * *

Below I reprint a card from my former old-time contributor and friend, C. C. Johns, formerly publisher of the Wood River *Sunbeam*. This card is nearly self-explanatory—all that I need add is that it was gotten out by Mr. Johns as an introduction to his wonderful quartet of ads (of which I shall have more to say) and sent along to every member of the Nebraska State Press Association, of which Brother Johns is secretary-treasurer:

GRAND ISLAND, NEB., June 11, 1909.

in a Nebraska paper, or any other paper so far as I know. Two colors are not often used either.

Pardon the seeming egotism, but all my life in newspaper work I have been preaching to merchants to use printers' ink—ADVERTISE. A month ago I came here as Advertising Manager for S. N. Wolbach & Sons. I am now practicing what I preached. We believe in advertising. We used this ad in a daily, six pages in another paper, besides small spaces in others. We also used 12,000 six-page bills on a mailing list. Does advertising pay? We know it does by the crowds that come. Please note the excellent work done typographically by the *Independent*.

A suggestion: Give us a write-up in your paper if you wish. 'Twill do your advertisers good. Any retail store can do the same thing and make it pay. If you mention this, send me a copy of your paper and I'll reciprocate by sending you some more live advertising matter some day. I think you can hold this ad up to your advertisers as an example for them to follow.

Thanking you for the paper, I remain,

Most fraternally, C. C. JOHNS,
Sec.-Treas. Nebraska Press Association.

I am pleased, indeed, to present my readers with a view of these remarkable advertisements to which Mr. Johns' card above refers. Exhibits 12, 13, 14 and 15, however, can show them in only part of their glory, for the originals of Nos. 12 and 13 were in two colors. One who has not seen the originals, therefore, can have but the slightest idea of how doubly attractive they were. Most admirably, in these ads, has Brother Johns demonstrated his ability as a maker of advertisements; indeed, methinks it would require a very eminent expert to suggest the least improvement. And in saying that I mean to include the composition, which is a compliment—but none too high—for the mechanical department of the Grand Island *Independent*. Carefully inspect each of these big full-page specimens, and you must end with the conviction that they have been most wonderfully and perfectly designed and written, and further, that the printer has caught the author's spirit in every detail. Fact is, brothers, if all work in typography were so nearly perfection as this,

there would be little use for critics like me, except as it is necessary to the life of good workmen to have praise—just as I intimated a few paragraphs back. And work like this can't get too much of it. I sincerely thank Brother Johns for having treated me to the pleasure of seeing this marvelous and daring advertisement. I hope he'll come again, for his work is doubly interesting, inasmuch as it shows the work of one of us on the other side of the fence.

* * *

GLIDDEN, IOWA, June 11, 1909.

Mr. O. Byron Copper, De Soto, Wis.

FRIEND COPPER:—I say, friend, because, after the roasting you gave me in the May issue of the NATIONAL PRINTER JOURNALIST, we should certainly be friends. It is the real friend who dares to point out the weak spots in another. The criticism was good. Have been sending you the *Graphic*

each week lately. We know there is much to criticise in each issue, and especially of late, as we have been installing and getting ready to install some new equipment. The worst trouble was, as you said, to know when to stop when one once starts to improve. We have our typesetting machine now on the floor, a new six-horse-power engine running, about 800 pounds of type in the house—only part of it laid as yet—among which is the Adstyle series from 36 to 96, inclusive in weight fonts. The New Departure type cabinets have not arrived yet, but expect them in today. With a rush of jobwork and being torn up painting we are pretty busy. Hope you will notice by this week's *Graphic* that all but one of the ads have disappeared from the first page. Hope to find some reason to remove this before long. Criticise the ads all you wish. It is helpful. Will try to do better by the make-up after we are settled. Am glad you like the Coon Rapids *Enterprise*. It is one of our exchanges and it invariably has a good first page. We prefer the N. P.-J. to any other journal we receive because of its fearless criticism of newspapers and advertising.

Fraternally yours, H. F. RUBEY.

Probably it's because I belong to no other calling that I hear less complaint among members of others than among my own, but haven't you noticed what a class the printers are

to "kick" about the printing business? It is true both of the employed and the employer. One reason for the complaint of the former is under pay (sometimes) which is still the reason mainly, after the employed has crossed the line and begun running a newspaper for himself. It is sometimes an eye-opening experience for the man—this crossing the line. He often finds how difficult it is to pay his help good wages—the wages he would like to pay, and the wages he used to think his "boss" ought to pay him—yea, even to pay any wages at all. This is largely due to congestion in the field of newspaper-making and more largely due to the fact of men entering the business without capital and frequently starting up business in places too small or penurious to properly support a paper. And now, you may ask, where is the analogy between all this and Brother Rubey's hearty letter above? There is no analogy—but a mighty contrast. The *Graphic* office, I dare say is free from "sore-heads." It is evidently in a field that is neither too small nor too penurious to give a grand, big newspaper the right sort of support, and the *Graphic's* publishers doubtless have the capital requisite for providing its field with a worthy newspaper. It is also quite evident that Messrs. Orchard & Rubey do not hesitate at anything the acquisition of which may go to make their paper more fitting for the fine patronage with which it is being accorded. There are probably many pleasures to be experienced within the walls of the lesser print-shop, that must be eliminated when the proprietor pushes on into greater fields of activity; but the zenith of a country newspaper man's happiness ought to be realized in the ability to put out such a magnificent modern sheet as the Glidden *Graphic*, and especially in being able to see it rapidly and constantly improving. And amid all this gratifying evidence, Brother Rubey, I am especially gratified with the gradual disappearance of those displayed ads that used to mar your first page. The one little "blot" that remains is scarcely noticeable and will melt away, I trust, in your future successes. I am immensely interested in the present transformation of your office, and shall watch expectantly for the change that must appear whenever all the new equipment is installed and put in operation. Exhibit 16 is a first-rate advertisement from this publication. Original was printed in green and black—the frog at the mottom, I presume, having determined the unusual color combination. In the line about the pineapples the compositor evidently failed to reckon upon the shoulder of the type employed, with the undesirable results that a greater space of white exists below than above the line.

* * *

WYNNEWOOD, OKLAHOMA, July 3, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Have been endeavoring to follow out the suggestions of Copper, alias Hoyle, in regard to make-up and under another cover send you the front pages of my country exchanges for comparison. Am sending you three or four of the late issues of the Wynnewood *New Era* so that you may

know I've not gotten up a special make-up just for show.

Any suggestions you may make and any more criticisms you have to offer will be greatly appreciated. It's hard to have a paper appear just as one would like and at the same time have all ads, especially medicals, top of column, next to pure reading matter. Very truly yours,

THE WYNNEWOOD NEW ERA.

During the course of an editorial the other day, I discovered that there is a remarkable likeness between a faithful family physician and a faithful country editor: Both sometimes find it necessary to administer bitter doses. And I find that my work on this journal is not unlike the work of an ordinary editor. Sometimes, just like I imagine it must be with the doctor, I would rather be delivered from giving my readers the bitter pill that I nevertheless feel it my duty to administer. I'm up against exactly that kind of a proposition right now. I like Editor Stoddard; I admire his disposition in the matter of these criticisms; I admire his paper, in so far as it is progressive; I think he's a jolly good fellow, and I'd rather do most anything than hurt his feel-

ings; but I can't have a great deal to do with sentiment if I'm to make the most of this position. I can't recall what advice I offered him the last time his sheet was inspected herein, but, at any rate, he does not seem to have understood me, no matter how much he may have appreciated my words. I have taken the trouble to examine his paper very closely again, and also the twenty-four front pages which he sends for comparative purposes, and I am compelled to testify that out of the twenty-four exchanges there are but five that can be compared with the Wynnewood *New Era;* still there is a vast opportunity in evidence in the *New Era* for improvement. This is chiefly in respect to mechanical make-up and typography—in fact, wholly confined to those departments, for the *New Era* is a very bright, wide-awake disseminator of the local news. There is still one displayed ad on the *New Era's* front page that should be eradicated; and the other pages should be gone over carefully and arranged according to Hoyle, as follows: First, place all advertising matter to the right side of the page—now mark what I say—to the right-hand side of the page—not on the left, nor the wrong side, nor in the center. Arrange them by placing the larger specimens at the bottom of the page, graduating regularly until the page is topped out with the smallest space. In this way a neat, symmetrical effect is attainable, with the largest number possible next to pure reading matter. In writing the head-lines for the stair-step style, longer lines should be chosen than those commonly employed at present. Lines with but a two-em indention are preferable to one that is shorter. In so many instances too great space is used between words in the head-lines. The compositor should have both brains enough and full license to subtract or add words as required to make the proper length of line. I am pleased with the high degree of enterprise in evidence in this paper, and am not blind to the great improvement that has been effected in its pages since I first began to get acquainted with it. I sincerely wish it a continuance of both. Concerning Brother Stoddard's closing remark to the effect that "it's hard to have one's paper appear just as one would like, and at the same time have all ads, especially medicals, top-of-column, etc.," I beg to add that it's hard to have a paper

as I would like it and have any medicine ads in it at all It is some two or three years ago since I turned down the last patent medicine advertising contract offered for my signature.

* * * *

In Exhibit 17 I am pleased to show the first page of the special issue of the Hartford City, Indiana, *Evening News*, gotten out in honor of the dedication of the new Masonic temple and Firemen's annual convention there. This front page was in three colors: The fire engines in red, the Masonic emblems in blue and the type page in black. It serves as an additional proof, that sticks out all over this modern little daily, that it is a live, progressive, wide-awake paper. In every department this publication is a credit to the age. Editorial and reportorial work are excellent; all composition and presswork of the highest order. Exhibit 18 is one of the creditable ads from this issue.

* * *

Lately I have been receiving copies of the Hannibal, Missouri, *Courier-Post*, which have been enough to convince me that it is a very praiseworthy little daily. It gives a good

news-service, including associated press dispatches. In all respects I deem it a good representative of modern journalism. Its typography, including ad composition, is uptodate and pleasing.

* * *

My desk has been littered this month (June-July) with copies of the *Saturday Blade* (Chicago) containing big scareheads about Mr. Boyce having secured the famous outdoor photographer, George R. Lawrence, to accompany the *Blade's* African expedition, for the purpose of making flashlight photographs of the "denizens of the jungle" from a balloon. I felt some timerity in making this statment, for in the circles where I have made it a practice to circulate, people who confessed to having gotten their information from the *Saturday Blade*, have also usually gotten the laugh. Still

the *Blade* may be more reliable than it is reputed. One thing none of us can deny is that Publisher Boyce has made a big success with his paper and has a following of some 750,000 devotees. His new sensation about the balloonograph expedition into the wilds of Africa is just like him—full of originality and daring, and therefore is bound to "catch on" with a big class of the masses.

* * *

Another publication that has been making itself seen on my desk these days is the Starbuck, Minnesota, *Times*. When I looked into the sub-head of the first issue I found that I. M. Kalnes was the publisher, with Prof. Bj. Bjornaraa and Carl L. Nelson as editors; but in two issues later I got an awful jolt when I discovered that the name of Fred F. Flatt had been substituted for that of the professor. But later still I see that the professor has been re-instated, which makes three editors for one not overly-large weekly paper. Fred F. Flatt—that name is very familiar; twice before I have seen it at the top of different editorial columns; the last time, if I mistake not, it was in the Letts, Iowa, *Record*. Now, an explanation is certainly due me; especially if I've gotten things mixed; and I've a notion not to write another word on the subject until such explanation is forthcoming. But that would be too mean, maybe. Outside of the fact that the *Times* prints big displayed ads on its front page and makes its other pages up after a hit-and-miss style, it is a pretty creditable six-column quarto. One unusual feature is the publication of part of its contents in the native tongue of

Norway. This, I take it, is the professor's work, to whom I have alluded before. (I have refrained from mentioning his name, because I can't pronounce it; and I'm afraid the reader might encounter the same difficulty. So far as possible I always endeavor not to use any words that my readers cannot pronounce—which is practicing what I preach to you fellows—or rather what I preach by practice.)

* * *

The illustration herewith presented is from a photograph of an interior corner of the office of the Coon Valley, Wis.,

COON VALLEY, WIS., NEWS OFFICE.

News. The gentleman in the foreground is Editor Harvey Owen. Mr. Owen has an ideal little shop with excellent quarters in the basement of the bank building.

The Manitowac, Wis., *Daily Tribune*, a socialist organ founded three years ago by former Mayor Stolze, has suspended publication on account of financial difficulties, and lack of support from labor unions.

Thus I am compelled to stop with several publications yet on hand, review of which will have to be deferred until my next installment. In the mean time, cheer up and forward more stuff for criticism.

Addresses before the Twenty-Fourth Annual Convention of the National Editorial Association, Seattle, Washington, July 19-25, 1909

ADDRESS BY WILL H. MAYES, PRESIDENT

BEFORE THE NATIONAL EDITORIAL ASSOCIATION, SEATTLE, WASHINGTON, JULY 19TH, 1909.

THE official position I hold may give me the authority to deliver a lengthy statement of my views on various topics, from the Colonization of the Arid Plains of Arizona to The Effect of Alaskan Icebergs Upon the Complexion of Alabama Coons, but it doesn't give me the right to consume your valuable time and delay the proceedings of this Association by needless discussion of uninteresting topics, however much it might please me to hear myself talk. In accepting the trust you gave me a year ago I stated that I accepted it as the servant of this Association and that no labor would be too arduous for me if thereby the interests of the membership could in any way be advanced. I have faithfully endeavored to redeem that pledge, and whatever of failure you may have observed is chargeable either to lack of opportunity or ability.

Despite the financial crisis through which the country has recently passed, the press has stood as a mighty oak in the face of the storm, successfully withstanding the several tempests and giving by its strength encouragement to the weak and despairing. It has pointed out the strength and the weakness of our financial system and its consequent institutions; has by its exhibition of faith in our common country stimulated a greater faith and a greater love on the part of the people; has created a confidence in our institutions that the most fabulous wealth of the land could never have restored without its aid.

From every section come reports of the increasing strength, influence and dignity of the press. Journalism is no longer regarded anywhere in this country as an unreliable, haphazard undertaking, but as a business or profession commanding the highest order of talent and bringing the fullest rewards in honors and financial returns. The time has passed when a newspaper man uses an apologetic manner or tone, when stating his business, but whether he labors in the hamlet or the largest city, he holds his head erect and feels as kingly as governor, or banker, or college president, however rich they may be in fame, in finances or in brains. Journalism has not been satisfied merely to keep pace with the progress of the country, but it has boldly taken the lead and keeps it No measure can now be advanced that will meet the approval of the people until it has first received the endorsement of the press, or at least of an influential portion of the press, and that measure is foredoomed that receives the united condemnation of the newspapers.

The greatest obstacle that has stood in the way of the influence of journalism has been its unswerving allegiance to party and to political leaders whether they were right or wrong. The idea once prevailed that the only excuse for the existence of a newspaper was to serve some political party or politician, and that however corrupt either might become, it was the duty of the paper to stand loyally in defense of those with whom it was aligned. With the party lash constantly cracking over their heads most papers hesitated to do anything to incur the ill will of the leaders who used newspaper party loyalty merely as an asset to their greed or their ambition. Thankfully that day has about passed. Most newspapers, while still loyal to their parties, are only loyal so far as those parties and those leaders are right. They do not hesitate to criticise when criticism is necessary, or to condemn when condemnation is just.

The result is that the influence of the press has increased with its increasing independence, and that the people are coming more and more to regard the press as a safeguard against political and civic wrongdoing.

The printing trade has become one of the great industries of the country, a powerful and important commercial institution that invites capital purely as a business enterprise. There are very few places in this country where the newspaper business is unprofitable, where it does not yield a fair remuneration for the capital and the effort put into it, and in the isolated cases where it does not pay the cause is usually to be found in bad judgment and poor business methods.

A marked improvement is being made in the homes in which newspapers are being printed. The city papers naturally took the lead in building for their plants as good houses, as well located, as other enterprises of their cities, but the country press is keeping up the pace in improvement set by the larger papers. Most progressive papers have learned the value of a choice location on a good street and in a building that compares favorably with the best in their towns. This has invariably added a certain business dignity to journalism that could not be obtained by ever so able a paper conducted in a hovel.

The matters of prohibiting the exchange of advertising for railroad transportation, the tariff on wood pulp and white print paper, the postal regulations, and other things pertaining directly to our business, are all of record, and fresh

WILL H. MAYES, PRESIDENT.
Bulletin, Brownwood, Texas.

enough to be remembered by each of you without the necessity of being specifically recalled in this address. They are mentioned for the purpose of suggesting that the remedy for the correction of any evils in national or state legislation affecting our business lies more directly with the affiliating associations than with this national organization, for the reason that the delegations forming this association change so often and our sessions are of such short duration that it is practically impossible to work out any business or legislative

reforms, while the affiliating associations maintain largely the same membership from year to year, and can formulate and work to plans without having to make them anew each year, and especially through committeemen who can keep in close touch with each other can much good be accomplished. I would urge direct, systematic and thorough work on the part of the membership of each association and that persistent effort be especially made by each paper with its representatives in Congress and in the state legislatures for such remedial legislation and regulations as may remove unnecessary burdens and exactions from our business.

I would suggest that under present conditions the Association should endeavor to increase rather than restrict its membership and annual attendance, and that the constitution be so changed as to admit to affiliation all state and district associations that have been organized one year and that have exceeding fifty members.

The addresses and papers to be presented during this meeting will cover most of the things that have contributed and will further contribute to our general and individual success, and I bespeak for each of them your careful and studious consideration.

In arranging the program I have not called to our aid any celebrities or public entertainers, but have invited plain, practical newspaper people to deliver us plain, practical talks on subjects of peculiar interest to the craft, with a view to benefitting every one here who is engaged in newspaper work, and it is expected that, within the limitations of our time, you shall discuss the points brought out in all papers and addresses.

An earnest effort was made to place on the program editors and publishers from every section of the country, and as far as possible from every state, and that this has not been done has been due to the fact that executive committeemen, to whom I have appealed for assistance, either could not or would not suggest members of their associations who might be invited to take places on the program.

I wish to thank all those who have contributed in any way to the success of the year's work soon to be brought to a close, and who have aided in making this meeting one of the best in the history of the association. Your officers have worked faithfully, and I feel that I would be remiss in the performance of a pleasant duty should I not especially commend the faithful, conscientious, and laborious work of your excellent corresponding secretary, W. F. Parrot, with whom it has been a pleasure to co-operate, and who has never hesitated to undertake anything that he thought might possibly be to your interest.

I ask your further help in making the sessions we may hold here all that they should be, I ask that you be prompt in attendance at all the meetings, that you interest yourself in the proceedings to the same extent that you will in the excellent entertainment to be furnished, and I especially beg that you bear patiently with me as your presiding officer.

Seattle will make good her every promise; there is a feast of good things set before us; we are to have a strenuous week of instruction and entertainment, a week to which I am certain that your memories will ever revert as one of the most helpful and most delightful experiences of a lifetime.

"The Relation of a Country Newspaper to the Metropolitan Daily"

BY LEON WESTMORELAND, DEMOCRAT, GREENWOOD, ARKANSAS

LADIES AND GENTLEMEN of the National Editorial Association:

I am from Arkansas and not ashamed of it. More than that, I am extremely proud of it Many people smile when I meet them and make known my place of abode. There was a time when it made me mad as a hornet when a stranger laughed at me because I was from Arkansas, but I don't do it any more.

I learned a lesson from an old preacher down in my state several years ago.

At one of his meetings some of the young people in the back of the house kept sniggering and talking until the disturbance reached such a point of hilarity that a committee waited on the preacher and told him the misbehavior must be stopped or it would break up the meeting, and that they could not understand why he did not reprimand them, He told the committee he would answer them at the next service and that night when he arose he told of the action of the committee and explained that at one time in his life a boy kept laughing in the audience and he reprimanded him severely and when the service was over a friend told him he had made a great mistake, that that boy was a confirmed idiot. "Since that time," said the preacher, "I have always been afraid to reprimand any one for misbehavior in church."

When I meet a man who laughs because I am from Arkansas, I know it is ignorance in him, when I meet a man who knows of Arkansas I don't have to ask him any questions, he at once takes off his hat.

Arkansas produces everything that is good, the finest of fruits of all varieties. We even raise lemons down there. These great big ones, almost as large as a cocoanut. We raise them to give to people who make fun of Arkansas.

We find marble, granite, zinc, lead, bauxite and the best coal in the country except a mine in Pennsylvania and one in West Virginia, my county alone could lease out its coal fields and take the royalty and buy an ordinary state.

Many of you have your corn huskings, goober grabblings, log rollings, etc., the other day down in Pike County the people had a diamond picking. That is the way people are entertained in Arkansas.

But I did not come here to talk of the greatest state in the Union, the central gem, and hub around which all of you turn, but to address one of the greatest organizations ever organized under the succoring hand of Columbia, the National Editorial Association.

We may be smaller in number, and some of us in size, but we speak to millions, and this mighty army of thoughtful observers look to us for the proper dissemination of the news, and the honest discussion of potent issues.

I am to talk of the "Relation of a Country Newspaper to the Metropolitan Daily," and being the editor of a country newspaper, before I get through I want everyone of you to believe that the country newspaper is father to them all.

I do not care to make any strenuous fight on the metropolitan dailies, but I do want to show to the world the importance of the country newspaper and its unlimited power over the destiny of a nation.

A few days ago I wrote to Hon. Wm. J. Bryan, the greatest orator in the world, for his opinion of the country newspaper as compared with the average metropolitan daily and replying he said:

"I am glad to commend the work of the country newspaper. At this time when the great dailies are becoming more and more business enterprises rather than exponents of opinion, and especially when a number of them have become the property of various predatory interests, the country newspaper increases in importance. It can be owned by the editor who edits it, and, therefore, has behind it a conscience and a character that can be identified. In the second place it is close to the people and can give voice to the sentiments of its readers. We have to rely more and more upon the country papers for the educational work that is necessary to a correct understanding of public question.

The country newspaper can obtain its news from the metropolitan daily, but it must do its own digesting and interpreting. There is a lot of difference between a man that writes what he is *told* to write and the man who writes what he *believes*, and writes because he believes he has a message to deliver to his readers."

Very truly,
W. J. Bryan.

In answer to a letter to Col. Henry Watterson, probably the best known editor in the world, asking him for an incident in his life connected with a country newspaper by which he was inspired, he said:

"When I was sixteen years old my father bought me a newspaper outfit and I began the publication of a weekly called *The New Era*, at McMinnville, Tenn. Excepting the period of my military service during the war, I have been in newspaper harness from that day to this. *The New Era* is still in prosperous existence.

Sincerely,
Henry Watterson.

I also wrote to two representatives of the other side of the political house, but they were too busy laying "Aldrich" eggs and making "Cannonade" to answer my letter.

A few months ago a copy of my paper, the Greenwood *Democrat,* fell into the hands of the editor of the New York *Sun* and that gentleman after a pernicious perusal of its constituent parts from the motto to the most insignificant want ad, proceeded to try to puncture it with ridicule and inuendo, ironically referring to it as a medium where "brief bright glimpses of that Arkansas world met his rejoicing eyes."

The editor of the *Sun,* who is supposed to reflect the sentiment of Wall Street, and whose advertising columns are mostly patronized by brokers, or gamblers in stocks and produce, made fun of the personal mentions in my paper and left the impression that they were ridiculous.

After a month's writing and registering I received a copy of the *Sun* and what "brief bright glimpses" do you suppose reached my rejoicing eyes from that Wall Street world?

The first article on the first page to attract my attention was six inches of nonpareil concerning a cat that had obstinately perched himself on the limb of a tree in Greenwich village.

An inch was given to a rat club and two inches to a man who was in the city last fall before the election with his walking glasses on.

The advertisements with few exceptions were set in type that was old eight years ago, and their typographical appearance would have been a discredit to any country paper in the most remote districts of the country.

My answer to that editorial was published in many papers throughout the country and many have done me the honor to say that it has been of service to both the country papers and dailies.

Not long ago a few seed ticks in the jungles of Africa in search of material sustenance, silently with Indian like tread passed up the shoe and over the socklets, on up the lower extremities of the man of the "big stick" fame, and there without fear or trembling, completely surprised the enemy and proceeded to stick their probosises into his epidermis, turned on the stock cock of the inspirator and began to fill up according to the customary mechanical operations of all industrious parasites.

At once a message chronicling this great event was flashed under the seas and these big dailies that make fun of the country papers for mentioning minor items of personal interest, came out in big headlines with the startling information that "Ticks Bite Roosevelt."

Local mentions in country papers are of much more importance than such as this, in fact it is here that they do much of their greatest work.

They plant ambitions and inspirations in the minds of men and women that the metropolitan dailies can never touch.

They start the fires of inspiration where the dailies, if left alone, would fall like a mist or shadow.

Like a mighty alarm clock they awake the slumbering souls reveling in air castles and day dreams into real efforts of indefatigable persistency to push onward to power and progress.

The greatest inspiration in the world comes from the realization of the fact that others are watching your progress.

I can take a ragged and dirty man who has common intelligence and by personal mention have him coming to town in a short time with white shirt and collar and awakened energy.

One of the proudest days of my life was when, after I had been to the county seat and returned, picked up the county paper and read, "Leon Westmoreland, one of Magazine's hustling young men, was in town Saturday."

I read that over a dozen times and it looked better every time.

I wanted to be an editor at once and it is more than probable that but for that three line local I would not be here talking to you.

The country papers must make men great before the metropolitan paper discovers them.

The country papers make men, the metropolitan dailies make the fact known to the world.

The country newspaper is the architect and builder, the metropolitan daily the decorator.

The country paper is the great engines that turn the winding screws that move the great ships across the broad expanse of the oceans, the metropolitan daily the sentinels that stand on shore and announce their coming and either welcome or deplore their landing owing to the contemplated influence.

Like the hand that rocks the cradle, the country newspaper lays the foundations for the ambitions that ultimately move the world.

The influence eminating from the discussions at those great gatherings of the Forum in Rome afterwards drove Pompey to his death, set Cleopatra upon the Egyptian throne, crushed the despotic rule of the Patricians and put the Plebians in possession of the Roman Empire.

The kind and resolute words of the teachers of Phillip's son inculcated an inspiration that afterwards untied the famous knot, swept over three continents with an electrified arm until the known world bowed at his feet, while he sighed that there were not other worlds to conquer.

It is such little items as today appear in the country papers that start the flames of ambition that are later fanned by the big daily.

It is too often the case that to gain favor with the news department of a metropolitan daily, one must commit some terrible crime, the more diabolical the more favor, and only the known great are admitted to its sacred columns.

From an editorial standpoint it is as Mr. Bryan says, "a great deal of difference in a man writing what he is told to write and what he believes," and it is generally true that the editorials of the country newspapers, whether daily or weekly, are heart throbs of sincere thought, while in the metropolitan daily it is too often commercial machinations for the interests of some particular person or thing.

Leon Westmoreland,
Democrat, Greenwood, Ark.

There are too many editors writing what they are told to write.

They are in slavery doing their master's will.

Uncle Tom's Cabin is no bugbear to them.

Ladies and gentlemen, is it right, is it elevating to the profession for editors to sell their honest opinions at auction?

Has any editor in mental slavery ever gained more than the contents of his Saturday night envelope?

What has become of the once famous editor of Atlanta whose name was once a household word in every nook and corner of this great republic? Where, oh where is he? Swallowed up in a $15,000 annuity, and I tell you the truth I had forgotten his name and not having an almanac concerning the result of the last election, cannot recall it. Why is this? Not because he has not the brain or the opinions, or that

he is not with a pushing man, but he is writing what he is told to write.

It is lamentable, but true, today, that you can count the editors of our country on the fingers of one hand that have gained national prominence, and then have some to spare, and everyone of them so recorded have been sending forth honest opinions from the deepest recesses of their own hearts.

Rehashing the words of one of America's great patriots, I would exclaim, is a livelihood so dear or money so sweet that our honest convictions are to be sold at a price of silver or gold, forbid it Almighty God, I don't know what others do, but for me, give me liberty of thought or give me the poorhouse.

It is my great ambition to some day become an editor of a great daily, but when my ambition is realized only honest convictions shall go into its editoral columns, and a special easy chair shall be provided in the most comfortable part of the sanctum for the country editors when they come to see me, and they shall get preferred positions, reading matter along both sides and top of column.

The power of the press is a potent factor in any government where the freedom of the press is tolerated and it should be the greatest ambition of this Association to encourage the freedom of the press, which is often throttled here in this country as well as in Russia, not from the edict of the throne, but from financial transactions inaugurated behind closed doors and in committee rooms by interests inimical to the public welfare.

Too often the country press is controlled by the subsidized press. They too often let them set the pace.

Like a man going through the woods of Missouri one day who saw a gang of hogs rushing to and fro. He watched them for a time, and passing on saw a farmer leaning on the fence, approached him and asked what was the matter with the swine. The old gentleman replied in a cracked voice that he had formerly called his hogs as other people do, but during a tussle with the grip the fall before lost his voice, but trained his hogs to come all right by knocking on the fence. "That worked all right," said the farmer, "all winter, but this spring when the pecker woods got busy they are running my fool hogs to death."

That is the way with many of the country papers when we hear a woodpecker knock over here we rush this way and when he knocks over there we are there, when the redheaded bird is not knocking for us or principle, but for the bug under the chip.

I am certainly glad to have met you all here and wish I could have met more. There would have been more perhaps had there never been a Hepburn. In fact, I suppose the most of us would like to help burn Hepburn.

Alas, poor Hepburn, we all knew him and remember him.

I have remembered him $62.95 worth on this trip.

In justice to the editors of Indiana we should also not forget that they have remembered him.

I believe he resigned his seat in Congress last spring, did he not? Took exceptions at the action of some of his constituents and quit. Most of them voted for some other fellow and he gave up his job.

Poor fellow, we ought to pass a resolution of condolence.

Probably some of you Hoosiers could tell us something of his downfall.

After all, I suppose most of us can live on without a sheriff sale.

Speaking of that reminds me of that great poem written by Shakespeare, Byron, Burns or some other great poet, who said:

"There was a man in our town,
And he was wondrous wise,
He swore by all the gods that be,
He ne'er would advertise.

At last one day he advertised
And thereby hangs a tale
The ad was set in nonpareil,
And headed 'Sheriff's Sale.'"

From my reasoning of the present situation of newspapers, I do not want you to think me a pessimist.

Far, far, very far from it.

I believe the world is growing better every year and if the same proportion of progress is made within the next 2,000 years as has been made in the past twenty centuries, we will have an enviable heaven on earth.

The newspaper profession is getting better all the time, and never in the history of our government has the illegitimate Metropolitan daily and editorials written for pelf had less effect, and the honest conscientious expressions of heart throbs been more influential.

The subsidised press is well located, always easily found. Just twist the caudle appendage of the subsidized press and it will bleat every time.

Politics are being eliminated and the sheep separated from the goats. There will be more old Billies roaming over the mountains of former glory in a few years than was ever driven from a political trough.

The great power of conservatism is getting in the saddle and I hope the day not distant when the two contending forces of political extremities, Plutocracy on the one side and Socialistic inclinations on the other; in which editors are bought on the one hand and the people are worked on the other, will bow to the will of the great body of the American citizens that believe in justice to all, freedom of the press and absolute sincerity of honest expressions.

Profitable Recreation

BY WILL G. STEEL, STEEL POINTS, PORTLAND OREGON

WHY I should have been selected to address this body of thinkers and doers, on the subject of "Profitable Recreation," and so many passed by, who might have done infinitely better, is one of the secrets of Providence that no fellow can find out. However, such is the case, and you will have to take the consequences.

My life has been one constant round of hungering and thirsting for the things that are in the mountains, and sometimes hungering and thirsting on general principles, for, the dreamer has never been known to accumulate cash at the expense of sentiment, but, manhood is made up of sentiment without any cash in it, and my dividends have been paid in the former. However, I have no regrets to offer on that score.

Several years since I was in the mountains of Southern Oregon with one of the wealthiest men of the world, who complimented me with the statement that I was the only man he ever envied, for the reason that I loved the mountains and had spent my life among them. He would gladly give a million dollars for a season of the perfect freedom I enjoyed, but, to this I responded: "If you could place all the money you own and can control in a little parcel, and I could place all the experiences of my life in the mountains in another, and you would say to me, "Steel, let us trade," I would reply, "You keep your little parcel and I will keep mine." Such is the contentment of the man whose life has not been too busy to shut out the sunshine of recreation. Woe to the man whose life is too busy to think of other things than gold.

Unfortunately the general run of otherwise intelligent beings feel that it is impossible for them to enjoy the pleasures of an annual outing. Better things might be expected from editors, however, whose thinking apparatus is supposed to be in active eruption at all times. Still, even editors sometimes make mistakes, and this is one of them. They remind me of the fellow who preferred muck-raking to the crown constantly suspended over his head. All they need is to look up.

Let me tell you a story of two boys who were born on a farm, and at an early age drifted to town, where they each got a job on a newspaper.

Tom was studious and anxious to excel, so he worked faithfully and conscientiously, never neglecting business for pleasure, the result being that he advanced rapidly, and when still a young man, got an interest in the paper. Gradually he secured control, until at last he was sole proprietor, and was considered a great catch for the young ladies, one of whom he married. His family increased, but, bye and bye the

business of the paper seemed to have reached its limit. Thrifty habits grew upon him, until he denied himself rest or recreation. The enthusiasm of early life gradually gave way to a steady grind and his health began to fail. Do what he would, his work became harder and harder. His faithful wife took a hand and helped as only a woman can, but she saw her husband's tottering steps, and knew the end was not far off. At last she had all the work to see to and a prostrate husband to care for, who soon gave up life's struggle for the peace of eternity.

Charlie was of a different temperament. He worked just as hard as Tom, but, every Saturday took a half holiday and went fishing. Monday morning the decks were cleared and he was ready for any sort of an engagement. Bye and bye the proprietor went away for a few days and somehow a story of Charlie's fishing exploits got into the paper. It created comment, and when the boss returned he heard of it. His readers liked it and asked for more. It was forthcoming and Charlie became known as an expert with rod and fly. His articles were copied in other papers and commented upon. He went again and stayed a little longer. He went to camp-meeting and sent in an elegant article. He joined a party and went to the mountains, just for fun, and his report of it was a gem. He got an interest in the paper and wrote more articles about his recreations. In fact, life to him was fast becoming one continuous recreation and the circulation steadily increased. He heard that Tom was in poor health and went to see him. "Tom," he said, "all you need is to get out and rough it for a few weeks." But Tom could not see his way clear to do so. He was compelled to stay in the office and run the business.

A little later Charlie was invited to act as pall-bearer at Tom's funeral. The boss was getting old and Charlie bought him out. He had a large family and taught them to love all out doors, so they were well and hearty, and enjoyed every minute of life. If health is wealth, then Charlie's lot was one of health, wealth and happiness, and what more can a man possess?

It is a mistake to suppose that recreation means idleness. Far from it. It simply means to re-create. If you have been working like a slave in the office, try seeking a little new business in the next county. Take a Day off and see what it looks like. It is just possible that it may have a few redeeming qualities. In fact, there is a possibility that it may even compare favorably with your own. Prepare yourself for such a revelation, and if it is so good as all that, say so in your paper and say it hard. It will wake up your neighbors, anyhow. Cultivate the acquaintance of the other county, continue to say nice things about it, and you will be surprised to learn that there are some pretty good fellows over there after all, and they will reciprocate by patronizing you. Persist in this policy by trying the experiment on a second county, and you may even find that there are two that seem to exist in the same class with your own, but don't forget the other county in the meantime. Thus extend your influence step by step, and some day you will wake up to find that you are not running a county paper at all, but, a broad gauge newspaper of recognized standing and influence, and men will come to you to consult as to the affairs of state, or on matters pertaining to the public welfare.

It has been my good fortune to spend thirty-four consecutive summers in the mountains of the Pacific Northwest, and a portion of that time I did not have enough money to walk, but, I had the disposition to go, so, when other ways failed I got up a syndicate of newspapers and earned more than my expenses by going and reporting for the papers. If this can be done successfully, the proprietor of a newspaper can certainly spare the time to go and report matters for his own columns. If one has not been in the habit of doing so, I would not advise taking an expensive journey and expect to make it pay dividends by increased circulation, but why not take a few days off and visit some near-by point of interest until your readers are educated up to the point of expecting such articles, and as such a circulation is built up you can safely and profitably increase the extent of your journeys and the consequent increase of expense.

It is not a serious problem to gather sufficient news for the ordinary country paper, and when you have obtained practically all of such local information, you have builded to your limit, as such things go, but, is there any reason why you should not look about and find something interesting to residents of some other county? If successful, and you keep it up, it is a foregone conclusion that they will subscribe and patronize you in other ways. True, your expenses have increased, but, your increased circulation will justify it. There is no permanent prosperity without a vastly increased expense account.

If your mind does not turn to fishing and hunting, or to scientific pursuits of knowledge, turn your talents to profitable recreation in the way of writing up the marvelous resources of not only your own county, but, some other section of the state. If your efforts are limited to one section you must expect to grow narrow, and for such pains you will receive no thanks from the section so faithfully served. Broaden yourself and your readers by describing the wonderful crop of alfalfa raised in some other county, where it is said they raise the best beets on earth. Get out of the ordinary. Get something new. Keep getting something new. Drop your hammer and join the boomers.

This is a beautiful world, but millions of people go through it without finding it out. If you are looking for trouble you are sure to find it. It is a peculiar fact that you will find exactly what you are looking for, hence it becomes important that you should look for the good things and not the bad. Your mind is a storehouse and if it is full of delightful recollections, your life must be a happy one. The easiest way to fill it with such recollections is to help others. Teach them to think of the good things and not the bad. Fill their

Will G. Steel,
Steel Points, Portland, Ore.

minds with the beauties of Nature, and they will bless you.

Because I love the mountains I have tried to teach others to love them, and for that purpose conceived the idea of organizing a club of hardy mountaineers on the summit of Mount Hood, which plan was put into execution just fifteen years ago, at which time the Mazamas were organized. Never before did so many human beings stand on the summit of such a mountain in one day.

On the evening before organization over 300 persons camped on the rugged moraines at extreme timber line, fully a mile above the line of snow, 196 of whom reached the summit next day.

As the day wore on and the sun descended, word was passed from camp to camp to watch the western horizon. Far off in the distance, by one sweep of the eye, the famous Willamette Valley could be seen through its entirety. Beyond it the Coast range of mountains shut the ocean from view, and almost from our very feet the great Columbia flowed on to the sea. The Cascade range extended to the south in a line of snow peaks and cross ranges, while here and there bits of cloud gathered over the valleys below. Mount Jefferson, fifty miles distant, seemed like a sentinel.

while forty miles beyond the Three Sisters stood in chaste beauty. One hundred and fifty miles down the range Diamond Peak rears its snowy crest aloft, while the rugged summit of Mount Shasta looms up 300 miles distant. Fifty miles to the east the plains of eastern Oregon lay like a scroll, tessalated with fields of ripening grain.

But the sun is descending, and as his rays strike the waters of the Pacific at the right angle they are reflected to us on the mountain, and a yellow line along the horizon shows clearly the ocean, over a hundred miles distant. Everybody is excited as Old Sol descends, for clouds have gathered in the west and Heaven's artistic hand is at work on the canvas. Every moment the scene grows more brilliant. The gilded clouds roll into golden streets and celestial palaces and cities rise up and disappear. Great temples and walls of precious stones linger for a brief season and fade away. The waters of the ocean glimmer like molten gold in their magnificence. Finally, the sun sinks to rest, the ocean disappears, the brilliance of a moment is but a vivid recollection of a glorious scene that shall never fade from memory. Before us stands the grand old mountain, bold and beautiful, while a sea of snow stretches away to the summit or is lost in the timber below. As the sun goes down a great yellow ball appears on the eastern horizon, and a full moon covers the world with a soft, effulgent light that grows brighter as the night advances. Camp is pitched fully a mile above sea level, beyond all impurities of the atmosphere, and is surrounded with pure snow, which reflects and increases the already bright light of the moon. So light is the night that many sit and marvel that such things can be.

A weird scene presents itself as we look up and down the moraines and see scores of camp-fires, from around which happy voices are heard, mingled with various musical instruments. Shouts and laughter greet the ear, and dull care is banished from our midst. Some of the brightest minds of the country are gathered here, with mechanics and farmers' boys, presidents of colleges, students and beautiful women. Original songs float upon the breeze, and trained voices add melody to the general rejoicing. Newspapers sent representatives, and delegates are here from schools and religious organizations. The musicians of Portland sent a bugler, who at 9 o'clock climbed high up the mountain and played "America." Quick as thought camps here and there joined with words, and it seemed that every voice on the mountain-side was awaking the echoes in one grand refrain. Then the bugler played "Nearer My God to Thee." The notes came like whisperings from Heaven; every voice was hushed, every sound ceased, and all was charmed into absolute silence. Never did music sound half so sweet, never was poor humanity so peacefully at rest. "Taps" followed in quick succession, and camp was stilled for the night.

Promptly at 2 o'clock the "Reveille" was sounded, and all was activity. Far down below us the foothills and mountain valleys were filled with clouds, through which vivid flashes of lightning could be seen, and from which came loud peals of thunder. The air was chilly and the wind strong, but the order was given to advance. After a hasty breakfast more than 300 persons started over the snow. At 7 o'clock a snow storm overtook us, and an hour later a hail storm pelted us until it was tired. At sunrise a shadow of the mountain was shown, clear and sharp, in the atmosphere to the west. In a few minutes a second, smaller and darker shadow-mountain appeared behind the first, then both gradually faded from view. When the hail storm ceased, the sky above became clear, but the clouds below remained until nearly noon, when they, too, disappeared, leaving an unclouded atmosphere and a view unsurpassed and seldom witnessed by poor humanity. Two great states lay at our feet, and a dozen grand old snow peaks were before us. For a hundred miles in all directions the view was unobscured, and will never be described, for human language is powerless before such stupendous grandeur.

This is the kind of stuff you can get in the mountains of the Pacific Northwest, and similar matter is obtainable anywhere on the Atlantic seaboard if you only have a mind to look for it. Go out into the wilderness and seek health, and while about it write up your experience and use it in your columns. It will broaden your mind, fill your memory with ever-present visions of happiness gone before, and materially increase your circulation if you keep at it. Why, within sight of this great city there is enough material to keep the N. E. A. busy for a hundred years, and yet I have seen men whose lives have been spent there without discovering the beauty or grandeur of their surroundings. Look for things that are beautiful and grand and you will find them. Do not stop there, however, but teach others to look for them, and you will realize as never before that gold is not of the first consideration in this world, and the very effort to teach others to look for the beautiful things, if properly used, will bring a fair result in sheckles. But the best of all will be the added strength of body and mind, together with a never ending store of happy recollections.

Starting a Daily Paper

BY MISS GOLDIE PERRY, SUN SENTINEL, WINCHESTER, KY.

ONCE the subject, "Starting a Daily Paper" has been assigned to me, it is a fair presumption that the topic should be confined within the limits of my experience; therefore, I take the privilege of amending by adding, "in a Country Town." Then, too, "Launching a Daily" would have been a better expression, as "launching" implies a possible swamping.

The small city daily "evolutes"—that may not be the word, but it certainly is a fact—from a local weekly. The principal advantage of the change is that the "goods box wag" can't say that it is "very local and extremely weakly."

The average subscriber not only asks to be given his daily bread, but also his daily paper; like salvation, without money and without price. He or she (if there be any she's who subscribe) have been reared on a paper at one dollar in produce;—when they produced, which was at infrequent and irregular intervals.

The editor, immediately upon the change from weekly to daily, is expected to look, act and write in a more dignified manner, while self-conscious that he is delivering in installments, six days in the week, that which he formerly gave in one issue. You will figure that one-sixth of one idea would make mighty thin reading.

As a rule, the transposition from weekly to daily does not cause the editor to eradicate all of his previous habits, and he still has trouble with his "midst." People move in "our midst" and out of "our midst;" things occur in "our midst," and sometimes, for lack of other news items, he will publish: "There is nothing doing in 'our midst.'"

In salutatory, he claims that this paper will not be like the subsidized city dailies—and in many respects, it is not.

It is a good idea, when you have finished your salutatory, to write your valedictory, as paper, pens and ink will probably be more obtainable at that time than later.

There are greater difficulties to be overcome, and more difficulties to be "fit out" or compromised, by the editor of a country daily than a city daily. In a city, the work is subdivided. In a country town, the editor is manager, solicitor, collector, headliner, proofreader and, in Kentucky, scrapper.

The editor of a country daily is more likely to recall the passage, "Sufficient unto the day is the evil thereof" than any or all others, and is inclined to paraphrase and say: "Sufficient for several days are the annoyance of one."

The first time he realizes that the paper is to be issued between two hours, instead of two days, he is "sorry he jined." He is informed of a death, and has to write an obituary, fifteen minutes before the paper is to be issued. Writing obituaries had heretofore been one of his long suits, but was the joint effort of him and his parson, who spent whole Sunday afternoons on this line of work. And in one respect was a gem, as it was a mighty "sorry" article. It invariably began: "An all-wise Providence has seen fit to call from 'our midst'"—whether the man was hung by a mob or shot himself.

But to return to the subject: "Launching a Daily Paper in a Country Town." DON'T. But, in case in a moment

of weakness you permit yourself to be over-persuaded by over-zealous townspeople, who are willing to assume the benefits without incurring any of the risk, you have only yourself to blame.

Miss Goldie Perry.
Sun Sentinel, Winchester, Ky.

There are ought to be a logical sequence to every subject, but a daily paper is not subject to logical sequences. It is the unexpected thing, that you did not expect to happen, that always happens to happen, and it happens to happen to you, instead of happening to the other fellow.

Running a daily in a country town is an illustration of the saying: "Faith without works will not work, but faithful work will always work."

You will have no lack of encouragement at the start. Nearly every citizen will tell you that a daily is a "long felt want." And unless you are careful, it will not be long until you feel want yourself.

You must claim and guarantee a subscription list, before there's a name on your books, that will mislead patent medicine manufacturers and advance agents of circuses. You must publish pictures of individuals that have been cured of something, after the doctors had collected all they were able to pay, and an imaginary lion, in the menagerie line, with a little skillful lyin' by the manager.

Most of the business is done on credit, and the bookkeeper is constantly humming—"A charge to keep I have."

Subscribers are secured by persuasion, but are lost in various ways. Our facetious collector entered the office of a delinquent, who asked if he wished to see him individually. "No," replied the long-suffering newspaper man, "I wish to see you 'collectively.'" So one account was collected, and one subscriber lost.

A country daily, with its limited patronage, must be independent in politics, which, if it means anything, means a lack of independence, because the average individual understands independent to mean neutral. Part of a small community never supported a daily. And the whole of it, seldom.

It is imperative that an independent paper take the stand that one party is as bad as another, if not worse. If it prints a true account of the wrong-doings of one party, it must, in the same issue, publish an act equally as disreputable committed, or said to have been committed, by the other party, or it will be regarded as partisan. Consequently, the affairs of both the great political parties are handled with an impartial imperfection.

Having already exhausted the time allotted to me, I must now conclude—and, for the further reason, that I have been advised by a friend that the way to make a finished speech was to close when I had finished.

Handling the Circulation of a Weekly Paper

BY ERWIN C. FUNK, DEMOCRAT, ROGERS, ARK.

THE essentials in any system for handling the circulation of a weekly paper are efficiency and simplicity. Nine-tenths of the weeklies of the land are one-man papers, where the duties of editor and business manager are combined with those of reporter, solicitor and collector. The ideal system, therefore, is one that invites the fewest mistakes, the smallest amount of book-keeping and brings in the most dollars. My own personal experiences along these lines have demonstrated that my own system is not the ideal one, but I can only give you the results of these same experiences with the hope that they may prove of interest, if not of value.

If you have assistants in your office work, it is more than likely that they change frequently, and every system for keeping track of the subscription list should be so simple that any office employee can easily secure the required information at a moment's notice. Many inquiries come by 'phone and the books should be easily accessible. I am intimately acquainted with an editor so methodical that he uses a complicated card index system and no one else is allowed to touch them. The consequence is that many a subscriber, who calls during his absence, has a justifiable grievance at being compelled to make a second call—and perhaps he does not make it. Every regular employee of the Democrat office is thoroughly acquainted with our system of accounts, and is authorized to accept collections and issue receipts. They fill in a desk slip with the name, date and amount paid, and these are checked carefully over with the subscription list and the daily cash account. There has never been a regular employee in the Democrat office that I could not trust—I wouldn't keep one, however efficient, if I thought him dishonest. Of course every community has people who refuse to deal with anyone but the "boss" and such as these will continue to make the necessary trips to find him at home. Our policy has always been to encourage our patrons to trust the employes with orders and accounts, for it promotes an interest in the business that cannot be secured in any other way. Numerous subscriptions are secured through them and they are an important factor in the business aside from their office duties.

Our local subscription list, our county list and our out-of-the-country or single "wraps" are kept in as many separate books. All are carefully indexed and it is but the work of a moment to find any name, if we know to which class it berecord for a dozen years the date on which the account is paid and the date to which it is paid. Our cash book also serves as a farther check, for knowing the date on which a payment is made, it is easy to turn to the cash account and find whether credit was given for the correct amount.

Some papers date their subscription receipts according to the number and volume of the issue, but it has been tried in our town and was a decided nuisance. It was much easier to make a mistake than in writing the month and day, and the subscriber looking up his account from a receipt, or the numbers after his name on the wrapper, hates to get a paper and hunt the date line. Make it just as easy for him as you can.

Corrections or additions to be made in the mailing galley lists should be noted on special blanks, which give the name, whether a new subscriber or a renewal, present address and date of subscription, and the new address and the date to which it is to be extended. After corrections are made, the slips should be returned to the desk, and carefully verified from the galley proofs. Too much emphasis cannot be laid upon painstaking and systematic care of this mailing list, for that list is the backbone of your business. Few things are more irritating to your subscribers than missing the accustomed visit which is—or should be—one of the important events of the week. If your readers fail to complain every time they miss an issue, you can take it right to heart that they are not going to care whether they miss

renewal day, and that it's up to you to give them something they will miss. There is no use spending time and money in the editorial and mechanical departments if your mailing department is constantly nullifying their efforts by misspelling names and giving wrong initials, incorrect street addresses, careless wrapping, or a slovenly use of whatever addressing system you may use. A friend in the rural delivery tells me that a paper in our county has lost a dozen subscribers on his route during the last year because of a failure to get their papers regularly. The trouble in this instance he said was the poor paste used in the mailer, which allowed the names to shell off after the papers had been handled once or twice. And the chances are that the editor will never know just what it was that struck his subscription list, especially the rural routes, because he makes it a point never to enter the office after the paper goes to press. He says the employes can handle it after that point and he is due a vacation for the remainder of the day. One editor with years of experience asserts that it is a good policy to address by hand all papers where the circulation does not exceed 1500. His argument is that it makes the reader feel in closer touch with the paper.

See that your paper is out on time. That sounds unimportant to some country editors, and you probably know of many to whom it is a matter of seeming indifference. But they are not the successful ones. With the latter, missing the day of issue would be a national calamity, and varying more than an hour or two, suffice for a call-down for the whole office force. Make your paper so interesting that the entire community religiously sets aside one night each week for its perusal—and then see that they get it that night. Once when local conditions made necessary a change in the day of publication, I was surprised to see how long it took our patrons to become accustomed to the new order of things and for six months they kept enquiring at the office and of the carriers the reason for the day's delay.

I regret that I cannot come to you with experience in the strictly cash in advance system for it seems to me that it is the only satisfactory method for handling a subscription list, city or country, weekly or daily. The *Democrat* has decided to adopt it this fall and it is growing in favor all over the state. A neighboring brother, who only a year or two ago delivered an address at the state meeting in which he strongly endorsed the credit plan, and told of the impossibility of placing his business on a cash basis because of local conditions, changed to the cash in advance system last spring. Out of a total circulation of 1700 he marked off nearly five hundred names, but they have been coming in every day, paying up and going back on the list. Taking into consideration the cash collection at the time and since, he is more than pleased.

We adopted the cash plan several years ago for all of our out-of-the-county subscribers. We had built up a strong list but found that the trouble and time of continually dunning delinquents was too great a burden for the all-ready-too-small profits. It stopped a considerable leak in the subscription department and has proved a saving in postage. And now when we get one of those colored cards from some distant postmaster saying: "Gone, present address unkown," there is no worry for fear we will find that there is the government limit of one dollar—and as much more as you could be worked for—in arrears on the account.

At home it has been easier to look after the collections, and yet there are very few editors doing business on a credit basis that do not lose a considerable percent of their accounts. Last year the *Democrat* collected nearly 87 percent of its subscription list, but it required so much time and systematic dunning that it would have been better to have accepted cash for the list at a discount of 25 percent on the regular subscription price, anl then devoted the time and energy to the securing of new business. Or still better, we could on the same basis, have afforded to lose tweny-five percent of our subscription list and taken cash for the remainder. The day is coming when every paper in the country will be on a cash basis, and the sooner it comes the better it will be for the newspaper fraternity.

I know a paper of 2,500 circulation in my State whose subscription collections for years have not amounted to more than 40 cents on the dollar. The deficiency has been carried by the job and and advertising departments, the editor holding that he gets enough from his increased advertising rates to pay for the subscription loss. He could go on a cash basis with a loss of not more than five or six hundred names and get the same rates for his advertising. Another paper in our district has added a large list, temporarily at least, by cutting the subscription price from $1.00 to 25 cents a year, this offer holding good for three months. It cheapens the paper with both the reader and the legitimate advertiser who looks for quality as well as quantity. The subscription department should be made to pay its own legitimate share of all expenses, and no paper can be built upon a sound financial basis that does not keep that fact constantly in view.

During the thirteen years that I have been with the *Democrat,* it has never had a voting contest of any kind, and has never offered a premium. Neither does it place a regular solicitor in the field, although it is a fine thing if the editor can make short trips himself for this purpose. Most of its new subscribers have been added unsolicited, and were secured through the recommendations of its readers, from country correspondents, and very successfully through the medium of sample copies sent to every new family that moves

Erwin C. Funk,
Democrat, Rogers, Ark.

into our territory. These names are secured from our own news columns, from real estate agents, postoffice employes, and country correspondents. Send the newcomers the issues in which their arrival is noted, or non-subscribers any issue that happens to have a personal mention. I do not believe any plan beats this when time, trouble and the results are taken into consideration. It is also well to cultivate the goodwill of the rural mail carriers in your neighborhood for they can help you in many ways. Rogers is located in the "Big Red Apple" district and we have specialized in the fruit news to an extent that has given more than a local reputation.

Not having qualified on the voting and premium plans, I have little or no advice to offer. They have been tried by my opposition in Rogers a number of times and by the papers of the county, but the promoters were so divided in opinion as to the results of the schemes that it afforded little data as to their real value. I am personally strongly opposed to the premium plan for increasing circulation, or aiding in collections; almost as strongly as I am to the plan of clubbing with the city dailies or magazines. The *Democrat* does not exchange with the city dailies on an advertising basis, either. I pay cash for the ones I want and if they read the *Democrat* they pay cash for it.

What is the size of your exchange list? No item runs up faster in a newspaper office than a big exchange list, two-thirds of which are opened only when you want to sell them for old papers. After every editorial meeting each editor finds a big bunch of papers on his table marked "X." It's hard to resist the compliment implied by a brother wanting

to get your valuable paper, but every exchange is worth just as much to you as a regular subscriber, and it's well to go slow.

One of my biggest newspaper "Don'ts" is "Don't dun your subscribers through the columns of your paper." You want the money and you've got to have it, but that is about the worst way in the world to go about it. A specific announcement at regular intervals each year, announcing that you will after a certain day begin sending statements to all who are a year in arrears, in order that you may comply with the postal regulations, is an excellent plan for a paper working on a credit basis and will undoubtedly suffice for many subscribers who need only a gentle reminder to bring them in with the cash. It is only a small per cent of your readers who get behind because they deliberately intend to defraud you. With most it is carelessness and the hint is sufficient. Give them the hint. For those a trifle more careless, it requires a direct statement. Some continue to forget. A letter should jar them a little harder and a blank note enclosed is used to good advantage with those who are really hard up. And the third time? Refer them to your attorneys for you don't want them on the list and the cash is worth more than their patronage or good-will.

Never let the impression get out that, "You just can't get your name off so and so's paper. I have told them to stop it half a dozen times, but the blamed thing keeps coming. I won't pay a cent." Make it as easy for a man to quit as it is for him to subscribe and be just as pleasant about it. It's best, in my experience, not to question a man too closely as to his reasons for stopping. It is seldom you get the real truth of the matter, and if the reader was slightly offended, he may say something that will make the breach harder to close in the future. Let them go with the knowledge that you are sorry to lose them, that you hope to have them back at some future time, but that their loss has not left you broken-hearted or on the road to bankruptcy.

Profitable Sidelines for Newspaper People

BY OMAR D. GRAY, EDITOR STURGEON, MISSOURI LEADER

N one of his books to young men, Andrew Carnegie's advice is to put all the eggs in one basket, try to make them hatch, and then see that the chickens grow and multiply.

This is good advice, but how many of us follow it?

A former president of the National Editorial Association and one of the best business men in Missouri, Hon. E. W. Stephens, gave me this advice years ago, and now if he does not look out the voters of Missouri are going to make him our next Governor. And then he will be a Side-liner.

How many in this audience have no side lines—just stick to the newspaper business and let everything else alone?

The editor is offered so many inducements to lend his influence and money to side lines, I do not see how he can escape being led astray.

We are all side liners.

We make money printing a newspaper and then we do not know what to do with the profits.

We get the mining fever and spend of our surplus going down into mother earth. We let some fruit tree man tell us of the money we could make by planting orchards, and we get busy trying to keep the bugs from eating the fruits on our broad acres. We think there is money in farming, so we buy a piece of land near town and pay out all we make in the printing line getting extra experience in this side line of work. We are told by the to-be cashier of a new bank about what a good director we would make and we at once proceed to borrow money to buy bank stock and fool away three or four hours a week looking into the financial affairs of other people's business. We think life insurance companies make too much money while we are policy holders so that we are delighted when a gentlemanly agent comes around and on account of our high standing in the community agrees to let us have a limited number of shares in a new Company just starting. We read so much proof of pedigreed cattle we become satisfied we can make money buying Shorthorns or some other brand; we invest and put some of our cattle in a sale only to find the country overstocked with the kind we want to sell. We hear of a State prospering because it is well advertised and we leave home on an excursion train, buy a section of land, and return home in a happy mood, only to find that land near our town sold during our absence at a profit to the owner of twenty per cent; then we wonder why we did not buy land at home. We get interested in factories, telephone plants, cemetery associations, fair meetings, chautauquas, opera houses, amusement parks, and if we don't watch out will be subscribing for stock in an air ship line to circle the earth.

Does it pay to scatter? Are there any profitable side lines for newspaper people?

It is easy to give advice, and yet it is very hard for us to map out a clear path for ourselves.

I know of newspaper men in small towns who make money in side lines. They have their newspaper work systematized and employ good help. They have time to devote to other enterprises and in many cases the side lines are profitable.

In the larger cities where publishers have from $15,000 to $100,000 invested in newspaper properties the owners have about all they can do to look after the one business.

Few business men know what to do with their money after they get it. On some lines money is made; in others we sink what we put in. Some put all their profits in old line life insurance. Others buy automobiles and burn up their cash.

OMAR D. GRAY,
Leader, Sturgeon, Mo.

The publisher in the small town with some capital has opportunities to pick up good money in side lines. I mention insurance and real estate.

My friend Junkin, of Kansas, takes a little stock in anything offered in his home town of Sterling and I understand that these feeders make him money for his printing business and the side lines in the main pay a very good dividend.

In my state Editor Bob White runs an asylum at Fulton, a newspaper at Mexico, is interested in numerous banks, cuts a good deal of ice in politics, helps run a church, joins all kinds of lodges and manages to save a little money every day in the year.

I love my newspaper property but I have the work systematized and it does not need all my time.

I embarked in the newspaper business 21 years ago with a cash capital of $2.40 and my note in four figures was held by a local bank. I knew I would sink if I did not get a side line. I took the management of the opera house and almost fainted when I found out on the first night that my commission on an Uncle Tom's Cabin show had netted me $33. I paid $25 of that on my note and made a start and the side line was responsible for helping me to pay my debts.

I endeavored to get someone in my community to build a telephone system, but all to whom I mentioned it refused to put money into the project. I found a good partner and we built up, by hard work and the expenditure of a large sum of money, a property that is paying fair dividends.

The telephone business has been a valuable feeder for my newspaper business and the telephone profits have been fair, everything considered.

I tried to get the fire insurance men of my town to advertise in my paper. They refused. I put in an insurance department and in three years I have worked up a larger business than the combined business of all the agents in my city.

The real estate men in my section would not advertise in my paper. I organized a real estate company. It is making money.

Nobody in my town would lay off a new addition. I bought 80 acres of land, divided it into 296 lots, and sold them. I sold an addition to Mexico, Mo., in fourteen months.

I do all the printing and advertising for these side lines and get good pay for same.

Let me show you how one business helps another.

We have six hundred telephone subscribers and all of them are required to pay their rent in advance for a year. We send to each subscriber thirty days before his telephone rent expires a notification. In the envelope goes a notice referring to the merits, as I see them, of my newspaper. The fact is stated that the subscription is cash-in-advance and the paper is discontinued at the paid expiration. The attention of the telephone subscriber is called to the fact that the first week in every month the complete telephone directory is printed in the *Leader* and that unless he is a subscriber to the paper he will probably not get the latest directory. The truth is, we print the directory only in the *Leader*, and not on cards or in book form. The telephone subscriber must take my paper or he will not get the directory unless he comes to the office and calls for one, stating that he is not a subscriber to the paper and this gives me a good opportunity to annex his name. In the same envelope goes a card telling him how I can reduce his fire insurance premium. And in the same envelope is sent a list of farm bargains signed by the Realty Company in which I am interested.

In my newspaper I advertise the insurance business, the telephone business and the real estate business, charging the same rates as to merchants.

Thirty days before the expiration of an insurance policy the party insured is notified. In the envelope goes the same literature told about above.

The *Leader* subscriber is notified that his subscription is about to expire. He gets a batch of the printed literature in regard to the other side lines.

You cannot find more profitable side lines than fire or life insurance and you do not have to have any capital to work either. There is good money in buying and selling good real estate if your judgment is half good.

Of course every country editor cannot write insurance or deal successfully in real estate, and if your newspaper business keeps you busy and you love the work I would advise you to stick to it and not fool with side lines. But I confess that I like side lines.

Editor Walton, of the *Herald*, at Armstrong, Mo., makes good money writing fire insurance and he tells me it does not interfere at all with his newspaper business.

Remember, I am not advising anybody to take up side lines. I can only tell you what I am doing and what others have done. If I ever become crazy and buy a daily newspaper in a town that cannot hardly support a weekly why, of course, I will buckle down and give my entire attention to the newspaper business.

A country editor in a small town with the right kind of push can do anything he wants to. If he only knew it, he is the biggest man in the community and can make his people do anything he wants them to do. If he is not now making money and prospering the fault is with him. If the newspaper, when properly handled, does not make you enough money, scheme a little and take up something there is money in.

Gathering News for the Country Daily

BY G. WALTER RIDGWAY, KIRKSVILLE, Mo., DAILY EXPRESS

THERE is a well-worn saying that God made the country and man made the city. If this be true, the country paper is worthy of man's more pious service and support, for it must be a little more Godly in its origin. But it is not my call to discuss the origin of newspapers, divine or otherwise.

It is well, perhaps, to essay some definition of the words "country daily" which conveys a multitude of meanings to the multitude of people. Some would classify country daily newspapers according to the population of the town, others according to the telegraphic or lack of telegraphic service, some according to the number of pages, and still others according to circulation, so that my subject is a broad one and may have as many interpretations as the text of the young Presbyterian preacher who was asked to preach his initial sermon on the text, "And David danced before the ark."

"This text, "said he, "is a very ambiguous one, and may mean any one of three things. David danced before the ark, may mean that David danced in front of the ark, or it may mean David danced prior to the time the ark was made, or David danced before the ark, may mean that David danced first and the ark danced afterwards, and I believe, brethren, that I shall preach on all three themes."

Without attempting any academic definition of the country daily, I will say that, to me, it means the daily of the second or third class city, having from four to forty pages, (according to the era that the merchants of the town are living in), well filled with liver pill ads, bargain sales and boiler plate, it means a daily containing primarily local news and secondarily, telegraphic or general news. Now, there is a definition that is as indefinite as the boundaries of a Central American republic, and might equally well be used to define the city daily.

Country newspapers, daily and weekly, fill a very distinctive mission in American life today, because they come near to the hearts of the people. We are a farming people still, despite our metropolises, and as farmers we read the country papers and scan the metropolitan papers. The city paper is less independent, more influenced by interests and less fitted, therefore, to be the real teacher of the people. I believe that the ideal country daily is independent in politics and everything else, and that its measure of usefulness depends largely upon its independence. I am speaking now of the ideal and not of the real.

Comparisons are odious, but I make them between the two great classes of newspapers to show their relations to the public welfare, as I see those relations, from my own particular viewpoint. It is next to impossible to estimate the influence of either or both, and certainly both are complimentary in their mission of service.

Country newspapers are but entering upon their period of the larger usefulness and they need the best men as they have never needed them before. It is unfortunately true

that many of the strong men desert the smaller fields for the larger ones of the city, for reasons of emolument. The reason is not always a good one, however, for certainly the country towns offer some things that the cities do not in the ways of opportunity of service.

The Government at Washington has done much to make country life more attractive each year, establishing mail services, etc., and is doing much more toward solving the problem of keeping the farmers on the farms. President Roosevelt, himself a kind of farmer and hunter by instinct and choice, said in a message:

"I warn my countrymen that the great recent progress made in city life is not a full measure of our civilization, for our civilization rests at the bottom on the wholesomeness, the attractiveness, and the completeness, as well as the prosperity, of the life in the country."

What goes farther to make country life attractive than good country papers which are the link between the farmer who produces and the merchant who buys what he produces? It is the link which holds him to his neighbor, to his county, to his state, to his church, to everything that is highest and best. This, then, is our mission, mission of education, and our columns are helpful and wholesome only as our makers of these columns are men of force and learning.

The news field of the country daily is necessarily a limited one. In the average Missouri town of ten thousand people there are two or three colleges, several public schools, and enough other institutions to make a sufficient amount of news for the day reasonably certain. The small country daily does not carry a telegraphic service, if it does, the service is a very limited one and, therefore, worth little. The circulation field is confined to the town and the radiating rural routes. In giving the general news the small daily can not compete with the metropolitan papers in either fullness or fleetness.

The one aim of the country daily should be to give the local news. The editorial column, although necessary as ornamentation, is like Paradise Lost, much admired but seldom read. It might be abolished and the paper still be a power for good or evil in the community. The people want the news, and need the news about their neighbors, about their municipal and county government, and about their commercial, religious and educational institutions. News is crystallized into public sentiment, and public sentiment, says Elbert Hubbard, is more powerful than lawyers.

It is difficult to keep news and editorial comment out of the same paragraph and even the same sentence. The temptation to flatter or to frizzle comes daily to the man behind the pencil, in his desire to praise the good and to censure the evil and to have a well filled and popular paper.

There are four "F's" in the way of the newsgatherer in the country town. The first F stands for the field and the limitations thereof. As I have already suggested, there are enough institutions in the average town to furnish sufficient news for the day. The active country editor is prepared for those quiet days, however, when even the leaves on the cottonwood trees won't rustle for the very stillness, and he has in his pantry a feature story about the blind preacher or the negro school teacher that will keep the Linotype man busy until the calm is past. If he is really a newsgatherer he will never lack for these feature stories. There are a dozen or more characters in his community who have resided there from the crossroads days, who can tell stories artistically of the traditions of the community. Such as these are very present helps in the time of trouble. Nearly every man you meet upon the street has something that you ought to know, and something that the people want to know, and it is your business to get this information. The man on the streets will very likely tell you that he knows absolutely no news and in the same breath will give off something that you have wanted for days.

A story borrowed from Harpers and given an Ozark setting illustrates my point. A country editor was out in the hills of south Missouri looking for whatsoever he might devour and for some news for his journal when he met one of his rural subscribers.

"There ain't a bit of news," said the farmer. "All down this way is too busy with their crops to think of anything else."

"Fine crops, eh?" asked the news man.

"Couldn't be better," asserted the farmer, "I oughter to be in my field right now, and I would be, only I come to see the corner."

"The coroner, who is dead?"

"Yes, he's wanted to hold an inquest on a couple of fellers in our place."

"Accident?"

"I reckon not. Ran Morgan ain't doin' nothin' like that by accident. He got Jim Jeffords and his brother Tom with two shots. Got to have an inquest, though.

"What led to the fight?"

"There want no fight. Ran never give the other fellows no chance to make it a fight. Jes' hid behind a tree and give it to 'em when they come along."

"Has Ran been arrested?"

"No, what's the use? Some of the Jeffords people burnt Ran's house, shot him and his wife, and set fire to the barn. No, Ran ain't been arrested. But I ain't got time to stand here talking to you. Got to git to my harvestin'. There ain't no news down our way, but if anything should happen, I'll let you know. Get up Hawk."

The second "F" is for friendship. The newsgatherer is generally a close personal friend to most people, or he should be at any rate. But this very friendship is often his greatest obstacle. He does not and can not give a free and impartial account of incidents and events that affect his friends. Sometimes he sacrifices his friendship if he presumes to give anything at all, and he may exchange his friendship for fees, lawyers' fees. It is this condition that often causes the young man to go to the large city daily where he may be a freer lance.

The third "F" is for fights, local option fights, town fights, etc. Local option and liquor scraps have been prolific sources

G. Walter Ridgway,
Daily Express, Kirksville, Mo.

of news in some communities, but prolific sources of suits in others. In the presence of such conditions there are, what President John R. Kirk of our Normal School, called "struggling young lawyers" who proof read the papers to find grounds for suits. Unless it means the sacrifice of principle to do so, the country paper's mission is to promote harmony and unanimity, that the community's interests may be builded to the highest, in both material and moral matters.

In this connection it is fit to speak of the news man himself. Sometimes his own prejudices against people cause him to suppress or to give partial accounts of happenings of great moment in the community. If there is one place where self must be kept under, it is on the reportorial staff of a country daily.

My fourth "F" is for falsehoods. There are people who would consciously report things that they know to be untrue and the newspaper man must bear the stigma of their lies. I sometimes think Jefferson's suggestion should be adopted, that the editor divide his paper into four chapters, heading

the first Truths, the second Probabilities, the third, Possibilities, and the fourth, Lies. He adds with some humor that the fourth should be professedly for those who would rather have lies for their money than the blank paper they occupy. I think that if he had advised all news be published over the names of those who give it, newspapers would have but one chapter and become broadsides.

Certain it is, there are few of us mean enough to print lies, even probabilities, about our neighbors, especially when the world is so full of good wholesome news which the world really needs.

If you were to ask me what I regard as the most valuable thing in news gathering on the country daily, I should say the personality of the reporter. It is the man that makes the news mare go. There are, however, certain other characteristics of the good news man worth mentioning.

First, he knows news, and has a long "nose"; some reporters will stumble over a dozen real news features every day and never see them or smell them. Much good news will escape even the most vigilant of us. As Holmes said about reading, gathering news is like fishing with a net; you catch a few minnows, but a dozen miles of water have run through our net.

Second, he must know the minds of the people. There is much psychology in newsgathering. The alert news man with his psychic sense is enabled to feel that news is going to happen and is ready.

Third, he must, of course, know how to write. He may be a very fine judge of news and yet not know how to tell it effectively. A well known journalist once said, "Just sit down and let the story tell itself." So far as I am concerned, I have found few stories that would thus reel themselves off of my forehead, full grown, like Minerva from the head of Jupiter. I have had to put forth a conscious and voluntary effort to tell of the stories that I have caught in my newspaper net, and I believe this to be the experience of the average man. Here is where the schools of journalism come unto their own. I am glad to note the good work done by my own state university in pioneering the idea of a school of journalism which now ranks with the other schools of medicine, engineering, law, and agriculture. This idea I may say was born in the mind of a former president of the association, a master mind, that is now guiding the destinies of the school. Whatever else the School of Journalism of the University of Missouri may have done, it has done these two; first, it has advertised the institution more than any other department or college; and second, it is putting the finishing touches upon five score or more of journalistically inclined students who could get these finishing touches only by hard rubs and raspings in the mills of experience. This school of journalism is not without honor, save in its own country, where the criticisms have been the fiercest and most relentless. But the School of Journalism of the University of Missouri is adding dignity to the profession of the journalist, giving it proper rank along wth the other professions, and is training some acute minds for larger usefulness in the country and city fields where they are needed, and this is unanswerable argument for the maintenance of such an institution.

Fourth, the country news gatherer must have two long legs and one long head, physiology as well as psychology. He must study the seasons and the weather, and divine the intentions of men. He must, moreover, be many places at many different times of day, a veritable jumping jack, or a Jack the Giant Killer, if necessary, for there is no place on the staff of a country daily for either a lazy man or a coward. I think that the ideal country reporter takes the Apostle Paul as his paragon, Paul who could write many letters to suit many people, advising us to run with patience the race set before us.

The future of our institutions depends upon an uncorrupted free press, or as Mr. Bryan put it, the country press. That other Democrat who had his "ins and outs" with the newspapers at the beginning of last century, once wrote to Col. Edward Carrington.

"The basis of our government being the opinions of the people, the first object should be to keep that right, and were it left to me to decide whether we should have a government without newspapers or newspapers without a government, I should not hesitate a moment to prefer the latter. But I should mean that every man should receive those papers and be capable of reading them."

Stopping the Leaks

BY H. G. TAYLOR, NONPAREIL, CENTRAL CITY. NEB.

IT is the day of little things—the microbe, the doctors tell us, is king of the earth. It has taken us something like six thousand years to learn that "every little bit added to what we've got makes just a little bit more." Genius has been defined as an infinite capacity for doing small things. In the olden days when space writers and pipe dream artists enjoyed the privilege of having their "stuff" accepted as literal fact giants sprang full grown from the air and marvelous perfection was achieved in a breath. Later, when that cold and unimaginative editor Experience got to blue-penciling the copy we discovered that success is not accomplished by simply wishing it but that it consists principally in being able to "clear off the desk every day." And it is with the idea that no business or profession on earth presents a more multitudinous array of little things than does that of country newspaper making that I am prompted to choose this subject—"Stopping the Leaks."

Since the time when the mind of man runneth not to the contrary the country newspaper has been regarded as a joke by successful business men in other lines. In recent years, I am glad to say, this conception has been considerably modified and country editors are coming to be looked upon with some degree of tolerance even by bankers and ready-print houses. And they are meriting this new-born respect, not because they have perfected a more brilliant literary finish nor because they have developed a broader statesmanship—two things very dear to the heart of the perspiring newspaper worker—but because they are mastering the interminable details that seem to swarm about every department of the business, spreading a contagion that leads to loose, unsystematic methods and slipshod practices. I believe, however, that there are leaks yet to be stopped before we can claim kinship with thorough-going business men, and briefly I should like to point to a few of them, not that I have plugged them up myself, but in the hope that calling attention to them may lead to ways and means for doing so.

And if you were to ask me to put my finger on the largest and most damaging leak I would unhesitatingly place it over the hole caused by politics. Politics! Politics! What monkeys we editors make ourselves in thy name! We place money, time and energy on thy altar and thou lettest the county printing to our loathed contemporary at the first opportunity. Thou exactest brain-sweat, loyalty and campaign contributions and rewardest us with the icy mitt and the secretaryship of the Taft club. In view of the results sometimes I frequently wonder if our efforts are any more effective than were those of the Kansas attorney who was trying a case before an Irish justice of the peace. The prosecuting attorney made an address that was very eloquent. At the close of his address, the lawyer for the prisoner arose. "What are you getting up for?" the Irish justice asked. "To state the prisoner's side of the case," the lawyer replied. "Sit down," said the Irish justice; "I don't want to hear from you. Your speech will only confuse the court." Judging from the returns that come in occasionally I fear that the searchlight of publicity only serves to "confuse the court." I would not have you understand that I am arguing that the editor should retire from politics. Far from it. Next to a brainless dude a spineless, opinionless newspaper is the most useless thing in the universe. I have an intense admiration for the virile, independent, aggressive paper that takes a position on one side or the other of public questions and maintains it regardless of business hazard of personal risk. My quarrel is with the condition that makes politics the chief end of a newspaper, absorbing the time and talents of the editor to the exclusion of business success and his own welfare. How many times have we wasted half a day swapping yarns with the candidate for county judge when we could have been more profitably employed posting our books or chasing down a news item. How often have we neglected our own press-

ing duties to hustle out into the highways and by-ways for some palpitating office-seeker, who, the chances are, forgot our labors as soon as he was elected. And, again, how many times have we wasted valuable news and advertising space sounding the praises of some obscure statesman who has more or less arrogantly demanded the favor on behalf of the party. Brothers and sisters, we have been a "palladium of liberty" long enough. Let's shift the government to the backs of the bankers, coal dealers and merchants and divert our energies to saving our business instead of the country.

The political leak suggests another that rather follows in its wake—if you will permit that figure. It seems trivial and yet it is so common to newspaper men that it ought to be mentioned. I refer to the habit of loafing which we form in our daily and weekly rounds for news. A young man who some time ago quit a newspaper office to go on the road, said to me recently: "You would be surprised to learn how many of the newspaper fellows make it a habit not to get down to their offices before nine or ten o'clock in the morning." This condition is very prevalent in newspaper offices and is responsible largely for the contempt which methodical business men have for our easy-going, slipshod habits. I'm not saying that we are lazy—for no business on earth requires more arduous toil than ours. It is only that we have allowed the distracting demands of our work to tempt us to slight the numerous tasks as they crowd upon us. We spend an hour or so talking politics or exchanging stories in some favorite haunt and deceive ourselves into thinking we are gathering news. I know we get news like the milkman gets skimmed milk — by pumping, but too often we get so much fun out of the pumping that we prolong it to the detriment of our duties and then when press day rolls around we wonder why the girls haven't set more type and why the foreman had to use so much boiler plate. Chas. Dana said that a good reporter is one who knows where "hell is going to break out next" and I realize that if we accept that description we can hardly bring news gathering within the boundaries of the methodical and the systematic, nevertheless, we should not spend all our time in congenial surroundings and expect "hell" to break out there for our exclusive edification.

Speaking of the local news department, however, reminds me that we sometimes allow it to encroach on the other departments and cause a leak that permits the editorial department to run out. News, of course, is the life blood of a country paper, but editorial opinion is its bone and sinew. That editor deceives himself who imagines his readers do not want to know what he thinks about public questions, be they local, state or national. The editorial page gives tone and character to his paper and he should be careful that business duties, advertising patronage or indifference do not crowd it on to the margins. His editorial paragraphs do not have to be brilliant or witty or heavy in order to carry. So much the better if they are, but they will be read, however simple the language in which they are couched, if they come from the heart, if they are independent and if they state the truth without fear or favor. Sacrifice the editorial department occasionally if you must, but do not make it a practice to do so.

Passing now to the business office, we find a leak, that from the appearance of rust around its jagged edges, must be an old one. You will detect it immediately when I dub it "free advertising." Is there are any enterprise in existence that is expected to donate as much of its product free to the community it serves as the newspaper? Do you know of a commodity as valuable that is valued so cheaply by the public as newspaper space? And who is to blame? The newspaper men themselves. We have given away space so long that the people have come to value it according to our own estimate. Churches, lodges, theatres, politicians, promoters, doctors, lawyers and what-not have exacted generous tribute from us and we have paid it cheerfully, and then wondered at the close of the year why there was no money in the newspaper business. Let's place a value on very inch of our space and then make our fiat regarding that value as unchangeable as the laws of the Medes and Persians. Say "no" to the "sponger" and throw the grafter out of the office. And about that rate—make it high enough to cover cost and a reasonable profit and then see that it is maintained. Allow no patent medicine representative or advertising agent to wheedle you into deviating from it. I am told it would take an expert accountant to compile and classify the rate on file in any of the leading advertising agencies, so wide is their range, and so much do they vary. The local merchant, too, will grow into an increasing respect for the value of your space if you let him understand that your rate is as stable as his price on calico or granulated sugar.

Were it not for the popularity just now of prosecutions against unlawful combinations I should like to call attention to a leak that is sapping our business of much of its vitality, but the fear of a twenty-nine million dollar fine causes me to treat the matter gingerly—I am fearful that the state might insist on going into partnership with me. Perhaps, however, I may be permitted to speak, "on the advice of counsel," to the extent of suggesting that we cultivate a more friendly feeling for our competitor. Ruinous competition and cut-price rivalry is not as prevalent as it used to be in this business, but enough of it remains to make publishing and printing a precarious proposition in many towns. Only a few months ago a publisher in Kansas secured the county printing contract by agreeing to do all the work for nothing and pay

H. G. Taylor,
Nonpareil, Central City, Neb.

$5.00 for the privilege. And after playing the dodo like that I presume he went back to his office fairly hugging himself in the ecstacy of having outwitted his competitor. So long as we cut prices just to knock the other fellow out of a job, so long as we allow the public to extract the profit from our spite and jealousy, just that long may we expect to find our bank account in the "red" and our business demoralized. The cultivation of a spirit of harmony among competitors will quickly correct this condition and at the same time secure the advantages that invariably follow intelligent co-operation.

There are many other leaks that might be mentioned, but the compass of this paper will not permit of their discussion. The delinquent subscriber, the editorial row, the neglect of country correspondence, the temptation to spend all our earnings in equipment, our extravagance of time in promoting public enterprises, our neglect and abuse of machinery, these and many others drain the newspaper business of its rightful surplus and make it less remunerative than it should be.

Perhaps some of the things I have discussed may strike you as trivial and unimportant and yet we should remember that it is the finest threads that make the smoothest fabrics, that the splendid mosaic is composed of tiny pieces. The successful publisher is the one who trains himself to comb out the tangled threads of detail and who makes every unit of his business yield its share of profit.

University Training for Journalists

BY MERLE THORPE, HEAD OF DEPARTMENT OF JOURNALISM, UNIVERSITY OF WASHINGTON

R PRESIDENT and Members of the Association:—I am deeply sensible of the courtesy extended me by your body in the invitation to address you today, and I thank you. It makes me feel that despite the prevalent distrust of "tailor-made newspaper men" that I have not departed from the blue pencil and copy pad long enough to be classed by you as a rank outsider. Then your invitation emphasizes that prime characteristic of the newspaper man—the desire to hear both sides of the question. And since I have the press of the country with me, and behind me, I am bold to confess what the university is attempting to do in the way of training young men and women for work in the newspaper field.

You have no doubt already noticed that I have carefully avoided the use of the word "journalist." I see danger ahead in the Honorable Tom McNeil's address on "Journalists and Common Newspaper Men." It is true that we are called a Department of Journalism. In the exigencies of the composing-room, since rubber type went out of fashion, we must have a title to fit the average column headlines. Can you imagine us ever getting a top head, first page, seventh column if we had such a title as "Department of Newspaper Writing, Managing and Editing, or "Department Leading to Editorial and Reportorial Proficiency?" No, of course not So we had to do what head-writers are always doing, sacrifice the sense to fit the space. But notwithstanding our title we are training just common newspaper men.

Seriously, I wonder how the good old English word, "journalism," acquired its present-day stigma among editors. Mark Twain, I think it was, said that a journalist was a reporter out of a job, and no doubt this good-natured little flip has had its influence. The dictionary, however, and it might be said in passing that Webster in spite of his woeful lack of unity of plot is our most valued text-book, states that journalism "is the periodical collection and publication of current news; the business of managing, editing and writing for journals or newspapers." So I'm not sure that it was necessary for me to apologize for calling our school for newspaper men a department of journalism.

Two years ago the University of Washington modestly announced a class in journalism and twenty-two students enrolled for the four hours a week. In the February following, the demand for this specialized training was such that another class was organized, and two months later the Regents decided that the eagerness with which men and women applied for this branch of instruction warranted a department. Sixty-six students registered last year for the four years' course and 140 men and women took work in the department. Of the sixty-six, fifty-one intend to follow some phase of newspaper work as a career.

When the University installed this department of journalism no other higher institution of learning, so far as I know, had such a department. The past year, however, saw no less than a half dozen universities offering the four years of specialized work, with a full-fledged school at the University of Missouri, where a member of your association holds forth as Dean. Next September six other universities, including Minnesota and Colorado, will inaugurate like departments. These institutions are not only heeding the call made on them by students, but have been forced to accede to the demand made upon them by editors, educators, and men of public affairs.

It is easy to understand why students are eager for the work. Some of them have had a taste of newspaper life and those of us who have once been in the harness appreciate the fascination. Others choose journalism, as the more technical courses are chosen, because they are fitted thereby for a profession. A deeper reason for the popularity of the work lies in the fact that the courses of journalism give the student a broader and more practical foundation than a regular arts course or a technical one. There are a great number of high school students, and I venture a number of us were in this class, who of necessity must choose a calling and specialize at once, yet whose inclination is for more studies of a general cultural nature. The boy or girl may have a liking for literature or philosophy or history, but his parents are obliged to send him to college with the injunction "to get into something that will pay your way when you get through." As a result he chooses some form of engineering, or law, or medicine, specializes, becomes strong in that particular line, but sacrifices breadth. The ideal way, I suppose, would be for him to spend the four years in the liberal arts, then the three or four years in the technical course. But the average young man of today cannot afford the eight years' time.

Now this journalism training bridges over the English idea of culture, as best exemplified in our own Harvard University, and the German idea of specialization as at Yale. It gives the student the greater part of a liberal arts course, allowing him to browse around in literature, political science and government, history and philosophy, and at the same time gives him enough technical training to send him out at the end of four years with a profession. He has been laboring along the line of his inclination, and has made it fit into his work as a writer and editor; he has the breadth of knowledge so essential in a newspaper man, and understands the game of gathering and editing news.

But I doubt if the great universities of the country would have regarded the wishes of the students in the matter if there had not been another agency urging them to provide training for the coming newspaper generation. That agency is public opinion. Editors themselves are lamenting the fact that they are not as well informed today in law, politics, government and history as the editors of seventy years ago. There is a general feeling that the press is not making the best of its opportunities. In material and mechanical advancement, its progress has been short of miraculous. It is not too much to say that it has supplanted the pulpit and the platform, the text-book and the market-placce, but how about its influence? There was a time, it is said, that for a man to have a premature obituary notice published in a certain section of the New England press, was to kill him to all intents and purposes of the credulous readers. But that doesn't hold today. It is almost necessary now for the paper to publish a coroner's certificate alongside the death notice.

Say what we will, the large papers are losing their hold on their readers. "I saw it in the paper." "Ah, but that doesn't prove anything. Which paper?" is the usual reply. Readers have become skeptical; they are seeking motives behind politics. Some papers have abandoned their editorial pages altogether. I have two metropolitan papers in mind particularly. Why? we ask their editors. Because persons no longer read the editorials, care nothing for the expressions of the paper on public affairs. Those who do read them do so only to assign motives and then attack the principles enunciated. With the editorials abolished, the policy of the paper must be found in the way it handles the news. Whoever heard of more than a handful of men at a Republican rally in a Democratic paper? Who ever heard of a rousing and ringing speech of "Our Excellency, the Governor" in an anti-administration organ? A public official answers charges of malfeasance in office "laughingly" in one paper, but in the other paper the same carbon-copy answer is given out "angrily."

Since leaving the office I have had occasion to meet with a large number of newspaper readers who, knowing me to be engaged in training newspaper men, have spoken frankly of how they discredit most of the news appearing in the daily paper. One of your members said to me the other day: "Remarkable attendance you are having at the Exposition. I had seen stories of it in the papers, but was afraid it was only press-agent dope." And here is another significant fact. Nine out of ten of the freshmen who register for journalism have the idea that making a newspaper consists in the ability to fill it up with fake stories. There can be no doubt that with the higher class of readers the daily press is becoming discredited and the feeling is spreading.

The state of affairs is brought about not because the newspaper profession has a lower standard of morals than other professions. There is not a more upright, generous and honest body of men anywhere than those found in the newspaper profession. No, the cause of this growing discredit lies in another direction. First, in the prevailing economic conditions, which prevent the real editor from owning the paper; and the second, which is more reprehensible, where the owner has political ambitions.

There are only three or four Greeley papers today in our large cities. The immense capital required to carry on a great daily makes it impossible for the real editor to own his paper. The owner and the paper's policy is too often found in the business office, where the staggering bills for

cable tolls, telegraph tolls, special service, the salary roll of five hundred men, and the enormous paper bills are to be met weekly. The owner is only able to build up such a business by bending his energies in other channels. Often he is associated with public service corporations, and it is too much to expect of human nature, when public intrests, whose guardian it is, and its own interests conflict, for it to deal fairly and squarely with its ward.

When the owner has political ambitions, his paper ceases to be the servant of the people. It no longer fulfills its mission as an impartial observer of events and as adviser and counsellor on matters political. The whole office force soon learns the politician who is the staunch statesman and sturdy patriot, because he is always in the headlines and quoted at length, and by the same token it learns the demagogue and the rascal. The best journalism and politics that seek personal aggrandizement can never be co-operative, and because certain owners are attempting to serve all the people and themselves at the same time, the whole American press is being brought into disrepute.

It is this growing distrust that has caused thinking men and women to wonder if the press is living up to its responsible position as teacher and leader of public opinion. The press will always remain the "regent of sovereigns, a tutor of nations."—we have no fear as to that—but we do feel that with these evils eliminated, its capacity for regency and tutelage will be greatly increased. It is this feeling that caused the public to ask the university to assist in raising the tone of the press.

And how will it be done? By sending out young men and women, intelligent, broadminded, fearless and morally-sound to assist in making and editing the papers of the larger towns and smaller cities. Here they will be able to own their paper, preserve their individuality, and as editor and owner of conscience, character and conviction who feels his responsibility to the whole people, and who is independent of the whole or any part, he will soon have a following in his section that can successfully combat the large daily which has forgotten or neglected its duty to its readers. As independent editor of his own paper and respecting his profession will the young man or woman graduating from the department be able to pay back full toll to the state for his education. It may be that I am too idealistic, but I would like nothing better than to see at the top of every editorial column of every paper in the country the following motto: "I have no political ambitions; I have no business affiliations; I have no ax to grind in any field."

I am not forgetting my young editor's relation to the advertiser. I should not be honest with him if I did not tell him how almost daily he will be called upon to decide between two radical courses of conduct. His biggest advertiser approaches him with the request to suppress the news that the advertiser's drunken son while on a joy ride has killed an innocent passer-by. Such a question has come more than once to me and to you, and I think you will bear me out that the only advice that can be given the young student is "to hew to the line and let chips fall where they will"; that in spite of temporary financial and social loss, in the end right and honesty must prevail.

I realize that what has been said so far is pretty idealistic stuff to come from a newspaper man and for the consumption of newspaper men. What you practical newspaper men want to know is: How does the university prepare men for such work as lies before him? The first thing the department tries to do is to teach the student to think clearly, to acquire what the lawyers call a "legal mind," to be able to see the many sides and quirks of a question, form a decision and form it quickly. Then the next thing is to teach him to express himself clearly and truthfully. "It is a long way from the eye through the arm and pencil to the paper," said an old German philosopher. An exact quotation from a public man often misquotes him. Accuracy of impression, rather than accuracy of statement, is the ideal continually held before the student. In fact, clearness of thought and lucidity of expression is the foundation of the four years' work.

Then the student is taught to grasp essentials. It is true that the news of today is the history of tomorrow, but not all the news is state and national history. It was the trained newspaper mind that saw history in a Fairbanks' cocktail. Since the journalist is teacher, the teacher should be better educated than his pupils. He is called upon daily to place an estimate on a scientific discovery, he must tell us the importance of a piece of literature or a play. He passes upon political, social, ethical and economical topics, and to fit him for these tasks the department is striving to have him grounded thoroughly in all that these fields represent. He will have a wider comprehensiveness of knowledge and will be able to apprehend more quickly the correct viewpoint of vital subjects. He should have all this; everyone admits it, and where is he to look for if it not to the university?

Training the student to look for the large significance of of passing events and to express himself truthfully and clearly, then, are the two fundamental phases of the department's work. He will also be taught to study human nature on every hand, and to individualize a character so that it can easily be distinguished from all others of its class. In the selection of feature stories the student will have his powers of observation whetted to a high degree. He soon learns that there is much of comedy and pathos in life all around him. To see things from another man's standpoint is no unimportant lesson in itself and to draw a lifelike picture

Merle Thorpe, A. B.,
Department of Journalism, University of Washington.

of a tragedy or unusual happening, to recount a humorous incident, or give life to a man interviewed, are valuable assets for the young writer.

Short prose fiction is having its inning today. The man or woman who can tell a short story is in demand. In the seventeenth century the great lessons of life found expression in the drama, in the eighteenth, the essay;the nineteenth, the novel, and today it seems that the twentieth century will claim the short story. Poe's totality theory is at least justifying itself. So the student after developing his observation and expression, and combining the technique and mechanics of the short story may find his talent along this line. Last year two short stories, which were handed in by students for class work, were accepted by magazines of national standing. This study is the legitimate work of the department and while we do not expect to make all students short story writers, they are certainly better equipped to approach a magazine editor than if they had not learned the fundamentals.

The young writer is taught early that he must be both creator and critic. He stands little chance of writing a masterpiece until he can recognize a masterpiece. When a Becky Sharp, caught in a trap, disgraced forever, is made to admire her husband for traits of manhood she did not know existed, our young writer must be able to throw down his pen and exclaim with Thackeray, "That is a stroke of

genius." The student must develop a critical consciousness which will guide his pen and make well-meant work a reality. To attain this ideal personality he must write and study the masters, then write and study the masters. He describes a coyote, and then compares his effort with Mark Twain's celebrated "allegory of want"; he pictures a boarding-house through a sense of smell, then sees how Balzac shows us Madame Vauquer's boarding-house by the same method.

He must be able to recognize a well-written news story when he sees it. To this end a score of the best dailies in the United States are received by the department and carefully studied. Editorial policies and methods are exemplified in the different papers in the manner in which the same news story is written, handled, or "played up." Opportunity is given to study editorials on live subjects, and what is more important, to become familiar with the tools employed by the best editorial writers in the country. A New York *World* uses seven columns on the morning that Roosevelt leaves the White House; a New York *Sun* uses one word and that spelled "thru."

News is gathered by the students and written for the university daily and state papers. Correspondents in the department supply campus news regularly for eight daily papers. Last year these papers, excluding the three Seattle dailies, used eighty-six columns of news and feature stories from the department's students. The class wrote and edited the twelve-page magazine supplement of the Seattle *Sunday Times,* and two of the stories were appropriated en toto by a press association. The "college journalists" were the guests of the Seattle *Post-Intelligencer* staff on one occasion and went the rounds with the reporters, read copy at the desks and wrote heads. As further testimony of the active support of the press of the state a dozen prominent editors addressed the students during the year on various phases of the work.

This fall the department will have a press of its own, equipped with Mergenthaler, Meihle, in fact, with everything down to a quad-splitter that goes to make up an ideal printing office. The daily will be increased to six columns, four pages and will be supplied with a 12,000 word telegraph service of the United Press. A staff will be organized with students acting in the various editorial positions and reporting. On Fridays a "Sunday" edition of eight pages will be published, containing interesting and instructive feature stories. A weekly Alumnus journal and monthly literary magazine will be published by the department's students.

The department is working toward a school of journalism when professors from the law school, science, economics, history, literature and philosophy departments will give courses specially designed for journalism students. These respective subjects will be traced in bold outline, and the student will learn the broad principles of each without spending the time necessary to specialize in the subjects.

The first year has shown a demand on the part of young men and women for the work. A brighter and more eager group of students is not found in any other department of the university. The first year has shown that the university can give these students a broade r comprehensiveness of knowledge, and equip him with tools with which to express himself clearly and forcibly. The four years' training will install in the student a quick sense of the right and wrong of those problems which daily are met in the newspaper office, and by precept we hope to guide him safely past snares that the rest of us found only by bitter experience. The university has shown that it can teach men the practical work of journalists, those ins and outs which go to make up the every-day life of any profession, and it proposes to place its graduate in a newspaper office so familiar with the work-a-day details that he will not become rusty in the other more important lines while working them out. To be sure, there will be much left for him to learn in the office; the university does not pretend to turn out a full-fledged managing editor any more than a conservative school of law or medicine pretends to turn out an experienced lawyer or surgeon. It believes, however, that training along certain lines in the university will do as much for the young journalist as it does for the doctor or lawyer, and with everything else equal the university trained newspaper man will be better able to benefit society and the state than the so-called self-made newspaper man.

The university can do all this for the man who intends to follow journalism. To deny it, is to challenge the principles on which the university is founded, is to say that our state institutions are no longer fitting men and women for the larger problems of life.

Editing a Country Weekly

BY CAROLINE A. HULING, THE BOOKSELLER, CHICAGO

OTIVES underlying the publication largely determine the editorial conduct of a country weekly newspaper, and often there are many. Probably most papers are started by men having a taste for the business, as a means of support, but ambition for political preferment is frequently at the bottom of editorial activity. Ambitious politicians who establish a personal organ, or subsidize one already started, are not altogether unknown. A patriotic desire to serve the community as member of the state or national legislature, and incidentally to promote his own interests, leads many a rich man into journalism, although he may not appear as editor of the publication which his money sustains, and the policy of which he dictates.

Most papers of this class, however, are doubtless owned by their editors, who are men of sterling character, great conscientiousness, independent and fearless in their work, and who are largely animated by a desire to really serve the community wherein they live. Of this class was he who placed at the head of his paper, over a century ago, the motto:

> "Pliant as reeds, where streams of Freedom glide;
> Firm as the hills, to stem oppression's tide."

Thus were the principles of the *Vermont Gazette,* or *Green Mountain Post-Boy,* proclaimed, when established at Windsor, Vermont, in 1781, soon after the close of the Revolutionary War. The sentiment is phrased in somewhat archaic form for this day, but many editors live up to the principles thus expressed by my great-grandfather. Some editors there be who are imbued with the idea that a local paper is a "quick get rich" scheme, a short and easy road to wealth, but they soon learn their mistake and seek other fields of enterprise. The real editor would rather be at the head of a live newspaper than do anything else, regardless of a lack of adequate compensation from the talent and effort involved in conducting the business.

We are apt to smile at the idea of a country editor becoming rich, but the methods of journalism are changing, as in other lines of business, and newspaper men are reaping the harvest of their efforts nowadays, like the Indiana authors, and, like George Ade, may become wealthy gentlemen-farmers. It was rumored that several of the Editorial Association bought Canadian land last year, and many of them will take the Alaska trip this year.

The ideal editor, he who holds his calling sacred and whose opinions cannot be bought or sold; who serves his constituency with the fidelity of the priest for his people, or the family doctor for his patients, deserves the place of honor in the category. He it is who labors for the work's sake, unmindful of the pecuniary rewards; who espouses the cause of the poor and oppressed against the rich and powerful. There are, and have been, many such—all honor to them—as the pages of history prove. Any one familiar with the annals of journalism will have no difficulty in recalling names of heroic editors who have given their lives for their principles. When the microbe of journalism enters the system of the individual who must be an editor because he cannot be happy otherwise, there is no other course to pursue than to allow it full scope, though the indulgence of the impulse may bring pain as well as pleasure. No other vocation makes greater demands upon its devotees, nor can any derive more sincere enjoyment from doing his duty than does the ideal editor. The real newspaper man (who may be a woman) literally goes without food and rest cheerfully, at the demand of the profession, and is happy in so doing.

The country editor is a leader in his community and the most of his readers will quote from his pages with full assurance that "if you see it in *The Sentinel,* it's true." To his credit let it be said that the many privileges and per-

quisites of his office, and the regard of his readers, rarely affects the size of his hat. The sense of power that is felt by the man who owns and edits his own paper (untrammelled by the fear of losing his position, should he express sentiments contrary to the views of another), is indescribable, but none the less real, as I learned to understand as an editor's daughter. Doors which were closed to the general public swung open to "the editor"; and then did we not have complimentaries to the circus, with seats in the manager's box? To say nothing of personal conduct through the side-shows. But, jesting aside, none can realize the fullness of the editor's life more than the editor himself. Many of his readers take no other periodical unless it may be one published by a religious denomination, and a single magazine; thus the country paper has many departments to fill. The outside pages are usually devoted to miscellany, stories, household affairs, cooking recipes and plants for inexpensive dwellings. One of this type lies before me now, published within the limits of Greater New York, yet bearing all of the marking of a country weekly, for it serves a small section of the great city just as a real country paper does a little inland hamlet. The ready-print factories provide generously and well for the needs of such editors, but there are some who feel their obligation to their readers too strongly to use this labor-saving matter. Though by no means despising the aid of the invaluable scissors and paste-brush, my editor feels himself responsible for the personal selection of every line admitted to his columns, though it is probable that not one of his readers would know the difference if he used a "patent outside" complete.

Perhaps it is well to be duly cautious; he may thereby avoid the error of one who left the "editing" of his plate matter to his foreman, who astounded his readers by publishing an exciting account of a South Dakota blizzard (of six months previous), in his telegraphic column in midsummer. But all make mistakes once in a while.

"All the news that's fit to print," is the aim of a real editor, in the conduct of his local pages. Personal scandals are barred, even though their publication would enhance the sale of his paper. He is ever mindful that he caters to the family, and steadfastly refuses to print anything which might shock a modest maiden to read. The misdeeds of those whose acts affect the community are not suppressed, however, regardless of the fact that they may be committed by men high in power, with great influence. That men whom he exposes may have power to seriously injure his business rarely affects the peace of mind of the conscientious editor who feels constrained to do his duty to his constituency, and takes his work seriously. His opinions are not bought with a price, even though the very bread of his children may be jeopardized through his fidelity to his trust.

One editor whom I knew well, had four libel suits, which were the direct results of this idea of duty. None of them were ever brought to trial, nor did he ever retract or make any effort to settle them out of court. In one case the summons and complaint (in a civil suit for damages), was composed of extracts from the libelous articles. By no means intimidated, this brave man published the document, then published his answer, and later, got leave to amend and republished the document entire, to the amusement of his friends and the confusion of his foes. This plaintiff was a leading lawyer and a former judge, yet he dared not push his suit to an issue, for he had stolen the money of depositors in a bank in which he was a director, by means of bogus notes for money loaned ostensibly, to irresponsible persons.

The daring of another editor is told in a family history, privately printed:

Matthew Lyon, a remarkable man of his time, published *The Freeman's Library,* in Franklin, Vermont, in the latter part of the eighteenth century. His editorials were radical and censorious, bitter and denunciatory, and were directed against the administration of John Adams, then president of the United States. This bold editor was indicted and summoned to trial under the "Alien and sedition law." He was convicted and "amerced" in a fine of $1,000, and was sentenced to serve six months imprisonment in the jail in Vergennes, Vt. This conviction ruined his business, but such was his ability that, after his removal to Kentucky, he was elected to Congress and served from 1803 to 1811. In 1820 he was elected from Arkansas, as a territorial delegate, but did not live to take his seat. He had previously represented Vermont in Congress, thus serving from three States. This man was what was termed a redemptioner, that is, he came to this country from Ireland, and having no money to pay his passage, was sold as a servant, to meet the amount. He afterwards became a man of considerable property. There were others equally brave in the "good old colony days," who aided in making this country what it is today. Col. Lyon was a partner of Judah Paddock Spooner, my great-grandfather.

Libel suits used to be taken more seriously than they are now, when they are considered good advertising for an enterprising newspaper.

Questions of public policy and general interest; local, state and national politics, should be carefully treated in the editorials of the country editor, to the best of his ability, and in consonance with the policy outlined by him for the conduct of the publication. Some editors carry their personal opinions to an extreme length, seemingly oblivious of the fact that they may be breaking faith with their people in so doing. An editor of a reform journal, whom I enjoyed a personal acquaintance with, used to emphasize certain passages with an oath, and the readers of that paper liked the "vigorous" language, but not long after this editor was converted and the mildness of the language used thereafter lost a number of subscribers to the journal. A certain magazine (one of the so-called "fadazines"), which is very popular, is so coarse in its language as to disgust many, though they can but laugh at the witty articles. Such things, however, will not do in a newspaper which is to be read in a family circle.

Photo by Ida J. Palmer

CAROLINE A. HULING,
The Bookseller, Chicago, Ill.

What the average editor refrains from printing, from various considerations, would often be found far more interesting than that which actually appears in his pages, yet we, who live within sound of the cries of the newsboys selling the "yellow" journals of a great city, may well wonder whether their editors do not strain their imagination to distort facts, and invent fiction, to make sale for their scandalous publications.

The newspaper which enjoys the confidence of the community is the mouthpiece for such favorite contributors as "Pro Bono Publico," "Justitia," and their kind, who delight to pen communications to the dear public on affairs of

the day, and proclaim their opinions on momentous matters. They add to the interest of a paper and help to educate its readers on moral, ethical and political questions. It is well to cultivate this class of contributors. They add variety to the articles published, which are sure to be read with great interest by a select circle of friends of the writers. Retired clergymen and public school teachers are to be found in this class. In this way the people generously assist the editor.

Perhaps one of the greatest annoyances to an editor is the well-meant but often valueless advice of the laity as to the conduct of his publication. It is strange that persons having no practical experience in publishing a paper should arrogate to themselves the position of counselor to the editor, in the management of his own business.

I have had my own experience in this line, but when publishers told me that I should give more space to telling my readers of the big editions of their books, "just as a matter of news," regardless of its value to them as advertising which they did not wish to pay for, I could hardly consider their advice disinterested. An amusing incident occurred some years since when I was publishing a reform journal. A dear old lady, who feared that my paper might injure another, in which she was interested, suggested that I divert it into a magazine for "working girls." I did not believe that there was a demand for such a periodical, but was unwilling to argue the question, so I closed the matter by proposing to allow her to bring out an issue as an object lesson to me. To my secret amusement she replied:

"Oh, La! I don't know anything about running a paper, but I asked my maid if she would subscribe to one published for girls, and she said that she would." Thus I was guaranteed a single subscriber, but as that would not pay for the white paper for one issue, I concluded not to make the experiment.

Another time when an interested party took exceptions to some trade news matter which I had published, I put a page of space at his command, *provided* that he would affix his name to what appeared thereon. This he declined to do and, as I would not assume the responsibility, I did not use the article. I offer this as a suggestion to brother editors who are troubled by amateur assistants. It is an excellent way to get rid of them.

The man who seeks political preferment for his own benefit must have some means of reaching the public and manufacturing public sentiment sufficient to elect him. Many of this class will buy, or establish, a local paper for this purpose; but there are many "personal organs" in politics which do not make financial drafts on their candidates, at least they do not demand their support openly. Thus it was well known that the Albany *Argus* was the personal organ of Grover Cleveland for many years. My brother was court and legislative reporter, and city editor, on the *Argus* for a number of years, which made me familiar with the staff. Daniel Manning, its managing editor, and Daniel Lamont, a reporter, both occupied seats in the presidential cabinet as rewards for good service on the *Argus.* Thus journalism has its compensations which may some time be well worth having.

The ordinary political aspirant who seeks to control votes through his editorials, often keeps himself in the background, only the select inner circle knowing his connection with the paper. He is not a real editor, and he makes mistakes. With eye single to his one selfish purpose, he cares little about what else may appear in his publication, so that his own claims to office are well set forth. He does not know that a paper without circulation has little influence, and that the "good-will" of a journal is a very valuable asset. He is often unwilling to employ competent men on the staff to make fair reports of the petty happenings of a small place, which go far to keep up the interest of a community in its weekly paper. The "cub" reporter who essays to "enter journalism" at any cost, and will sell his services cheaply, finds a position on this class of papers. One of these wrote of a war-song concert that the music was too "classical to be appreciated by most of the audience." Perhaps it was because they were too young to know the thrill which their elders felt as they listened to "Rally round the flag," "Tenting to-night on the old camp ground," "The vacant chair," and similar "classical" compositions. The efforts of such youths are apt to amuse readers possessed of a sense of humor. Others, who take their pleasures sadly, will be disgusted at their ignorance.

Poor Mr. Opp, the creation of the facile pen of the author of "Mrs. Wiggs of the Cabbage Patch," is a type of this class when he attains to the dignity of full editorship. This ambitious but illiterate man, delighted to pen pompous editorials, one of which I quote. The name of his paper was the "Opp Eagle":

"The great bird of American liberty has soared and flown over the country and lighted at last in your midst. The *Opp Eagle* appears for the first time today. It is no money scheme in which we are indulging; we aim first and foremost to fulfill a much-needed want in the community. The *Opp Eagle* will tell the people what you want to know better and at less expense than at any other method. It will aim at bringing the priceless gems of knowledge within the reach of everybody. For what is bread to the body if you do not always clothe the mind spiritually and mentally?

* * * * * * * * *

"The *Opp Eagle* will, moreover, stand for temperance and reform. We will hurl grape and cannister into the camps of the salloonatics until they flee the wrath to come. Will also publish a particular statement of all social entertainments, including weddings, parties, church socials and funerals. In conclusion, would say that we catch this first opportunity to thank you in a collective manner herein for the welcome you have ordained *The Opp Eagle.*"

Queer as this may sound, it is doubtful but that every editor here present may not have read something equally pretentious and amusing in some of his exchanges at various times. Mrs. Rice typifies the ambitious editor who delights in fine phrases and high-sounding words, regardless of their meaning or applicability. He takes himself far too seriously, for he has no sense of humor.

But there are problems ever confronting the real editor which are worthy of consideration. Perhaps the first, an ever-present problem, is how to increase the circulation. I shall leave premium schemes, and excursions for pretty schoolma'ams, to the circulation manager to discuss, confining myself to the editorial department, for it is my belief that the most effective way to promote circulation is to make a paper so good that everyone in its territory will want to subscribe, and will feel that he cannot live without it. I have heard of but one periodical which had too many subscribers. This is a magazine published in Chicago, and a newsdealer told me of it. He said that it was so expensive to print that it cost nearly all that it was sold for, and, as it could not raise its advertising rate, a larger circulation would mean bankruptcy. I wonder how many editors will believe that story.

The personal equation enters largely into newspaper work, thus Horace Greely made the New York *Tribune* by his strongly individual conduct of its pages; Charles Dana made the New York *Sun;* James Gordon Bennett stamped his personality upon the *Herald,* as Joseph Medill did upon the Chicago *Tribune,* and the prestige given those, and other papers, by editors now among the silent majority, has made them powerful long after the brain that molded their policy has crumbled into dust.

Some papers are famous for their brilliant editorials, thus, "What's the matter with Kansas?" made William Allen White and the Emporia *Gazette* famous. Probably few country editors ever develop great brilliancy in penning editorials (perhaps they are too busy with the details of the business office), and those who do will not remain "country" editors all of their life, for they will respond to the beckoning fingers of the city managing editor, and naturally gravitate to the metropolis. The average reader of a local paper cares more for a complete record of neighborhood happenings than he does for a fine report of President Roosevelt's adventures in Africa. What he likes to see in his home paper is a notice of the arrival of the stork at the parsonage; that the village druggist has put plate-glass windows into his store; that Lawyer Jackson has bought an automobiile and is about to transform his barn into a garage. Perhaps John Smith, the drygoods merchant is laying cement sidewalks in front of his house, when his neighbors are content with planks. This is good advertising for the merchant, indicating a prosperous business. All of these items are legitimate, even though they may seem petty to the casual reader. They are significant of progress in the little community, and are read with avidity by residents, and especially by those who, having moved away, retain an interest in their former home. A paragraph telling of the burning of a stable, during a high wind, thus jeopardizing the safety of several houses, has more value to the readers of a local paper than an earthquake in Sicily, which is too remote to affect the population of Smithtown. Perhaps some rising peanut merchant of the place is an Italian whose family remain in the earthquake zone, in which case that catastrophe at once assumes a local interest, which is worth a paragraph or more, according to

the status of the citizen. The editor who appreciates his opportunities will make the most of even such seemingly trivial connection as doubtless most of my hearers do.

The largest and best of our city dailies use very small items which many wonder at, as for instance, when a two-column picture is published of a young woman who is simply to sell candy, or programs at a charity entertainment. A prospective bride is always of interest, although she may not have a prominent social position, and may be unknown outside of her own little circle. This is a recognition of the principle involved in the above paragraph. A picture of a faithful maid who has served one mistress for many years, is worthy of a notice and having her portrait published, which no less a paper than the Chicago *Tribune* recognizes. Incredible as it may seem, in these days of wandering and elusive housemaids, there are such paragons to be found and "when found, make a note of 'em," as they say, for well do they deserve the exploitation by enterprising journals. The very fact that these items are read indicates their interest and vindicates the wisdom of the editor in publishing them.

In a little suburban town, where I visit, occasionally, the editor of the paper keeps a box at the street door of his office labeled, "Items for the Reporter," into which anyone is privileged to put communications containing news notes. Thus he places the entire population on his staff and suggests volunteer service. To make such service more efficient I would adopt the plan in use on some city papers to obtain another class of contributions: viz., I would offer prizes for the best item thus sent in each week. Books sent for review, and similar articles might be used as prizes or $1 be given. This would stimulate competition in the contest and would secure many items free of cost to the paper. This offer should be well advertised and a special effort made to enlist school children and young people in the work. Even the smallest item, turned in by a child in the primary grade, will increase the interest in the paper, as others will want to try their hand at writing for the paper, and parents will be watching for matter sent in by their own little ones. In no other way can the entire community be made to consider the paper as especially for them. When this is attained an editor may feel proud of his consituency, and that he has secured all the subscriptions available in town. Should some members of the junior staff show especial diligence and ability, a small stipend, or "space rate" will further stimulate them to effort in news-gathering, in which they will take great pride.

The advertising manager may then recognize his opportunity, and if he cannot persuade every business man in his territory to take space he should begin a campaign of eduvation, to convince them of the value of the right kind of publicity.

The average editor neglects many sources of items, or works them spasmodically, rather than regularly. Possibly this may be from a multiplicity of duties, which include the business management and, too often, the principal part of the mechanical department. Proper system will enable him to get others to work for him; and, like Mark Twain's inimitable Tom Sawyer, they may be made to feel it a privilege to contribute to the paper. Ministers who are so closely connected with the three great events of life, in christening babies, performing marriage ceremonies, and officiating at funerals, should be called upon regularly for news. Some of them are greatly gratified to keep themselves, and, incidentally, their congregations, well before the public. Other professional men are also valuable sources of information interesting to their fellow citizens. They are busy people, however, and cannot be relied upon to turn in their news unsolicited, nor are they always good judges of what constitutes news matter, hence it is well to call upon them frequently and to make some return for their service, though it may be but slight.

Doctors have many an interesting item in the course of the year, in the line of their professional work. It is not good form to say that we are glad to hear of the death of a prominent citizen, but we would not like to omit an obituary notice, even though the dark angel made his presence felt just as we are going to press, and his visit was unheralded. It were even better to hold the forms for a short time, rather than defer the notice until after the funeral. With the aid of the ubiquitous telephone, data for a correct notice may be quickly gathered, and the swift Linotype, or Simplex, will rush composition.

My father made much of his "About the County" items, and had a special correspondent in every hamlet of any size, in all parts of the county. Such a department, well maintained, will stimulate the circulation materially. A tour of such places may be profitably made at frequent intervals, promoting the work of local contributors. Teachers, storekeepers, rural free delivery carriers, and ministers make excellent correspondents, as they are apt to hear many a choice item in the course of their regular business.

Political affairs are a fruitful source of "copy" as every editor knows. Where there is but one paper in a small place, it is apt to be violently partizan, neglecting the opposition party to promote the one of his choice. While it is conceded that party patronage, in the way of job printing and some advertising, is a valuable factor in sustaining a paper, which few editors can afford to overlook, it is good journalism to present news items of all happenings, including fair reports of the meetings of the opposition party and other matters that may not necessarily embody an endorsement of its political tenets.

A peculiar condition presented itself during the last presidential campaign, when not a single daily newspaper in the great city of Chicago supported the democratic party. The *Tribune* opened its columns to a certain amount of matter each day, furnished by the press bureau of that party. Possibly the space was paid for, but that did not effect the fact, and many caustic criticisms were made upon the subject. Old readers of the paper objecting to such use of space which they preferred to see filled with what was of greater interest to them. Such a condition would have been impossible a generation ago, but nowadays journalism triumphs over partizanship, and the editor who recognizes this fact profits thereby.

That "men are but boys grown tall," is paralleled by the fact that great metropolitan journals are conducted upon substantially the same principles as are those published in the smallest hamlet, and the country weekly may well take a few lessons of their urban contemporaries. Nearly every city daily devotes considerable space to charities and civic betterment, the country weekly can do nothing better to popularize itself than to promote reforms and the work of village improvement societies, women's clubs, and the like. These latter exercise a most wholesome influence on the community and tend to break down the lines of separation fostered inevitably by churches. It is but natural that persons of the same religious faith should gather themselves into little groups, and become clannish. These are broken up, and their members harmonized and broadened, by clubs and fraternal orders. The wise editor will do much to keep these associations and their activities before his readers, and he will find it profitable, withal.

A woman on the reportorial staff is a good investment, even though her services must be utilized part of the time in other ways. Many a girl-compositor blossoms out into an excellent reporter, but all else should be subordinated to the more important work; nothing should be allowed to interfere therewith.

Personal items of the right kind are desirable for a local paper, and they add greatly to its favor with those who are thus signalized. Pleasant personalities (and no others should be published), promotes prosperity in the village paper. Truly, "we all do like to see our names in print," and many who are really retiring by nature, will read dignified, correctly phrased items about themselves with pleasure and a secret pride. Though they may not buy extra copies of the issues containing them to send to their friends, the publication has won their regard and kindled a feeling which ensures retaining the names of such persons on the subscription list indefinitely. Names count for much if used in the right way. Personal mention goes far toward pleasing the absentee subscribers, those who have moved away from the place, yet retain sufficient interest in their old home to like to read about its happenings, in the weekly budget of news.

No editor who fully appreciates his opportunities will neglect the schools, for parents are always pleased to read pleasant paragraphs about their children. A good notice of the Friday afternoon "literary exercises," will hurt no one, while gaining the favor of teachers, pupils and their parents. It goes without saying that the programs of the "last day," those miniature commencements of the village schools, deserve considerable attention. So many of the children bid adieu to teachers at the eighth grade that they have no part in high-school, or college festivities, hence should have the more attention in the home paper. There are many minor events in the school year which are too often neglected, that help out in making good copy: birthday celebrations of great men, patriotic dates, Memorial Day, Flag Day, and the like. These notices should not be overdone, but should be handled in a dignified way, free from any suggestion of fulsome com-

pliment either to pupils or teachers. It is a safe rule to avoid surperlatives in descriptive, since if all of the adjectives or adverbs are used in writing up minor events none will be left for the more important ones, and there is a loss of force overdoing the complimentary. Many of my hearers will recall with amusement the florid puffery of amateur reporters in treating similar entertainments.

Happenings in the churches, Children's Day, Mother's Day, festival observance, weddings, confirmations, the doings of the ladies' aid societies, repairs and improvements to the structure, song services, etc., all offer opportunities to the wise editor to pen winning articles that strengthen the loyalty of the better class of citizens toward their own paper.

Civic pride and all that makes for the betterment of the community may well be fostered by the model newspaper. Purely as a matter of business it is well to cater to the better element, rather than to favor the lower class. Not a month ago I heard a child make the comment on the village paper, "it favors the lower classes," and I thought that its editor ought to have heard the remark. A donation of $25 from a saloonkeper, in the guise of an advertisement, may look bigger than the dollar a year from an officer in a church, but when it is noted that there are hundreds of church members to one liquor dealer, the real support of the paper comes from the more respectable citizens.

Hotels, the postoffice, railroad station, suburban trains, and stores are fruitful sources of good items, properly handled. The editor who understands his business will not overlook these places in his hunt for news.

The relation of the business office to the editorial department is not always fully understood, especially when the editor is an employee. One, who ran a flourishing job printing office, made it a practice of giving each patron a business notice in the paper, in proportion to the value of the job. Perhaps this might be considered making his space too cheap, but it was good advertising for the printing office, and some of the items had a value for their news feature. After living in the city many years the pleasant little changes of courtesies between the editor and his advertisers are apt to be forgotten, but I recall my first experience in soliciting advertising, which dates back to childhood. I believe that I was but eleven years old when I made my first contract. It was an exchange; I saw a pretty pink bow in the window of a hairdresser and timidly promised a "nice notice" if the kind woman owning the place would give me the ribbon. She did so and I "made good," perhaps I should add that I also made a good friend for many years thereafter. Probably some of the members of the National Editorial Association may find that a pleasant paragraph telling of the prize cattle displayed in the butcher shop, may be recognized by the receipt of a fine roast cut from that same fat steer. It is well to cultivate the good will of merchants by similar notices, complimenting the fine appearance of their show windows, or telling of the receipt of new stock; most editors realize that this is also profitable.

The personality of the owner enters largely into newspaper work, as it does into all other business. The editor cannot be a snob, nor can he cater strictly to the higher social classes. He must remember that he is publishing a *news*paper, first of all, and that news may be obtained for all kinds of people. No class of persons are so strongly individual as those who dabble in literature, as editorial work may legitimately be called. The tastes and interests of his constituency must be considered in conducting a paper, and the greatest intelligence and broadest culture are not any too good for the business. The more that an editor knows the better he will serve his people, with due attention to the details of the publishing end, the greater will be his reward in cash receipts.

A man who was selling an encyclopedia, once called upon an editor of my acquaintance (not a member of my family, however), and found his wife keeping the office open during his temporary absence. She insisted upon learning the object of the call and, on being told, curtly dismissed her guest with the remark that her husband was all the encyclopedia needed in that family; so, presuming that others editors are equally wise, I draw this paper to a conclusion. Amusing as this may seem, there is a fair amount of truth in it, for the man who would succeed as an editor must be well informed upon many topics, even though his knowledge be encyclopædic in its brevity. To attain this high grade of intelligence he must be (as he generally is), a voracious reader of the best journalistic models, and be well posted in magazine literature, since many important questions are now treated in the magazines which aid in the understanding of problems of the day. Books are desirable, but are not so necessary, since few editors can spare the time to read, even in the special lines in which they are mainly interested. He must be abreast of the times in all popular movements, if he would be, what he should be, a leader in his community, taking his place naturally, and by right, among its best citizens.

Profitable Features for Small City Dailies

BY E. P. CLARKE OF THE RIVERSIDE, CALIF., PRESS

HAT an age of specialties this is; we have specialties for all kinds of physical, mental, legal and even financial troubles; we have department stores where everything is classified and separated; we have special papers and magazines for all sorts and conditions of men, women and children; and more and more the daily papers are meeting this condition by a classification of their matter under department or "feature" heads. This is no freak idea but a recognition of the fact that people are interested in special things—the women in clubs, or churches; the men in lodges, politics or automobiles, and all of us in the home baseball nine. This is a busy age and the average reader of a daily paper does not read all there is in it (even though it is all "good stuff"). He wants to be able to find the things he is most interested in readily, and that is why the make-up of the paper and the classification of its news is of the highest importance. The most successful of the great dailies are those that most effectively and intelligently carry out this principle of the grouping of matter.

Within its limited field, the small city daily ought to follow the same rule. We will all concede that the telegraphic news should be separated from the local matter and the editorials from the market review; and the more widely we can apply this system of classification of matter, the better pleased our readers will be.

It may add to the gaiety of nations to sandwich a notice of the meeting of a ladies' aid society in the local columns between an account of a horse race and a report of a divorce case, but the average reader will much prefer a classification of the news so that he will find court reports in one place, church items in another and sporting news in still another.

And the editor or publisher who is getting out a paper in a city of 5,000, 10,000 or 20,000 population ought not to settle down with the idea that because he cannot afford a corps of special writers and a lot of syndicate matter he must dispense with special features such as are made prominent in the big dailies of the great cities. Some of these papers, especially in their Sunday edition, have such a multiplicity of special features that you have to wade through a bushel basket of white paper and rainbow-colored supplement monstrosities to find the particular things you want to read about.

My own newspaper experience, covering a period of almost 25 years, has been entirely on small town papers, most of it on a small city daily. I propose therefore to discuss this topic from the standpoint of papers of that class.

Let us consider briefly some of the features that are feasible and profitable for a small city daily. Any feature is feasible that is profitable; and any feature is profitable that strengthens the popularity of the paper with its readers and makes it indispensable to them, as indispensable as their supper or breakfast. The best asset for any paper is a body of well satisfied, loyal readers.

No daily paper is complete without its society column and that department of the paper may well include the activities of women's clubs and of many of the lodge and church organizations. The paper that women read is the one that is sure of a circulation that you cannot pry away from it; and no department will make a paper so solid with the women readers as one that deals intelligently and sym-

pathetically with the affairs in which women are interested. This work should never be done by some one who has a good natured contempt for social functions and club activities and it should not be done by some one who does not know the difference between a "tub" dress and a princess gown or has no more conception of the field of effort covered by a state federation of women's clubs than she has of the meaning of a page of botanical terms. A weekly review of general club matters and the wide range of modern activities of the modern woman can be made of great value to a paper, but the department, and all other work in this line, should be handled by a woman who is in touch with those things and in sympathy with them.

Some editors ridicule the idea of a church news department; but in many communities a majority of the families belong to some church and why should not due prominence be given to the activities of those organizations. The secular paper is not a religious publication and the editor needs constantly to be on his guard against the zeal and fanaticism of people who want to draw his paper into religious and denominational controversies; but there is news regarding the churches, the Young Men's and Young Women's Christian Associations, that is legitimate and interesting and it can be best handled as a rule under a department head. Let it be distinctly known that it is news you want and not sermons or essays on controversial subjects and you will have no trouble in getting it.

Some 15 years ago I started as a feature of our Saturday paper a "Layman's Talk" on the Sunday School lesson. One of my contemporaries soon after got off a good joke on me to the effect that when the children of our city were bad, the mothers frightened them into goodness by threatening to read to them the *Press* "lay sermon." Nevertheless the feature has proved a popular one and syndicate articles on the international lesson are now used in a majority of the daily papers of the country. Some of these are good and others, if not bad, are at least indifferent. I believe a review of the lesson written by some one connected with the paper, or some local person, is preferable to a syndicate article, as local matter is always better than syndicate matter. Frank L. Dingley of the Lewiston, Me., *Journal*, has been writing a Saturday night talk on the Sunday School lesson for the last twenty-five or thirty years, never missing an issue (in fact, I think the *Journal* is the first secular paper in the country to inaugurate this feature; I know I got my idea from that source and I think I am quite a pioneer in that field). One good feature of Dingley's lesson study is that he brings in some timely comments on local and state politics and reform movements that add much to the interest of the feature. And I see no reason why any paper cannot follow that one.

A musical department is a popular one but it wants to be edited by some one who knows the difference between a Beethoven sonata and a rag-time waltz. And here again the local flavor should be made prominent. A ten-line item about a local church choir is better for the average country daily than a half-column critique on the latest operatic success of Nordica or Caruso. If you have no musician on your staff, get some good local musician to edit this department on space rates, but do not allow her to use the paper as a channel for venting her petty prejudices and personal spites.

The lodge news ought to be prominently featured for practically every man in every American community belongs to any where from one to seven lodges and the women are now a close second in this regard. But do not allow the lodge column to be made the medium for free notices about entertainments that ought to be paid for at the line rate. Kindly but firmly refer matter of this sort to the business office; and you will have to watch this proposition with an eagle eye, for next to the church worker the lodge booster is the most skillful and persistent seeker for free advertising there is in the land.

The sporting column has become as indispensable as an editorial column and I do not know but more so. As in musical matters, here again it is important that the department be handled by some on who knows something about it. A man does not want to be turned loose on this work who does not know the difference between a base hit and a passed ball, or between a touchdown and a goal from placement.

The auto must be given a prominent place in the sporting news of an up-to-date paper and it has become necessary to educate some one about the office to a knowledge of at least the technical nomenclature of the modern hurryup wagon. He ought at least to know the difference between a runabout and a touring car and to have som glimmering idea of the difference between two cylinder and four cylinder cars. Here, again, you must be on guard against advertising matter that is so skillfully worked into readable auto "dope" furnished by manufacturers and dealers. Even great news gathering organizations like the Associated Press and the United Press allow themselves to be worked for columns of better than "next to pure reading" advertising stuff about the achievements of particular makes of cars that are making runs across the world or the country. That stuff ought to be paid for at space rates. And if a thrifty institution like the Associated Press can be fooled, the average country editor may be looked upon as easy game. News is one thing; commercial advertising to sell cars is another; and some of the alleged auto news should be received only on the C A D (cash in advance) basis.

Every county seat paper should make its county correspondence department a prominent feature; and almost every small city that is not a county seat has suburban territory that can be featured in this way. We cannot expect a subscription list from this outside territory unless we represent it in the columns of our papers. And I believe the day is past when we can expect to have this matter furnished by correspondents simply by sending them the paper. If the department is worth while at all, it is worth paying for. Use the blue pencil freely on your correspondents' letters until they learn to send live stuff only and in terse, readable form, but pay them for the matter you use. Pardon a reference to my experience. The *Riverside Press* is printed in a county of 25,000 or 30,000 population, about half of which is in the county seat. We have twenty country correspondents; we pay about $75 per month to them; and I have no hesitation in saying that the money is well invested.

Fortunate is the editor whose paper is located in a town having a college or similar institution; for that should be a rich mine of news. But if we are not all so favored in that respect, we at least have the public schools, attended by practically every child of school age, and objects of interest to every mother and father in the community. We ought to give more prominence than we do to their activities—manual training, domestic science, the study of birds and flowers, debates, basketball and a score of other things; and the feature can certainly be made one of the most popular that a paper has.

Nearly every community has some industry on which its prosperity is based. In the city in which I have the honor to live, it is orange growing; and so we make a weekly report of orange shipment and review of market and orchard conditions a feature of our paper. In my judgment every progressive paper, daily or weekly, ought to have a feature of this sort. If it is corn or even hogs that you ship instead of oranges or apples, feature that. And if it is shoes or typewriters or coal or silver that you manufacture or mine, give prominence to that industry, and feature the number of carloads you send out. Thus will you play your part as booster.

Another feature that can be made very effective in advertising your town is a weekly and monthly summary of building improvements to which a review of real estate sales may often be added with advantage. If you have no city ordinance requiring the issuance of building permits, it is sometimes difficult to secure complete statistics on buildings; but buildings and material men are usually very willing to put a reporter "wise" on these things; and real estate men are always glad to give out information on important transfers of property. A newspaper record of these two lines of progress is splendid proof of the prosperity and growth of a city, more valuable and convincing than any number of "hot air" boom stories that do not get down to actual facts.

I have a decided impression that every editor present probably knows more about these special features and how to handle them successfully than I do; but possibly some one may ask whether it is best to accumulate the matter for some of these features and run them once a week or to make use of the material you have daily or every other day. I am not going to be foolish enough to write any general prescription; every editor must be his own doctor and decide on a treatment according to his own special conditions. The only suggestion I am going to venture is a sort of double-barreled one—do not hold "live" stories until they are "stale" and your contemporary "scoops" you. And on the other

hand, if you are to have departments or special features at all, do not run them so often that you only have a few stickfuls of matter to place under a big department head.

We have been considering "profitable" features; but we should not consider profit in the narrow sense of dollars and cents. The mission of a newspaper should be something higher than to make money. It is true we have to consider that phase of the matter, but we should always have a higher purpose. The newspaper is a sort of secular pulpit, a leader in all movements for progress and reform. And we should plan to publish such papers as will make that leadership most effective. Any feature that will make the hold of a paper stronger on its readers and so contribute to the power of that paper to mold and direct public sentiment is a profitable feature. Every paper does a work for the community in which it is published that cannot be measured or paid in dollars and cents and we ought to be proud of the fact. The paper should always be a little better than the town, never as poor as the town will stand. The editor should be a standard-bearer in the army of life; and it is the mission of the standard-bearer to carry his flag forward and let the army come up to it. He should never march in the rear and wait to follow the lead of some one else. The banner that we newspaper men ought to carry is a "stainless flag," blazoned with the stripes of fairness and made glorious with the flaming star of truth.

Developing Advertising on a Small City Daily

BY CARL ROE, UNION STATESMAN, WALLA WALLA, WASH.

SOONER or later the manager or proprietor of a daily newspaper in a city of ten to fifty thousand population, realizes that not everything comes to the one who waits. If he waits for the advertisers and subscribers to bring in enough cash to meet the payroll at the end of the week, he is going to be sadly disappointed, as can probably be borne out by every business manager of a daily paper.

Omitting the several axioms of the newspaper business, such as the "Circulation is the foundation upon which all advertising is based," "It pays to advertise," etc., I might say that even after a circulation has been secured, there is a good-sized job ahead for several able-bodied men to secure and maintain sufficient advertising patronage, at the proper rate, to regularly "make the ghost walk."

But, seriously, the problem of realizing on a circulation through the advertising department, and thus making a profit on the newspaper investment, is the ultimate aim of every modern newspaper.

Several books and many magazine and newspaper articles are in existence purporting to teach the novice and the old-timer "how to make a newspaper pay," but I will venture to say that while some of them may be helpful, each one of you who are engaged in the business of publishing a small city daily, either has or is working your problems out along lines peculiar to the local conditions.

What experience I have gained in developing the advertising end of a newspaper has been worked out in Walla Walla within the past three years. Formerly our single advertising solicitor put in his time on *local display* advertising, calling on the different merchants, trying to induce them to contract for space and then each day to get their copy ready. On some of them he called many times each day, according to whether or not the particular individual was an enthusiastic advertiser. After a while it dawned upon us that there were three classes of business men in the city from a newspaper advertising standpoint. To the first class belong the few leading and progressive firms who actually believe in advertising, are willing to pay money for the space, and who set aside a liberal amount for advertising each year. This class, it may be said, always prepare their copy carefully and regularly. To the second class belong the business men who sometimes believe in advertising and sometimes do not. When business is good in the city they are usually good for some space several days out of each week, but it is always an all-day's job for the advertising man to get their copy. To the third class belong those who never advertise and take frequent occasion to say that they do not believe in advertising.

After making this classification of the business institutions of the city it was clear that if an appreciable increase in the volume of local display advertising was to be secured it would be necessary to look to the second and third classes, rather than the first. The first class institutions usually kept increasing their space each year any way.

In looking about for ways and means of reaching the second and third class it was found that one of the great problems of the average merchant is the preparation of advertising copy. A development of this thought resulted in our writing the copy for a few of them. This proved so effectual that another man was employed and a copy-writing department added to the newspaper. More new business was run in the newspaper during the next three months than in any three years before. The ad-writer was kept busy by the advertising manager, or solicitor, and many of the second and third classes found themselves paying good-sized advertising bills on the first day of every month. The ad-writer furnished the copy on almost any subject from ladies' suits to threshing machines. He used page, half page and quarter page layouts and made himself a general utility man to the advertising business of the city, and a profitable adjunct to the newspaper. The copy for the ads for the Sunday edition were of larger size and ready earlier in the week, thus relieving to a great extent the rush on Saturday night.

About this time an analysis of the advertising pages of our own paper and those of other and larger city dailies resulted in a classification of the advertising business of a paper under three heads. The first is local display advertising; the second classified advertising, and the third, foreign advertising. By careful observation we found that while we had been developing the local display advertising we had overlooked the two other sources of income.

Attention was next directed to the classified advertising. After careful consideration another advertising solicitor was employed, whose time is devoted solely to the development of this branch of the business. Within two months the classified had increased from a bare two columns to over a full page. Most of this increase at first was made up of real estate advertising, being a few lines from a majority of the real estate firms in the city. Later a house-to-house campaign was begun. Sub-stations for the receipt of classified advertising were established in the suburban grocery stores and in the stores in neighboring towns. All of this was supplemented by plenty of advertising in our own papers. The classified solicitor soon came to be known all over the city and a very healthy increase in business was evident immediately.

Just now we are engaged in a campaign for foreign advertising, and results are in evidence, though we expect to reap more substantially later in the fall. The campaign for this line of advertising is carried on through our special agents and the general agencies, and the advertising journals, as well as direct to the manufacturers. A list of the advertising agencies is on file in the office, as well as a list of the leading foreign advertisers of the United States. Carefully prepared advertising of our papers is regularly sent to each, and then followed up by both form and personal letters. Every manufacturer has received a letter, to which is attached a copy of an advertisement carried in some other paper, setting forth the merits of our publication and the advisability of authorizing a contract with us.

Summer resorts, and school and college advertising is not overlooked as a means of increasing the volume of business during July and August.

While the greatest possible results cannot be expected in one year, yet some of them will each year become regular patrons of the paper.

These are the lines along which we are working and have been working for some time. And I take them as fundamental to every small city daily. Of course each step has meant the employment of one or more men and an increase in expenses, but each has also meant an increase in the volume of business that warrants the expenditure.

It will possibly be a revelation to the managers and proprietors of small city dailies if they should take the daily papers from other cities and carefully measure and classify

the advertising from day to day under the heads of local display, classified and foreign. You will probably find that you have been devoting your time to the local display business and neglecting the other two important branches.

What may prove profitable in Walla Walla, however, may not work out the same in other cities, but we believe a careful and intelligent analysis of the business of the average small city daily will reveal an opportunity to develop the advertising business.

Report of the Illinois Woman's Press Association to the National Editorial Association

SEATTLE, WASHINGTON, JULY, 1909.

Mr. President and Members of the National Editorial Association, Gentlemen and Ladies:—

The Illinois Woman's Press Association, a twin sister of the National Editorial Association, is preparing to celebrate its silver anniversary next June, full of vigor and enthusiasm. The year just closed has been the most active and prosperous in its existence. The reports rendered at the annual meeting, held June 3rd, were remarkable as showing a great amount of work accomplished and the largest balance in the bank in the history of the organization. Despite the large membership, now numbering, all told, nearly 130, the meetings have been conducted in the greatest harmony. The membership is divided into regular (105), asso-

THE CITY OF SEATTLE
BY ITS MAYOR AND COUNCIL
a Cordial Invitation to visit the
ALASKA-YUKON-PACIFIC EXPOSITION
to be held in this City from June the first to October
sixteenth, one thousand nine hundred and nine.

AN INVITING INVITATION

ciate (5), corresponding (2) and honorary members (8), fourteen having been added during the year despite the strictness of our requirements for those who would enter our ranks. The membership is on a strictly professional basis, every applicant being obliged to establish her connection with a reputable journal, either as editor, publisher, contributor or artist; or she must have published original matter in book form; or be a magazine writer. We construe the term "press" in a broad sense, hence do not restrict our membership to journalists. All classes named above are numbered on our lists including a few poets.

Geographically our territory is nominally limited to the state of Illinois, but actually we have members on the Atlantic and on the Pacific coasts, with a few scattered about between, for such is the hold which the organization has upon its members that they retain their connection after removing to distant points. Most of them reside in or near Chicago, hence all meetings are held in this city.

Two meetings are held each month, a social-program meeting the first Thursday of each month, from October to June, and an afternoon business meeting the middle of the month. The programs combine professional topics with entertainment, musical and literary. The principal number on the program is generally given by some writer or publisher of note, and the theme discussed pertains to the professional work of the club, or is instructive. Fine vocal and instrumental selections lighten the programs.

Of late years the Association has taken up a small amount of philanthropic work, making it part of the year's work to entertain the inmates of the Model Lodging House for Women, in memoriam of our beloved Frances E. Owens, and the old ladies of the Home for the Aged, in memoriam of Miss Asenath M. Brady, a member who passed away there last year. We are about to add a date at the Home for Incurables, in memoriam of Mrs. Fanny M. Harley, who went to rest a year ago. In addition to this we are accumulating a fund which will be devoted to the establishment of a home for aged and infirm women writers. We have about $400 in bank as the nucleus for this fund. The association was incorporated in 1907 to enable us to hold property.

A small publication in the interests of the Association was maintained several years and may be revived. It is our purpose to promote the welfare of members and other women writers in every way possible, and to cultivate social relations between them. To that end we are about to establish headquarters in the heart of the city and are hoping to take rooms with the Press Club, in its new building, 118 Dearborn St. The club has been most cordial to our organization from the date of its formation, the initial meetings having been held in its rooms and of late years our program meetings have been held in the library of the Press Club.

We have sent our new president, Mrs. Cornelia T. Jewett, to the National Editorial Association as our representative. As she will present this report in my absence, it is impossible to tell you how proud we are of her as a practical worker in journalistic lines, at the head of a publication of international circulation, the organ of the greatest body of women on the globe. Under her capable leadership we expect to accomplish a greater work during the present year, and in preparation for our silver jubilee next June.

Respectfully submitted,

CAROLINE A. HULING,

Executive Committeeman, Illinois Woman's Press Association.

Unsolicited Words of Praise.

COULD NOT THINK OF DOING WITHOUT IT

National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Enclosed find draft for $2 for subscription to the NATIONAL PRINTER-JOURNALIST to April 1, 1910. I could not think of doing without this publication, which is one of the few that I take home to read carefully.

Yours truly,

MEXICO, MISSOURI, July 10, 1909. R. M. WHITE.

DOESN'T INTEND TO GET ALONG WITHOUT IT.

National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Enclosed please find $2 in payment of within bill for the N. P.-J. for another year. I suppose I could get along without it, but I don't intend to.

Yours very truly,

FARINA, ILL., January 10, 1909. A. S. COON.

COMBINES ALL THE GOOD FEATURES.

GENTLEMEN:—In my opinion, the NATIONAL PRINTER-JOURNALIST combines all the good features of the various other printers' papers. I established this paper December 24, 1908, and am lost without a good trade paper.

Yours truly,

HOSPERS, IOWA, April 4, 1909. JOHN S. RANDOLPH.

COULD NOT DO WITHOUT IT.

National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—I herewith enclose my check for which you will continue my subscription to the NATIONAL PRINTER-JOURNALIST, for it is so good I can not do without it in my business.

Yours truly,

HYDEN, KY., Jan. 20, 1909. H. C. CHAPPELL.

The NATIONAL PRINTER-JOURNALIST is unequaled as an advertising medium in its field. No attention paid to postal card requests. Information cheerfully furnished to all patrons.

Subscribers and patrons will confer a favor on the NATIONAL PRINTER-JOURNALIST COMPANY by sending in the names of responsible newsdealers who do not keep the monthly on sale regularly.

Manuscript sent in for publication must be accompanied by a letter of explanation and return postage.

CHICAGO, AUGUST, 1909

We have had occasion recently to publish from able addresses and papers, many excellent thoughts as to the value of associations, for the interchange of views and experiences, and for mutual consideration and collaboration of ways and methods, in carrying on the work of newspaper-making, printing, engraving and other useful callings, as well as for social enjoyment and uplift. These deserve careful study, thought and practical application. The higher the equipment and broader the view, the greater and more satisfactory is the success which is measured, not alone by the receipts in the business office, but by the good that is accomplished the influence and power exercised for general betterment. He is not most permanently prosperous, who keeps his eye alone on the cash box or the size of the bank account. People pay for services rendered and the greater the service, the more general and the more continuous the employment.

* * *

Discussions are sometimes had as to the value of the editorial department of the newspaper. That value depends upon its character.

* * *

In the remarks of Mr. Johnson, before the Kentucky Press Association, published elsewhere in this issue, are some very apt suggestions along this line of the useful character of editorials. While the object of a newspaper is to find the news and especially that news which most nearly concerns the residents of the community, city or state in which the paper circulates, it has, as Mr. Johnson suggests, a very important, useful and generally a properly appreciated object on work in the aiding to build up all worthy local institutions and industries and aiding of readers in forming correct opinions. Herein is found a field for the most effective editorial work.

* * *

The editorials are the very life and heart of the newspaper and are the medium through which a living interest, a trusting comradeship and a genuine confidence, respect and friendship, are kept up for the hope among the readers. Editorials should ever be candid, reliable, earnest, pointed, brief and on topics of the highest, immediate interest and usefulness to the newspaper's patrons. Through them, the editor shows his good will, his loyalty to his community, city and state and makes every reader to feel that there is a sympathetic life pervading every issue. The editor must courageously deal with and wisely and sympathetically interpret current events, first being sure of his facts, his premises and then carefully logical in his conclusions, with a view, always to honest helpfulness and conscientious righteousness and fairness, avoiding all prejudice, partizan bias or the influence of self-interest, and all partiality of personal friendships on the one side or the unfairness of personal enmity on the other.

* * *

The editor must be ever on deck to make himself felt and recognized as a vital personality on all important events or questions of interest to his constituents. Every man should put his honest personality into his work and win a name as being ever alive, awake, broadly informed and wisely sympathetic and not as one dead or indifferent.

* * *

One's calling is to be used as an implement or means of accomplishment, the manifestation of a life, and for growth, for doing more and becoming more, for seeing more and feeling more, the joy abides and accomplishment is worthy and victory sure. More than all this vitality is preserved. Without this joyous interest in one's work, as years advance, nothing remains but the dead timber; with it all the power and fires of intellect and feeling remain to the last. We personally recall two men, whose years are four score, whose brightness and vigor of mind, whose warmth of sympathy and feeling are as great as when at twenty-five years of age, and when called upon, they express their thoughts and opinions with as much earnestness and clearness and with much more wisdom and effectiveness than many men of fifty or sixty years of age who are worn out, as dry as husks or stubble and seek retirement and relief from thought or work to await death of the body.

Newspaper work should be somewhat on the plan of the true method of teaching geography to the child; first, begin at home, teach the position and the true relations and uses of things near at hand, then expand the view and the teachings into the city, the township, the country, the State, and then to the adjoining States and on to include the whole nation and then adjoining nations and so on, until the knowledge imparted includes the whole world. Interest is greater at the home and things at home are most important to life and development. No correct, clear, practical knowledge and understanding of relationships, of relative values or positions will be attained without mastering the nearby things first, as standards of measurements. The newspaper man must first know, and wisely treat of things in his own vicinity, before he will be able, wisely or profitably to teach, or interest his readers in the things of the broader world. Then, if every community, every township or city is made right and influenced to right living, to the right use of means and opportunities for reaching a competence or securing prosperity for carrying on a good government with a square deal for all and each, the good government of countries, the State and the Nation and a world-wide prosperity and security will be assured and editors will be saved from much trouble in trying to regulate legislatures, governors, Congress and Presidents.

* * *

There is no reason why editors should not be the writers of books. Their close contact with men and events, their constant observation and their broad information, the necessity that is upon them to know about and treat of all things that concern or interest all their people, as well as their constant exercise in composition, in the expression of thoughts and the narration of events, in sifting out the truth, proving all things and standing by that which is good, and of condensing and writing clearly and understandingly, all help to fit editors for successful authorship. We are not so sure but that authorship, putting their views and sentiments into books, would make, in many cases, better editors, more careful in their writing and more thorough in their investigation. There is something about a book that suggests permanency and a broader, more serious accountability, than in writing for a newspaper that is expected to endure only for a day or week.

* * *

Be all this as it may, we have before us, with the highly prized compliments an autograph of the author, G. W. Hughes, of Clinton, Ill., a book by the editor of a home paper. The volume is tastefully gotten up, contains over three hundred well-printed pages and is entitled, "Faults and Follies. As mirrored in a Series of Lectures." It occurs to us that it is better for an editor to treat of "Faults and Follies," in a book than in his paper. These "Lectures" have the editorial brevity and decisiveness, and cover a broad range of subjects on such matters as are apt to come under the observations and treatment of a local editor, from "Boys" to "Wife Choosing," or vice versa, as the choosing of the wife generally comes first. The preface indicates the benevolent object of the work and shows the right idea of the proper place to commence and to secure improvement. The author says: "The reform most needed is that of the people. The world grows better as the people become better. As the character of the members of the family makes the home what it is, so the character of the people makes the world what it is."

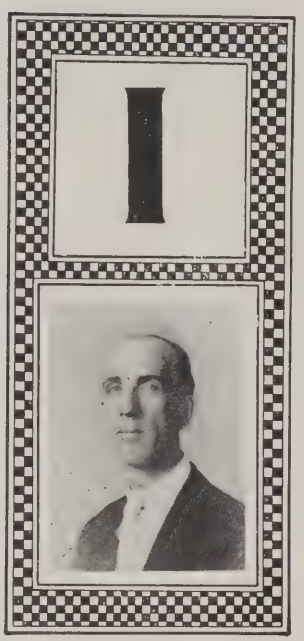
GENTLEMEN:—Enclosed please find check for $2, for which please renew my subscription to your valuable journal, and oblige, Respectfully,

A. S. BURGER.

REVIEW OF JOB PRINTING

BY E. S. HANSON,

Address all communications for this department to 925 Linden Ave., Wilmette, Ill.



I MAY be intruding upon Mr. Copper's department, but I should like to call attention to a publication which has just been started by the Barnhart Bros. & Spindler foundry. It is gotten out in newspaper style and is entitled *The Barnhart Flyer.* No. 3 of of Vol. I has just reached my desk, and I trust that succeeding numbers may not miss me. It is a good example of what can be done by using type in series. It is not loud in any sense of the word, but presents a dignified appearance which it would be hard to surpass. At the same time it presents the matter in strong shape, bringing out the relative importance of the various articles by an admirable system of headings, as well as presenting a neatness and uniformity in the advertising columns which one seldom sees. It also contains some reading matter which is of interest to printers, and those who are not getting it would do well to ask for it.

* * *

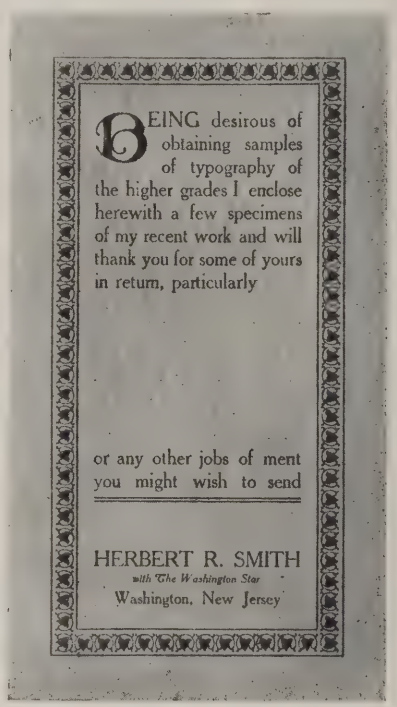
In this connection I want to say that the foreman of an office should make it a point to see that all matter of this kind comes to his desk. Sometimes an office does not get onto the mailing list of all the various foundries; and even should the office be getting all the specimen sheets and printed matter of foundries and manufacturers, there are some publishers so short-sighted as to withhold these from their employes, believing that they will merely stimulate a demand for increased expenditures for materials. It is absolutely necessary, if an office expects to be up to date and cater to the best class of customers, that not only the publisher, but the working force as well, should know about all the new things that are coming out. Aside from this, few better specimens of typography ever get to the average office than the circulars and specimen sheets such as most of the foundries send out. There should be a basket on the foreman's desk for all matter of this kind, where it can be consulted not only by himself, but the others in the office as well.

* * *

Several paragraphs in *The Barnhart Flyer,* to which I have alluded, are devoted to an attempt to stimulate the use of a larger quantity of quads, leads and slugs. Of course, the purpose of the foundry in thus agitating the matter is primarily to increase its sales. It will usually be found, however, that a foundry does not attempt to sell anything which a printer does not really find advantageous in his business. They not only do not want to jeopardize his good will by selling him something which he does not need, but they also know that material which is not usable is also not easy for him to pay for. I have commented a number of times in this department on the meagre equipment of many offices in this regard. They are losing money by it every day, although they do not seem to realize it. The foundries tell me, however, that the demand for leads and slugs is increasing at a rate much more rapid than the normal increase of business, so it would seem that some printers at least are waking up to the advantages of having material of this kind of suitable size always at hand when needed.

* * *

A type foundry representative recently suggested that the compositor and stone man would be in a serious predicament were they suddenly required to go back to the days of cardboard and wooden wedges for



BEING desirous of obtaining samples of typography of the higher grades I enclose herewith a few specimens of my recent work and will thank you for some of yours in return, particularly
or any other jobs of ment you might wish to send

Attractive card by which one printer solicits exchange of specimens.

justification, instead of having a box of brass and copper thin spaces at hand. There are, however, a large number of printers who do not have these at their disposal, but are struggling along with the obsolete methods of a decade ago. Some of them know what they are missing, but cannot induce their employers to equip the office with modern methods. Others there are who think the old-time piece of cardboard is just as good and refuse to use new things, even when they

have the opportunity. It can be set down as a sure thing that these men are not sought after to do the work on which quality is of greater importance than price, nor are they making as much profit for their employer on the work in hand as it is possible to make.

* * *

Speaking about price and quality reminds me of that story in the last issue of *Character*, that sprightly little publication sent out by the Griffith-Stillings Press of Boston. I will give the story just as it is published there:

"WHICHEVER IS CHEAPEST."

A man once walked up to the ticket window of a railroad office. "Give me a ticket to Springfield," he said. "Springfield, Mass., or Springfield, Ohio?" asked the ticket agent. "Whichever is cheapest," was the reply.

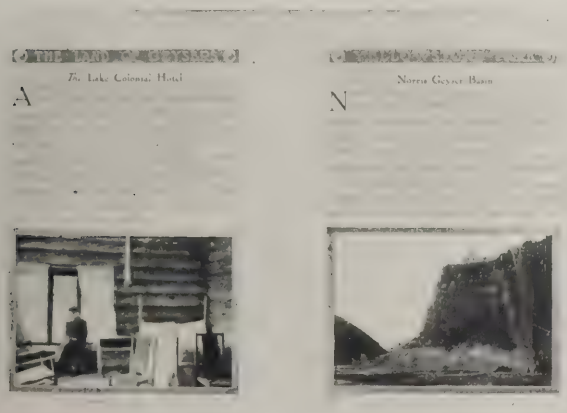
Ridiculous, wasn't it? But suppose a man were shown two dummies by a printer, and was asked which he would take. And suppose he should reply, "Whichever is cheapest." Would that be equally ridiculous? Under some circumstances it most certainly would.

The price you pay for advertising matter is the charge for transportation of your business arguments. Certain transportation methods or routes will take you to one place, others to other places. You want to go to the brain centers of those who should buy your goods. There is a route that goes there—straight as a string. A ticket which costs you less may take you over a route which switches you off in the wilderness, miles from your destination. You may never get anywhere at all—not because your cargo of facts is inconclusive, but because you shipped by the wrong route.

It is cheaper in the end to buy transportation direct to the point you want to reach. Pay the price, and get there.

* * *

Two little booklets issued by the Northern Pacific Railway have just reached my desk and form an interesting comparative study. I am showing two pages of each of them in order that my comments on them may be more intelligible. One of them has headings



throughout in halftone. These are re-etched so that the letters appear in pure white, but the shading of the background is so dark as to make the heading decidedly obtrusive. The halftone illustrations, which are scattered profusely throughout the booklet, also have a wide border of the same density as the headings. This gives a decidedly heavy effect. The attention of the reader is constantly drawn away from the text matter, as well as from the subjects of the illustrations themselves, by this undue amount of heavy ornamentation. Had these headings and borders been printed in a tint, or in a much lighter shade of halftone, they would have been very acceptable. The other booklet omits running heads entirely and has the halftones surrounded by fine double lines. Possibly I am an exception to the general rule, but it is much easier for me to read this second one than the other.

It is restful, whereas the other is tiring, and I get the drift of the story much more readily in this simpler one.

* * *

That old stand-by, the Devinne series, seems not to have lost its usefulness entirely for the better class of work. I have just received a little envelope folder of the better sort, printed by Nolan Brothers of Brooklyn in this old-time series. It is printed on a dark stock, however, so that the boldness of the type is somewhat softened down.

* * *

One of the best pieces of work which has come to me for some time, is a little booklet sent out by the School of Printing of the North End Union, Boston. It shows that the apprentices there are being trained,

not only in correct principles of display, but in careful, painstaking craftsmanship. The pages I am showing do not show their full value in the reproduction. The stock used is a machine finished book of cream tint. The text matter and running heads are in black, and the rules and side heads are in orange.

* * *

The *Bulletin*, Kalama, Wash., sends out a little booklet descriptive of its county, which is intended to interest tourists investors and homeseekers in that region. It is scarcely gotten out in sufficiently attractive manner, however, to accomplish this result. As I

have pointed out in these pages before, there is so much of this class of matter printed in the highest class of typographic art, that that which is only mediocre receives little attention unless there is some personal reason for the recipient to peruse it.

* * *

J. Thomas Perry, Atlanta, Ga., sends the specimen reproduced herewith and asks for criticism. The head

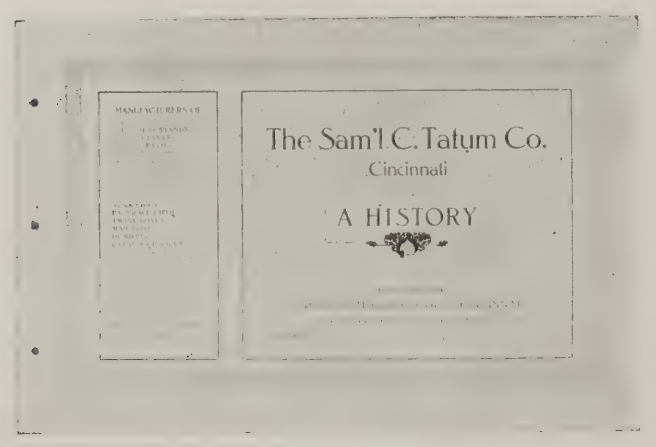
Atlanta, Ga.,

is a very well composed one and the only criticism I could possibly offer would be that the matter to the left, under the head of "Central Council," might all be in a smaller series; even this, however, I think I should not insist on were the work being done for me.

* * *

The Ebbert & Richardson Company of Cincinnati send me a little portfolio gotten out for the Sam'l C. Tatum Co. of that city. I am reproducing the title page, the only objection to which is the abbreviation of the word "Sam'l." This, however, seems to be the title of the firm as carried all through the booklet and shown on the signs in illustrations of their plant.



This booklet is printed on heavy white enamel paper with the text matter in black, the halftones in photo brown and the border in a cream tint.

* * *

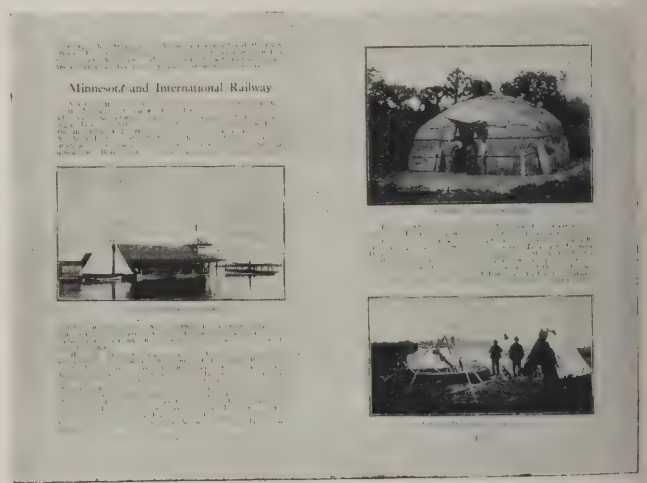
Raymond Stoll, Brookville, Ind., sends a letter head and envelope on which he asks for criticism. My criticism would be on the letter head to leave out the rules under the line, "Hardwood Lumber," and put the 'phone line in a smaller size of type. The envelope is very satisfactory with the exception of the spacing both above and below the line, "Manufacturer of all kinds." This space should be closed up.

* * *

B. B. McKay, Almena, Kansas, sends a letter head on which he desires criticism. I shall not try to reproduce the head, but will say that it is printed in four colors with a large amount of rule work and ornamentation. A number of years ago it might have been considered a good example of typographic art, but its day has long since gone by. I would suggest a much simpler head, in not more than two colors, and leaving out the larger part of the rule work and ornamentation. Try a plain, simple head and see if you will not be much better pleased with the result. Your Fourth of July sticker is a very satisfactory piece of work.

* * *

Of course one expects to receive from the Manz Engraving Company a piece of work which is absolutely faultless, and I am not disappointed in a little booklet just sent out, entitled, "Complete Service." The purpose of the booklet is to show that this firm can carry a piece of work from beginning to end, doing the designing, illustrating, engraving, printing and photography all under one roof and under the same supervision. This tends towards greater unity in the finished product, as is attested by the little



booklet under consideration. It shows illustrations of the various processes used by this company on their work, together with text matter describing these processes, under handsome little engraved headings. The whole is gotten up with a delicacy and attention to artistic detail it would be hard to surpass.

* * *

Charlie Craddock of Killeen, Texas, is, I think, the youngest contributor so far to this department. He is but 14 years old, although he says that he has had three or four years of experience in the printing office. He sends a large assortment of his work, much of which would pass careful scrutiny by many business men. The best specimen which he sends is the letter head which I am here showing. This might well have

had the name of the company in a larger size of type. The date line should also have been in the same series as the rest of the head. This would have made a very neat piece of work, indeed. On much of the work there is an overabundance of rules. The contributor does not say whether he did the presswork or not. It is not as smooth as it should be, however; but certainly for a workman of this age the work is remarkably creditable.

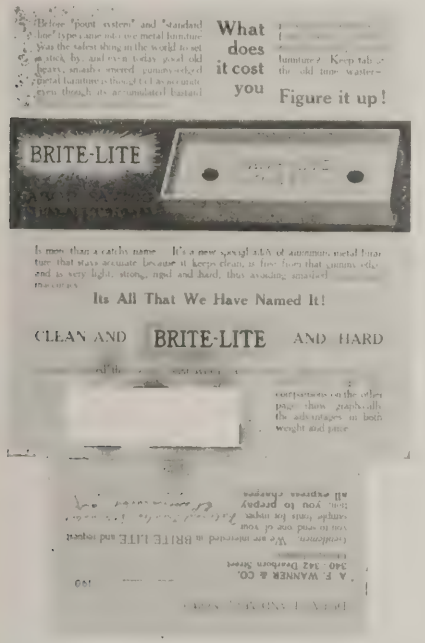
* * *

There is a demand among business men, which is growing every day, for a convenient return post card to send out with their advertising matter. The latest development of this kind is a card attached to a larger card and so folded that the name of addressee appears through a hole in the card. This address is placed on the back of the return card, so that when the return card is detached it has already on it the name of the sender, answering the purposes of a signature, so that no effort is required on the part of the recipient except to detach the card, affix a one cent stamp and place it in the mail. The printer who first gets on to these new things is the one who will keep his presses going while his competitors are sitting around wondering why business is so dull.



* * *

Herbert R. Smith of Washington, N. J., has a style of printing business cards which is all his own. I am showing three of them, although it is not possible to show them in their original strength and attractiveness. They are printed on heavy linen-finish cover stock of different colors, each card being printed in two colors of ink. They are decidedly different from the ordinary business card, although not being in any way sensational or showy. They are so well designed as to give them a prominent place anywhere. Mr. Smith sends out a little card to other printers asking for an exchange of specimens. This is a decidedly good idea and might well be adopted by other printers. In common with a number of other members of the craft, Mr. Smith is a poultry fancier, as the accompanying letter head will show.

* * *

A short time ago we had something to say about the matter of dummies, and the topic has come up again on receipt of a post card from H. M. Kurtzworth, Detroit. In regard to the dummy he says:

The successful printer now-a-days uses art and brains as well as type and paper—he no longer waits for jobs to come to him, but by having an artist get up ideas and a sketch or a dummy—takes the initiative and closes better contracts with much less competition. It does not take a large plant to do good printing—it is the idea that counts.

N. B.—A dummy is not only a great aid in showing the unimaginative "prospect" just what he is going to get, but also saves you time in showing your men just what is required.

Twenty-Fourth Annual Convention

of the

NATIONAL EDITORIAL ASSOCIATION

ROUTINE REPORT BY THE RECORDING SECRETARY, R. H. WALKER

On Monday, July 19, 1909, at 10:30 A. M., in the Assembly Room of the Chamber of Commerce, Seattle, Washington, the members of the National Editorial Association assembled in their Twenty-fourth Annual Convention.

The convention was called to order by President Will H. Mayes.

Invocation by Past-President B. B. Herbert.

Roll-call of executive committee and officers by Recording Secretary, R. H. Walker.

The President appointed the following credential committee: J. B. Castle, of Illinois; R. B. Habgood, of Pennsylvania; Will G. Curtis, of Minnesota; F. L. McKenzie, of Alabama; and A. D. Moffet, of Indiana.

President Mayes made his annual address, with Vice-President Pomeroy in the chair. (See page 535.)

On motion of B. B. Herbert, the President's address was referred to a committee of three. The following committee on the President's address was appointed by Vice-President Pomeroy: B. B. Herbert, of Illinois; H. B. Hale, of Connecticut; J. P. Chambless, of Texas.

W. F. Parrott, corresponding secretary, made a verbal report: He said in part:

"The only thing I want to say is, that I have secured Western Union and Postal blanks, which will be placed at the hotel just before luncheon; and I want you to be very careful of this privilege—do not abuse it. We do not want the company to complain about our writing our family pedigree on these blanks. Treat this privilege as you would like a privilege from you to be treated."

W. A. Steel, of Seattle, made the following statement:

"I want to say, we are somewhat perplexed over the Alaska excursion matter. When we originally planned that trip it was supposed we might have from seventy-five to one hundred people to go on it. The fact is, that while we have accommodations for one hundred, we have applications from about one hundred and fifty. Every room has three berths, and originally it was intended that we would put two people in many of the rooms, but it is now necessary that we put three people in a room. Some of the rooms have a couch on the side which could be utilized as a berth, and by thus using every available berth we would be able to accommodate about one hundred and twelve people. Now, if there are any who have made their deposit, and feel that they are going to be crowded or uncomfortable, while we are very anxious to have them, yet we know that if they do not want to take this trip there are others who are anxious to make it and who would be glad to take their places.

"We also wish to state that if there are any who would like to make the shorter trip, what is known as the inside route, the same company sends out a boat the first of the week on this twelve-day trip, for which the regular rate is $66, but they are willing to take some of our people on that trip for a $50 rate. Anyone wanting to make this trip should communicate with me and I will arrange it for them."

President Mayes thanked Mr. Steel for his efforts in behalf of the Convention.

A report by the Committee on Postal Laws was asked for, and Chairman Herbert responded as follows:

"The condition of postal laws with regard to second-class matter has not changed since our last meeting. Through the efforts of this Association largely, the Department has come to recognize the fact that what is called second-class matter is not a privilege granted to editors, but was granted to the people for the good of the people, just as funds are granted for the spreading of agricultural information throughout the country. It has been well set forth that the low rate made the papers was in favor of the people and not of the press, and they have dropped the idea that the newspapers are under obligation to the Department and that they are to be constantly scored because the Government sees fit to furnish the papers of the country at a comparatively low postal rate; so we have had little trouble on that point.

The very effective system of the government in advertising the printing of envelopes by the government has greatly increased the work; and the activity of the government in securing business for its contractor, has been resented by our associations throughout the United States. You probably have all received, as all business men throughout the United States, have been receiving, a circular from the Assistant Postmaster-General, urging you to use printed and stamped envelopes, claiming that by using them it would help the Postoffice Department and prevent letters being sent to the dead letter office. Your Committee has answered that argument and I won't go into it, but you all know that no man will pay $10.60 for 500 stamped envelopes at one time, who is so small a busines man but what he would print them before sending them out from his office. It is not the letters that are sent out by business men that go to the dead letter office, and for that reason we say their argument is entirely fallacious. The printing of envelopes is of benefit to large corporations and to banks. The name of the corporation on the outside of an envelope is an advertisement, and it is for their benefit and not for the benefit of the single individual in his private correspondence; it does not at all prevent the accumulation of letters in the dead letter office at Washington. Government printing of envelopes takes a great deal of business out of the hands of the printers and affords that printing free to the people buying these envelopes. It is the kind of competition where no printer can compete, and it increases greatly the number of envelopes put out by the contractor by having the Department advertise the envelopes.

By this advertising the business of the contractor at Dayton, Ohio, has increased 50 per cent; he is now making 6,000,000 per day. There is another point about it: If that contractor can run the business to such vast proportions with the machinery he is enabled to install, it will give him a monopoly of the business. No other private manufacturer will be willing to go to the expense, all at one time, in order to compete. It creates a monopoly for the Dayton printer, who is the special contractor. We consider it wrong. It is too great a loss to many printers. It is wrong in principle. The argument is: By using these envelopes you help the Government. A man said to me: "Why not send out circulars from the Department saying, 'Drink more whisky,' because you help the revenue of the United States." By using these envelopes we do not profit the Government, but it is claimed to be a saving by preventing letters from going to the dead letter office. I think this Association should endorse the action of nearly all the state associations in passing resolutions for prohibiting the printing of names on envelopes by the Government. Why not make a rule that these envelopes printed by the Government simply have printed on them, "If not delivered in —— days, return to P. O. ——, State ——," and then the person who uses about thirty or forty per year will have his attention called to the importance of inserting his name and address. That would be of some value. But the present plan is to create a great monopoly of the envelope manufacturers and the printers. Of course it is wrong in principle and we feel that a strong fight should be made, unless the Government is to be turned into a great socialistic concern, to grind our flour, handle the manufacturing, and all other kinds of business. It is not right to single out and interfere with their business for the benefit of a wealthy class of corporations, firms and banks.

I do not think there is any danger at present of any interference with our present second-class rate, but, of course, we want to keep watch and give the Government to under-

stand that we are going to keep up our end of the argument.

Report of Legislative Committee called and passed for the present.

It was moved and seconded that the Convention adjourn until 2 o'clock in the afternoon.

MONDAY, July 19, 1909. 2 P. M. to 4 P. M.

W. A. Steel, chairman of committee on arrangements, called the meeting to order.

Governor Hays, being detained at the last moment, appointed Rev. M. A. Matthews to speak in his place. Dr. Matthews extended a very warm welcome to the members of the National Editorial Association. He said, in brief:

"I think I voice the sentiments of every citizen of Seattle and of the State of Washington when I say that you are more than welcome to this State. I think that after you have visited the state and become acquainted with the people you will find many of your own friends—perhaps many of your relatives, or your relatives' relatives. There is a certain percentage of the citizens of the State of Washington who have come from various states of this great Republic They came here because we were doing things; they came here to enter into the enterprise of building a great empire; they came here because there was material here out of which to build a great commonwealth. They have not been deceived; in fact, it would be a very difficult thing for us to deceive anyone concerning the resources, the possibilities and the future of this State. We have territory enough to take care of several million people; we have resources enough to feed several of the States of this Republic; we have hidden treasures to make wealthy many more of the States of the Republic. We have the ground; we have the fruit; we have the timber; we have the minerals; and the people to take care of it all. If you will go home, sell out, move to Washington and become citizens here, we will not only welcome you as members of the National Editorial Association, but as relatives and friends from our former States. Ours is the real, genuine Western hospitality—no half-way methods of extending it—if you don't see what you want, ask for it; no matter what it is, you shall have it.

You will find in this State many enterprising newspaper men; in fact, I do not know of any newspaper in the State of Washington that is not enterprising and that is not trying to arrive at the ideals for which you are banded together. In my opinion, there is no greater educator in the world than the well-conducted, enterprising newspaper. The State of Washington welcomes you as editors; it will welcome you if you will bring your plants here and start a newspaper. If you have anything we will soon have it, then you cannot return. You will feel just as happy if you are poor as if you were rich. The State of Washington is not made up of rich men. It is composed of laboring people—editors, preachers, doctors, lawyers, etc. All classes are working men and if you have come to our State to know hard labor, to know honest toil, then we welcome you to our school. We will teach you.

Mayor Miller was then introduced and warmly greeted the visitors:

"I am indeed glad to have the opportunity of saying a few words of welcome to this national organization. We are a young city compared to the older and greater cities of the East. We are in our thirty-eighth year of organized municipal government, and we have achieved a growth and development that the great city of New York was two hundred and seven years in reaching. We have everything here to attract our fellow countrymen. We are away in the Northwest; only a few miles, ladies and gentlemen, from the British possessions, just across a little strait up here, three miles of which is British territory and three miles American—and we have been neighbors for many, many years without one unkind word. Our city is growing rapidly, as you may observe. We are building here—not only for the present, but for the future—and some day in this great northwestern country will be situated one of the great cities of the world You know that commerce moves in zones throughout the world, and we are surely in one of those zones. A few years ago, comparatively speaking, we were a little logging town, hemmed in from the outside world, with no means of communicating with it, except over the broad sea. Now the great iron railway is climbing over the mountains and its many lines reach throughout the Union. It was only a few years since we were isolated from mankind in general, but now in this day of generous commercial activity we are one of the great cities of the Pacific seaboard; and for the third time in your history you are meeting on the Pacific Coast. We are glad indeed to have the honor of entertaining you in the city of Seattle.

Honorable John F. McGraw was then introduced by the chairman and made the following address:

"As President Chilberg was detained elsewhere, I was informed, just before luncheon, that it was to be my pleasant duty to come here and extend to you a word of welcome on behalf of the Alaska-Yukon-Pacific Exposition. This I do most gladly. We expect a very large number of conventions to come here this year. Some have already been here, but, in all sincerity, I want to say, ladies and gentlemen, that this is the convention we most desire. Of course we are somewhat selfish in this. I happened to have the honor of being President of the Chamber of Commerce at the time we were seeking to persuade you that this would be the city in which to hold your convention this year, and I know the members of that organization were exceedingly anxious that we should have at least this one convention if no other.

Father Herbert, we are glad, sir, that you are here and that you have brought with you these children of yours. I will say to you, as I said briefly the other day to the State Editorial Association, you will see that at the Exposition we have but one commodity to sell, viz: admissions. When we fail to sell admissions we must close our doors. Thanks to you, ladies and gentlemen,—editors of papers throughout the whole Union, admissions to date have far exceeded estimates made in the early days. Now that you are here you will take the time to see the Exposition and I am sure you will agree with me that it is beautiful; but take the time to see this magnificent country of ours. You will all go home and urge your friends to come here, and from that time throughout the Exposition period the transcontinental railways will be burdened with their living freight, all coming to us. I have lived here almost thirty-three years; my home originally was in the far distant "Pine Tree State." I have never visited the East that I did not urge the people there to come out here. I am sure you will all like our climate. I am sure you will all agree that the Exposition is a beautiful one. Therefore, we are doubly glad that you are here. I thank you for your presence here, and again I bid you and all, particularly you, Father Herbert, a most cordial welcome."

Mr. Beaton, Editor of the Seattle *Star,* was next introduced, and warmly greeted the assembly:

"Ladies and gentlemen of the National Editorial Association, I think you have been sufficiently welcomed by Mr. McGraw, Mayor Miller and Acting-Governor Matthews; on behalf of the newspaper men of Seattle, I desire, however, to bid you a most cordial welcome. We were very anxious to have you with us and now that we have you here we are going to try and keep you going just as fast as we can. My particular job this afternoon is to see that you all get aboard of automobiles this afternoon at 4 o'clock, and I am going to take this opportunity to ask you to all be on hand at that time.

We are very glad to have you here and hope your stay will be a most enjoyable one and that you will all go home and do what we newspaper men are doing here—boost the Exposition."

President Mayes made the following address:

"Representatives of the State of Washington, City of Seattle, and A.-Y.-P. Exposition, members of the press club and others: I was impressed with the statement made by practically all the speakers that the people of Seattle are working people. Now, I wish merely to add—if you can work the members of the National Editorial Association before we can work you, you are entirely welcome to do it. We are an association of workers ourselves; and while some of us are a long ways from home, this is not our first trip out; and we have seen Expositions before. This association was organized twenty-four years ago at the New Orleans Exposition. We have since met at the great World's Fair at Chicago; we have met at the St. Louis World's Fair; we have met at the Buffalo Exposition; at the Jamestown Exposition; and we are now meeting at the great Exposition of the Northwest—the A.-Y.-P. Exposition. And we assure you that if we did not want to be here, we would not have been here. We came because we wanted to come and not especially to compliment you because you invited us to come. An evidence of the fact that we wanted to come is the fact that many of us have traveled so many miles to get here. I see here men from Florida; men from Connecticut; men from New York; men from the Central States; men and women from the Southern Pacific slope—people from all over this country have traveled here in order to see this great, growing Northwest country and to see the only Exposition that ever opened on time. I will talk

to you a little in confidence now. We have attended so many expositions early that we hesitated somewhat to come to Seattle early in the Exposition period, feeling that when we went back home we would receive information from the Exposition authorities that the Exposition would be ready for real, downright business to show the people something in about a month from that time. We found that when we got out here, and before we came, the Exposition was ready and waiting for people—that is an accomplishment in itself. It shows Western energy, Western push and Western enterprise—this, we are glad to see—but it is against the rules of our Association for the President of our Association to make more than one speech a day. I made my talk this morning when I delivered the annual address, so I am going to introduce to you Father Herbert, founder of the National Editorial Association and editor of the NATIONAL PRINTER-JOURNALIST of Chicago."

Mr. Herbert responded to the addresses of welcome as follows:

"It gives me great pleasure to respond with hearty thanks to the cordial welcome we have received here. I am particularly pleased with the fact that a minister in this State, at least, represents the Governor. Now, we are not a religious association; we are newspaper men, but we are in pretty close touch with the ministers and try to help in all good work; and I tell you whatever we may think; whatever sects or creeds we may belong to, whatever our beliefs or disbeliefs, we have to recognize the fact that religion is the only true foundation for a nation. It has been so with all nations, and I tell you that where true religion exists, there is always industry and progress — there is all that goes to the upbuilding of a nation; and we are glad to see the splendid churches and schools here and pleased to know that here is the highest type of Christian civilization, that is not only influencing the State, but the Nation, and sending abroad its influence across the waters to those lands on the highway of trade between this continent and Asia. It is a grand thing to have so noble a civilization that you recognize the obligation of man to man; that you recognize all men as brothers. It is the only way to substantial progress. After all, we are children of the one great Father, and it is our highest duty, and the most important duty, and the Great Teacher taught—'Whatever you have done unto the least of these you have done unto me.' I remember when a boy, reading that great work by Rome's great orator, and statesman, directed to his son and treating of the duties of life, of religion and loyalty, Cicero de Officis, and I found therein the same noble principles of service laid down and taught, that you are teaching and exemplifying here.

So we are glad to be in this glorious State of yours. We saw its beauty as we came across it; we stopped at Spokane and were shown its wonderful industries; we saw its splendid churches and schools. We stopped at North Yakima and they showed us what they could do with irrigation; and we came on here, and we confess we are surprised at the wonderful growth of your city. You have one of the greatest State Universities in the Union. I visited the University of Wisconsin and was talking there with the Dean of the faculty of Journalism and asked him if he could not come with us, and he said: 'You have the man right there in the University of Washington, who is doing the very best work along these lines; I communicated with our President at once and I am glad to say that man, Professor Thorpe, is on our program.

I do not know what to add to what has already been said, but a thought came to me suggested by a line in your minister's address: Sometimes, after remaining in great cities like Chicago and New York and reading the stories of crimes, coming from greed, envy, covetousness, hate, drunkenness and lust, the graft, the assaults, murders, thefts and other offences that ought to be unmentionable, recorded day after day, I do not wonder that some of the people of these places doubt the existence of a God, though they must firmly believe in the existence of a devil; but when I look at the other side of the picture and see the great work that real men are doing, the schools they are building, the benevolent institutions and churches they are founding; and then coming out here to this great free Western land and see the country God has prepared for the residence of man, with a wise beneficence through countless ages, how he has hid away the coal in the earth, and the precious metals and stones, how forests have been provided and streams made to follow in their course, how wonderfully everything has been built for your habitation—then I wonder how anyone can be so blind as to doubt the existence of a God. The old philosopher, when he contemplated the wonders of the heavens, the suns and systems and attending planets all moving in unison and listened to the celestial harmony—the music of the spheres—exclaimed, 'The undevout astronomer is mad.' So when I contemplate all that nature has provided, all the opportunities, that you are wisely improving, I feel like declaring that, 'The undevout resident of your State, the sharrer in these blessings, is mad.' He certainly is incapable of reasoning from the grand accomplishment, back to the primal, benevolent cause.

I confess that at one time I was tempted to come out here and if it had not been for my great love for the National Editorial Association, would have sold out in 1892 and come to this State, but because I believed I was working among men who were helping this country, I put aside the temptation—and so now I have come here with "my children." I am glad to be with you and thank you most heartily for this kind welcome."

Mr. Mayes referred to Father Herbert's age, and said that while Father Herbert was looking younger than he did twenty-five years ago, some people might put a wrong construction upon his allusion to the early days of Rome by thinking he was recalling his boyhood days; that he was not born, in the early days, at Rome; that he was a native of this country and although he was really getting younger all the time, he was still past twenty-five years of age. Mr. Mayes then introduced Mr. Harry A. Thompson, editor of the Tyrone, Pa., *Times*. Mr. Thompson said:

"I am sure I voice the sentiments of the representatives of this Association, not only from way down Maine to yonder Texas, from hustling Washington down to fairest Florida—when I say that we have received—no matter where the National Editorial Association has gone, although we have gone way down to Mexico and received a welcome there and to northern lands and received their welcome—but never have we felt such a *real* one as we have received here this afternoon. We received from the Governor, the Ex-Governor, the Mayor—and how earnestly that Mayor did say he was glad to see us; and then the representatives of that wonderful A.-Y.-P. Exposition—and that fellow who is always so alert, that fellow who is always watching to do something for some other fellow—the representative of the press here—Mr. Beaton. We feel as though we were welcome, and notwithstanding the fact that our most excellent President, Mr. Mayes, said we were here because we wanted to be here, nevertheless we appreciate our welcome just as much.

I have heard representatives from various parts of the country, as we were speeding across the country to your State, saying that of their immediate cities there was no town spoken of more frequently than this wonderful town of Seattle. This town is the town, or city, that it is, because of the faith and progress of the men that are still amongst you. Another thing I want to say about your city—you have very few poor people; I have wandered around and have found but few tenment houses. Nothing speaks better for the care of your children than that there are no high, rickety buildings.

Away back one hundred and fifty years before the Declaration of Independence, a man who was able to look down the vista of time and behold the future, said: 'Westward the course of empire takes its way.' Here within the last fifty years has spread a great city—the city of all the Coast—the greatest city in the West—and all the States that are represented here this afternoon hope that so long as the tide trails after the moon, so long may the cornucopia of plenty hang above you."

Chairman Castle of the Credentials Committee made a partial report showing 201 delegates present, accompanied by 117 persons. He announced another meeting of the Credentials Committee for Wednesday morning, when he hoped the list of delegates present would be completed. Mr. J. P. Chambless of Texas, from the Committee on the President's Annual Address, reported as follows:

"Your committee on the President's Annual Address, respectfully submit the following:

That we commend the clause advocating the independence of newspaper making, thank him for the advocacy of independence in newspaper making, and for calling attention for the advancement, elevation and influence of the press, the same becoming one of the leading industries of our country.

We further commend our President's views in the portion of his address pertaining to increasing, rather than decreasing the membership of the National Editorial Association, and coincide with his suggestion pertaining to the affiliation of all state and district associations; and we recommend that editorial organizations be admitted as members of the N. E. A., which have been organized one year with a membership of twenty-five, even should such a plan require a change in the present by-laws and constitution.

As a whole, the address is thorough, and to the point, carrying with it a feeling of enthusiasm pertaining to the good of this Association and we respectfully suggest its acceptance.

Fraternally submitted,

B. B. HERBERT,
H. B. HALE,
J. P. CHAMBLESS,
Committee.

Mr. Herbert, as chairman of the committee, moved the adoption of the report and said:

"The older members of this organization will remember that at the meeting in California in 1892, we had three trains and at that time we were receiving full courtesies from the railroad; and the attendance was so large that we thought it was necessary that in order not to destroy the opportunities of having courtesies extended, we would have to reduce membership. At that time the constitution and by-laws were amended so that no organization except a state organization representing a whole State, could be admitted to membership in this Association; and now it has reached a point where every man pays his transportation. There will now be no danger of our overburdening the railroads. I think the President's suggestion wise and think the by-laws should be amended so as to admit all genuine organizations of editors and publishers that have a membership of over 25, and has been in existence one year, showing they are permanent organizations, and as there is no reason now existing for excluding them, I move the adoption of the report.

The motion was seconded and the report was unanimously adopted.

It was moved, seconded and carried that adjournment be taken until 10 o'clock Tuesday morning.

TUESDAY MORNING SESSION. AUDITORIUM A.-Y.-P.

The meeting was called to order by President Mayes at 10:40.

The following committees were appointed:

Committee on Necrology.—Albert Tozier, Oregon; Frank S. Hardy, Idaho; Miss Ida Hiblack, Oklahoma; H. B. Hale, Connecticut; John P. Herrick, New York.

Committee on Constitution and By-Laws.—H. D. Campbell, Ohio; G. E. Hosmer, Colorado; Joe Mitchell Chapple, Massachusetts; John Redmond, Kansas; J. P. Hurley, Minnesota.

Committee on Treasurer's Books.—Sheridan Ploughe, Kansas; R. E. Dowdell, South Dakota; George W. Hughes, Illinois.

Committee on Resolutions.—R. A. Thompson, Pennsylvania; Mrs. W. C. Horner, North Carolina; R. R. Perry, Kentucky; J. A. Koutz, Indiana; L. A. Sherman, Michigan.

The Committee on Postal Laws and Legislative matters will be announced towards the close of the business meeting.

B. B. Herbert gave notice of article of amendment on membership in the Association, in accordance with report by committee and President's address yesterday, allowing all editorial associations that have been in existence for one year, and have a membership of 25 or more, to become members. Under the present by-laws organizations that were not members in 1892 can now come in. Mr. Herbert offered the amendment to be voted on at tomorrow's session.

President Mayes introduced Mrs. Edith Tozier Weatherred, *Western Tours,* Seattle:

"Mr. President and members of the National Editorial Association, the subject that I have on the program is: 'Seeing Things in the West.' I presume that after being here a few days you might change that to 'Seeing Things at Night,'—I haven't the least doubt but that many of you have seen things at night, as the story goes, but I think that if I have any one hobby, that hobby is that I want the whole of the United States to see and know our great Western country. A thing that really grieves me is to see the hundreds and thousands of people of the Atlantic Coast rushing off to Europe, spending millions of dollars; putting a great amount of American money into circulation is all right; I like this mingling back and forth, but the deplorable thing about putting American money into circulation in Europe by people 'seeing things,' is that there is not an equal amount of money going back into the United States by Europeans 'seeing things' in America. And another thing, our American women continue to endeavor to make European cities social centers, and there is no reason in the world why we cannot have cities in the United States social centers.

No, I am going to confine my remarks principally to seeing things on the Pacific Coast, and I am sure there is nothing in European countries—from a scenic standpoint—that can overshadow scenery on the Pacific Coast. I think it is the opinion of any editor in this assembly that if anyone has to go to European countries to see and enjoy the wonders of the Almighty, it is because he does not know the things of the West. Now, I have heard people say that editors' trips are all junketing trips. I thank God for it, because it is only junketing trips that have made America—it is through the junketing trips of the National Editorial Association that we and our readers over the country have come to know the United States as it is; and I think if there is any class of people that deserves a junketing trip it is the newspaper editor wherever he may be found. Now, while you are seeing things, I am proud to say that you can find no greater place to visit than right here in this Northwest country. I presume I have a right to be sort of devoted to this greater Northwest because my people were pioneers, who came over in an old ox wagon to the state of Oregon—the best in the Union. They came out here, built a log cabin, and somewhere out there in the woods they found me.

Now it is all well enough to say that it educates people to travel, but we first must educate the people to travel. I believe every effort should be made to encourage people to travel. We may talk against the great railway corporations, but I tell you there is not a better pioneer in the world than the railroads that have opened up our country. I remember back in my childhood there was a horse liniment called "H. H. Limited"; I expect that was before Mr. Herbert's time, but I remember it; today there is another limited—"H. H. H. H."—Hill, Harriman, Huntington and Holliday—four H's., who have helped to open up this great Northwest country of ours; and they may say what they want to about men having selfish motives, but there is no getting away from the fact that Jim Hill is the man we honor today—the man who was foremost in the opening up of this Northwestern country of ours."

Mrs. Weatherred spoke enthusiastically of Seattle, alluding to the regrade work and the marvelous amount of building going on. She stated she had been Oregon's representative to many world's fairs throughout the United States and that none of them equaled the A.-Y.-P. from every point of view, and continuing she said:

"Now, while you are enjoying this house party of Mrs. Seattle's, you are going up to Alaska for afternoon tea—and you surely will enjoy that twenty day trip. This is the most wonderful and beautiful tour you can take, and I want to urge you to take more interest in the affairs of Alaska. When the United States purchased Alaska some of us thought it was a stupendous thing to do and that Alaska was going to be a burden to the United States; and if you look over the records you will find that today Alaska sends annually one million dollars into her mother country. Alaska has greater opportunities for the development of her natural resources than any part of the United States—and Alaska belongs to you; it belongs to each one of us. And another thing, I would like this Editorial Association to take an interest in the politics of Alaska. It is my opinion, from all I have seen and learned, that Alaska has gotten past wanting missionary politicians; she doesn't need them. She is capable of governing herself. Alaska wants better roads and better transportation facilities and I want you to take an interest in that; and wherever you go, when you feel you can give Alaska a boost I want you to do so.

Mrs. Weatherred, who belongs to all of this Pacific Coast, spoke of the beauties of Oregon; of California, where one could order climate to his liking, where one can have mid-winter in summer or mid-summer in winter—just as one preferred. She then carried her audience off to the Hawaiian Islands and told of their tropical beauty, dwelling particularly upon the generous hospitality of the Hawaiian people—and suggested that an invitation tendered some time ago by the Hawaiian people to the National Editorial Association be accepted; and that two sessions be combined into one mid-winter session to be held at Honolulu.

Mr. J. P. Baumgartner endorsed Mrs. Weatherred's suggestion to hold a convention at some early period in Honolulu, saying that all the trips the Association made to the Pacific Coast was when the weather was warm and the roads dusty, and that a trip in the winter would be a greater contrast to what they left behind, and besides the best tourist hotels are all open in the winter; and that a winter trip through Southern California, then up to San Francisco and on to Honolulu would be one of the grandest trips that could be made.

President Mayes also heartily endorsed the idea of holding a convention in Honolulu, saying that the people of the States

were too prone to look upon the Hawaiian Islands and Alaska as foreign countries; and that the people needed to get into closer touch with these possessions to realize that they were really parts of the United States; and stated that he believed there should be a law compelling people of the United States to travel at least some every year and to set a part of their income aside for that purpose; that it would have a broadening effect and there would be no feeling of East against West, North against South, United States against Canada, etc.

Mr. E. P. Clarke, of Riverside, Cal., referring to President Mayes' remarks, said:

"Three years ago when I was attending a meeting at Salt Lake City, a movement of this sort was started and there was formed what was known as the 'See America League,' and for several months I had charge of this thing, but unfortunately, the movement being a little premature, it fell by the wayside as an organized effort, although at the present time I believe there is a movement to reincorporate it. It is rather startling when you stop to think of the amount of money that is spent on travel abroad annually by people who do not realize the extent or beauty of our own country. This movement was founded, not alone on a patriotic foundation but also on an economic foundation.

I want to say another word. At that time when the movement was started, it was a marvel the way the newspapers took it up. The slogan of the movement was: 'See Europe if you will, but see America first'."

The subject, "Individuality in Newspaper Work," by H. J. Allen, of Kansas, was postponed to some future meeting.

Mr. Lon F. Chapin, who was to have addressed the assembly on the subject of, "Telegraph Service for Small Dailies," was not present. President Mayes called for a representative, but no one responded.

Mr. G. W. Ridgeway, of the *Express,* Kirksville, Mo., was introduced and made his address on, "Gathering News on Country Dailies." (See page 544.)

Mr. Ridgway's address brought forth a discussion of the subject, and Mr. Baumgartner, in speaking of the method of gathering news for country papers, said:

"While Mr. Ridgway was presenting his paper, I noticed he pointed out in one place, that if there was a place in the world where self could be obliterated it was in gathering news for the country newspaper; but later on he qualified this statement by saying that the personality of the editor or reporter entered largely into the work. It seems to me that you have got to put yourself into the work; that is, your heart, your mind, your soul—as if related to the community. You are dealing with your neighbors, with your friends; you know every one of them personally, and if there is any place in the world where tact is called for—where good judgment is called for, it is in gathering news for the country paper. If you should get it into your your head that you could run your paper on general principles of journalism, as practiced in the larger cities, you would be in trouble all the time. Of course, you must not color your news—and yet you must do it—you cannot help it. You have got to be considerate for there are always certain bearings in each case that must be taken into consideration. You cannot handle it in a cold-blooded way. It is the final word of qualification of the newspaper man to know where to draw the line. To know where to color the news within the legitimate line and where not to color it; where to put on the screws. In absolute fairness to your subscribers you have got to give them the news or you are not treating them fairly; if you color the news, you are not treating them fairly. But after all you have to go back to that personal touch with the individual case, with the individual community; and the man who can do that with the greatest tact and the best judgment is the best country newspaperman, in my opinion."

In speaking of the manner of collecting local news, Mr. Wells, of Nebraska, offered a suggestion:

"Some people are very much put out if not mentioned in the paper. I have found it a good idea, in order to secure local news, to place a box outside the *News* office and if any one has local news for the paper he can write it out and drop it in that box."

Mr. Ortis, of Washington, spoke of using the country newspaper as a personal organ, wherein the editor ignored his enemies and continued patting his friends on the back. He says:

"In many instances this is carried on to a most shameful degree and before a man is going to succeed in the work he must get out of that morbid atmosphere."

Mrs. Merrick, of Illinois, alluding to the topic of Mr. Ridgway's address, said:

"We should not in any way allow ourselves to publish news items of simply those we like and ignore those whom we dislike. We should give the news, no matter where it is from — whether from friend or foe, patron or not. There is one other thing I would like to advocate, and that is giving so much space to news of crime and so little to the goodness of the world in general."

Mr. Perry, of Kentucky, brought forth considerable applause and laughter by his advice as to how to gather news. He said:

"Stand in with the policeman: Stand in with the preacher: Stand in with the gambler: Stand in with the rural mail carrier: Stand in with the city mail carrier: And if you have reasonable common-sense you will have plenty of news every day."

Mrs. Weatherred suggested that they also stand in with the Ladies' Aid Society; and a lady delegate from Texas added to the list the Woman Suffragists.

Mr. E. P. Clarke, of the *Press,* Riverside, Cal., delivered his address on, "Profitable Features of Small Dailies." (See page 554.)

An invitation from the Woman's Press Club, of Oregon, to attend an informal reception to be held Wednesday afternoon, was presented to the assembly. On motion of Mr. Baumgartner, the secretary was requested to present regrets that the Association could not attend.

An invitation from Honorable Hajime Ota to attend the dedication of the Japan Exhibits Building was presented to the assembly. On motion of Mr. Hurley, the secretary was requested to express the Association's appreciation and regrets that it could not attend the dedication.

Mr. Mayes stated that the program would be followed out for the following day.

It was moved, seconded and carried that the meeting adjourn until 10 o'clock tomorrow morning.

WEDNESDAY MORNING, JULY 21ST.

The meeting was called to order by President Mayes.

At the request of some of the members, President Mayes again announced the committees named at the previous session.

Corresponding Secretary Parrott stated the assembly was short on badges and requested anyone having a surplus to turn same over to him for distribution.

Miss Caroline A. Huling, *Bookseller,* Chicago, who was to have delivered an address on "Editing the Small Country Weekly," being absent, her paper was read by Mrs. Jewett, President of the Illinois Woman's Press Association and managing editor of the *Union Signal.* Mrs. Jewett said she regretted the writer could not have been present to have heard the excellent papers presented yesterday by Mr. Cooke and Mr. Ridgway, bearing upon the same subject. (Se page 550.)

Mr. Frank D. Throop, of the *Journal,* Muscatine, Iowa, who was to have delivered an address on, "The Newspaper as a Factor in Town Promotion," was not present and the address was passed over.

President Mayes then introduced Prof. Merle Thorpe, University of Washington, Seattle. In introducing Professor Thorpe, Mr. Mayes said:

"The people throughout the United States, especially those interested in the progress of journalism, have given a good deal of thought the past few years to university training in journalism. We now have several universities devoting much time and money in the proper education of young men and women for a journalistic career, and so we were particularly anxious to have a strong paper on this subject, and I am pleased to present Professor Thorpe to you, who will talk to you on, "University Training for Journalists." (See address page 548.)

The President then introduced Mr. Hill, the newly-elected President of the University of Missouri, who supplemented Prof. Thorpe's ideas on the subject of "University Training for Journalists." He said:

"Ladies and Gentlemen, it is indeed a privilege to be with you and listen to your program. I bring to you the greetings of Mr. Williams and his regrets that he was not able to to be present, as he is now representing his country in England at a similar meeting.

I was on the faculty of the University of Missouri five years ago when we first thought of offering a course to the students in newspaper work, and I was a member of the

committee that considered the feasibility of organizing a school of journalism—just as are organized special schools in law and medicine. I had some experience in organizing a school for educators, and I was led to believe that the work of training journalists is very similar to the work of training teachers. Both are educators. The average teacher trains the pupil how to read, using reading in its fuller significance—how to get out of the printed page what the child ought to know. It is the work of the journalists to provide that matter all the rest of that child's life. The teacher trains the youth to get control of his own resources—to use his own thought: The journalist provides an all-around education for the youth for the rest of his life. The journalist's work, therefore, while not as fundamental, is larger than the work of the teacher. It therefore seemed to me that if we were to train teachers for their field of labor, we also should train the journalist for his.

A lawyer is not completely trained without the experience he gets in a law office after graduating from the law school. This training in the law office is essential; it is the practical experience which enables the lawyer to anticipate—and to provide for the real work ahead of him. When I was thinking over the matter of organizing a school for educators, there were two things which had to be considered: One was to train the teacher, to give him that range of knowledge which would fit him to become an educator so far as his intellect was concerned: The other was to give him the perspective—the point of view—the purpose; to give him the professional spirit in his work, which so many teachers seemed to lack. It was, therefore, important to give him, in connection with that training, some practice so that he would land on his feet when he entered the school-room. We therefore organized a school for the education of teachers.

Now we have done practically the same thing for journalists. Students taking up newspaper work study the fundamental sciences—sociology, history, economics, special training from the faculty of the law school, training from the faculty of the department of agriculture, and other departments—so that he gets a wide range of knowledge. Then he gets his course in the history and principles of journalism and newspaper making. But perhaps the best training he gets is in the publishing and editing of the little four-page university paper. The students gather all the news for this, and after a two months' course, write practically all the editorials. The paper is edited under sympathetic guidance, but the student has to fight on for himself; and thus instead of being thrown at once upon his own resources he is given this opportunity to get on his feet.

We have been able, even during the short time this department has been in existence, to eliminate certain would-be journalists—those who are not likely to make professional newspaper men. The engineering school does that. A man sometimes enters a school of engineering, who, while he may appear to make a very good business man, it is soon discovered that he is not adapted for engineering, so he is at once eliminated. We will have to do the same thing with students in journalism. This is an important part of the work in any department—the eliminating of impossible candidates for certain professions.

Now, I want to say one thing that occurs to me, as an outsider: I think that the greatest weakness in our school system is that there are too many pupils in them, with absolutely no motive. Why should an intelligent young man spend four years in the pursuit of knowledge without knowing to what use he is going to put this knowledge of science when he leaves school, and how can he be expected to pursue his studies with vim? But let him find a motive and he becomes interested and everything he does fits into that motive. And I want to say, too, that the brightest men we have in our university are the students in journalism. They are men who probably would never have taken a university course at all, had they not been led there to take this particular course. We now have seventy-five such students and are looking forward to an enrollment of one hundred and fifty. In order to make the work significant to the student and to give him a normal motive, you have to publish a paper and have subscribers to it. We have sent a complimentary copy of our little paper to every high school in the State; and I am told that the high school students are as well informed on the happenings at the university as they are on the topics of their local towns. We feel that we are helping to educate the high school students of the State, and are likely to point out the way to students who might be interested in journalism.

I am especially pleased to note that here in this progressive and richly endowed State there has already been started something that is practically a school for journalists—a full four years' course, as I understand it. That is virtually what ours is—except that we have organized it as a distinct school in order to get the advantage of freer administration for it, of greater dignity for it; of calling attention to it among students in a way which perhaps we could not were it a department in a college. I congratulate the University of Washington in having at the head of this department such a man as Professor Thorpe."

At the conclusion of Professor Hill's address, Mr. B. B. Herbert, in the name of the Association, offered a vote of thanks to Professor Thorpe and Professor Hill for their able addresses, and said:

"In 1884, as president of the Minnesota Editorial Association I recommended a school of journalism, and in 1886 at Cincinnati, the National Editorial Association passed resolutions asking their members to endeavor to have departments of journalism established in their state universities; and also a resolution looking to a great separate national editorial university. So you see the seed was sown a long time ago and has been kept alive at all our different meetings. And we are all certainly glad to find that these two young men are so well equipped for the work to which they are called."

The motion made by Mr. Herbert was seconded by a number of delegates and was passed by a unanimous vote, the members at the request of the President, rising to their feet as indication of the vote.

Mr. Symmes suggested that Professors Thorpe and Hill be made honorary members of the Association. This was made a resolution and presented to the Committee on Constitution and By-Laws to be acted upon tomorrow.

Mr. Leon Westmoreland, of the *Democrat,* Greenwood, Arkansas, was next introduced:

Ladies and gentlemen, before entering into my regular discussion I want to say that I consider it a great honor to follow these men who have just gone before me. There is a disposition among all of us to lead in everything, but we should have the ability and insight to see when someone is ahead of us and try to catch up. Now, when I see two young men like Professors Thorpe and Hill, I always get right behind them and watch their every step and if they do not get a lively sprint on I will catch up to them—and that is always my ambition. I am always glad to see tailor-made newspaper men; I am glad to see that men are paying more attention to mental tailoring than to physical tailoring. After all, it is not so much what you have on as what you have in (placing his forefinger on his forhead). The greatest impediment to newspaper work in the country today is, that some of us stand back when we hear of these new institutions and complacently say: "You cannot tell me anything about newspaper work; I have been in the business for twenty years." There is never a day in my home that I do not learn something from my little children; they ask me questions every day that no newspaper man in this assembly could answer in a life time. (See address, page 536.)

Mr. T. A. McNeil, of the *Capital,* Topeka, Kansas, being unable to leave the politics of Kansas, his address on "Journalism and Common Newspaper Men" was passed up.

Mr. E. E. Hurd, of Vancouver, Washington, made the following report, which was referred to the Committee on Resolutions:

"*Whereas,* The United States Government is printing envelopes for private use at actual cost of material and labor and sending same postpaid to the consumer—charging cost of transportation to the postal deficiency, and

Whereas, The United States has a large number of monotype casting machines capable of casting type at a minimum cost, and

Whereas, the type-casting business of the country is controlled by a trust, now

Therefore, Be it resolved, that we urge our representatives in the Government to secure the passage of a bill compelling the Government to furnish type to everybody who may wish it, at actual cost of the metal plus the labor of casting; and that same be advertised by postmasters and furnished on terms equally liberal with that of the envelope business; and cost of transportation of type likewise be charged to postal deficiency."

Mr. Hosmer stated that the committee on Constitution and By-Laws would meet at the Hotel Kennedy at 9:15 tomorrow morning.

It was moved, seconded and carried that adjournment be taken until 10:30 tomorrow morning.

THURSDAY, JULY 22. MORNING SESSION.

The meeting was called to order at 11 o'clock by President Mayes.

Mr. Erwin C. Funk, of the *Democrat,* Rogers, Arkansas, was introduced and made the following address: (See page 541.)

Mr. T. J. Bell, of the Tacoma *New Era,* announced that everybody connected with the N. E. A. was expected in Tacoma tomorrow. He said:

"We are looking forward with considerable anticipation to meeting you in our own happy hunting grounds; and I was commissioned by the committe that has the matter in charge to call and tell you something. In the first place, you are sure of the warmest kind of welcome. We hope to make your visit to our city tomorrow so pleasant that you will not forget it. A steamer has been chartered which will be owned by the N. E. A. the whole day; it will leave the dock at 9 A. M., arriving at Tacoma at 11 o'clock and the morning will be spent in sight seeing. A luncheon will be served at the Commercial Club (applause from an Oregonian). The afternoon will be spent in visiting interesting points, including Point Defiance Park, then back again to the city, where supper will be served at six o'clock (applause from same Oregonian).

We are sorry we cannot take you on a trip to Mt. Rainier, but hope to do so at some future time."

Mrs. Weatherred offered a vote of thanks to Mr. Bell for his kind invitation.

Mrs. Mary E. Hart, of the Alaska Building, was introduced and extended a cordial invitation to visit the building. Mrs. Hart, who has spent a number of years in Alaska, has charge of the Art and Women's work of the Alaska Exhibit. In inviting the members of the N. E. A., she said:

"In far-away Alaska we people are supposed to still be savages,—but we have newspapers there; every town of any size has one and the larger towns have two and three. We have public schools—graded and high schools, and consider ourselves pretty well advanced to be so isolated. I am sure if you will come over to our building I can give you some points that will make your trip to Alaska more interesting. I want you to see something of Alaska's resources; almost everything but tropical fruits is to be found in Alaska. I want to show something of the Alaska women's work: The Alaska woman has been too often misrepresented by the journalistic writer, who describes her as a boorish sort of creature going around without shoes. You will find that our Alaska women are just as womanly—just as civilized—as women in any part of the United States."

Motion was made by Mrs. Weatherred that the invitation be accepted. It was seconded and carried that the invitation be accepted.

The President next introduced Mrs. Stephen Putney, of the *Enterprise,* Wytheville, Va.

"Mr. President, Ladies and Gentlemen: I want to say just a word. I want to talk to you about "Some Institutions in which Newspaper People Should Interest Themselves." I am an amateur in newspaper work and expected to say nothing, but when I saw the session drawing to a close and that this subject I have in mind had not even been mentioned, it was borne upon me so strongly that it should be mentioned—and most emphatically mentioned—that I asked for the courtesy to put it before you for a few moments. The work I mean is in regard to that class of people that cannot speak for themselves—those people who are absolutely in the hands of boards of commissioners—I refer to the reformatory, to the almshouse, to the jail; and above all, to those poor unfortunates from whom the light of reason has fled—the insane. You know these institutions exist; you know their inmates are not able to lift their voices, or if they did would not be listened to. Now, you see the power of the newspaper: The paper sends a reporter to one of these institutions to see how things are being conducted and in many instances have found conditions most heart-rending. He goes back, writes a story and, if the editor is a man who has the good of humanity at heart, he opens up the question of investigation and after a little while it is found that the conditions are true and the newspaper keeps hammering until things are changed.

I know whereof I speak. Last winter, in the city of Baltimore, the Baltimore *Sun* sent one of its reporters out to a reformatory for boys, and by off-hand questioning of one of the boys discovered that the institution was practically under the control of a boy and that the punishment meted out to the boys was something barbarous. Now, when there are such institutions in your town do not take it for granted that they are all right. Send out one of your reporters and when you find inhumanity, uncover it."

Mrs. Putney's address was much applauded and received the endorsement of President Mayes.

Miss Goldie Perry was next introduced. Miss Perry, who represents the *Sun-Sentinel* of Winchester, Ky., was instrumental in the starting of this paper, and she chose for her topic, "Starting a Daily Paper in a Small Town." (See page 540.)

Miss Perry's address was most enthusiastically received. It aroused much interest among those members who were contemplating starting a daily paper in their own towns, or who hoped to do so at some future date, and Miss Perry was called upon to answer a number of questions.

DELEGATE—I would like to ask Miss Perry how many inhabitants there are in her town.

MISS PERRY—10,000, counting those in the country.

DELEGATE—I want to know if you secured contracts in advance in order to assure the success of the daily?

MISS PERRY—We did not. The Commercial Club started the daily paper, and my father had charge of the weekly. The daily paper was a success from the start.

MR. BAUMGARTNER—You had practically the whole support of the community through this Commercial Club, did you not?

MISS PERRY—Yes, we did, and the paper, though only eight months old is an assured success.

DELEGATE—If I were to start a daily paper, what suggestion would you have to offer?

MISS PERRY—I would suggest that you know how to edit it. (Applause.)

DELEGATE—Did the starting of a daily paper hurt the weekly paper in your town?

MISS PERRY—The daily has weakened the weekly, but has not hurt advertising business; and the people who leave town always want the weekly.

DELEGATE—Do you devote yourself entirely to local news or do you take telegraphic matter?

MISS PERRY—We publish four columns of outside news every day, and what doesn't happen we make happen. (Laughter and applause.)

DELEGATE—In changing a paper from a weekly to a daily what are the principal difficulties to be encountered?

MISS PERRY—Well, the first time he realizes that his paper has to be issued in two hours instead of two days, he is rather sorry that he did it. He is informed of a death and has to write an obituary fifteen minutes before the paper is issued. Now, therefore, writing death notices was one of his long suits. Usually it was the joint effort of himself and the parson, and in most instances was a gem: It invariably began: "An all-wise Providence has seen fit to call from our midst"—whether the deceased was a man who was hung or who had suicided. The editor, immediately upon the change from weekly to daily, is expected to look, act and write in a more dignified manner, while conscious of the fact that he is delivering six days in the week what was formerly given in one issue. There are more difficulties to be ovrcome by the ditor of a country daily than by the editor of a city daily. The city editor's work is subdivided, but the editor of a country daily, besides being its editor is also its manager, its collector and solicitor; and in Kentucky—its scrapper—editors out here on the Coast no doubt are nearer the "Pacific." (Laughter and applause.)

Mrs. Weatherred expressed the sentiments of the assembly by thanking Miss Perry for her efforts.

Mr. R. P. Habgood, of the *Star,* Bradford, Pa., was next introduced by President Mayes. His topic was, "Handling the Circulation of a Daily Paper."

The next address on the program was, "Developing Advertising Business on a Small City Daily," delivered by Mr. Carl Roe, of the *Union-Statesman,* Walla Walla, Washington. (See page 556.)

Chairman Castle, of the Committee on Credentials, made the following report:

Ladies and Gentlemen: In presenting this report it was found necessary to use the treasurer's books as credentials for the delgates here:

Total number of delegates attending	219
Associations represented	(47)
Officers	7
Past Presidents	7
Honorary Members	2
Ladies in attendance	145
Total strength of Convention	380

NATIONAL EDITORIAL ASSOCIATION.

OFFICERS.

President, Will H. Mayes, *Bulletin*, Brownwood, Texas.
First Vice-President, A. Nevin Pomeroy, *Repository*, Chambersburg, Pennsylvania.
Second Vice-President, R. E. Dowdell, *Advocate*, Artesian, South Dak.
Third Vice-President, F. P. Hall, *Journal*, Jamestown, New York.
Corresponding Secretary, W. F. Parrott, *Reporter*, Waterloo, Iowa.
Recording Secretary, R. H. Walker, *Democrat*, Athens, Alabama.
Treasurer, Will Curtis, *Plaindealer*, St. James, Minnesota.
Poet Laureate, W. E. Pabor, *Florida Agriculturist*, Avon Park, Fla.
Flag Custodian, C. F. Lehmann, *Herald*, Halletsville, Texas.

ADVISORY BOARD.

Wm. A. Ashbrook, *Independent*, Johnstown, O.
A. W. Glessner, *Gazette*, Galena, Ill.
J. M. Page, *Democrat*, Jerseyville, Ill.

HONORARY LIFE MEMBERS.

*Mrs. Matt Parrott, Iowa.
Mr. James G. Gibbs, Ohio.
Mr. J. M. Page, Illinois.
Mr. R. M. White, Missouri.
Mr. H. C. Page, New Jersey.
Mr. Frank R. Gilson, Michigan, (Deceased.)
Mr. W. E. Pabor, Florida.
Wm. H. H. Judson, Alabama.
Hon. Wm. A. Ashbrook, Ohio.
Mrs. J. Irving Steel, Pennslyvania.
Will A. Steel, Washington.
J. W. Cockrum, Indiana.

PAST PRESIDENTS AND LIFE MEMBERS.

First President, B. B. Herbert, NATIONAL PRINTER-JOURNALIST, Chicago, Illinois.
Second President, C. H. Jones, New York.
Third President, Gov. A. B. White, Charleston, West Virginia.
Fourth President, James R. Bettis, 212 S. Third St., St. Louis, Mo.
Fifth President, Chas. A. Lee, *Gazette and Chronicle*, Pawtucket, R. I. (Deceased.)
Sixth President, E. W. Stephens, *Herald*, Columbia, Mo.
Seventh President, W. S. Capeller, *News*, Mansfield, Ohio.
Eighth President, B. J. Price, *Star and Times*, Hudson, Wis.
Ninth President, Walter Williams, *Herald*, Columbia, Mo.
Tenth President, A. O. Bunnell, *Advertiser*, Dansville, N. Y.
Eleventh President, R. H. Thomas, *Farmers' Friend*, Mechanicsburg, Pa. (Deceased.)
Twelfth President, Louis Holtman, *Jeffersonian*, Shelbyville, Ind.
Thirteenth President, Joseph B. Maccabe, *Argus*, East Boston, Mass.
Fourteenth President, R. H. Henry, *Clarion Ledger*, Jackson, Miss.
Fifteenth President, Matt Parrott, *Reporter*, Waterloo, Iowa. (Deceased.)
Sixteenth President, F. B. Baillio, *Review*, Cleburne, Texas.
Seventeenth President, Albert Tozier, *Pacific Farmer*, Portland, Ore.
Eighteenth President, Garry A. Willard, *Herald*, Boonville, N. Y.
Nineteenth President, P. V. Collins, *Agriculturist*, Minneapolis, Minn.
Twentieth President, W. W. Screws, *Advertiser*, Montgomery, Ala.
Twenty-first President, John Dymond, *Sugar Planter*, New Orleans, La.
Twenty-second President, John E. Junkin, *Bulletin*, Sterling, Kan.
Twenty-third President, Henry Branson Varner, Lexington, N. C.

The Credentials Committee reports that but few formal credentials from the various states were presented to it. It was therefore necessary to take the Treasurer's book and get a list of the delegates who had paid their per capita tax, and were therefore entitled to a seat in this meeting of the N. E. Association. We hereby recommend that the following list of delegates by states be declared the delegates to this meeting.

LIST OF DELEGATES ATTENDING SEATTLE CONVENTION.

A star (*) preceding the name of delegate indicates that he is accompanied by his wife or other persons.
Two stars (**) indicate two persons, etc.

Alabama Press Association (2)—F. L. McKenzie, *Tri-County Weekly*, Tallahasse; *R. H. Walker, *Democrat*, Athens.

Ladies in Attendance	145
Total Membership of Convention	379

Respectfully submitted,
J. B. CASTLE, Illinois.
F. L. MCKENZIE, Alabama.
R. P. HABGOOD, Pennsylvania.
A. D. MOFFETT, Indiana.
WILL CURTIS, Minnesota.
Committee on Credentials.

Respectfully submitted to the Convention, and moved that the report be adopted.

It was seconded and carried that the report be adopted.

Mr. Steel announced that he was arranging a little longer trip to Vancouver and Victoria; that it would probably extend over Saturday and Sunday, and suggested that the various delegates report to him how many intended taking the trip.

The president announced that the committee on necrology would like the names of members who had passed away in the last year.

Moved, seconded and carried that the adjournment be taken until 2 o'clock.

THURSDAY, JULY 22. AFTERNOON SESSION.

The meeting was called to order by President Mayes at 2:15.

Mr. H. G. Taylor of the *Nonpareil*, Central City, Nebraska, was introduced by President Mayes and addressed the Convention on the subject of "Stopping the Leaks." (See page 546.)

Mr. Taylor's paper was received with much interest by the assembly and a discussion was started as to whether advertisements of lodge meetings, or of entertainments of a semi-philanthropic nature, etc., should be charged for in full, at the half rate, or no charge made.

J. A. METCALF—I want to ask a question that perhaps Mr. Taylor can answer. When I purchased the paper I now have I found that it had been the custom there to give all sorts of lodge notices, etc., entirely free. I introduced this half-rate charge, assuming that these things were partly of a philanthropic nature, but not long ago I was threatened by one of these societies that if I did not print their notice free it would hurt my business. I stated that I did not care for the money but was working on a principle and that I would be willing to donate to them all and more than I was receiving for the advertisement.

MR. TAYLOR—I would have refused absolutely to deviate from the principle I had laid down. If they object too strenuously to the half-rate we purchase a couple of tickets, but we claim our space is worth something and that is the principle on which we base our charge. So long as we continue printing these notices for nothing, our paper will be looked upon as public property.

J. P. HERRICK—We have this simple little rule. Any entertainment or meeting that is charged for, we charge for their notices, and take no tickets in exchange. There is no half-rate.

W. H. MAYES—I think the mistake Mr. Metcalf and Mr. Taylor made was in charging the half-rate. The full rate should be charged and we should not be bluffed into taking tickets or donating. Those bluffs do not last long, and the editor is respecteed more if he does charge.

J. P. BAUMGARTNER—What do you do when all the papers do not stand pat?

J. A. METCALF—That is the trouble I have been confronted with. When I first went to Glendive, Montana, the publishers of the other papers there and myself signed an agreement that we would not cut our rates, but before the ink was dry I saw bills where my competitor had cut rates fifty per cent."

J. B. CASTLE—I have two competitors in my town, and three years ago I started a rule that for entertainments that had a nickel charge or more I would charge the half rate; and for a fifteen-cent or quarter charge they were to pay full rate. My competitors objected to this rate and said they would hurt me, but I lost no business. There was a little friction at first, but the people took it for granted that an inch of space was worth something. They come along and pay just as the ordinary advertiser, and I have no trouble.

B. F. WOOD—We have three Sunday-schools in our town where, of course, collections are taken up for charitable purposes, and of course expected free notices. I suggested to them that they charge an admission fee for this same purpose. Well, the same objection raised itself: The other Sunday-schools refused to do it, saying they would lose attendance, but we pointed out to them the principle of the thing, and agreed to publish the fact that they would make the change. They finally agreed and paid us for their notices. We gave them to understand we would pay for what we got and they must pay for what they got.

L. A. SHERMAN—I believe if you will make some small reduction—say 25 per cent—on church notices, you will satisfy the people and then you do not have to buy tickets.

J. P. HERRICK—Our plan is this: We always add a reasonable margin of profit, and if anyone is anxious to take work without a profit, let him do it and he soon finds out he is the loser. If we do not see our margin of profit on the job we don't do it, and let the other fellow make the loss.

President Mayes read a telegram from the Chamber of Commerce of Aberdeen, Wash., inviting the members of the Association to visit Aberdeen. The secretary was requested to present the regrets of the Association.

Mr. W. L. Tobey, of the *Republican*, Hamilton, Ohio, who was on the program for an address on "Foreign Advertising," was absent and the address was passed over.

Mr. Omar D. Gray, of the *Leader*, Sturgeon, Mo., was introduced by the president. Mr. Gray made a motion that his paper on "Profitable Side Lines for Newspaper People" be printed without being read, as the session was drawing to a close. The motion was refused. (See page 543.)

Mr. Gray's paper proved a very interesting one, and in alluding to the topic, Mr. C. L. Bittinger, of Florida, told of one successful side-liner he knew in Florida. This man, he said, who had to borrow money to start his plant, last year made $50,000 on a fair that he ran as a side line. "Besides that, he has made money on real estate. Not long ago a moral wave struck the town and horse racing was not going to be tolerated. This young man went to the mayor and asked him what he was going to do about it; the mayor replied that every horse that ran was to be taxed $200 a day. This man has an option on a piece of land outside the town, and I learned a short time ago that he was preparing the land for a race track. Of course, this man may be the exception to the rule, but I see no objection to a newspaper man making money on side lines if he can do it."

H. B. HALE, of Connecticut, told of an editor in his State, who, after he had his paper running over with advertisements, had all the subscribers he could get, finally launched into the steamboat business, out of which to date he has made a profit of $10,000.

JOE CHAPPLE, of Massachusetts—I want to say I have a side line now. I have a daily press, and about the time the

halftones came out I got out a special edition, printing the pictures of the business men and distinguished people of the city, and I made a good deal of money. In order to be successful in any side line the editor must go among his people and observe. He knows everybody, he knows what is going on, and if he keeps his eyes open he is not long in finding a profitable side line.

Regrets that they could not attend the Convention were read from Mr. and Mrs. J. E. Junkin, of Kansas; from Mr. and Mrs. J. Dymond of Louisiana, and from past-president H. B. Varner of North Carolina.

The address on "Profitable Recreation for Newspaper Workers," by Will G. Steel, of *Steel Points,* Portland, was passed over for the present.

W. F. Parrot, corresponding secretary, said he had no report to make at this time as his report was turned over to the auditing committee. "However, it is my duty as corresponding secretary to appoint an advisory board. For this board I have selected: J. B. Castle, Illinois; W. H. Mayes, Texas; and (A. W. Glessner).

Will Curtis, Treasurer, reported receipts for 1909 as follows:

Total amount recived up to July 22, 1909:
207 paying delegates at $6.25.....$1,293.75
145 visitors accompanying at $4..... 580.00

Total from membership.....$1,873.75
In addition to above, there is $150 to come from advertising, making total.....$2,023.75

Mr. Mayes asked the sentiments of the Association in reference to a matter that came up last year: "A resolution was introduced and passed that a committee be appointed to prepare a report of the meeting for the American Press Association, and that it might be obtained in plate by such of the papers as desired to use this plate of the American Press Association. Now, is it the wish of the Association that this be repeated this year? If it is, the American Press Association will be glad if you will edit the matter. They will charge the usual plate rate, but there will be no charge to the Association. What is the wish of the Association?"

The matter was put before the house, and it was moved, seconded and carried that Sheridan Ploughe, of Kansas; J. P. Baumgartner, of California; and Omar D. Gray of Missouri, be appointed a committee to prepare matter for the American Press Association, with reference to this Convention and also with reference to the A.-Y.-P. Exposition.

The secretary was instructed by the house to put a copy of the constitution and by-laws in the proceedings of this meeting.

Chairman Hosmer, of Colorado, made a report of the committee on constitution and by-laws as follows:

To the National Editorial Association:

Your committee on constitution and by-laws, while in favor of the amendment offered by Mr. Herbert in accordance with the recommendations of President Mayes, increasing the membership of the Association on account of being unable to secure a copy of the present constitution and by-laws are unable to report said amendment in a proper and intelligent manner, and would therefore recommend that this meeting of the Association select a committee of five to prepare a new constitution and by-laws and report at the next annual meeting. Respectfully submitted,

G. E. Hosmer,
H. D. Campbell,
J. P. Hurley,
J. Redmond,
J. M. Chapple.

Mr. Ploughe of Kansas, offered the following amendment, and moved that a special order be made requiring it to be taken up the first thing at the next meeting:

"Amendment to Sec. 3: In order to determine the voting strength of this Association, the following rule shall be observed: Each State shall have one vote for each twenty-five newspapers that are registered in the Association of said State, or major fraction thereof,

Provided, That such delegates shall have credentials provided for in section two.

Further Provided, That all dues of said delegates shall be paid before the Association's meeting, for which said delegate is elected, has opened.

Sec. 4 to remain as it now is."

Respectfully submitted,
Sheridan Ploughe.

H. M. Wells, of Nebraska, asked that the word "Association" in the amendment to Sec. 3 be changed to "associations."

Mr. Habgood seconded the amendment, but asked that the word "newspapers" be changed to "members," for the reason that in many of the States membership was the basis and not newspapers and this would put all the States on the "paper" basis.

Mr. Ploughe responded that the Association had practically acknowledgd the "paper" as the proper representation in the Association, and that a national association has the right to set its own standard of membership and that there had to be a common basis. He further said:

"This does not interfere with Sec. 2. You can have as many delegates as you want; this simply goes to show the voting strength only; it has nothing to say about who shall be a delegate. It determines the question we have fought over so long; and we will know before the next convention just how many votes we have in that convention.

Mr. Habgood—I am in favor of establishing a permanent basis for voting, but I think votes should be based on the membership and not on the newspapers; and I ask that the word "paper" be struck out and the word "member" be inserted.

L. Westmoreland—In our State we have five press associations. Do I understand by this amendment that the general association shall be entitled to one vote by one delegate for each paper represented in that general press association? If so, I am opposed to it."

At this point, President Mayes declared the whole discussion out of order.

F. S. Harding, of Idaho, made a motion that the amendment be adopted and vote be taken changing the constitution the first day of the next meeting. It being the last day of the meeting, this was ruled out of order.

There was an exciting fifteen-minute discussion, in which Clarke of California, W. M. Glenn of Kansas, and Miller of Minnesota, took part as to whether or not Ploughe's amendment meant the revision of the Constitution.

Mr. Castle suggested that the matter be placed on file; that there was no reason for re-drafting the constitution when it could be remedied by the proper committee.

Mr. Ploughe said he did not think it necessary to redraft the constitution; that he simply wanted to give notice that this amendment was to be placed on file at the next meeting.

G. E. Hosmer, of Colorado, said it was so long since the members had seen a copy of the constitution, he thought a committee should be appointed to put it in proper shape so that the members could have a copy at the next meeting.

J. P. Hurley, of Minnesota, stated that, personally, a number of times he had inquired for a copy of the constitution but could not secure one; that for the want of a copy the members were unable to act intelligently over the proposed amendment. He suggested that a committee put it in shape and submit a copy of it at the next meeting.

At Mr. Mayes' suggestion a report of the constitution and by-laws was accepted and placed on file.

Mr. Ploughe again gave notice that he wished to place this amendment on file to be disposed of at the next meeting.

Mr. Habgood again objected to the word "Paper instead of "member" and said that while he knew the amendment as Mr. Ploughe had it was to prevent putting in delegates for voting purposes, but he contended that the resolution as it now stood would make it easier to pad delegate rolls than it would if it were based on members instead of papers.

Mr. O. H. Wangelin stated that Ploughe had a right to make it a special order, and Habgood's statement was ruled out of order.

President Mayes placed before the house the making of an amendment to the constitution as suggested by Mr. Ploughe, and it was moved, seconded and carried that amendment to Sec. 3 be made.

The committee on necrologyy made the following report:

"We, your committee on necrology, submit the following partial report:

We ask that any member knowing of the death of a past member of this Association send the name to the recording secretary, who shall include the name in the report of proceedings of this, the Twenty-fourth Annual Convention, the printing of the proceedings not to be delayed awaiting the report. The report to date is as follows:

Mrs. F. M. Hurley, Illinois Women's Press Association.
Rufus E. Echols, Editor *Star,* Mangrum, Oklahoma.
Dewitt C. Britt, Chelan, Wash.

Emory Smith.
Frank P. Garrett.

Respectfully submitted,
ALBERT TOZIER, Oregon
H. B. HALE, Connecticut.
J. P. HERRICK, New York.
IDA NIBLACK, Oklahoma.
F. S. HARDING, Idaho.

Mrs. Weatherred, who had a long acquaintanceship with Mrs. Hurley, spoke very feelingly of that lady's estimable qualities. "Her influence," said Mrs. Weatherred, "lasted not only while she lived but it is an influence that is still felt, and her death is much regretted by those who knew her."

Mrs. Jewett suggested that the Association make some tribute to the Old Ladies' Home in Chicago in memory of Mrs. Hurley.

Orno Strong, of Washington, asked permission to speak a few words in memory of Dewitt C. Britt:

"I found an acquaintanceship with Mr. Britt twenty-five years ago when he first came to this State; this country was then a wilderness and there were no lines of transportation. He located at Lake Chelan and there set up a printing press. There was no man living at Chelan more universally respected than Mr. Britt. One particular trait of his was his love for little children."

Mr. A. Tozier, of Oregon, also spoke of the beautiful traits of the deceased, and told of an incident at a depot in Milwaukee where a child had been run over by a truck, and the accident was witnessed by Mr. Britt, who picked the child up, took it to its home and left with the mother a sum of money for its care during its illness.

B. B. Herbert spoke a few words in memory of Emory Smith. He said:

"Emory Smith was a man so well known to the people of this country that it is almost unnecessary to say anything about him. He commenced business as a country editor and, I think, the second paper he was on, is now the paper owned by Mr. Pomeroy of this Association. He was a delegate to the first convention. He was a man of thorough education and had literary ability. He wrote 'The Life of Lincoln and Men of War Times.' He was a model editor and a man of pure life."

Mr. H. A. Thompson also made mention of the beautiful character of Emory Smith.

Mr. J. P. Herrick, of New York, spoke in eulogy of Frank P. Garrett:

"For many years he lived in the State of New York and so well did he carry on his duties that it would be safe for anyone to follow his footsteps. As a young man he succeeded in the wholesale business of his father; and for a while he served in the cavalry, where he made a fine record. As an editor, he was a member of this Association for more than twenty years and never missed a meeting. He was a man of wonderful executive ability and was a most successful newspaper man."

President Mayes read a telegram from "Gray's Harbor Daily News" extending a cordial invitation to the members of the Association to visit "the most westerly city in the United States."

The secretary was instructed to present regrets to the "News."

Mr. Will G. Steel, of *Steel Points,* Portland, Oregon, was then introduced by the president and read a paper on "Profitable Recreation for Newspaper Workers." (See page 538.)

Harry A. Thompson, chairman of Committee on Resolutions, presented the following report:

"In consideration of the many courtesies extended to the National Editorial Association in connection with its Twenty-fourth Annual Convention by the citizens of Chicago; the Northern Pacific Railroad Company, through that prince of good fellows, Mr. A. M. Cleland, general passenger agent, and of favors given by the Chicago, Burlington & Quincy Railroad Company, through its city passenger agent at Chicago, Mr. H. A. Cherier; also the delightful entertainment bestowed by the Chamber of Commerce at Lincoln, Nebraska; of the kind attention of the Chamber of Commerce at Spokane; of the citizens of Yakima, in the midst of the great apple country; also of the royal entertainment of the people of Seattle, and the managers of the Alaska-Yukon-Pacific Exposition; and,

Whereas, This hospitality has been so much enjoyed by every delegate and guest of the National Editorial Association; be it

Resolved, That we extend our heartfelt thanks to the citizens of Seattle, the greatest example of faith, enterprise and progress in city building and home establishing of modern years, a city beautiful for situation; to the managers of the Alaska-Yukon-Pacific Exposition, one of the prettiest, cleanest and most interesting and edifying of the several great expositions conducted in the different sections of the United States; to the Seattle Press Club, for the various kindnesses shown our members, including the prompt housing of the delegates, place for holding the convention, theatre tickets, boat and automobile rides, dinner and smoker; to the citizens of Tacoma and Victoria; to the Alaska Steamship Company, for extending courtesies now awaiting our acceptance; and to the genial and ever-courteous Will A. Steel for manifold favors throughout our stay in Seattle, also, be it

Resolved, That we, as members of the National Editorial Association, give substantial evidence of our appreciation of the city of Seattle, the Alaska-Yukon-Pacific Exposition, Tacoma, Victoria and Alaska, by liberal space in our several journals devoted to the story of our visit to the great Northwest and its ideal city, Seattle."

It was moved and seconded that the report by the committee on resolutions be adopted. The report was unanimously adopted.

The next order of business was the selection of the next place of meeting. W. F. Parrott moved that this matter be referred to the executive committee. The motion was seconded and unanimously carried.

Sheridan Ploughe presented the following report of the auditing committee:

"To the National Editorial Association:

We, the committee organized to audit the books of the Treasurer, beg leave to report that we have carefully checked the treasurer's report and find same correct.

Respectfully submitted,
SHERIDAN PLOUGHE,
G. U. HUGHES,
R. E. DOWDELL.

It was moved, seconded and unanimously carried that the report be adopted and filed.

President Mayes announced that the next order of business on the program would be the election of officers:

The contest for the presidency was between A. N. Pomeroy and J. P. Baumgartner, the latter withdrawing in favor of Mr. Pomeroy.

Alabama yielded to Mr. Dowdell of South Dakota. Mr. Dowdell responded with pleasant words of appreciation. He spoke of the somewhat bitter contest for the presidency and asked that all disharmony be done away with.

A. N. Pomeroy's name was announced and Sheridan Ploughe immediately seconded the motion.

J. P. Baumgartner, of California, was called for, and took the floor amid loud cheering led by R. P. Habgood and others, with chorus of "For He's a Jolly Good Fellow."

Mr. Baumgartner responded with the following:

"Ladies and Gentlemen: I had hoped I would have the pleasure of seconding the nomination of Mr. Pomeroy; I did not know what form the proceedings would take at this meeting. I have always loved this Association and cared more for its welfare than for any honor it might confer upon me. After my experience two years ago at Washington where I failed in the election by two votes, I had not thought of again being a candidate, but during the past two years it has been uncertain in my mind whether I should accede to the request of my friends, for I always coveted the honor and hoped for it.

In this contest there were several delegates who absolutely refused to take any sides; others were either unanimously for Pomeroy or myself. Some of the delegates expressed regret to me for having to vote against Pomeroy; and he tells me that others expressed regret to him for having to vote against me: It was a sort of mutual admiration society condition. There really had grown much bitterness between brothers and sisters in the same State because the majority would not yield to the minority, I felt it best to withdraw from the contest. I want to take this opportunity of thanking my friends who have been so loyal to me."

It was moved, seconded and carried that the secretary be instructed to caste the vote for Mr. Pomeroy for president.

The secretary counted 234 votes for A. Nevin Pomeroy for president.

President Mayes then introduced the new president to the Association, and Mr. Pomeroy responded with a few words of appreciation and spoke admiringly of Mr. Baumgartner's stand in the matter.

L. A. Sherman, of Michigan, moved that J. P. Baumgartner be elected first vice-president; seconded by Clarke, of

California, and carried; that the secretary be instructed to count votes for Mr. Baumgartner. The secretary counted 234 votes for J. P. Baumgartner as vice-president of the Association.

J. B. Castle, of Illinois, placed the name of R. E. Dowdell for second vice-president.

Mr. Baumgartner heartily seconded the nomination, and said that the happy results of a contest that promised to be very unpleasant were due to Mr. Dowdell's unselfishness; that without his tact it would have been impossible to bring about conditions that now prevailed.

It was moved and seconded that the secretary be instructed to count the votes for Mr. Dowdell. The secretary counted 234 votes for Mr. Dowdell as second vice-president.

J. A. Kautz, of Indiana, offered the name of A. D. Moffet, of his State, as third vice-president. W. M. Glenn, of Kansas, seconded the nomination and moved that it be carried. The secretary was instructed to count the votes. The secretary counted 234 for A. D. Moffet for third vice-president.

Mr. Moffet heartily thanked the members for the honor conferred upon him.

W. F. Parrott was unanimously re-elected as corresponding secretary.

It was moved by Mr. Herrick of New York, seconded and carried that W. F. Parrott be instructed to cast the ballot for Secretary Walker. Mr. Parrott counted 234 votes for Mr. Walker as secretary of the Association.

J. P. Hurley, of Minnesota, presented Will Curtis in re-nomination as treasurer, warmly seconded by J. B. Castle of Illinois. Orno Strong, of Washington offered the name of W. A. Steel, of his state, and J. L. Gillespie seconded the nomination.

President Mayes announced that J. P. Hurley, of Minnesota and J. L. Gillespie count the votes for the roll call of the States, a few minutes recess being taken for this.

The convention was again called to order by President Mayes. The secretary was instructed to proceed with the roll call of the States.

The president announced that while the tellers were preparing the list, the executive committee from the States for next year would be announced. The secretary was instructed to call the roll while each state responded:

Alabama Press Association—Jacob Pepperman.
Arkansas Press Association—W. W. Folsom.
Colorado Press Association—Newton Wilcox.
California Southern Press Association—J. P. Baumgartner.
Caliornia State Press—F. W. Richardson.
Florida Press Association—C. L. Bittinger.
Idaho Press Association—Chas. R. Hackner.
Illinois Press Association—J. B. Castle.
Illinois Women's Press Association—Mrs. C. Huling.
Inland Daily Press Association—A. W. Glessner.
Indiana Associated Weeklies—H. F. Harris.
Illinois Republican Association—W. L. Jones.
Northern Indiana Editorial Association—W. E. Beeson.
Indiana Republican Editorial Association—J. A. Kautz.
Iowa State Editorial Association—E. F. Medary.
Kansas State Editorial Association—Sheridan Ploughe.
Kansas—H. R. Honey.
Kentucky Press Association—R. R. Perry.
Massachusetts Press Association—Joe Chapple.
Michigan Press Association—L. A. Sherman.
Minnesota State Editorial Association—J. P. Hurley.
Minnesota Home Print Association—W. R. Hodges.
Mississippi Press Association—J. L. Gillespie.
Missouri Press Association—Omar D. Gray.
Missouri Northeast—J. W. Jacks.
Missouri Northwest—Wes. L. Robertson.
Missouri Southwest—B. F. Wood.
Montana Press Association—J. T. Metcalf.
Nebraska State Press Association—H. M. Wells.
Ohio Buckeye Press Association—J. H. Simms.
Ohio Associated Dailies—H. D. Campbell.
New England Suburban Press Association—Ernest E. Pierce.
New York Press Association—John P. Herrick.
North Carolina Press Association—Mrs. W. C. Hammer.
Oklahoma Press Association——.
Oregon State Press Association—D. W. Bath.
Pennsylvania Editorial Association—Harry A. Thompson.
South Dakota State Press Association—R. E. Dowdell.
Tennessee Press Association—Lynch Perry.
Texas Press Association—J. P. Chambless.
Utah Press Association—I. E. Diehl.
Virginia Press Association—Mrs. Stephen Putney.
Washington State Press Association—Will A. Steel.
Wisconsin Press Association—J. H. Waggoner.
Washington, D. C., League of American Pen Women—Mattie H. Flick.

The president stated that the votes for the election of the Treasurer would be read:

	Steel	Curtis
Alabama Press Association	1	1
Arkansas Press Association	1	1
California State Press Association		1
California Southern Press Association		15
Colorado Press Association	5	
Florida Press Association	1	
Georgia Press Association	1	
Idaho Press Association	1	
Illinois Press Association	1 not voting	6
Illinois Women's Press Association	3	
Inland Daily Press Association		2
Indiana Associated Weeklies	3	
Iowa State Editorial Association	4½	4½
Kansas State Editorial Association	4	6
	(Not all voting)	
Kentucky Press Association	2	
Massachusetts Press Association	1	
Michigan Press Association	5	1
Minnesota State Editorial Association		9
Minnesota Home Print Association		1
Mississippi Press Association	7	
Missouri Press Association		7
Missouri Northeast		5
Missouri Northwest		1
Missouri Southwest		1
Montana Press Association	3	
Nebraska Press Association	6	
Buckeye Press Association, Ohio	2	2
New England Press Association	1	
New York Press Association	1	5
North Carolina Press Association	10	
Oklahoma Press Association	3	2
Oregon State Press Association	11	
Pennsylvania Editorial Association	15	5
South Dakota State Press Association	5	6
Texas Press Association	7	7
Utah Press Association	3	
Virginia Press Association	1	
Washington State Press Association	23	
Wisconsin Press Association	2	

The results of the voting was announced as 92 for Curtis and 138 for Steel.

Will A. Steel was elected treasurer of the National Editorial Association.

The president read an invitation from the Board of Commissioners of the Territory of Hawaii, requesting the members of the Association to visit the Hawaii building, where they would be well entertained.

The President also read an invitation received from the Alaska building to visit the building after adojurnment, where an entertainment was provided for them.

Motion was made for final adjournment, seconded and carried.

REPORT OF COMMITTEE ON TREASURER'S BOOKS.

Hon. Will. H. Mayes, President National Editorial Association:

Your Committee to whom was referred the Treasurer's books and accounts, beg leave to report that they have examined the same and find them as follows:

Amount of money in treasury at begin- this meeting, nothing.	
Money received at Seattle Convention, 207 delegates	$1,293.75
148 persons accompanying	592.00
On advertising from W. F. Parrott	150.00
Total receipts of meeting	$2,035.75

Your Committee approves and recommends the payment of the following bills:

W. F. Parrott, salary, traveling expenses, stenographer, postage, printing, etc.	$ 751.65
R. H. Walker, Recording Secretary	100.00
Will Curtis, Treasurer, salary, printing, postage and expenses	179.85
Credentials Committee, printing	34.00

Appropriation for present for Will H. Mayes, retiring president	100.00
B. B. Herbert for publishing Proceedings	500.00
Total expenses	$1,665.50
Balance in Treasury	370.25

All of which is respectfully submitted,

SHERIDAN PLOUGHE,
G. W. HUGHES,
R. E. DOWDELL,
Committee.

The United Typothetae of America in Annual Convention at Detroit

The United Typothetæ of America held its twenty-third Annual Convention at Detroit, Michigan, Wednesday and Thursday, July 14th and 15th. The meetings were well attended and were marked by unusual interest on the part of the members. In the parlors of the Cadillac Hotel many exhibits of interest to master printers were on display. Implements and machines for all manner of work in producing printing were shown. On Tuesday afternoon there was a meeting of the retiring Executive Committee, and Tuesday evening an informal reception and smoker was held in the hotel parlors. A very fine entertainment had been prepared by the Detroit committee, consisting of music, vocal and instrumental, sleight of hand, vaudeville entertainment. This was open to the ladies. On Wednesday morning Mayor Breitmeyer of Detroit welcomed the 200 visitors to the city and turned over the keys. The mayor was followed by John Trix, president of the Employers' Association of Detroit, who delivered an address on the relations of the business man to the employing printer.

In the afternoon the convention held a regular session and the ladies who had accompanied the delegates were given an automobile ride. At 3 P. M., the secretaries of the local organizations held a meeting looking toward a more effectual organization. Reports were made on local conditions and recommendations offered for needed legislation. An illustrated lecture on the cost of production was given Wednesday evening by Chadwick P. Cummings, Secretary of the Board of Trade of Philadelphia. This was illustrated with lantern slides under the able management of Daniel Baker of the *Master Printer* of Philadelphia.

A lively session of the convention was held Thursday morning, the interest centering about a discussion concerning the liability of employers in the case of injured workmen. The following strong resolutions were adopted:

Whereas, The United Typotheæ of America stands for the bettering in every practical manner the conditions of workmen employed in the printing industry, and,

Whereas, With the development of modern manufacturing the old common law concerning accidents to workmen and contributory negligence generally works injustice and hardship to the injured and their families; therefore, be it

Resolved, That the United Typothetæ of America advocates the enactment of laws fixing reasonable but sure and prompt recompense to injured workmen, whether injured by unavoidable accident or through negligence, which recompense may, through insurance or otherwise, become a regular charge of doing business; and, be it further,

Resolved, That the convention recommend to its various typothetæ that they use their influence toward having the necessary legislation passed in their respective States to accomplish this purpose.

Resolutions were also drawn against the application of the contributory negligence defense in damage suits.

Thursday evening there was a lecture on color harmony by a gentleman attached to Philip Ruxton's office, New York, followed with a lecture on Cost by Robert Denham of Minneapolis.

Friday afternoon there was a water trip on the Detroit river with dinner at Bob Lo Island. Music was furnished on board for dancing which added a very enjoyable feature to the trip.

The election of officers resulted in the selection of E. Lawrence Fell, Philadelphia, president for the last two years, for a third term. The other officers elected were: First vice-president, Wilson H. Lee, New Haven, Conn.; second vice-president, George M. Courts, Galveston, Texas; third vice-president, Harry K. Dean, Grand Rapids, Mich.; treasurer, A. M. Glossbrenner, Indianapolis, Ind., and secretary, Franklin W. Heath, of Philadelphia, Pa.

The following members constitute the new Executive Committee:

Wilson H. Lee, New Haven, Chairman; J. Stearns Cushing, Norwood, Mass.; L. T. Davidson, Louisville; George H. Ellis, Boston; Alex. Fitzhugh, Des Moines; W. T. Fletcher, Kansas City; Wm. J. Golder, Pittsburg; William Green, New York; H. W. J. Meyer, Milwaukee; W. E. Milligan, San Antonio, Tex.; J. W. Morgan, Chicago; William Pfaff, New Orleans; Robert Schalkenbach, New York; Fred L. Smith, Minneapolis; C. M. Skinner, St. Louis; Edward Stern, Philadelphia; John Stovel, Winnipeg, Canada; E. C. Tanger, Rochester, Rufus C. Williams, Richmond; President, Vice-Presidents and Treasurer, Ex-Officio.

FRANKLIN W. HEATH, *Secretary.*
The Bourse, Philadelphia, Pa.

One of the most important moves of the executive sessions of the day was the decision to select an assistant secretary who will be appointed next month and will be stationed in the Chicago-Detroit-Kansas City district. The convention city for 1910 will be named by the executive committee later this summer.

It was the unanimous opinion of the members that this convention was the best one held in recent years. Under the head of Special Legislation the following subjects were considered and acted upon:

Amendments to Constitution.
Reduction of Dues.
Discussion of Trade Abuses.
Matter of Printing Stamped Envelopes by the Government.
Duty on Post Cards.

A WELCOME VISITOR.

DAVIS, W. VA., Jan. 28, 1909.

Mr. B. B. Herbert, Chicago, Ill.

DEAR SIR:—Enclosed find check, for which please continue us on your list of friends. The N. P.-J. is indeed a welcome visitor to the *News* office.

Yours very truly,
W. R. MORRIS.

ENJOYS READING THE N. P. J.

SOLDIER, KANSAS, April 15, 1909.

B. B. Herbert, Chicago.

DEAR SIR AND FRIEND:—The enclosed will pay for another year's subscription to your valuable paper, which I enjoy reading.

Yours very truly,
B. L. MICKEL.

IT GIVES GOOD SUGGESTIONS.

RED WING, MINNESOTA, March 31, 1909.

B. B. Herbert, Chicago.

DEAR MR. HERBERT:—Enclosed check for subscription to N. P.-J. We enjoy your paper very much and it is giving us good suggestions.

Very truly yours,
S. N. GIBSON & SON.

President-Elect A. Nevin Pomeroy

Hon. A. Nevin Pomeroy was born in Philadelphia, Pa., May 27, 1859. At the age of eighteen he entered the office of his father, who was then editor and proprietor of the *Franklin Repository*, a weekly newspaper published in Chambersburg, Pa., and now the third oldest newspaper published

A. Nevin Pomeroy, President-elect,
Franklin Repository, Chambersburg, Pa.

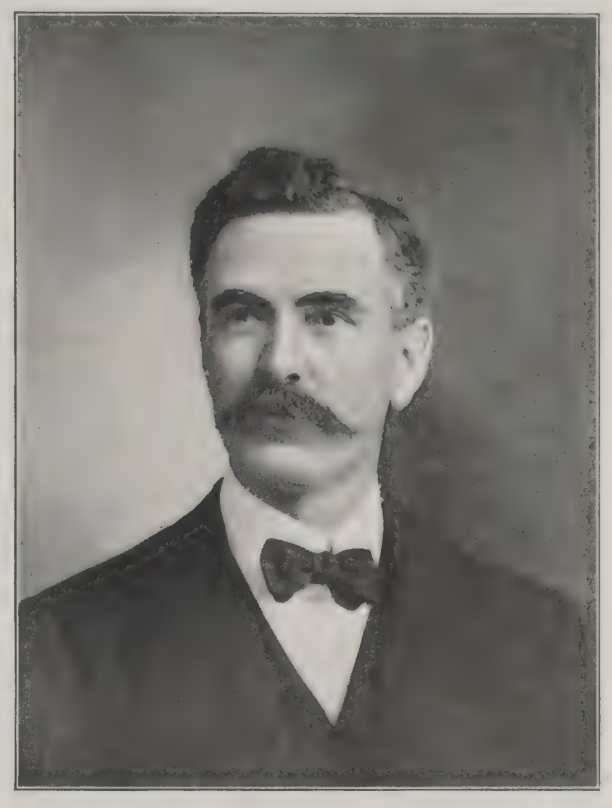
in the United States, having been established in 1790. Mr. Pomeroy first learned the printing trade, then became reporter and upon the death of his father became the owner and editor of the *Repository*.

Will F. Parrott, Corresponding Secretary,
Daily Courier, Waterloo, Iowa.

In 1883 Mr. Pomeroy established the daily issue of the *Repository* and has conducted it as well as the weekly most successfully ever since. The Repository is regarded as one of the leading papers of Pennsylvania, and its editorial utterances are quoted largely by the newspapers of that State.

In addition to the newspaper plant which is equipped with Mergenthaler Linotype machines, web perfecting presses, and all the latest improved machinery, Mr. Pomeroy conducts one of the largest job and book printing establishments in his State, as well as a large bindery, all thoroughly equipped, railroad and book work being a specialty.

Recognizing in Mr. Pomeroy a man of vast experience in the printing business, Governor Pennypacker offered to him, entirely unsolicited, the office of Superintendent of Public Printing and Binding of Pennsylvania. The Department at the time required many improvements and reforms. Mr. Pomeroy at once had new laws enacted which placed the Department on a business free from any political entanglements or opportunity for graft in any way. So well has the Department been conducted that Governor Stuart upon



J. P. Baumgartner, First V.-P.
Daily Star, Pasadena, Calif.

assuming office immediately reappointed Mr. Pomeroy, something that has never been done in the history of the position.

Mr. Pomeroy has also represented his district several times in the House of Representatives of his State. On various occasions he filled the speaker's chair with great acceptability. His knowledge of parliamentary law is such as will make him an excellent presiding officer of the National Editorial Association in every respect.

The Stoughton, Wis., dailies have merged and the paper will be known as the *Courier-Hub*.

J. E. Spaulding, one of the best known newspaper men in Iowa, has gone to Topeka, where he takes the circulation management of the *Kansas Farmer*, one of the leading agricultural papers of the southwest.

W. L. Odett, who has been managing an Elgin, Ill., paper for several years, is about to start a daily paper at Kenosha, Wis. The paper will be issued evenings and called the *Journal*. Kenosha now has only one paper.

Following the resignation of Miss Alice Boland, teacher of German at Appleton, Wis., high school, came the announcement of her engagement to Sam J. Ryan, Jr., editor of the Appleton *Daily Crescent*. Miss Boland's home is in Rogers Park, Ill.

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

Among recent shipments, the Oswego Machine Works, Oswego, N. Y., report several of their high-speed Paper Mill Automatic cutting machines shipped to the San Rafael Paper Mills, Mexico, D. F.

* * *

The Frank Armstrong Advertising Company of Des Moines, Iowa, has been using space in this magazine for the purpose of telling printers about a most effective scheme for securing an increase in trade and multiplying the orders for printed matter. The charge for the service is low and out of proportion to the benefits derivable from its use. Immediate reference to the advertisement is advised.

* * *

Mr. John D. Rerick, one of the most capable salesmen that ever traveled for a printers' supply house, and who has been Illinois representative for Barnart Brothers & Spindler for twelve years, has given up his position to return to his first love—the newspaper business. Mr. Rerick has purchased the *Daily Sun* and *Weekly Standard* at Kendallville, Indiana, and assumed control July 1st. Mr. Rerick was part owner of this newspaper property fifteen years ago, and returns to it as sole owner, his former partner, Senator Joseph S. Conlogue, having died. Mr. Rerick is a newspaperman of extensive practical experience and possesses a wide and cordial acquaintance in Illinois and Indiana, among printers and newspapermen. Kendallville is an enterprising and beautiful town of about 6,000 population, surrounded by a rich agricultural district, and extensively engaged in manufacturing.

* * *

ADVANCES IN PRINTING METHODS.

The average merchant in printing materials is a mere peddler, having little real knowledge of his customer's requirements and is unfriendly to all new ideas, because they make some of his stock unsalable and require some exercise of practical intelligence to comprehend. Thus it happens that the contents of nearly all printing materials catalogues are alike, copied one from the other and are extremely conservative. An article or machine that has not proved itself salable easily is excluded. In the meantime, the wise ones among the printers are reaping the advantages of new inventions for a few years before the average printer hears of it.

One firm that makes a specialty of encouraging all good new ideas is that of Wesel. Consequently the Wesel Catalogues are much more interesting than are others to those who wish to progress. There are hundreds of printers who specialize certain lines. These are the most prosperous. Almost invariably these are customers of Wesel, because he caters for them, developing their ideas or furnishing ideas to them. The results are usually—not always—shown in Wesel's catalogues, and in course of time, when the cream of the profits derivable from the use of new methods has been lapped up by the progressives, these may be found in the average catalogue of the average peddler of printing materials. Wesel has built up the most complete supply house in the world by thinking ahead or getting in touch with those who think ahead. After a while the hindsighters catch on. The foresighters are all students of the Wesel catalogues which are (1) Printing machinery and materials, (2) Electrotyping machinery and appliances, (3) Stereotyping machinery and appliances, (4) Photo-engraving machinery and appliances, (5) What those who print from plates should know about blocks, (6) Automatic Self-Feeding and Self-Inking proof presses.

* * *

A pamphlet that will be of interest to Nature lovers, and especially to those contemplating an outing in the Rocky Mountain region, is Stanley Wood's "With Nature in Colorado," just published by the Passenger Department of the Denver & Rio Grande Railroad. The illustrations, of which there are many, harmonize with the title and text. This is one of the best of the score of publications put out by the railroads this year and no doubt will be in great demand.

* * *

Many printers make a specialty of monthly blotters carrying a Calendar and they will be interested in the unique Calendar Figures which have just been brought out by the American Type Founders Company. The accompanying specimen is set in the 12 Point size and as these figures are made in 6, 8, 10 and 12 Point, they can readily be adapted to varying requirements.

Just the thing for running a small calendar in the newspaper column. The 6 Point font contains an assortment for yearly calendars and the 8, 10 and 12 Point sizes contain an assortment for 6 months. The prices of the 6, 8 and 10 Point are $1.00 per font and the price of the 12 Point is $1.25. Wide-awake printers will find these useful also for other forms of printing which have previously required the expensive combination of rule and figure work.

1909 AUGUST 1909

For certain forms of printing there is nothing that quite takes the place of Script, and in this issue the American Type Founders Company have two pages devoted to a showing of their new Commercial Script. This is a beautifully cut, legible and bold face, which will speedily become popular with the best printers.

CONTAINS A WORLD OF INFORMATION.

National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Please find enclosed check for $2 as subscription to the NATIONAL PRINTER-JOURNALIST to January, 1910.

I am always pleased to receive the N. P.-J., as it contains a world of information for the printer.

Yours very truly,

WHEATON, MINNESOTA, June 12, 1909. J. W. MILES.

VERY HELPFUL IN HIS WORK.

DONALDSON, MINNESOTA, Feb. 1, 1909.

National Printer-Journalist, Chicago, Ill.

GENTLEMEN:—Inclosed find draft for $2 to apply on my subscription account. I find the PRINTER-JOURNALIST very helpful to me in my work, especially the departments conducted by Messrs. Copper and Hanson.

Yours truly,

ARTHUR DODD.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . .

LEAGUE BALL RESULTS FOR MORNING PAPERS, $1.00 per week. General news for evening papers. Special correspondence. Yard's News Bureau, 166 Washington St., Chicago, Ill.

THE VAN BIBBER ROLLER CO., Sixth and Vine Sts., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

A COLD SIMPLEX STEREOTYPING OUTFIT, $17.00 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

FOR SALE—BEST PAYING ONE-MAN WEEKLY PAPER and job office in Texas. $750.00 buys plant. Address TEXON, Mobeetie, Texas.

PRACTICAL JOURNALISM

A Complete Handbook of Modern Newspaper Methods

By EDWIN L. SHUMAN

Author of "Steps into Journalism"
Literary Editor of the Chicago *Record-Herald*

Illustrated, 12 mo. Cloth $1.25 net; postage 12c additional

THIS is the most comprehensive treatise on newspaper work that has thus far appeared. It explains the organization of a newspaper staff, the best way to enter journalism, the usual steps of promotion, the salaries paid, etc. There are practical chapters on how to start and run a country newspaper, and for workers on the country press there are valuable suggestions on how to make connections with large city papers. There is a chapter for the country correspondent.

Mr. Shuman's method in regard to the large journals has been to tell what each department does, and the best methods of doing it. We get a view of the reporter at work, coupled with clear instructions on how to write a news story. The question of how to get a start is answered in regard to every department. For the experienced editor there is much valuable information in the chapters on errors, libels and copyright. There are chapters for artists, ad writers, women and special writers. The book covers the whole field of journalism with a thoroughness never before attempted.

NATIONAL PRINTER-JOURNALIST

ESTABLISHED TWENTY-TWO YEARS

THE OFFICIAL PAPER of Employing Printers and Newspaper Publishers in America—The National Editorial Association of the United States, Founded by Its Editor in 1885 at New Orleans, La.

Enthusiastically supported by its readers, and they are *readers* too:—

Right here is an advertising point that many an advertiser overlooks. A trade paper, for instance, may have a great number of subscribers and only a few ***readers***. They look at the pictures and lay it aside "to keep." How much more successful is the advertising medium which compels attention, whose every page is greedily devoured—ads and all!

Circulates in Every State of the Union. A subscriber says: "Every printer and publisher with brains should take it."

And Every advertiser who wishes to secure the attention of printers and publishers should know of its sterling advertising qualities.

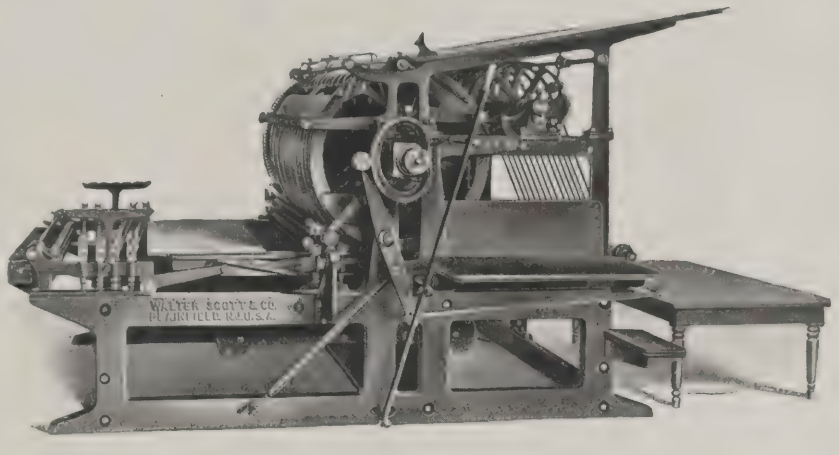
From NEWS DRUM to "SPEED KING" ROTARY

No matter what your requirements are, you are doing yourself an injustice if you fail to get full information about *SCOTT PRESSES.* They are built in many different styles to properly and economically fill various demands. Below are illustrated two extremes. If your paper is too big for the first or too small for the last, we have several intermediate styles, one of which will suit YOU. We also make bigger presses—in fact, we have the only complete line.

SCOTT CLASS C. T.

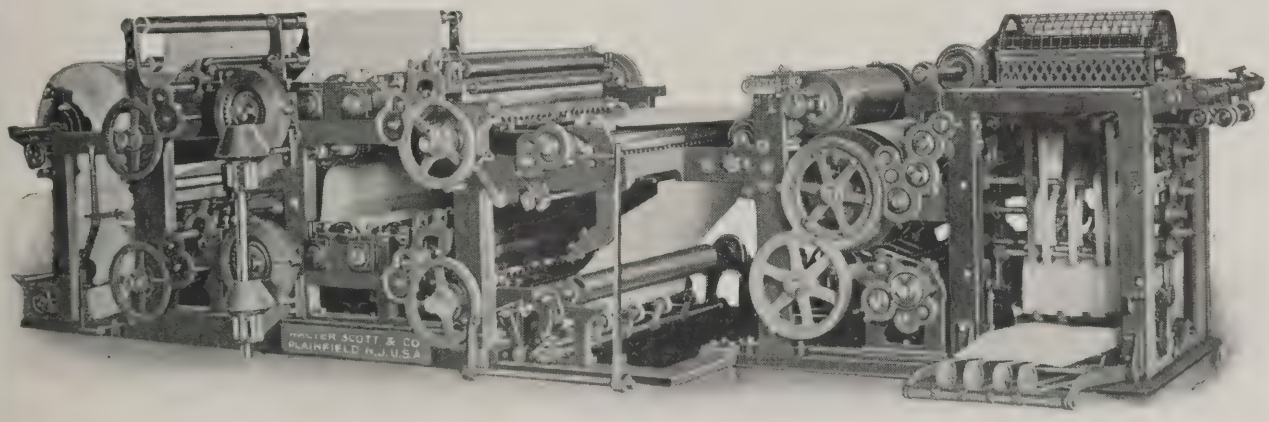
This is the latest improved machine especially designed for the requirements of the newspaper office in smaller towns. It is so accurately constructed and of such excellent design that it is also used by job printers for the economical production of ordinary job work.

This press is the finest machine of its kind that it is possible to build at any price, and it has become so popular that orders for a large number of these presses have been received, although the first machine was only shipped in January of this year. Send for descriptive matter and price.



SCOTT CLASS XX. The Latest—The Best.

Enormous speed attained from fewest plates, without increasing number of cylinders, surface speed of webs or number of paper rolls, and using regular semi-circular plates.



There is no machine ever offered the publisher that combines so many advantages and at the same time has no drawbacks. It is made in many sizes. The press illustrated feeds from 2 two-page-wide rolls of paper, has 4 plate and 4 impression cylinders, 4 ink fountains and distributing apparatus, and a single rotary folder, and it will easily produce 24,000 per hour of 4, 6, 8, 10, 12 and 16 pages from practically a single set of regular semi-circular plates—all pages inset.

THIS PRESS HAS NO EQUAL IN THE WORLD—INVESTIGATE IT.

AMERICAN TYPE FOUNDERS COMPANY

SEPTEMBER, 1909

AMERICAN TYPE FOUNDERS COMPANY

Big Type Founding Business

There has been no panic in the type founding business.

There is not an idle type founding employee in the United States.

The American Type Founders Company offers to employ any person experienced in any department of type founding.

It has advertised extensively to secure experienced type foundry employees, of which it has obtained quite a number.

It has been compelled to constantly train apprentices to keep up with its large increase in type sales.

This large increase has been due not only to its beautiful type faces and type families, but to the low price of the product where job type is sold in weight fonts at body type prices and large discounts.

Many printers are buying more type than formerly because of the weight font opportunities.

There is no further excuse for empty cases or lack of sorts.

Job type was never sold at so low a price as now—in weight fonts.

The enterprising printers are taking advantage of it, knowing that they will save more in the cost of labor in their composing room by having an ample supply of type than the amount of their entire annual purchases of type.

Besides, new up-to-date type faces bring new customers to the printery and hold old ones at fair prices.

American Type Founders Company

Set in Cheltenham Bold, 18 Point

The Casting Machine Fad

Selling job type in weight fonts, at body type prices and discounts, has brought great changes, and many printers who were considering the purchase of casting machines have concluded that it was not only far cheaper, but more satisfactory to buy type in weight fonts than to put in casting machines with the big original outlay and the endless expense for labor, metal, matrices, repairs, gas and other supplies ever afterwards with a limitation as to the number of sizes and variety of faces, except at an outlay of many thousands of dollars for matrices.

The enterprising machine salesman claims that a six or eight dollar boy can run a type casting machine, and in many cases it was tried with the result of poor type, bad line, matrices burned out and unsatisfactory results generally. There are not a dozen printing offices in the United States that can afford to purchase and operate a casting machine when job type can be bought in weight fonts at our low prices and large discounts.

The entire yearly purchase of job type in weight fonts would not cost a printer as much as the matrices, to say nothing of the big investment in machines and the cost of labor, wear and tear, interest and other operating expenses.

Any printer endeavoring to keep up with new faces and new styles would have to spend hundreds of dollars annually for matrices, and then obtain only the smaller sizes.

Some printers have not hesitated to spend from two thousand to three thousand dollars in the purchase of a casting machine plant and supplies with a limited number of matrices, who would not spend that much in ten years in the purchase of type at the weight font prices, and as long as he used the casting machine be out the original cost, the operating expenses, the cost of matrices, gas, repairs, insurance, interest, etc.

COALINGA OIL RECORD

U. M. THOMAS, Editor and Business Manager. Subscription Price, $2.00 a Year, in Advance

Coalinga, California, May 19, 1909

T. J. Wilbourn,
Corning, Cal.

Dear Sir:

Your inquiry regarding the merits of the Junior machine in contrast with the Simplex, was handed to me for reply.

The best way in which I can explain the merits of the Junior is to tell you what I do on it. We print an eight and ten page six-column, and use from fourteen to eighteen galleys of eight point on a nine point slug, and I set the body of all small ads on the machine, averaging about twenty hours per week on the machine.

It would take two people to do the same amount of work on the Simplex, and the only difference in cost of running is that of heat for the Junior (1 gallon for 12 hours), which is nearly offset by breakage of type by the Simplex. With the Junior you have a clear, new dress for each issue.

The metal is used right from the forms each week, and only needs melting up about once in six months, at which time you can stir in a little borax to clean it.

If you still think seriously of purchasing a Simplex, let me know, and I will give you the addresses of three country shops where Simplex machines in good working order were discarded, one in favor of a Junior and two in favor of Standard Linotypes, and you can have the Simplex machines almost for the asking. Very respectfully,

C. B. Shaw

Foreman, Coalinga Oil Record.

ANOTHER ENDORSEMENT OF HAMILTON'S Modernized Composing-Room Furniture

There are printing offices in Amsterdam, Holland, dating back closely to Gutenberg's time in the latter part of the fourteenth century.

In some of these offices the original furniture as first installed is still in place, worn and weathered by the ravages of time, and the wear and tear incident to its long-continued use.

The most conspicuous example of these old-time printing plants has been converted into a museum now owned by the government, and it is a place of interest to printers who visit Amsterdam and who come from all quarters of the globe. This is still a valuable printing-office plant, not from an economical standpoint so far as actual printing is concerned, but sentimentally it is of the utmost interest to every printing-office proprietor.

A study of the equipment in this office will show the difference between the appliances of that early date as compared with those now in use. Naturally the contrast is forcibly impressed upon the practical printer's mind, but this difference has been a matter of slow process. The evolution has been gradual, and there are thousands of composing-rooms still in the intermediate state of the change, not only in Europe, but throughout the United States and all North and South America.

The furniture of twenty years ago is now antiquated, out of date, and such an equipment is not economical. The printing plants that have been modernized are the money-makers of to-day. The competition is of the present, not of the past, and it can not be met successfully with other than present-day equipment. This fact is so obvious that it needs no further elaboration.

We are continually modernizing printing plants—that's our business. We are going to keep everlastingly at it. Perhaps to-morrow we will re-equip the composing room of your most intimate competitor. Wouldn't you rather *lead* than follow the lead of your competitor?

With an office equipped with old-fashioned furniture, we can accomplish a saving in floor space of from 25 per per cent to 50 per cent, and in labor from 5 per cent to 20 per cent. It's up to us to show you how this can be accomplished.

Fill out the attached coupon, mail it to us and we will have our representative show you what can be done toward modernizing your composing-room. Don't build an addition—don't spread over the earth, but *do more business in the same quarters at a less cost.*

LET US SEND YOU A COPY OF "COMPOSING-room Economy."

Results accomplished in a representative Iowa printing plant.

THE HAMILTON MFG. CO., Two Rivers, Wis., *Decorah, Iowa, August 7, 1909.*

Gentlemen,—We have just arranged the furniture which we bought of you several months ago, and we are now in position to say that the equipment which your representative figured out for us fits our purpose exactly. We have been using furniture which was "good enough" for thirty years, so that this new furniture undoubtedly saves us about one-half the space, and we are convinced that it must save the typesetter considerable time. We are very much pleased with your services in laying out a plan to scale.

Yours truly,
B. ANUNDSEN,
Publisher of "Posten" and "Ved Arnen."

We are interested in the question of Modernized Furniture and we would like to have your representative show us a floor plan of our composing-room as you would re-arrange it, with a view to our installing such furniture as you can show us would soon be paid for in the saving accomplished.

The Babcock Optimus
The Babcock Optimus

The "Plant of the Famous Harper Brothers," New York, was written about in the April *Printing Trade News.* Of the many Optimus machines in use there Mr. John F. McCabe said:

"The first presses we came to were printing the covers for the next issue of the Weekly—Babcocks. The superintendent, with the true love and the keen eye of a connoisseur in good printing, pointed out to his visitor the many telling features of these presses, according to my notebook somewhat as follows: "It has a great delivery; see how easily and evenly it throws out the sheet. We turn out some very clever—yes, some very beautiful work on these presses. Take it altogether, it is a delightful press. We use the Babcock on the color work for the Weekly and the Bazaar, and they turn out the very finest kind of product, as a reference to those publications will show."

HANDLING THE CIRCULATION OF A DAILY PAPER

Practical Talk by R. P. Habgood of "The Star," Bradford, Pa., at the Convention of the National Editorial Association, Seattle, Washington, July 22, 1909.

MY newspaper experience is limited to ten years on a daily paper. On February 1st, last, we merged with the other afternoon paper in our city, so that I know by a glimpse, at least, as to over eighteen years of their experiences. I did not write down what I have to say because I have learned it through hard knocks and I do not think I will forget any of it.

I am especially glad, and I am fortunate, that I was not here to take part in this entertainment prior to this time, for I have intensely enjoyed the speeches which have preceded mine, especially the addresses by the ladies and I am always much better pleased to come after them than before them. I feel that if my remarks, whatever they may be, are a success it will be largely due to the inspiration I have gathered from the last two speeches.

It seems to me that the matter of handling the circulation of a daily paper has much more to do with handling everybody, than does the managing of any other part of the paper. In the advertising, you handle the advertisers almost exclusively; in the typographical part, you handle the employees, and in the reportorial part and the press work, you handle others but with the handling of the circulation, you have to handle the general public. Not the least important department of the circulation is the newsboy. You have also the agent, the man who wants trust for his paper and the man who comes in loaded to the muzzle as an "indignant subscriber." It seems to me that handling the circulation of your paper involves handling more people than does any other phase of the newspaper work.

I am not prepared to say that what we have done is the best for all to do. I am prepared to say everyone must work out his own salvation in the newspaper business, the same as in any other business, but we can get much more help from suggestions and if you can get any benefit from my suggestions I shall be glad.

The circulation of a paper, it seems to me, has a direct analogy to the circulation of the blood in our bodies. In the first place, it is unfortunate for anyone to receive through his body a circulation of blood that is not pure, rich and red and has not the right quality. In the second place, it is unfortunate if it is, in any local section of the body, retarded or interfered with or heated too much and it is also unfortunate for that person if in the circulation of the blood, through the body, there is, no matter how pure and rich the blood, an improper action of the pump.

It seems to me that in this illustration there are important lessons for us to learn as to the healthful circulation of the newspaper. It matters not how complete your organization may be for distributing your paper; how magnificent your details may be in connection with getting out the paper and getting it before the public; it matters not how complete your management and co-operation and line-up may be and your system of collections; it matters not whether it is done on a cash basis, absolutely, so that you are sure of your money, if the circulation of the paper does not represent, as does the blood in your body, the rich, red, pure blood and the paper be, in itself, on its own merit, its best means of handling the circulation, then something is wrong.

Then, with the paper, which I believe is in itself the greatest factor in handling its circulation, coming up to the full requirements in pure, red blood, care is necessary on two points, particularly. There must be care that the people who want the paper get it absolutely, without fail, when they want it, because if they do not get the paper when they want it, lots of times they won't take it and soon they will not want it at all. I do not hesitate to say, if you will pardon a personal illustration, that more than once, more than ten times, more than twenty-five times, I have either walked or ridden as far as from ten blocks to half a mile to deliver personally a paper to a subscriber who has phoned and said that he has not received his paper that evening through the fault of some boy upon whom one cannot always depend. In such cases I have myself taken papers to subscribers who have been missed that they might have it in the evening when they wanted it because they would not want it the next morning, and I can say, from personal experience, I never took a paper to any man or to any home that it did not count more for the handling of the circulation of the paper than ten times the amount of effort or expenditure for other things in the way of routine system and advertising.

It is the small things that count. It is the small things that count in handling circulation, the same as in handling anything or anybody. It is the small things that will make your business grow and make it permanent and that is one of the most important things it seems to me, thoroughly to learn and enforce, in handling your circulation.

Then in connection with the handling of the circulation of our paper we make much of the newsboy, as we believe that he is one of the greatest agencies for building up and holding our circulation. We do not hesitate to go on record, at every spot and place, that we honor the news boy, we speak to him on the street, we invite him to our home, we ask him to come in a body and he is welcome and we impress on his young mind the important position which we believe he holds in connection with our business. Once a year, regularly, without interruption, for three years now, we have had what we call the *"Star-Record's Newsboys Outing"* and that costs us about $160 to $175, hard cash paid out without any obvious returns. We take the newsboys on special trolley cars to a near-by park, twelve or fourteen miles from our city on the top of a mountain. Last year we took them over the mountain and down the Alleghenny river and we took the High School Band along—as we are fortunate enough to have a High School Band of 60 pieces, composed of young fellows in the High School and they play admirably under an instructor in the City school. On these excursions we pay the fares of newsboys, provide them with dinner and free tickets for every attraction in the parks, including the merry-go round, the moving pictures, the bowling alley and every clean,

healthful amusement to be found there. They own the park. The newsboys can use it—they have *carte blanche*. We take them to the parks and bring them back. We give them not only a luncheon but, as they leave the park, we give them on top of the luncheon, a dish of ice cream and a box of cracker jack. These small details may seem rather childish but I want to assure you that in my humble opinion this plan has more to do with handling our circulation, locally, in our city, and building it up than all the theories we can work out or systems of canvass or any other system that can be suggested. It has an effect on the people who read our papers.

Last year we had that trip and it is astonishing how the newsboys get more numerous each year. We require an enrolment beginning with the 1st of July and we have our outing the next month,—some day in the third week in August. The newsboys do not know what the date of enrolment is but this year we have made it July 1st and we enroll no newsboy as such unless he handles at least five papers a day. Then he is a newsboy and we have some who handle as many as 275 and 300. We enroll them and last year on the trip we had 112. This year I was informed before I left home that the enrollment is 166. What does this mean in itself? It means fifty four more boys, who are selling at least five papers a day, than last year. Do you say they may have taken the papers from some of the other boys? It is true they may have bought them because boys are as smart as we are and sometimes smarter but it means that there are 166 from surely a hundred families in that city who are going to enjoy that outing and be our guests and we feel that our taking that interest in the boys will interest each one of these families, their relatives, their sisters and their cousins and their aunts, and if you can get any better solicitors and enthusiasts to popularize your paper in every way from the standpoint of handling circulation or that will do the work more thoroughly we should be most happy to have you tell what way it would be.

The results have been marvellous. We take the newsboys through the streets, with the band on the car—we go through every street before we start out of the city and you know you cannot put 200 newsboys on trolley cars and let them go down the streets, without everybody in every ward knowing it. We have streamers on the cars. It is true there is an essence of business; it is not charitable, pure and simple, and yet it is intensely appreciated and you and I know we can work more successfully and earnestly in season and out of season for those with whom we are pleasantly associated. We feel that they appreciate the attentions paid them and the plans for their pleasure, and boys are more susceptible, in my judgment than are men and women—more appreciative of recognition.

Learn to know your boys personally. If you do not know them, personally, try to make no mistake; speak to them on the street, let them feel you recognize them as a factor in your business. Meet with them at least every three months. We have our newsboys' meetings. We are able now through the merger of the two papers to have a large, permanent room on the second floor of our building. We used to hold meetings helter skelter, through the office, but now, once in every three months we get the boys together on a Saturday or when school is not in session from 2 to 3 o'clock in the afternoon.

As I was saying, we have meetings every three months and all the newsboys are invited, and we talk with them about their work and we ask them what the kicks are and how business is getting along and if they are getting any new subscribers and if there is any way we can help them and we try to emphasize the fact that we depend upon them a great deal and that we owe to them a great deal for the success of our business.

I wish to say further, we do not employ these boys. They share with us, share and share alike on every paper we turn out. Our paper sells for 2 cents apiece and we sell it to the boys for one cent and we do not control their circulation or routes. We have tried it two or three ways. We formerly owned the whole routes and hired the boys at so much a week,—they doing the collecting for which we paid them a commission. Since February 1st, we have decided on what we have thought experience proved was the best way, and now we do not handle one carrier or paper within the city limits. If someone in the third ward subscribes for the paper direct to our office we turn it over to the boy nearest in that ward and charge him nothing for it and while we do say "Bill, we give you this sale or subscriber free and it is good for one cent a day as long as you sell it, or 5 cents a week," yet we ask, if he won't try to get another subscriber to help us that much too and you would be surprised how the little fellows work. They like to work especially to get what they feel is their share and I do not believe that there is any factor in connection with handling the circulation of a daily paper, within the city limits, that counts more. The having a personal share or profit in every sale outweighs all the rest of the considerations put together, to the newsboy and the newsgirl. Of the 112 we had last year at our party, we had 11 girls who sell papers every evening.

Now, of course, the boys pay us cash for their papers. We have no problem to solve in connection with collections. We have established a system of precedents with the bovs in securing their papers quickly and promptly and having the right of line, as we call it,—for everything is organized upon military discipline,—there is no helter skelter of the boys. Those who pay in advance for their papers every week are in the precedence class and we have over 90 per cent of our circulation in the city that is paid for each Monday in advance by the boys. They do that for two reasons. It is a benefit to their parents, it does not make it necessary for the parents to give them, every day, the small change, and it decreases the temptation to the boys because there is a temptation to boys, as well as to men when they have money in their pockets, and it makes a much better arrangement for the paper, as you can see at a glance—it not only gives you cash for your circulation but cash in advance for that week and the boys come each night and get their papers.

Now, concerning the circulation outside of the city, I wish to say that I am not so enthusiastic over any suggestion that I can make concerning the handling of papers outside the city as I am about the suggestions I have tried to make as to the sales and circulation within the city. We handle our circulation throughout the territory outside the city through agents, through exclusive agents. We say to a man, "You will be the agent for our paper, we will support you and you will be the only one that will handle it in that place for as long as you give satisfaction and handle our circulation and build it up." We permit him to return papers to us over a minimum number decided upon when we establish the agency and increased as the agency is built up. If we establish an agency for the first time in a place, we make no minimum for one month. At the end of the first month we make a minimum to that agent whereby we will not take any papers back except over that minimum amount and after three months or six months or a year, if the business has increased we put a special premium so far as the contract is concerned upon his handling the circulation and we increase the minimum which we require him to sell as his business grows. Then we have started a sort of similar plan with the agents out in the country, not the correspondents, as they are very much more numerous.

Once a year, we shall, in December gather all our country correspondents in our city and office, paying all their expenses from their homes to our office or to a hotel in our city, where we shall give them a banquet and through an arrangement with our local theater we shall entertain them at the theater to whatever attraction may be there. You know how comparatively easy it would be for you to make such an arrangement with your local theaters. They will be only too glad to co-operate and you can do it on an advertising space basis. Of course your banquet will mean an absolute outlay of cash, but I want to say to you from what I have noticed and what we shall observe in the future that this is going to have very much to do in creating a close and strong attachment for and personal interest and confidence in the paper. It is the most effective method to broaden and build up a business and make it permanent. The newspaper publisher, manager, and employees, because the latter are all invited even to the "devil" to those banquets, come into close touch with the people who handle our outside circulation and furnish the news from the different localities.

I could go on and talk of our system of keeping books and accounts. We allow no man to owe for more than a year. If one does not pay within three months after the year we stop the paper and take chances on collecting the amount due. I have tried to think of things that I thought would interest you and help you but I can assure you of one thing. You will find kickers and one or two men in your city who will say when you give your Newsboys' Outing "Of course they are going out and spending money but not for the newsboys, they are doing it for themselves." Of course you will find people like that—but where you will find one like that you will find a hundred who will say that a newspaper that will take care of the newsboys, is all right, besides nine out of every ten of the newsboys come from families in and around the city, and in giving them an outing, you are doing more than any Fresh Air Fund you can spring upon the people, because you are taking care of the boys and girls of your own city. I would not care for any man or newspaper that did not have an enemy or did not make a mistake, and if you do not make one of those things, you can bet your life, you are not making anything.

BUSINESS MANAGEMENT

By H. G. Bishop, Oneonta, N. Y.

MILLIONAIRES are plentiful in the United States, and have made their money in many kinds of trades, but does anyone happen to know of a millionaire printer? Tinkers and tailors, locksmiths and blacksmiths have reached that financial standing, but Diogenes himself would find his old task easy as compared with that of searching out a man who had become a millionaire in the printing business. And though he only searched for those who had passed the hundred thousand dollar mark, he would find but a ridiculous minority even then. Why is this? Surely it cannot be that the printing trade is so bad and profitless when compared with other trades. However, the fact just stated stare us in the face and call for an explanation. Perhaps some of the readers of the National Printer-Journalist will kindly send to this department their ideas on the subject.

So far as the present writer's observation and experience have gone, it appears that a lack of proper business management is responsible for much of the difficulty that printers experience in making money. A very large number of them had been working for someone else, but when they started in business for themselves they had not the requisite knowledge of business principles and methods and, moreover, could not hold themselves up to the mark as they had been obliged to do when working for someone else. It has often been said that many a man who was a good servant makes a poor master, and the printing business has furnished a large number of "horrible examples" of this fact. While it might seem reasonable to suppose that any man would work harder and longer hours for himself than he would for an employer, yet, observation teaches that this is not so. The fact of being his "own boss" has a tendency towards the swelled head and a disposition to play proprietor and put on style and give himself too many liberties. He is apt to feel that wearing an apron and tucking up his sleeves are *infra dig.*, and he tries to hide from his customers the fact that he has to work for his living. All of which is worse than ridiculous and is positively harmful.

It might be expected that after a time he would grow out of this bad condition, but while some do, the great majority continue just so to the end of their lives; and although their business may grow until it becomes really large and comparatively prosperous, yet they always suffer from such defects. Perhaps the best advice that could be given to a man who is starting in business for himself would be something like this: Do not work less but more; do not spend more but less; make every dollar you put into the business count for at least a hundred cents; be punctual yourself and see that your help follow your example; let your customers understand that you are working hard to make the business a success, and instead of thinking less of you they will help you; don't take work for the sake of doing it, but for what you can make out of it; avoid bad debts by getting cash or prompt payments, and remember that it is better to lose a customer than to lose a dollar; pay promptly yourself, save your discounts and get a reputation for being a good risk; don't buy something simply because you can get it on credit—this has ruined many a promising business; be honest and truthful, give full count, and endeavor never to disappoint your customers.

Furthermore, it will be found good policy not to reach out after more business than you can attend to. A master printer was heard to remark recently: "I can make more profit out of a hundred dollars' worth of business than I can out of two hundred dollars worth that I have to trust someone else to look after." More men have been ruined by having too much business than by having too little. The man who can truly and intelligently say that every job he has done during the past month has yielded him a profit will be away ahead of the man who may have done twice as much work but has been careless or incapable of knowing just how much the work has cost him to do.

In a big Southern city, a striking example of this was once observed. In one establishment the plant had probably cost fifty or sixty thousand dollars, not all bought at once, but increased from time to time, but too rapidly as the sequence showed. The other plant was worth less than ten thousand dollars, and had been purchased only when absolutely necessary. The head of the big concern was always worried and in financial difficulties, while the other head always kept a good balance at the bank, owned much real estate and stood higher in the community than his overgrown competitor.

Now, if those who are running businesses would only jot down the result of their experiences, they would help their fellow craftsmen and be sure to get benefit themselves by reading the experiences of others. Anything which tends to uplift the business is beneficial to every one who is engaged in it, whether as employer or employee.

WITH THE TRADE

The Beloit, Wis., *Free Press* is to have a new building for which a contract has just been let.

The *Slavie*, the oldest Bohemian paper in Wisconsin, has been purchased by Joseph Stehlik, Jr., of Racine who will be sole owner.

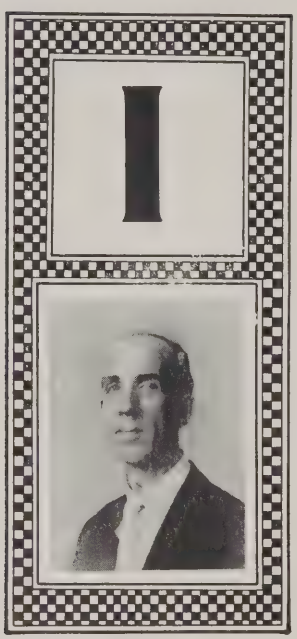
There is a boom in press clubs at Chicago. A new one is started nearly every week. The latest is a Jewish press club organized at the Chicago Hebrew Institute, 485 West Taylor Street. It is made up of editors and writers for the local Yiddish papers. Dr. David Braustein, superintendent of the Institute, is president, and James Loebner, city editor of the Jewish Daily *Courier*, is secretary.

Victor E. Bender, who recently sold the Council Bluffs, Iowa Daily *Nonpareil* to its present owners, has announced he has associated himself with Charles H. May in the publication of the *Herald-Transcript* at Peoria, Ill., and the *Evening News* of Springfield, Ill. Mr. May purchased the Peoria paper about five years ago, and acquired a controlling interest in the *News* about a year ago. Both papers are republican in politics, the *Herald-Transcript* being the only morning newspaper in Peoria.

REVIEW OF JOB PRINTING

BY E. S. HANSON,

Address all communications for this department to 925 Linden Ave., Wilmette, Ill.



I HAVE been more interested in the specimens sent in this month than for some time past. They show a considerable degree of excellence with but few exceptions. Am also thankful for the words of commendation which several of our friends have written me during the past few weeks. These are an encouragement, and help me to believe that this department has some other mission than merely to fill a few pages of space each month. By working constantly in harmony we can, I believe, accomplish much good through this department.

* * *

There are a great many blotters come to my desk; and with blotters as with many other things, I find it is a question of the survival of the fittest. I will often put away a blotter for my own private use, only to find in a few days that a more attractive one comes in and the former one is relegated to the waste basket. This is probably the experience of business men generally. If you want, therefore, to print blotters which will have staying qualities and render adequate service for the money invested in them, they should be gotten up in such a manner as to avoid the waste basket as long as possible. The printer who can educate his customers to use the best printing is not only building up his own business but that of his customer as well. Every printer should strive to do some of this educative work; but he must learn to do it in such a way as to inspire the confidence of his customer, so that it will not be passed over lightly as being prompted by purely selfish motives.

* * *

Last month we had something to say about advertising matter sent out with post cards attached, with the signature already written on. This month brings a new style from the American Printers' Roller Company of Chicago. This card contains three folds, two of which are tags which can be torn off and attached to packages of rollers to be sent to the company. The other fold is a narrower one, and underneath it is placed a regular Government postal card, reverse side up, at the bottom of which is the name and address of the person to whom it is sent. By filling in above this name the package of rollers he is sending to the company, he simply mails the card and the deed is done. I am not sure that I have made this plan perfectly clear, and it is not easy to illustrate. Take a sheet of manilla board, however, 6½ x 9½ inches and score it 3½ inches from one end and 2¼ inches from the other end; then fold it with the short fold outside, and underneath this place the postal card, reverse side up. This, I think, will give you the idea. Another little wrinkle which this roller company sends out with the same card is a little sticker giving their telephone number, to be pasted on a wall directory, or in any convenient place.

* * *

The International Typographical Union School of Printing has just sent out a handsome circular descriptive of the course and showing some of the work which has been done by those who have availed themselves of it. This book itself is a handsome piece of printing, aside from the interest which it conveys in showing the remarkable work this course is doing in uplifting the trade. As I believe I have stated before in this department, this course will do much

type arrangement. Unless the compositor has in his mind a clear idea of how his job will appear when finished, he should not neglect this. If the proposition is a comparatively easy one, no sketch is necessary; but unless one can clearly see in one's mind the effect of the proposed arrangement, a sketch of this kind should be made. This sketch need not be at all elaborate; just a few pencil lines to give a general idea. In a very few minutes the compositor can make several of these arrangements and then choose the one which is best adapted to the work in hand. Then, too, the making of sketches of this kind will assist us in getting away from the trouble which we have all experienced in setting a reprint job. Frequently the compositor is given a job and told to reset it in a different manner, yet, try as he will to avoid it, the original design forces itself on him and he finds it almost impossible to get anything radically different. The sketching out of various arrangements for the same job is probably the best means of overcoming this trouble.

In making these sketches care should be taken to group the reading matter in such manner that there are comparatively few "spots" on the card. Each spot or group constitutes a force of attraction, and when we have too many forces of attraction the design becomes complicated—a thing which must be avoided on a business card.

In Fig. 1, then, we have sketched six different designs or arrangements for the job in hand, the question of which of these arrangements is the better is largely a matter of personal taste. For the sake of illustration, all of them have been put into type, together with three other arrangements, and are shown herewith.

In these examples, what the I. T. U. Course teaches as the fundamental principles of design—simplicity, proportion, shape harmony and tone harmony—are carefully adhered to. The display composition of to-day bears evidence of careful thought regarding design and the suitability of type faces and decoration. Not in a multiplicity of types, ornaments, etc., is good printing formed, but rather in the job containing few different letters and ornaments, but those few carefully chosen and properly used. The instruction given in the I. T. U. Course is practical, and the aim throughout is to enable the students to turn out high-class printing that will pay the employer a profit. For this reason no effort

A page from the I. T. U. circular

to combat the general idea that a labor union's sole purpose is to get the most money for the least work and to bolster up the incompetent members of the trade. A letter accompanies the circular advising us of a slight advance in the price of the course. The price is low, however, and the terms so easy that this

advance should not deter any one from entering it. As a matter of fact this price simply covers the actual cost, without any provision for coverng such things as administrative expenses and the like. As the letter well says, a course of this kind upon a purely commercial basis would cost from $60 to $75. I quote from the letter as follows:

The course is sold to students for less than the actual cost, the International Typographical Union defraying all promotional and incidental expenses while the Inland Printer Technical School furnishes tuition, outfit, etc., at about cost price. After September 1, this will be $23 for spot cash or $25 if taken on instalments of $2 down and $1 a week until paid. A year's experience proved that the fee of $20 did not cover the outlay for tuition, etc. Each student who finishes the course with ordinary diligence and intelligence receives a rebate or prize of $5 from the International Typographical Union, and many subordinate unions have supplemented this prize by granting a similar sum to their members and apprentices in their jurisdiction who secure the International rebate.

* * *

The idea of a book lover as to what a perfect piece of printing should be is told in the following little story, which I take from that new magazine, *Advertising and Selling:*

The lamented Frank Holmes, who helped to make the Chicago *Daily News* and other papers famous with his cartoons, was discussing with George V. Bentham a rather celebrated copy of Stevenson. Now, Bentham, as it may be remembered, was a bibliophile of great knowledge and learning He not only knew good books, but was a master editor and maker of sumptuous ones.

Holmes was telling how fine he thought the Stevenson in question; and Holmes was something of a book-lover, as all who have examined his collection or know the books of the "Banderlog Press" will agree. Finally, Bentham turned and said, in a tone of mingled grief and scorn:

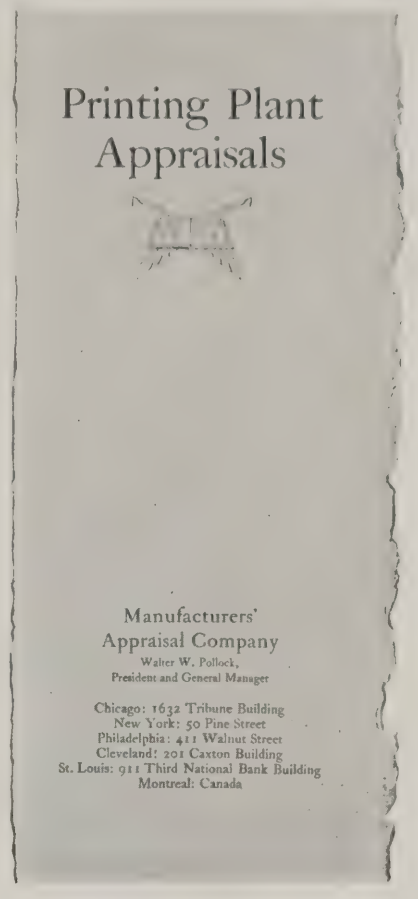
"And, Frank Holmes, ye consider yerself a buke lover, and ye call that Stevenson a gude buke! If ye turn to page 197, the seventh line from the bottom, at the end of the line, ye'll find an *r* with a broken serif! And ye call that a gude buke!"

* * *

Last month I had something to say about two booklets published by the Northern Pacific Railroad, and this month I find another one which is designed especially to show up the admirable features of this company's train service. It is set in a style of type somewhat more extended than I prefer to see in a high class booklet. This was done, I suppose, to make the matter cover the illustrations, but it seems to me

that it would have been possible to write the matter somewhat more fully, so that a more suitable type could have been used. I am showing two of these pages. I think I should have preferred them without the double border around the cut. A single border would have been sufficient. I ought to say in explanation, however, as it will not show in the reproduction, that this border is in two colors, orange and black. The car itself is also in the same two colors.

I am here reproducing the title page of a little booklet sent out by the company whose name appears thereon. It is gotten up in a handsome brown effect



throughout, well calculated to appeal to the better class of printers.

* * *

I have a number of specimens from Leo Partlow of Covington, Tenn. He says that any corrections or suggestions would be much appreciated. The first job I take up is a billhead in two colors for the paper on which Mr. Partlow seems to be employed, *The Tipton Record.* This head I do not like in any way. The name of the paper should be set in a less freakish type and should be in one line. I also do not like the rules which have been used as they are too heavy and not suited to this class of work. The name of the paper was evidently set in two lines in order to fill up the space. This might much better have been done, however, by using two blank lines for the name and address of the customer instead of but one. I should also have used a more decided color instead of the one you have selected. The other billhead under date of 1907 is much to be preferred. I like your plan of

INTRODUCTION

We herein present to publishers of newspapers of large circulation illustrations and descriptions of the latest advance in high speed newspaper presses. A glance at the illustrations of the machine reveals at once its radical departure from the forms of its predecessors and many of its great advantages. Most obvious among these are extreme simplicity, solidity, and convenience. More in detail, it will be found to be far superior to any other rotary press made, in that:

- can easily do all his work, even standing on the floor.
- a room less than eight feet in height, and additional height
- No loosing of paper, plates, rollers, or ink is necessary.
- The pressman can readily watch the color, as both sides of the printed web are in plain view.
- All cylinders, rollers, and ink fountains are easily accessible from the floor throughout their entire length, and adjustments can be readily made while press is running.
- Each whole set of composition rollers may be set off by a single turn of a handwheel, and may be washed without removal from the press.
- The manner of putting on the plates is such as to avoid the liability of springing them, which is common on presses in which the plates are put on from the ends of the cylinders.
- The ink fountains and composition rollers are all so nearly in the same plane as to be unaffected by the differences in temperature at different heights in the pressroom.
- There are fewer moving parts and correspondingly less friction, less consumption of power, and less liability to accident.
- Greater speed can be attained with this press than with any other because of the low-down construction, and its extreme simplicity, solidity and consequent freedom from vibration.
- Fewer operatives are required than with any other presses of equal capacity.

These machines have been thoroughly tested by daily use in many important newspaper offices, and scores of the leading experts throughout the United States have inspected them fully and have given them their unqualified endorsement. Their mechanical construction is unexcelled, being of the well-known Duplex standard. READ THE TESTIMONY

Note. It must not be understood that the machines shown on the following pages are our complete line. We make different kinds of web printing machines, ... been engaged in their manufacture nearly a quarter of a century.

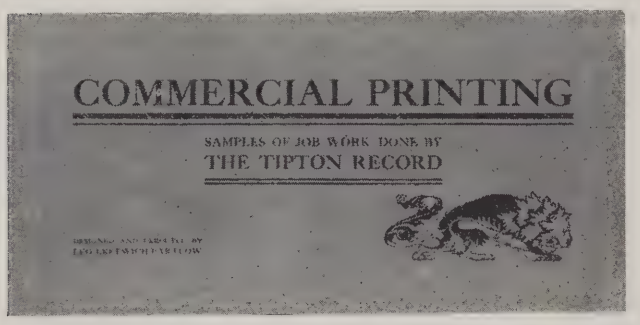
Recent work by Walter B. Gress, Brooklyn, N. Y.

sending out the little bunch of specimens of your work to prospective customers. The cover in which you send them is admirably gotten up and I can find no fault with it. Some improvement might be made on some of the specimens which it contains, though for the most part they would pass muster with the



ordinary business man. I like the general idea of your cover for the road law. The ornaments under the County Judge's name are not in good taste, however, and the imprint should have been in a less conspicuous position. Your work could be improved very much by using straight rules instead of leaders for blank lines in your stationery. I notice that you have done this on one notehead, that for E. H. McFadden, and I think you will agree with me that it is a great improvement.

* * *

Savoy W. Pereau, Troy, Mo., sends in a number of specimens, principally stationery. This is the first bunch of samples sent in by this contributor and I have looked them over with interest. The first noticeable feature is their smooth, clear press-work. The second feature to be mentioned is the fact that for the most part they are up to date in the style of

Troy, Mo. _____ 190 _

type employed. I am showing one of the letterheads for The Troy Commercial Company which, though not perfect, is very well gotten up. It would be improved by having the names of the officers in smaller type as well as the two lines in the lower left-hand corner. The stock certificate is very nicely printed, though the style of type employed does not lend itself very appropriately to a curved line. At any rate the curved line is almost a thing of the past and it is scarcely worth while to waste time on it unless the customer especially prefers it. The cover of the recital program is a fairly good piece of work with the exception of the ornament, which is entirely too stiff and formal. The date line at the bottom might well have been in italic also. I think your poorest job is the envelope for the Troy Racket Store. There is entirely too much rule work, much of which should be done away with. Your plainer envelopes are very satisfactory.

* * *

I do not believe that enough printers take the trouble to send out samples of their work to men whose business they are anxious to get. I am just in receipt of a bunch of specimens from J. M. Wigley, Lancaster, England, in which is a sheet of printed specimens of work done by this enterprising printer. I do not like them, however, as well as some of the other pieces of work which Mr. Wigley sends me. I think the cover for the Business Man's Library, which is here shown, is a handsome and well-balanced piece of work. It is worthy of study, it seems to me, by any compositor. I do not mean by that it should be copied bodily, for almost every piece of work will suggest some touches of original treatment, even if the printer does not take pride enough in his work to get up something different; but this can, as I say, be taken as a suggestion, and if carefully studied it will be very helpful. Another cover I am also showing, which seems to be intended for a little booklet of fashions. This cover is very appropriate for the topic and is also worthy of study.

* * *

I have just heard from Brannon again, that hustler down at Talladega, Alabama. He seems to be hust-

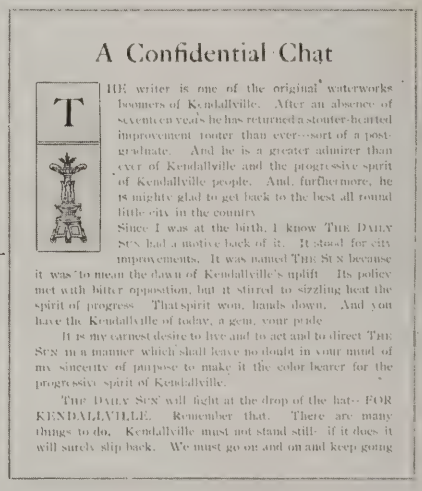
No. 118 EAST STREET, *TALLADEGA, ALABAMA*

ling as much as ever, for he simply sends in this one specimen with the one-word message, "Hello."

* * *

I am showing here a page from a little booklet sent out by *The Kendallville Daily Sun*, Kendallville, Ind. The purpose of the booklet is to boost the *Sun* in particular and the whole city of Kendallville in gen-



A Confidential Chat

THE writer is one of the original waterworks boomers of Kendallville. After an absence of seventeen years he has returned a stouter-hearted improvement booter than ever—sort of a post-graduate. And he is a greater admirer than ever of Kendallville and the progressive spirit of Kendallville people. And, furthermore, he is mighty glad to get back to the best all round little city in the country.

Since I was at the birth, I know THE DAILY SUN had a motive back of it. It stood for city improvements. It was named THE SUN because it was to mean the dawn of Kendallville's uplift. Its policy met with bitter opposition, but it stirred to sizzling heat the spirit of progress. That spirit won, hands down. And you have the Kendallville of today, a gem, your pride.

It is my earnest desire to live and to act and to direct THE SUN in a manner which shall leave no doubt in your mind of my sincerity of purpose to make it the color-bearer for the progressive spirit of Kendallville.

THE DAILY SUN will fight at the drop of the hat—FOR KENDALLVILLE. Remember that. There are many things to do. Kendallville must not stand still: if it does it will surely slip back. We must go on and on and keep going

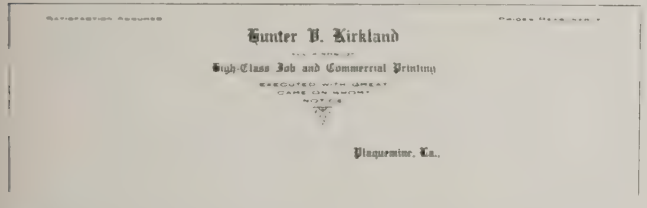
eral. The booklet gives me a good opinion of the town, so that it has served its purpose, in my judgment; for, as I have said so often, advertising matter of this kind should be gotten out in such a manner as to give one a good impression of the town it comes from.

I have a number of blotters from Robert E. Phelps, Brookings, S. D. These are somewhat odd, especially in their color schemes, and remind one of English printing more than the general run of work done in our own country. I would suggest the use of fewer colors and more decided contrast. I also would get away from the idea of "mixing in the colors in spots," for that is about the only way I can describe these blotters. They certainly have a decidedly spotted appearance. By using fewer colors and by using them in larger units a much better effect can be produced.

* * *

I am reproducing a letterhead which has been sent me by H. V. Kirkland, Plaquemine, La., with the following letter:

I am enclosing you a sample of a letterhead set up for me by a friend of mine in this place. Criticize it in the JOURNALIST for me. He is thirty years of age—has worked in a newspaper office since his boyhood—a steady worker and very fast, all-around man in a newspaper office. His work is always neat and well done. Could you not secure him a good position somewhere, as he would like to leave here?



The letterhead, I am sure, is very satisfactorily executed, though it might have been improved by using an italic type in place of the extended gothic. I trust the printer may be able to find satisfactory employment.

* * *

J. Thomas Perry, Atlanta, Ga., sends in the accompanying letterhead set in Keystone Type Foundry's Caslon light face. This makes a very satisfactory type for a letterhead, but I think I should have preferred to have had it in a smaller size all through. My own taste would also have suggested a use of lower case letters instead of the continual recurrence of caps and small caps.

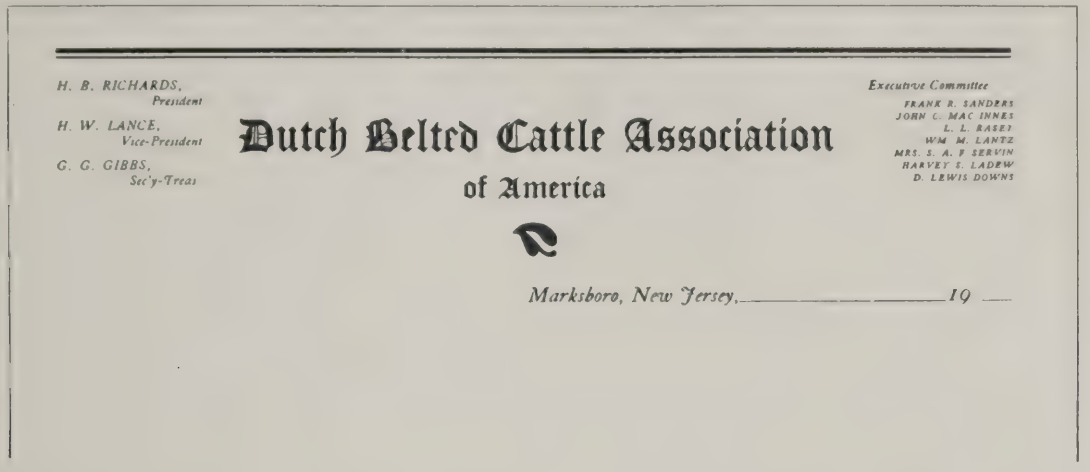
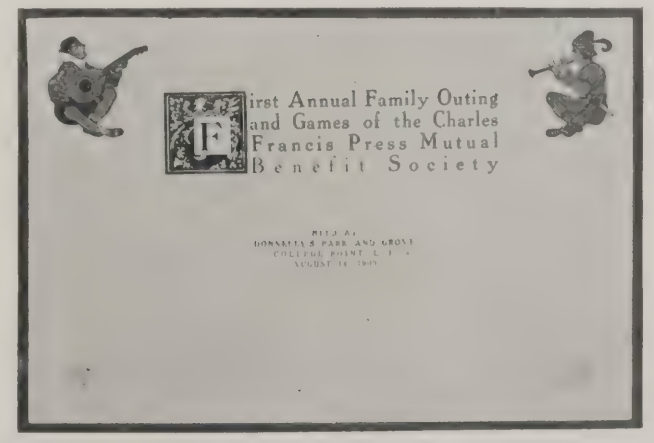
* * *

I had something to say in the last issue about the business cards sent in by Herbert R. Smith of Washington, N. J. This month he sends me another one in plain white and black, but with a distinct individuality of its own. I am reproducing it in the original size in order that those who see it can get as near as possible the effect of the original. There are not many printers who can set up an effective card with a border, but Mr. Smith has certainly done it with this one. He also sends a large number of other specimens of a varied character which I wish I had time to comment on. He asks especially for suggestions on the letterhead which is here shown. It is printed on white stock with the initials of the main line in orange and the rest of the matter in black. Mr. Smith says he does not like the style of composition, but I am frank to say that I think it is because he has studied the head so long that he has grown weary of it. It strikes me as being very harmonious, carrying an old-style effect with it throughout. I do not feel like suggesting any change.



* * *

A handsome folder from the Charles Francis Press, New York, announces the first annual family outing and games of the Charles Francis Press Mutual Benefit Society. Not only is the program artistically designed and executed, but the series of events looks decidedly interesting. This benefit society, as its name would imply, is intended to take care of its members



in sickness and disability, and already includes seventy-five members of the force of this organization.

* * *

F. A. VanGelder, Lima, N. Y., sends in another batch of work which is very satisfactory. I do not

I am here reproducing it. I am also showing a card, which is a little out of the ordinary and rather attractive.

* * *

I am here showing a page from the catalog recently issued by the Duplex Printing Press Company of Battle Creek, Mich. At first glance you will say that there is nothing of particular interest about the page, but I want to call attention to the manner in which the type is set, giving each item its proper importance and bringing out the points which are desired to be emphasized in a clear and straightforward manner. The little illustration worked in with the initial is a delicate and appropriate piece of work, and is characteristic of the book throughout, which is descriptive of the duplex rotary press.

* * *

The reproduction herewith of the check sent in by Levi P. Smith of Bonner Springs, Kansas, does not do it justice by any means. The original check is in two colors, red and black, the main line combining the

two, the body of the letters being in the red and the outline in black. The line under this, and the border, are also in red, as well as the initial "P," and the two lines in the lower left-hand corner. The check does not, therefore, have as heavy an appearance as the reproduction would suggest. In general, however, I do not care to see a check having any color about it other than the lines designating the bank upon which it is drawn. These can very well be in a color, preferably in red. In resetting the job at any time I

A. G. PARKER — LEVI L. SMITH

August 8, 1909.

National Printer-Journalist,
Chicago, Ill.

Gentlemen:

Enclosed please find check for $3.00 to pay my subscription up to July 1910. Have taken your valuable journal for two years and am sorry that I did not begin sooner.

Ours is a new company, having started up July 1st. We think we shall enter your contest some time in the near future, not for the hopes of winning a prize so much as to get some good, sound criticism on our work. The writer is 22 years of age and has had about five years experience in the trade. I do all the inside work, my partner being the solicitor and general utility man.

People who see the enclosed check seem very much pleased with it. Can you give me any hints on how to improve it.

Respectfully yours,
Levi L. Smith

should suggest a little more generous use of lowercase letters. Mr. Smith's letter is a source of much satisfaction to us, and I am reproducing it herewith.

* * *

It is always a pleasure to see the work of Walter B. Gress of Brooklyn, N. Y., so that one of the delights of this month's department is a large number of specimens from this enterprising compositor. One of Mr. Gress' chief characteristics is his admirable manner of handling delicate colors, some of which seem to fade off imperceptibly into the paper. This is one of the features of his work of which, unfortunately, I cannot give any idea in reproduction.

ITEMS OF INTEREST

Gary, Ind., is to have a Democratic newspaper. It will be known as the Lake County *Democrat*, and will be issued about August 20. Alfred Jones of Gary will be the editor.

Robert McMaster, night editor of Creston, Iowa, Morning *American* for more than ten years, has resigned and will leave for Colorado, where he will continue in the journalistic work. He is one of the very well known newspaper men of the state.

The editors of the Upper Iowa and Eastern Iowa Editorial Association gathered at Mason City, Aug. 5 and 6 for a two days' outing. Only shop in the lighter vein was talked and Clear Lake vied with Mason City in giving the editors a good time. Mason City tendered them a banquet.

J. K. Huston, formerly one of the publishers and managing editor of the Centerville, Iowa Daily *Citizen*, who has returned from an extended California trip, has accepted a position as advertising manager of the Pasadena Daily *News* and will move to Pasadena. Mr. Huston has been with the *Citizen* for twelve years until this spring when he disposed of his interests and went west for the benefit of his family's health. Otis C. R. Needels, son of Geo. W. Needels, now sole publisher of the *Citizen*, has taken the place of managing editor. He is a capable young man and has grown up in the newspaper business.

GOOD ROADS AND THE PRESS

MONG the most strikingly practical features at the Alaska-Yukon-Pacific Exposition is a panorama of views showing the value and beneficent results of good roads and the astounding losses coming directly from, or chargeable to, bad roads. Good roads and their economic building comes within the province of good newspapers as promoters of public well-being, and we are glad to publish the following, on this subject, by past-president Varner, from an address delivered before the North Carolina Press Association:

The press always leads, or always ought to lead, in a fight for better things, and in this movement it should take the foremost place, for there is not another question before our people that is so vitally connected with the welfare of the State. It is the high duty of every newspaper to take up the cudgel vigorously for better roads. The State of Georgia is aflame with good-roads enthusiasm because *The Constitution, The Journal* and other newspapers in that commonwealth have begun a campaign that must result in good roads. In this instance, alone, the duty of the press and the effects of its efforts are brilliantly set forth.

Building good roads is the great question of the hour. In the familiar phrase, it is the paramount issue, not only in this state, but throughout the Union. It transcends in importance politics, the tariff, the money question or any other question. Nothing is hampering this country so much as mud; nothing could possibly do more for the development of the state and nation than macadamized highways. Hence, the duty of the press to begin a campaign for the promotion of better roads. It is our manifest duty to cry aloud, to advocate strongly, to publish information, to mold public opinion until the people reach that point where they are willing to bear the cost of building modern roads in every county.

* * * * * * * * *

Nothing contributed more to Rome's prosperity and prowess than the imperial highways, straight as an eagle's flight, reaching to all parts of the world-empire.

Following the fall of Rome, the darkness that settled over Europe was in no small degree attributable to the lack of means of communication, and returning light came with the movements to build passable highways. Europe today is far ahead of us in the matter of roads. The thrift and wealth of the Frenchmen largely come from magnificent thoroughfares. England has good roads into every nook and corner of the island. They are constructed scientifically and guarded jealously. This great country of ours, with its illimitable resources and its teeming millions, the grandest country on the face of the earth, is fettered by mud, and our people are just awaking to the absolute necessity of good roads if we are to progress and become what we should be. Mr. Roosevelt has said:

"Merely from the standpoint of historical analogy, we should have a right to ask that this people which has tamed a continent, which has built up a country with a continent for its base, which boasts itself with truth as the mightiest Republic that the world has ever seen, which we firmly believe will in the century now opening rise to a position of headship and leadership such as no other nation has ever yet attained—merely from historical analogy, I say, we should have a right to demand that such a nation build good roads. Much more have we a right to demand it from the practical standpoint. The difference between the semi-barbarism of the Middle Ages and the civilization which succeeded it was the difference between poor and good means of communication. And we, to whom space is less of an obstacle than ever before in the history of any nation; we who have spanned a continent, who have thrust our border westward in the course of a century and a quarter until it has gone from the Atlantic over the Alleghanies, down into the Valley of the Mississippi, across the Great Plains, over the Rockies to where the Golden Gate lets through the long-heaving waters of the Pacific; we, who take so little account of mere space, must see to it that the best means of nullifying the existence of space are at our command."

Good roads mean progress and prosperity and are a benefit to the people who live in cities, and an advantage to people who live in the country. Like good streets, they make habitation along them desirable. You never, or rarely ever and then not for long, see a shabby home by the side of a modern road, where everybody passes and sees how you live. The value of farms is enhanced. Statistics prove that in nearly every case the States having the highest percentage of improved roads are powerful factors in encouraging the settlement of unused lands. Roads also have a far-reaching influence in holding men to their farms, and restraining them from drifting to the towns. While the manufacturing towns must have labor, who is here that will deny that if our counties had good roads, the hundreds of good farmers would have moved their families from the country home to town to work in the mills? So great an exodus occurred two or three years ago that farm labor was almost impossible to secure. These people are needed in the country; there they could have stayed had there been good roads, which make farm life so much more attractive. As the price of land depends as much on accessibility to market as on productivity, it follows that road improvement, by holding people and attracting others, directly tends toward increase in values of all farm lands within touch of the improved highways. It is shown that in States where the average price of land is less than $20 an acre the percentage of improved roads is only ⅛ per cent, whereas in States where the acreage value is more than $20, the average of improved roads is 9 per cent of the total mileage.

There are records which show that roads have increased the value of farm lands from 50 to 500 per cent. It has been ascertained by a dozen railroads, through their land and industrial departments, that farms through which good roads run are enhanced in value from $2 to $9 an acre, and whether conservative or enthusiastic, all concede that the increase is marked, immediate ad inevitable. Suppose a county of 200,000 acres votes bonds, and placing the enhanced value at only $4.50 an acre, it will be seen that the land owners thus benefited would gain not less than $900,000. If the bond issue amounted to half a million, there would be $400,000 profit, at once. The increase in the profit and price of farm products is equally certain and plain. The farmer's produce is worth nothing unless it can be placed on the market. Time was in England when food would be rotting in one place, while people suffered for the lack of it in a community a few miles away, because it was impossible to transport the products of the farms.

Official records in Guilford county show that the price of farm products since good roads have been built has increased from four hundred to seven hundred per cent. And yet, there is a farmer in my county who maintains that good roads will ruin him and the county, because they will reduce the price of produce, since, when the roads are bad, he gets $2.50 a cord for wood, because wood is made scarce by the impassibility of the highways; and he says he would rather haul wood through mud hub deep for $2.50 than to roll along a smooth road and sell it for $1, which price he claims a cord will drop to in the event of good roads. The experience of Charlotte and Greensboro entirely disapprove this absurd idea, for there are not two better markets in the State,

and the first named has 200 miles of good roads leading to it, and the second 100 miles.

There is no question about it—why argue further? We may close the discussion of the advantages of good roads with the quotation from the Honorable John H. Bankhead: "Good roads are avenues of progress, the best proof of intelligence; they aid the social and religious advancement of the people; they increase the value of products; they save time, labor and money; they are the initial sources of commerce, which swell in great streams and flow everywhere, distributing the products of our fields, forests and factories. The highways are the common property of the country, their benefits are shared by all, and all should contribute to them."

The question comes, how to get good roads? Shall we vote a direct tax or shall we issue bonds? Shall we pay as we go, or shall we pay part now and let future generations pay part? To my mind, the whole question comes down to whether we want good roads now, or whether we are willing to build a few miles now and let another generation build a few miles more and another and another, until in the course of human events we secure good roads throughout the State years after every person now at the age of accountability is dead and buried. I stand for bonds. Mecklenburg has been building roads thirty years, and she has about 200 miles, using direct tax. Guilford has been building roads six years and she has 100 miles, using bonds. We are too far behind to depend on a direct tax. We must go ahead and issue bonds, build the roads, increase our wealth, and reap many fold the cost of the roads.

* * * * * * * * *

A county which shows sufficient progress to bond itself in a liberal amount for the purpose of securing improved roads should keep its money intact until its officers have learned exactly what class of roads will best meet its requirements; what type of road it is best qualified to construct and what it can best afford; and these facts can be secured through the aid of the national government, the office of public roads standing ready to give gratuitous advice and supply skilled highway engineers who are amply qualified to tell what type of highway would best meet that country's requirements and to demonstrate those suggestions by supervising the building of stretches of model highways, after which local officials may take pattern.

* * * * * * * * *

In asmuch as road building and road mending have been for a century under county commissioners and township road supervisors with practically no beneficial results observable—it seems plain that the time for a radical change of methods is at hand.

Many farmers fear a bond issue as they do the visits of the chinch bug or the Kansas grasshopper, but the benefits they derive from that method of raising money for road improvements are far-reaching and immediate, while the individual tax on each is so small that it is scarcely noticeable. In reality, borrowing money through the sale of road bonds is like buying a house, a farm, or a business on the installment plan. The purchaser receives the object at once and derives the benefits from it while paying for it. As the benefits derived from perfected highways cover long periods of time, fairness and equity demand that the rising generation should bear a portion of the cost and that the increased citizenship, always attracted to the locality by a system of good roads, should also aid in paying for the added benefits.

Besides that, there is a financial wisdom in floating county bonds for road improvement. In many cases those bonds sell at a premium, and everybody interested gains a benefit. In some Southern States good roads bonds have brought a price so high that the premium has wiped out two or three years' interest on the principal. In Bradley County, Tennessee, but a few years ago, the supervisors voted a bond issue of $90,000. Those bonds bore interest at the rate of five per cent. So enthusiastic were the citizens for road improvement, and so much confidence did they have in the locality in which they lived that the premium was $20,000; the cash sales placing in the county treasury $110,000.

I am an earnest believer in Federal and State aid and co-operation in building good roads, and I believe that the time is at hand when the government will hit upon some plan whereby it may co-operate with the State and the State with the county, in the work. It has been argued that it is unconstitutional. Why should it be more so than the expenditure of money for river and harbor improvements, which often take the form of a private enterprise? As a matter of fact, it has been shown conclusively in Congress that so far from being unconstitutional, the government in its very beginning began the construction of good roads and expended more than seven millions on the old Cumberland road from Maryland to St. Louis, a distance of 700 miles, and the work was only abandoned because there arose a question of authority and responsibility as to who should maintain and repair the road, the States or the Federal Government. What does the Government do for the farmer? We spend millions annually on the army, a dead loss, though doubtless necessary; we spend some hundred millions on the navy; have spent a half billion on river and harbor improvements. During ten years we spent more than six billion dollars of which about forty-seven million went to the agricultural department; but not a dollar for the promotion of good roads, a common blessing for all the people. During fifty years, in all the vast sums our Government has disbursed for one thing and another, not a dollar has been appropriated for roads. And yet, the farmers of the country compose the bulk of the population, and last year contributed to the national wealth some eight billions of dollars. The one-horse farmer around behind the hill, miles from town, forms the foundation of the nation, and what has the Government done for him? Nothing. The burden is upon him, he foots the bills; and the government takes his money and spends it on everything under the sun by the millions but on what effects him mostly—*roads.*

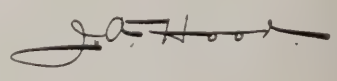
Chicago.

My dear Sir:-

Enclosed you will find a check for two dollars in payment of my subscription to your excellent trade journal for year ending May, nineteen hundred and nine.

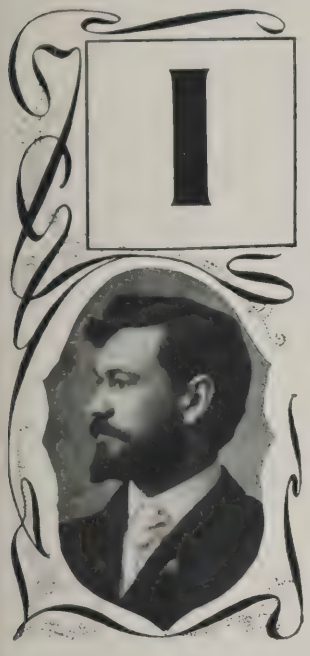
Yours very truly,



NEWSPAPER CRITICISMS

By O. BYRON COPPER

Address all communications for this department to De Soto, Wisconsin.



IT is not to be supposed that many of you remember it, nevertheless it is a fact that last May I criticised copies of the Russel, Kansas, *Reformer*. What I said was not all flowers, either, as the reader can verify by referring to that number in his files of this journal. On receipt of his copy of that number, Brother J. W. Morphy, editor and publisher of the *Reformer*, wrote a personal reply to my public criticism, the mailing of which, however, was in some way overlooked until during last July, when the letter was discovered by its author and forwarded to me at once. In spite of the fact that Brother Morphy explains that his object in sending this letter is not that it might be published, but only that his position in the matter might become more plain to me personally, I cannot forego quoting the epistle in full, not only because it is not more than fair to give Mr. Morphy a public hearing and make plain his position, but also because it offers an excellent inspiration for me to exploit a random thought or two of more or less interest and importance. Here is the letter:

RUSSELL, KAN., May 15, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—The current issue of the N. P.-J. is here and comments noted. They are about what I expected. Naturally your position should be that of holding up the highest possible ideals. Just as naturally it is impossible and in some cases undesirable to attempt to fully attain them. While I have no disposition to argue the case, I am of course content with my own view of the matter, but am fair enough and interested to the extent that I am glad to hear yours. Nineteen years in the business have firmly fixed the results of considerable experience in my mind and the views thus formed will have to be combatted by something of commercial value to bring a change even though I am not inclined to regard commercialism as the whole thing in newspaper work.

The offending dress will be changed in the near future to Century Expanded, and some of the more worn ad lines will give way to more Cheltenham. Plainness of border, reasonable use of rule and simplicity and directness in ad composition will be fostered. Little space will be purloined from the reader for scare heads and every scrap of available news will be given fair treatment. Clean presswork and punctual publication will not be overlooked. A general adherence to these rules brought me a profit of 40 per cent of the purchase price of the plant in the past year and that is a consideration worth while. And in so doing, the advertisers did not run the paper either, nor will they.

In closing I wish to thank you for your comments and to say that I shall use some copies of the publication among my patrons. I am interested in your department and read it quite closely, although I sometimes fear that perhaps in your criticism of ads you do not fully realize the conditions as to time, character of copy, limitations in material, under which they are produced.

I am sending some more copies of the paper, not with the idea that they will receive attention in your department, but that you may see that my advertisers have forced some changes in the make-up of the paper and especially in the size.

Again thanking you, I am,

Respectfully,

J. W. MORPHY.

I quite agree with the brother that it is entirely right and natural that a critic should hold up the highest ideals, but the rest of his assertion strikes me as wholly erroneous. "Not doing more than the average is what keeps the average down." We ought to all be idealists of the highest type—everyone of us newspaper makers ought—that's the only way we can hope to see the standard of the press, that most glorious of all American institutions, raised to its rightful and normal preeminence. It is frequently charged that I am an idealist by those on whose work I am called upon to pass judgment in the capacity as critic for this magazine, and I sincerely hope and trust that I am entirely worthy of that charge. Many a time, however, when I chance to look over the reproductions in this department of the NATIONAL PRINTER-JOURNALIST, and see the numerous little flaws that I have allowed to pass uncensured, I get that human feeling bordering on the "blues," in which one condemns himself for duty only half done. At such times I am inclined to fear that my ideals are not high enough. But, at any rate, don't any of you get a wrong impression of me. Don't fall into the habit of looking upon me as an indolent theorist, used only to cases groaning with heavy weight fonts, and shops replete with all the best, latest and most highly improved appurtenances, constantly lolling in the lap of luxury, living a life of partial ease and impractical experimenting and looking over newspaper "specimens" with a prone tendency to "cuss" every least thing about them that is not exactly up to the mark of perfection. Try to realize so far as possible that I am only an ordinary newspaper-maker, like the rest of you, digging and delving every day in the week into actual, practical, serious newspaper work. Try to imagine a printer-journalist with congenial printing-journalistic proclivities who has worked at the case, on the floor, at the press, at the desk, in the front office—who has practically and thoroughly covered the ground from devil to foreman, from foreman to editor, and from editor to publisher—and who has worked in nearly every kind and size of print-shop there is between the great lakes and the Pacific coast, and is therefore fully conversant with the various conditions to be met with in printing offices—and you'll at once feel fairly well acquainted with the writer of these lines. This being the case, then, I will ask you, dear reader, if Brother Morphy's suspicion of critical unfairness on my part, due to ignorance of conditions under which certain work is produced, is reasonable? Of course, I do not make these explanations with the least feeling of boastfulness, but merely that you may all clearly understand my position and appreciate just how far you may de-

pend upon the "trade tips" I may be able to extend you in the course of my reviews in this department of the National Printer-Journalist. As a closing proof that, with all of my apparent idealism, I offer no advice that is not fully practicable and adaptable to every-day newspaper work, is attested by the fact that in not a single instance that now occurs to me have I ever aired an innovation in these columns, that has not first been put to practical test and proved out in actual demonstration in my own newspaper office. You may depend upon it that all departures, that to you may seem new, as exploited under this department head of the National Printer-Journalist, have, so far as means and state of territory would permit, been first tested and proved good in my own newspaper work. And, what makes this fact worth more to you, my reader, is that my office is not an experiment station in any other sense than is your own. I depend almost as entirely as do any of you upon yours, upon my newspaper business for a living for myself and family.

* * *

Covington, Tenn., August 4, 1909.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir:—Am sending enclosed for your criticism, if you think it worth while, an ad which appears in the current issue of the *Record*. Maybe I had better tell you I tried to make it look like a signboard—so as to save you some guessing. Suggestions and corrections will be appreciated.

Yours respectfully, Leo L. Partlow.

The advertisement to which Brother Partlow refers in the above letter is reproduced herewith as exhibit 1. The brother need not have offered any explanations as to the "bill-board" effect which he strove for and so well attained; that is self-evident. I don't know whether in this case it is so very good an idea or not. Certainly the typography of the thing is not so very attractive, and in that it is quite like, and also quite unlike, many real bill-boards I have seen. It seems to

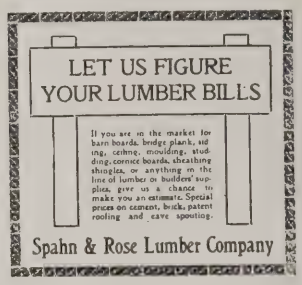
me that putting in the nail-heads was carrying the illustration a trifle too far; in any picture, you know, at least some detail should be left to the viewer's imagination. To indicate the cracks between the boards was doubtless all right, but it is too bad that the lettering on each board did not run so that it could have been complete without extending over onto the next. Of course this is consistent, perhaps, with every-day bill-boards, but rather exceptional in printing, where the outlines of each board must nevertheless remain as a panel. The fact that the last line is a little out of center is not especially pleasing—but I see how it happened: Brother Partlow did not properly reckon on the space occupied by his initials in the right-hand corner. These initials, by the way, are somewhat of the nature of an innovation; but I do not see why they do not represent a practice wholly as commendable and proper as the artist's signature on his own cartoons. Especially is this to be recommended in an office where a number of ad-men are employed in getting up the ads. Each compositor is thereby assured of all credit due him at the hands of the paper's readers and advertisers. But I should advise a little more delicacy in the matter than that displayed by this compositor: I should have placed the signature down snug against the outside border, and have set it in a modest nonpareil. This way it is altogether too prominent, pushing itself into the readers' vision almost sooner than the reading matter in the advertisement; not only this, but it really tends to appear as a blemish in the work, much as a high quad would. As intimated above, I do not know but that this "bill-board" sign is all right. In exhibit 2, I show a similar



LET US FIGURE
YOUR LUMBER BILLS

Spahn & Rose Lumber Company

No. 2

idea of my own; but I consider the design a trifle more appropriate in the latter instance, because the ad itself has to deal with planks and boards. It will be observed, too, that I have let the reader guess as to how the horizontal board is attached to the two uprights. They may conclude that it is glued on, or fastened by means of screws inserted from the backside, or that the nail heads have been sunken and the holes plugged—but I don't care, whatever their conjecture, they must all agree that the cross-board is there and does not seem to be in the least danger of falling or slipping from its position.

* * *

I am indebted to Arthur Capper, the famous publisher of the Topeka *Daily Capital*, Kansas *Weekly Capital, Farmers Mail and Breeze, Missouri Valley Farmer* and *The Household*, for a copy of No. 3 of Volume 2 of the last and least of his publications, namely, *The Capper Bulletin*, a very neat little magazinelet, full of wise sayings and fetching little stories intended to convince the big men of business that Kansas is a mighty wonderful and desirable field for them to advertise in, and incidentally proving that the Capper publications cover that very desirable field. The *Bulletin* is simply perfection itself in all departments of its makeup.

* * *

Sumner, Miss., July 22, 1909.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir:—We herewith enclose copy of the *Herald-Progress* of date July 22nd.

Please give us, through the columns of the National Printer-Journalist, criticism of the page advertisement of Shapira & Levy, which appears on the last page.

Very truly yours,
The Herald-Progress,
By A. Leland Whitten, Mgr.

The advertisement to which my particular attention is directed in the foregoing letter is shown as exhibit 3. In the main it is a very neat and attractive piece of work. Especially is this true as regards layout, and the Cheltenham Bold, used in grand continuous exclusiveness, lends a charming aspect that is not frequently surpassed. Only a few little changes in detail, and here would have been a perfect ad-specimen: The first display line is a dandy, but the remaining portion of the heading is scarcely satisfactory. If these words, "Of Shapira & Levy, Sumner, Mississippi," had been considered the second line, and set to full measure, fol-

lowed by a double rule clear across, the effect would have been preferable. The balance of the heading could then have remained as it is, only omitting the empty panels at both ends of the second line, as well as the heavy rules which now appear above and below the brief introduction. It will be observed that by following these suggestions more space would have been

FIRST CLEARANCE SALE
OF
Shapira & Levy, Sumner, Mississippi
Starts Saturday Morning, July 24th, and Continues to
August 7th, Inclusive
WHEN we will offer our entire stock of seasonable Dry Goods, Clothing, Shoes, Hats, etc., at greatly reduced prices, as we must clear out our Spring and Summer goods, rather than carry them over.

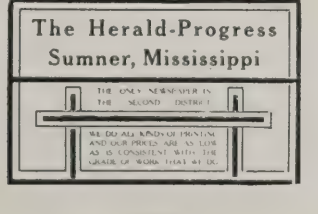
No. 3

gained, which would have permitted the setting of the lines, "A Two Week's Festival of Unprecedented Bargains," inside a deeper panel. At present there is not enough white space inside the panel, above nor below these lines. The balance of the ad is without a fault except that in using initials of a larger font, as the I and O in two panels here, care should always be exercised to see that a perfect top-alignment of the letters is secured, which is easily accomplished by the insertion of the required number of points above the first line against the initial; and the signature closed up and



No. 4

centered at the bottom of the ad would have been the proper way to treat this. I clip another ad-specimen from this publication, which admirably illustrates the fine mechanical skill of the *Progress* ad-man, notwithstanding that, uninvited, I shall very probably have to discriminate in my criticism. (Exhibit 4.) This is an extremely attractive and intricate job of modern rule work, but the Cheltenham Bold, if available, ought to have been employed, in order that the bold rules should, so far as possible, have been prevented from overpowering the type. This ad is hardly properly whited out, either. The lead or two between the two main display lines should have been removed and inserted above the first, and the same treatment would be the proper recommendation as pertaining to the second little squib, the second line of which, by the way, could just as well and better have been centered under the first, than so widely spaced to make both lines flush. Of course, the lowest panel is crowded, too, but this evidently could not have been avoided without having changed the matter therein to six point. The pages of the *Herald-Progress* show unmistakable evidences of prosperity. The typography is nice and the advertising support gratifying. The clean front page, the sane way of treating the mechanical makeup, the able editorial work, the bright, spicy news features, and the excellent press-work have all made their favorable "hit" with me. Oakes & Whitten are the publishers of this creditable sheet, with the latter gentleman as editor and manager. I trust he may become a regular contributor to these columns.

* * *

STARBUCK, MINN., July 21, 1909.

Mr. O. Byron Copper, De Soto, Wis.

MY DEAR MR. COPPER:—I sent you a copy of the *Times* of July 16th for your inspection. Some of the ads, I think are pretty good. Will you kindly tell me what you think of the appearance and make-up of the sheet?

I was until recently conducting the Letts (Iowa) *Record*, and have been contributing to your department several times.

Yours very truly,

FRED F. FLATE.

Well, now you see, my conscience does not hurt me so badly as it would otherwise have done, if I had done as I had a mind to and not have given a thorough review that appeared in last month's installment. I'm pleased to note that in later issues of this publication the front page ads have disappeared from the front page, but the hit-and-miss style before alluded to as in evidence in the other home-printed pages has not changed. I am sorry I cannot agree with Brother Flatt in his opinion of the ads in the *Times*. I wish, however, that conditions were such that I consistently could. The Starbuck *Times* is evidently a-hustling for news and business, and it is gratifying, indeed, that it is getting lots of both. Success to it and its makers.

* * *

LEWISTOWN, MONT., July 17, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Am sending under separate cover sample of double-page ad set by Mr. Chas. R. Bebb, foreman of the *Fergus County Democrat*. Would appreciate any criticism that you may have to offer.

Thanking you in advance for the criticism, I am,

Sincerely yours, F. D. TALLMAN.

This advertisement of Brother Bebb's is a fine one. It has been very skillfully laid out and the compositor has shown great skill, too, in reducing it to type. I have but one adverse criticism to offer: There are too many and too great a variety of rules used both as cut-offs and underscores in this specimen. Almost any compositor, and particularly one with so much ability as Foreman Bebb, ought to be able to appreciate my reason for filing this complaint. A single glance at this is quite enough to reveal the deleterious effect of such an abundance of bold rule. Bold rules in any advertisement, unless subdued with plenty of white, have a direct tendency to overpower the type in the ad; in fact, it cannot help doing so, because that it is one continuous line, or black mass, whereas the type is broken with the little lines of white which must of a necessity

occur between the letters and the lines, resulting in various shades of gray masses, which in no case can possess the strength of the blacker rule masses. Now, if your advertising-writer is responsible for these underscores (and I have known just such cases) simply ask him which he desires to get before his readers, the thought expressed in his display lines, or the thought

expressed in the underscore? If he chooses the latter, you are simply "up against it," and will have to keep right on giving him the underscores, according to directions. I don't wish to be taken as one of these extremists who insist upon no rule whatever; but I urge its use sparingly, sanely, cleanly and judiciously.

I also have a copy of the Fergus County (Lewiston, Mont.,) *Democrat*, under date of last May 25, being a special edition of twenty pages issued for the purpose of exploiting the "individual enterprises, the growth, development and possibilities of Fergus County." It

No. 6

was a very creditable and commendable effort, was this special edition. J. H. Loughran, a skilled special newspaper writer, traversed the county and compiled the contents; 5,000 copies were printed, 2,000 for the *Democrat's* regular list, the balance for outside circulation. Excellent editorial work, neat typography, and the best of presswork made this edition a veritable delight. Of course, this edition was replete with many long, able articles that I haven't had the inclination to enter into very deeply, and these were very attractively put up, with fancy heads and appropriate half-tone illustrations from photos. Withal the special was worthy of all praise that it must have elicited from contemporaries.

Besides this special number, I have still a copy of the regular edition of this enterprising sheet, which is quite as commendable in every respect as the special edition. The mechanical makeup is neat and well balanced, the head styles uniform and pleasing, the reportorial and editorial work first class, and the print excellent. I find nothing in this paper to contradict the

opinion that it is a weekly production, although it may be issued at more frequent intervals. The dress is evidently linotyped and everything else about the sheet is similarly modern. The advertisements in this regular issue are not quite so burdened with superabundance of brass rules as those in the special, although there is too much in either. A good piece of work is that which I am reproducing as exhibit 6. It has the same fault, to be sure, as the other specimen from this publication, but fortunately the gigantic prices somewhat counteract the bold rules. Some of the neater specimens are being illustrated by exhibits 7 and 8.

* * *

SPOKANE, WASH., July 17, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Believing that a copy of the 25th anniversary number of the *Spokesman-Review* did not reach you, we take pleasure in mailing one today, under separate cover. This issue, of June 17th, was exhausted on the date of publication, despite the fact that tens of thousands of extra copies were printed, and, the demand for it continuing for four weeks, a second large edition was printed today.

Very truly yours,

THE SPOKESMAN-REVIEW,

W. H. Cowles, Publisher.

Special edition after special edition has been issued in modern years by the hustling, progressive newspapers of today, but it remained for the *Spokesman-Review*, that leader in all things pertaining to the craft in the great Northwest, to break all previous records

with the issuing of her immense ninety-two page "twenty-fifth anniversary special and guide to the land of health, wealth and opportunity," on the morning of June 17 last. Just think of it, dear reader, ninety-two pages—big seven-column pages—four mammoth sections, three of which are cram, jam full of facts, figures and fancies of the marvelous resources of Spokane and the great Inland Empire. Cut after cut crowd these spacious pages, some of them too large even for many of the presses in the offices of some of my readers, reaching clear across two pages, for instance. And column after column of reading matter—enough to keep the whole family delighted for a month or so. I cannot attempt to describe this great edition minutely—fact is, the job is worth more than a summer's wages, and I doubt if the space allotted to "Newspaper Criticisms" this month could contain such a description.

No. 12

The *Spokesman-Review* always was famous for its handsome typography, in which it has lead almost everything in its class for several years past, and you can imagine what a vehicle for the exploitation of this quality this grand special edition stood for. No one who contributed to the making of this immense edition acquitted themselves with more credit than the *Spokesman-Review's* ad-men. If you remember, it was in the ad alleys of this self same noted newspaper that E. W. Stutes, he of NATIONAL PRINTER-JOURNALIST connection, a few years ago, put the finishing touches to the high mark he made for himself in the printing-art world. Rather at random have I made a few selections from this edition for reproduction in this installment (Exhibits 9, 10, 11, 12.) These ads will doubtless bear me out in the presumption that, whereas Brother Stutes has long since left this noted office for greener fields of his own, there are still ad-men to take his place and do the work probably quite as well as he used to. Need I consume space to add that everything pertaining to the making of this great edition of the *Spokesman-Review* was just about perfect? You ought to know that (and to be candid with you, I'm declaring it here without taking much trouble to satisfy myself with a second look) for the fame of the *Spokesman-Review's* perfection is known wherever that paper is known at all. And why shouldn't it be perfect? I understand the best editors, the best reporters, the best machinists and operators, the best ad-men, the best pressmen, the best of every kind of men needed in the making of a great newspaper, are retained by the Review Publishing Company—and so, with abundant capital included, all that is left as a requisite for perfection in every department is the simple desire for it; and it must be said, as a closing compliment to the publisher of this fine big daily that he has evidently ever possessed this very commendable desire.

* * *

O. Byron Copper, De Soto, Wis.

ELGIN, ILL., July 20, 1909.

DEAR SIR:—Enclosed find ad (as *"treated"* by five different papers), for review and criticism in your department of the N. P.-J. Which do you consider the best? I think this will be a new departure and prove of interest to your readers.

Very truly yours,

G. B. SNOW, JR.

Brother Snow's contribution does indeed make a departure of some novelty—an ad-setting contest in which the contestants probably did not consciously contest. As to design and display, the reader will observe, there is a great similarity between all five of these specimens, and between some of them the degree of superiority or inferiority is so slight as to make the task of judgement rather difficult. However, I have looked them over carefully and arranged them in the order of judged excellence. I have deemed No. 13 the best of all, unfortunately it is neither above adverse criticism. My chief objection is against the double rule inserted between the signature and address lines. With some

compositors this is a common practice, but nevertheless a senseless one. Rules extending across a piece of work of any kind cannot convey any other significance than dividing, cutting off, or separating the two parts between which they occur, hence the absurdity of segregating the name of the firm from the address or slogan. This specimen, however, has been treated with feeling, well whited out and displayed with good taste. No. 14 is but a fraction of a degree inferior to its predecessor. In some respects it is better, especially as regards the treatment of the tail, though I doubt if the omission of the period after the abbreviation, "Bros.," were not an unlicensed act. The setting of the line, "We will pay your fare," in caps of so large a size is the feature that lowers this specimen in my estimation and gives it the coarse appearance that it would otherwise have escaped. The manner of the arrangement in the head is a trifle grotesque, perhaps, but not wholly displeasing. This compositor is to be commended for one thing which he did that all the others have neglected, namely, spelling out the lines under the above quoted display

"Elgin's Finest Shopping Center"

No. 17

line, instead of dittoing. In No. 15 the compositor attained perfection in his head and tail, or nearly so, and it is only in regard to typography that this specimen falls inferior to the preceding ones. He maintained a fine eminence of simplicity throughout his work, with the exception of the contrived initial, which is a little too "foxy" to harmonize fully with the simplicity conspicuous in the rest of the design. In exhibit 16 the compositor started out just right, but before he got to the bottom of this ad, apparently, he fell into the error of using too big faces in order to fill up the space. Here, too, the dittoing of the matter referred to above becomes especially obnoxious and noticeable inasmuch as this matter has been treated as secondary display. To have spelled every word out would have done a world of improvement in this specimen. The signature is entirely too large, overpowering everything else in the ad. Exhibit 17's simplicity is its redeeming quality. There is too great a variety of type faces in evidence, however, and the whole thing is conspicuously monotonous, due to a lack of sufficient contrast between the display lines and the body. My preference in setting this copy would be something like Nos. 13 and 14 as to treatment of the body, with an initial like that in the second specimen (only alligned at the top) and the list of fares spelled out as intimated. The internal display lines like those in the first specimen are all right; but the head I should have endeavored to fashion like this:

COME TO ELGIN
DURING MILITARY
ENCAMPMENT

the last line, you will observe, letter-spaced, and all three lines flush. And the tail I would have set to match the head, something like this:

Elgin's Finest Shopping Center
ACKEMANN BROS.

divided, as you will note, from the body of the ad by a rule similar to that following the head, which should be the same as that employed in specimen 13. I sincerely thank Brother Snow for having favored me with these ads, and hope that they have inspired something at least as payment for his trouble.

* * *

BERESFORD, S. D., June 25, 1909.

Mr. Copper.

DEAR SIR:—Enclosed I hand you one of our circulars, which happens to be more for job work than for the paper, which is your department, but we would like to ask if you have any suggestions. The corners of the job failed to match as well as we wished, and the selection of type for the signature is somewhat old style, but we selected it because of a similarity between it and the heading of the *Republic*.

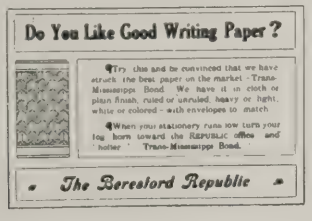
I assure you that your department in the NATIONAL PRINTER-JOURNALIST is read with interest by both my force and myself, and we endeavor to profit by it.

Yours with best wishes,

H. A. STURGES.

Brother Sturges' circular is being reproduced as exhibit 18. It is a very neat, pretty piece of printing. The original is in two colors, the two display lines and the paragraph marks being in a good, deep red, with the remainder in dark green. I should have preferred

having the line in the last panel fuller, which could have been accomplished readily by changing it to read, "The Republic, Beresford, S. D.," or something like that. I'll admit that going into the discussion of job printing is rather out of the province of this department, but, since I am a country newspaper man, which means a job-printer, too, and many of my readers are ditto, I may be allowed the license to continue briefly: I was going to suggest that by using a different color scheme, a more pleasing effect might have resulted. I know for years I made the common error of always choosing two strong colors for every two-color job I got, and I was never fully satisfied with the result. At length I was induced to try running the less important portion of the job in a tint, say buff, for instance, and the more important portion of the job in a color, say black, blue, brown or green—something that will harmonize and yet give strength to the display. In this job of Brother Sturges', all of the rule and ornamental work would have gone in the tint, of course, with the type matter all in the darker shade. This color printing is a most interesting phase of the calling and one that requires the truest sense of art. I have a letter head printed in six distinct colors and tints, which I defy anyone to say is



Do You Like Good Writing Paper?
¶Try this and be convinced that we have struck the best paper on the market - Trans-Mississippi Bond. We have it in cloth or plain finish, ruled or unruled, heavy or light, white or colored - with envelopes to match.
¶When your stationery runs low turn your log horn toward the REPUBLIC office and holler "Trans-Mississippi Bond."
The Beresford Republic

No. 18

more loud than the ordinary two-color harmony jobs. I think I have written Brother Sturges on one of these letter heads. The colors employed are silver, gold, blue, brown, red and light blue tint, all on maize stock. Brown predominates in the two chief display lines, with only a hair-line touch of red, which even then is a trifle detrimental or defeating to my intention of keeping the design subdued. The presswork on this circular from Brother Sturges is not excellent, that's true, but the idea for advertising the jobbing department was commendable. The job was printed criss-cross on a sheet of Trans-Mississippi Bond the size of note paper. More printers ought to be more persistent and regular in such advertising, both of their paper and their jobbing department. We ought to give up that feeling that we are too busy to attend to our own advertising, but we ought to realize, just as the big stores, and small ones, too, realize, that publicity is half the business.

* * *

JULY 20, 1909.

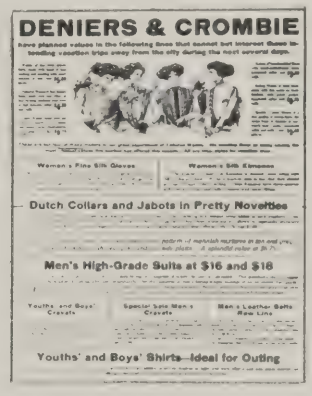
Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—We are sending you today a marked copy of *The Barnhart Flyer*, showing the first page, third column. We have reproduced what you say in the NATIONAL PRINTER-JOURNALIST. These discussions are good for all concerned, and we thank you for what you have done to bring the matter out. Yours truly,

BARNHART BROS & SPINDLER.

Messrs. Barnhart Bros. & Spindler are entirely welcome, I assure you, to anything that I may have said in helping bring out the objects of the *Flyer*. I have said just what I have pleased, and I am satisfied if it pleased them, too. The July edition of the *Flyer* is quite as pleasing as the last. This time the paper is one exquisite study in Gothics. There couldn't be a better demonstration of the contention which I have been making now for about a decade in favor of a single series of type for each newspaper. Every newspaper publisher ought to take *The Barnhart Flyer* and study its pages seriously and earnestly. After several hours of this sort of thing he ought to hand it to his foreman, and after the foreman has studied it carefully, it should be passed on to the next man in order, and so on down the line to the "devil" himself. After the devil has "soaked" up as much as possible out of the excellent lesson that emanates from the pages of this perfect sheet, it should be carefully and securely posted in a conspicuous place in the composing room, where it can be consulted at all times by compositor, imposer and pressman. You remember what I've said lots of times in these columns concerning Gothics: They're a dangerous—an extremely dangerous letter to place in the hands of a novice—only a finished artist is worthy to set Gothics. Unlike some of the later old style faces so popular today, one cannot throw Gothics together "any old way" and hope to view something pretty to look at in the proof—they've got to be handled carefully, discriminately, and with ever a view to sufficient reservation of white. Another important consideration to be constantly borne in mind is harmony of border

No. 19



DENIERS & CROMBIE
Dutch Collars and Jabots in Pretty Novelties
Men's High-Grade Suits at $16 and $18
Youths' and Boys' Shirts—Ideal for Outing

No. 20

and ornamentation. Choose every accessory of a Gothic style, if you choose Gothic type, and, other things being equal, you'll come out all right. Now it is evident to me that the man Barnhart's are having set their ads in the *Flyer* is a past-master in the calling. He knows pretty near what he's doing. If you doubt, take a look at the accompanying exhibits, Nos. 19 and 20. Doesn't it look like this compositor is worthy to set Gothic? Study these ads in the *Flyer*, dearie, for they are simply perfection as pertains to detail. In the first exhibit I feel like suggesting that the compositor should have been allowed more space. The ad was wide enough, but hardly deep enough to admit of sufficient white between masses. And in the second exhibit, I wonder if that Italic squib in the panel is just exactly Gothic? Of course, I fully appreciate that Messrs. Deniers & Crombie wished that little item about the women's tailored suits to stand out different and distinct in there where it is, surrounded by all those men's apparel, and other contrasting stuff, but I still think the compositor ought to have stuck to his Gothics. Why not a slant Gothic? Surely Barnhart's have them.

* * *

SPRECKELS, CAL., July 10, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I am sending you a copy of the *Courier*, which I shall be glad to have you look over. I shall appreciate any suggestions you may have to offer. The paper is printed one page at a time on a half-medium job press, and in the usual rush, as we have a rather large

job printing business which takes up most of our time. I find your comments in the National Printer-Journalist very helpful. Yours fraternally,

Rudolph A. Wilson.

Brother Wilson's sheet is a five-column quarto on ready-prints. I am indeed sorry that it is thought impracticable to maintain a clean front page, but I am likewise pleased to note the many other ways in which there is an apparent evidence of endeavor to follow out the instructions of this department pertaining to mechanical makeup. The ads are all corralled on the right hand sides of the pages, at any rate, as they should be. The neat method of opening every alternate front page column with a double deck head is commendable, as it gives that page an attractive, well-balanced aspect. After reading the advertisement of the Spreckles Improvement Club on the last page of this little paper, I got the opinion somehow that the Spreckles *Courier* was hardly up to scratch. Such a good town as that ought to have—I'm not going to say a bigger paper, for a paper don't necessarily have to be big to be good—but a better paper, one with less plate in it and more local news, less cheap foreign advertising electrotypes and more local news stories, less dashes and slugs and dead-head space fillers and more news-letters from surrounding points in the paper's field. You may think I am a heartless wretch, brother, to shoot it at you thus so strong, but I positively cannot do you fellows much good unless I treat you with perfect candor. Whoever sets the ads in this little sheet has a high and proper regard for white space, and I dare say the results would be far better were it not for the hurried conditions under which they are composed. Brother Wilson gets his double deck heads set after a pretty commendable style, and his "Number 1's" are passably neat, too, only in the latter the monkey-dash between the head-line and the article following is superfluous and distasteful. The editorial work has a simplicity about it that is charming, and inspires a feeling of confidence and fellowship. The print is first rate.

* * *

Herald-News Office,
July 29, 1909.

Mr. O. Byron Copper, De Soto, Wis.

Dear Sir:—I am sending you under separate cover a copy of the Edmore *Herald-News,* on which paper I am doing the mechanical work. The ad type equipment here consists of a series of DeVinne, a series of Jenson and one of Condensed Gothic.

Any criticisms that you may offer, and any suggestions, will be thoroughly appreciated. Yours truly,

R. A. Qualey.

I very sincerely regret that I am unable to find anything about the mechanical features of the Edmore *Herald-News* which I can consistently praise with enthusiasm. The first thing to be deplored is the fact that the first page is littered with displayed advertising matter; I know the paper is much crowded with ads, but by systematic arrangement and the elimination of the D. H. stuff, that occupies the advertising columns of so many country publications, I believe the front page could be entirely cleared. I would rather have but a single column of reading matter on each of my other pages, than have to be compelled to father a front page like this one on this North Dakota paper. The advertisement composition is mediocre. The impression a trifle rough, but entirely readable. The news-service and editorial work are good, there being an especially good, sound editorial department. One of these editorials mentions some measley usage tendered the "boys" of the North Dakota state press at the state fair this year, by the management of the latter institution. It seems that the fair had been liberally advertised by the several papers with the anticipation of free admission to the fair grounds and grand stand during all days of the tournament; but on "Dan Patch Day," passes were refused, and at all times it required considerable nerve and diplomacy on the part of the state's editors to secure grand stand courtesies. After reviewing the circumstances, Editor E. M. Crary says:

"The proper way to do is to get pay for your advertising and then pay your way into the fair grounds," to which I can freely affix my complete approbation. And this does not apply alone to fairs, but to everything else for which the newspaper publisher may be called upon to give publicity. Let other people pay us for what they get from us, and we'll find less difficulty in paying our way as we go. I have known editors who believed that the local merchants would give them a more liberal patronage if they did business on this system, but I never thought so, and have practically proved by experience that the merchant feels a whole lot better when the editor hands him a crisp five-dollar bill, or a personal check, for goods purchased on the spot, than he does when the editor gathers up his purchase and says rather sheepishly, "Well, Mr. Blank, you may charge this." The merchant under the exchange system grows to feel that he's giving the publisher the goods, loses interest in his advertising, or looks upon it more or less as a matter of charity toward the editor and the town. Trading or exchange of commodities is intended for the savage, who has no appreciation of a medium of commerce; but for the modern civilized editor, who knows and needs money, it is out of date. And just another thought before I close: I have noticed that when the exchange method is adopted, the merchant is less prone to become so liberal with his patronage of the newspaper as the publisher is prone to grow extravagant in his patronage of the store, so that when settling up day comes round, there is usually a balance in the merchant's favor, which is less likely to be the case when both parties are paying cash for what they get from each other.

* * *

Bartersville, Okla., July 19, 1909.

O. Byron Copper, De Soto, Wis.

Dear Sir:—Possibly you remember my sending you a copy of my paper, the Ochelata *Progress,* some months ago. I have leased it since, and would like your opinion on it, under the new editor. I am sending a copy under separate cover. I take the N. P.-J., regularly from a local newsdealer and enjoy your department very much, as I get so many new ideas from it. J. T. May.

Not Fred F. Flatt—but Fred F. Mayfield is the new editor to which my correspondent has referred above, and I cannot see that he has succeeded in inaugurating much improvement in this unfortunate sheet, over conditions as I remember them under Brother May's management. The impression is frightfully bad and the makeup is little better. Doubtless the first cannot be helped, but surely there is little excuse for the latter, since there is hardly an installment of this department of the National Printer-Journalist in which full instructions for correct mechanical makeup is not offered in detail. And as to the composition of advertisements, it is impossible in the course of a single criticism of a whole newspaper to explicitly point remedies for each error, but the compositor on this sheet is sadly in need of such a course of instruction, and I am sorry it is not practical for me to offer such a course at this time. It is sad but true that good advertisement composition is a part of the trade that many and many a printer never masters—and it is sadly evident that the

Progress ad-man has not yet done so, either. He ought to study very carefully every piece of high grade composition that comes his way and endeavor always to incorporate a good idea into his own work. Now, to be sure, I can see how limited material for ad work is on this sheet, but nonetheless is the work a credit to the little amount of type that is available.

* * *

SEATTLE, WASH., July 16, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I have read with interest your Newspaper Criticisms, in the NATIONAL PRINTER-JOURNALIST, and mail you under separate cover this week's *Trade Register* and would appreciate your comments thereon.

Respectfully yours,
THE TRADE REGISTER, INC.

In its class, it is my opinion that *The Trade Register* is just about all right. It seems to cover its avowed field and purpose thoroughly and creditably. Its editorial department is good—brief, terse, but broad enough in thought and subject. The special articles are all appropriate and able. Mechanically I can find nothing seriously wrong. Impression is good, makeup neat and proper, and the advertisement composition generally plain, simple and well whited out.

* * *

GARLAND, TEXAS, July 13, 1909.

DEAR SIR:—I notice your reference to samples of *News* sent you in July N. P.-J., and hasten to apologize. The "boy" inadvertently wrapped a bundle of papers I had used in checking the advertising. Under separate cover am sending you more copies. The office was practically out of material when I bought it four years ago, and have been adding as I could afford to, to the mechanical department. Garland is a town of 1,000 inhabitants, and while I realize that the paper has many deficiencies in make-up and matter, yet the people appear to like it and the merchants say their ads pay them. Have 1,500 circulation, mostly paid in advance. Any suggestions you feel inclined to offer or criticisms to make, will be appreciated. Respectfully,

W. A. HOLFORD, *Pub.*

This letter from Brother Holford was evidently penned shortly after the appearance of the July N. P.-J., and before the August number was out. I do not wonder that Editor Holford's readers seem to like the *News*, for it is a mighty big paper and each issue holds an abundance of good, wholesome reading matter. I should enjoy seeing this sheet made up once according to Hoyle, however. In so large a paper it would be a comparatively easy matter to give each advertiser a position next to pure reading matter, and then with such an excellent print, ads so well set, and contents so generally excellent, the Garland *News* would be hard to beat.

* * *

August 3, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR MR. COPPER:—I am here in Minneapolis, working as a reporter on the *Journal*, as much for what I can learn as for what I can earn. I felt that a year or two of city work would be a good thing for me, and when an opportunity presented to sell the *Chronotype*, I promptly availed myself of it.

I write to thank you for what you have said in recent numbers of the NATIONAL PRINTER-JOURNALIST about my position while at Neche. It was more than compensation, to have the newspaper boys rally to my support as they did, for what I was up against there.

Homer Fadden is running the *Chronotype*, and running it well, but as yet he has succeeded in getting no more advertising than I had when I left. He is a good boy, and bright, and whether he makes money in Neche or not will make no difference in the shaping of his career; he will get there any way. I am glad to see the encouraging interest that you are taking in his work. He was working with a woeful lack of good material at Morris.

While there is much that is strange and new about the city work, I find that a city is only a big town, after all, and that the same rules apply to the newspaper game here as at Neche.

I wish you continued success. Some day I hope to have another country newspaper to send you, marked for criticism.

Very truly yours, REX H. LAMPMAN.

Inasmuch as I told you the beginning of this story about Rex. H. Lampman, it doesn't look as though it would be just the fair thing to withold the closing chapters, as disclosed in the foregoing letter—that's why I present it to you. And Brother Lampman's retreat from Neche doesn't prove him a poor fighter at all—nor does it prove a victory for those boycotting business men of Neche! I'm glad for Rex that he's out of the place—glad that he's beginning as all real literary geniuses should, on the reportial staff of city papers. Don't think I've grown facetious at all—I mean it. If you doubt me, just read this little poem clipped from the editorial page of last Sunday's Minneapolis *Journal:*

NOT VAIN.

Life is not vain. The rose that blows
  Sequestered and unseen,
Upon the wind its perfume throws—
  Perhaps 'twill steal between
Some lattice where a sick one lies,
And bring back memories of blue skies,
  Bright brooks and fields of green.

Life is not vain. The rose will fade
  And die and turn to mold;
But from the dust where it decayed
  New roses will unfold,
As full and fair as ever grew,
Kissed by sweet winds as ever blew,
  With fragrance yet untold.

—*Rex Lampman.*

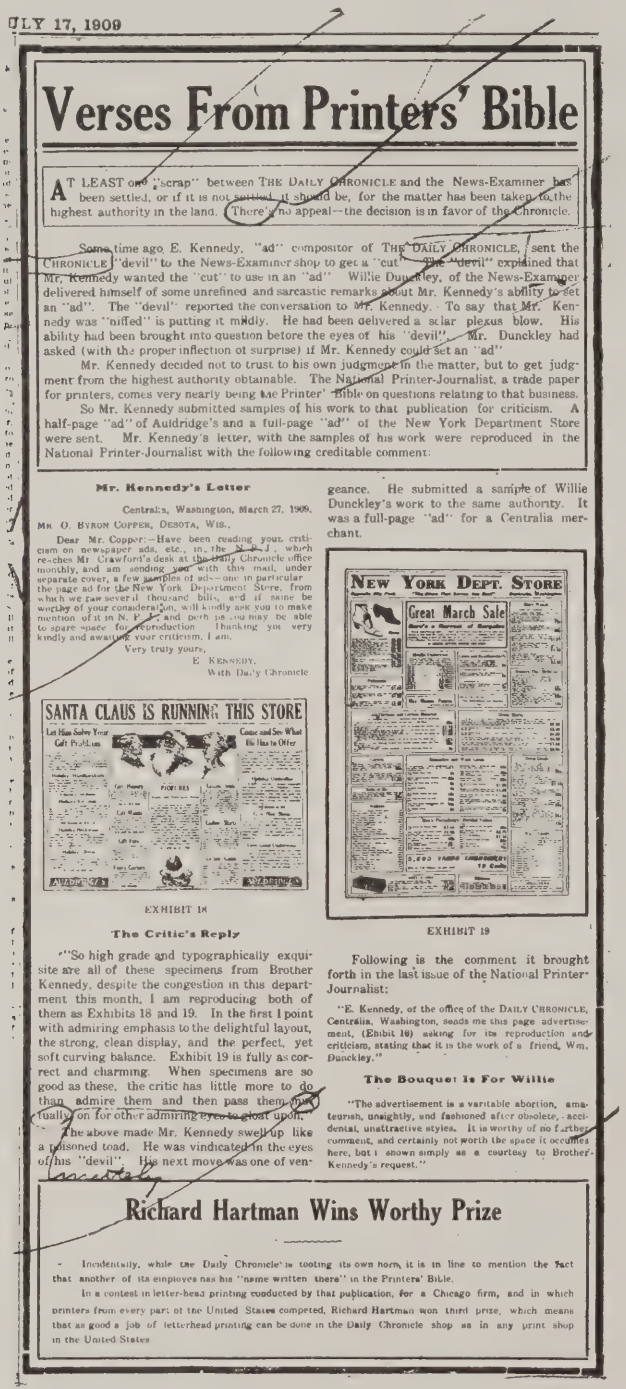
Minneapolis, July 31.

Did you ever read any thing sweeter even from the pen of Clinton Scollard? Do you wonder that I call one who can write in veins of such delicate tints and shades of the imagination a genius? Even though he lives in an age when those who can appreciate a mental morsel like this are limited, the world being blinded in its mad rush for wealth, yet I am sure that genius cannot be smothered, but will come into its own in time. I am glad that the Neche *Chronotype* has passed into good hands and the hands of a friend of mine. The last issue under Editor Lampman's management was dated July 10. He bid his field farwell without any bitterness rising to the surface, without any allusion to his enemies—it was all as if everything was pleasantest. So Albert E. Code of Morris, Manitoba, is the new owner of the *Chronotype*, with R. H. Fadden as managing editor—and it is a strange co-incidence that Mr. Fadden begun his work with the first issue of the thirteenth volume. He hopes that others will refrain from any undue joking about proverbial "unlucky thirteen" and so I desist. Good luck to the *Chronotype* and its new editor and publisher—I'm not in the least superstitious.

* * *

If you can read the printed part of reproduction 21, you will get the whole story of a "newspaper scrap" that has been going on at Centralia, Wash., between the offices—or rather the foreman of the offices of the Centralia, Washington Daily *Chronicle* and *News-Examiner*. I have unconsciously been made the instrument that won the fight for the *Chronicle*, who here gives the story of the victory so neatly—but alas! the *News-Examiner* foreman, Mr. Dunkley, has evidently come back at his enemies by sending me (as I guess) this copy of the report of the victory as heralded by the *Chronicle*, with all the reproduction. What a shame

that Mr. Kennedy, who is the *Chronicle's* foreman, was so careless as to run this otherwise creditable advertisement of his own superior ability without first having carefully and thoroughly read and corrected it! And what a greater shame that two printing offices should entertain such petty quarrels and differences! Bury the hatchet, brothers, and bring your troubles to this



JLY 17, 1909

Verses From Printers' Bible

AT LEAST one "scrap" between THE DAILY CHRONICLE and the News-Examiner has been settled, or if it is not settled it should be, for the matter has been taken to the highest authority in the land. There's no appeal—the decision is in favor of the Chronicle.

Some time ago E. Kennedy, "ad" compositor of THE DAILY CHRONICLE, sent the CHRONICLE "devil" to the News-Examiner shop to get a "cut." The "devil" explained that Mr. Kennedy wanted the "cut" to use in an "ad." Willie Dunckley, of the News-Examiner, delivered himself of some unrefined and sarcastic remarks about Mr. Kennedy's ability to set an "ad". The "devil" reported the conversation to Mr. Kennedy. To say that Mr. Kennedy was "miffed" is putting it mildly. He had been delivered a solar plexus blow. His ability had been brought into question before the eyes of his "devil". Mr. Dunckley had asked (with the proper inflection of surprise) if Mr. Kennedy could set an "ad"

Mr. Kennedy decided not to trust to his own judgment in the matter, but to get judgment from the highest authority obtainable. The National Printer-Journalist, a trade paper for printers, comes very nearly being the Printer' Bible on questions relating to that business.

So Mr. Kennedy submitted samples of his work to that publication for criticism. A half-page "ad" of Auldridge's and a full-page "ad" of the New York Department Store were sent. Mr. Kennedy's letter, with the samples of his work were reproduced in the National Printer-Journalist with the following creditable comment:

Mr. Kennedy's Letter

Centralia, Washington, March 27, 1909.

MR O. BYRON COPPER, DESOTA, WIS.,

Dear Mr. Copper:—Have been reading your criticism on newspaper ads, etc., in the N. P. J., which re-ches Mr Crawford's desk at the Daily Chronicle office monthly, and am sending you with this mail, under separate cover, a few samples of ads—one in particular the page ad for the New York Department Store, from which we saw several thousand bills, and if same be worthy of your consideration, will kindly ask you to make mention of it in N. P. J. and perh ps you may be able to spare space for reproduction. Thanking you very kindly and awaiting your criticism, I am,

Very truly yours,

E KENNEDY,
With Daily Chronicle

EXHIBIT 18

The Critic's Reply

"So high grade and typographically exquisite are all of these specimens from Brother Kennedy, despite the congestion in this department this month, I am reproducing both of them as Exhibits 18 and 19. In the first I point with admiring emphasis to the delightful layout, the strong, clean display, and the perfect, yet soft curving balance. Exhibit 19 is fully as correct and charming. When specimens are so good as these, the critic has little more to do than admire them and then pass them mutually on for other admiring eyes to gloat upon."

The above made Mr. Kennedy swell up like a poisoned toad. He was vindicated in the eyes of his "devil". His next move was one of vengeance. He submitted a sample of Willie Dunckley's work to the same authority. It was a full-page "ad" for a Centralia merchant.

EXHIBIT 19

Following is the comment it brought forth in the last issue of the National Printer-Journalist:

"E. Kennedy, of the office of the DAILY CHRONICLE, Centralia, Washington, sends me this page advertisement, (Exhibit 19) asking for its reproduction and criticism, stating that it is the work of a friend, Wm. Dunckley."

The Bouquet Is For Willie

"The advertisement is a veritable abortion, amateurish, unsightly, and fashioned after obsolete, accidental, unattractive styles. It is worthy of no further comment, and certainly not worth the space it occupies here, but I shown simply as a courtesy to Brother Kennedy's request."

Richard Hartman Wins Worthy Prize

Incidentally, while the Daily Chronicle is tooting its own horn, it is in line to mention the fact that another of its employes has his "name written there" in the Printers' Bible.

In a contest in letter-head printing conducted by that publication, for a Chicago firm, and in which printers from every part of the United States competed, Richard Hartman won third prize, which means that as good a job of letterhead printing can be done in the Daily Chronicle shop as in any print shop in the United States

No. 21

department not with vengeance in your hearts, but with a feeling of fellowship and mutual helpfulness—and I'll make it my duty to help you over the rough places in every way possible.

* * *

The receipt of a copy of the *Teton Peak-Chronicle*, of St. Anthony, Idaho, appraises me of the fact that my old-time friend and neighbor, Herbert J. Metcalf, has transferred his able editorial pen from the paper mentioned in these columns a few months ago to this publication, which is a very bright, enterprising sheet, with every mark of prosperity in its pages. Brother Metcalf is "doing himself proud" in his editorial work on the *Peak-Chronicle*. He fills up some five or more columns in this issue with some very good "dope." There's lots of level headed prose on some hundred different subjects, but here is one of Metcalf's quaint, Riley-like effusions in verse, that was most appropriate to the time—June 17:

FISHIN' FEVER.

Like to drop my work an' go to a fishin' hole I know;
Rec'on I would miss my guess, if I couldn't catch a mess;
Pears tu they ought to bite—sun an' sky an' air seems right;
If I jest could have my pick, I'd be down along the creek.
Like tu drop my work an' go tu a fishin' hole I know;
Like tu go an' fish jes' the hule endurin' day;
Like tu fish away an' hear water singing in my ear;
An' I'd go, I calcilate, wuzzen't jest fer diggin' bait.

—*H. M. J.*

Brother Metcalf is doubtless one more of that unfortunate class of geniuses who is living either too late or too soon to get his just dues at the hand of the world—in between ages when poets and poems have been, or will be, fully appreciated. There was a time—and there may come a time—when men who can see and commit the melodies of life to paper as neatly as can the subject of this paragraph will be "carried around on a clean plate."

* * *

I have copies of the Springfield, S. D., *Times*, which on inspection have merited both praise and censure. The ad-man (I am moved to jump right into this sub-

is seldom surpassed. He's just a trifle too bold with his display, a trifle too liberal with his rules and a trifle sparing with white margins. He has great ideas, however, as regards design. Exhibits 22 and 23 are speci-

mens of his better efforts. There is originality in this work. But I have ceased to entertain the least admiration for such ornate borders as predominate in the advertising columns of this paper. True, I am using just such borders in my own paper—but they are to be displaced by plainer designs before snow flies—I prefer plain rules. The *Times* isn't the least correct in me-

Semi-Annual Clearance Sale
Sale Begins SATURDAY JANUARY 23rd And Ends SATURDAY JANUARY 30th
WOMEN'S OUTING GOWNS
The close of a very successful season leaves us with a great many odds and ends on our shelves, we want to clean them up. Spring goods are beginning to arrive, therefore winter merchandise must be sold at once, hence this sale. This advertisement tells you a plain price story, without embellishments or exaggerations of any kind. Wherever possible, we give you a short description of the article sold at special price, depending, however, on the prices mentioned herein to convince you that it will be to your interest to attend this Great Semi-Annual Clearing Sale

chanical makeup, but it is a very well patronized sheet, evidently linotyped, well edited, and in many ways indicative of prosperity and progress. I just now ran across these two ads as I was leaving the subject of this contribution, and have deemed them so excellent and free from the several faults mentioned above that I cannot forego showing them also. (Exhibits 24 and 25). Both are very neatly and carefully handled.

* * *

The News of Summerville, Georgia, is another publication that I believe was given proper notice in these columns not many months back, but it is quite worthy of additional mention. It comes very near having a clean front page, maintains modest styles of typography, has a new linotype machine, gets up its ads in pretty fair shape, carries a good impression, gives its readers an abundance of local news, all of which is written up well, and maintains an able editorial column. With so many creditable features the Summerville *News'* future success looks like a certainty.

* * *

I seldom meet with a paper that comes as nearly subscribing to the recommendations of this department in every particular by actual practice as does the *Independent* of Jordan, Scott county, Minnesota. It maintains an ideally clean front page, made up with commendable care and taste; makes the rest of its home-printed pages up almost exactly as I am always tirelessly preaching that they should be; segregates its business locals from its local news items, sets its ads neatly, gets a good print throughout and does everything just right. This includes the editorial work, which both in point of news stories and editorials proper, is high class. Another highly praiseworthy feature in the *Indepen-*

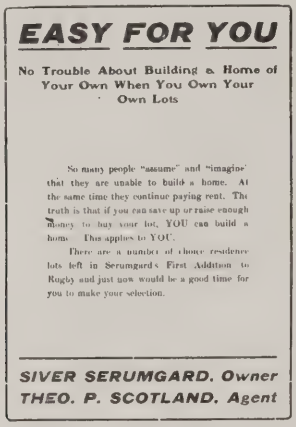
27. Only generally can this advertisement be taken by young readers as a model, for it is of a character of course, not to be recommended for everyday practice, especially not in shops where circular and angular

quads are not provided, Of its kind it is a very neat and faultless example. Faultless, did I say? Not quite —all it lacks is corner pieces for the border employed. It is a novel piece of work—an ad forsooth that would hardly escape notice.

* * *

An all-around excellent weekly is the Pierce County *Tribune,* printed at Rugby, N. D., with W. J. Anderson as publisher. Its front page is a veritable delight, clean and made up after the highest ideals. The balance of the sheet, too, is pretty creditable in this respect. It is printed entirely at home, and has as good a lot of news each week, and as good an editorial page as any weekly in North Dakota. The advertisement



EASY FOR YOU

No Trouble About Building a Home of Your Own When You Own Your Own Lots

So many people "assume" and "imagine" that they are unable to build a home. At the same time they continue paying rent. The truth is that if you can save up or raise enough money to buy your lot, YOU can build a home. This applies to YOU.

There are a number of choice residence lots left in Serumgard's First Addition to Rugby and just now would be a good time for you to make your selection.

SIVER SERUMGARD, Owner
THEO. P. SCOTLAND, Agent

No. 28

composition, while not in every instance exactly ideal, is nevertheless fairly good, the compositor evidently appreciating the value of an abundance of white space and simplicity of display. (Exhibit 28.) The *Tribune* also has a proper conception of how to treat its paid business "readers" by isolating them in a department by themselves. And I know from experience that here they are sought each week and read by a greater number of people than they would be if sandwiched in between the news items. It is encouraging, indeed, to meet occasionally with a paper that has such high standards throughout.

* * *

There isn't a paper in my whole list of patrons that shows more unmistakable marks of prosperity than the Gering, Nebraska, *Courier.* And one nice feature about this sheet is that, while its pages are thickly crowded with ads, the front page is kept free from any such obsolete blemishes. The *Courier* affords an exceptionally good news service, and its typographical equipment is evidently extensive and uptodate. The "boys" who manipulate this material, too, are fully worthy of the good things with which they have to work, although methinks at times they are just a wee bit careless—which, however, may be due to the rush of the day. I don't like the method followed in making up the other pages aside from the first one of the *Courier,* but I am content and thankful to find at least so much perfection in a single specimen.

* * *

If I mistake not, the *Eagle* of East Prairie, Missouri, is a new one on my desk. It is a seven-column folio, all home-print, by D. Bright and Frank Lee. It's not an easy matter to keep the front page of a folio clean of displayed matter, I guess—at least I seldom see one that is so, and this specimen is no exception. The contents of this periodical are a credit to its editors, there being many short local items together with an abundance of headed stories and an editorial department of more than average worth. The ad-typography in the *Eagle* is a trifle loud, perhaps, due to the many big faces

GIVEN AWAY TO OUR SUBSCRIBERS

Given Away FREE!

Get One of These Twentieth Century Kitchen Racks

THE EAST PRAIRIE EAGLE

No. 29

used, but the compositor has the excellent proclivity for white space that always goes so far toward making strong display. There's one especially good ad in the paper, that for the *Eagle* itself, which seems to possess a master's touch hardly perceptible in the other specimens. (Exhibit 29.) The Farmers Bank ad is also a good one. I would recommend that the one who has charge of the mechanical makeup of this sheet study well the rules of correct arrangement of matter, as outlined in detail in this department the past few months, and put them into practice in his paper. Then send me another copy.

* * *

Late copies of the Shelton, Nebraska, *Clipper,* The Dakota (Vermillion, S. D.,) *Republican* and the *Lawrenceburg, Indiana, Press,* show me that these three excellent papers are fully as good, if not better, than they used to be. They are all old friends of this department, friends from whom I have had many happy visits during the past years that I have conducted this

CHICAGO, SEPTEMBER, 1909

The education and special training of men for the responsible calling of newspaper making received a great impetus at the recent convention of the National Association, through the able address of Merle Thorpe, head of the Department of Journalism of the University of Washington, and the equally able and enlightening remarks by President Hill of the University of Missouri. These gentlemen showed themselves to be broad-minded, clear-headed and thoughtful educators.

* * *

While on this subject, we are pleased to notice the fact that W. O. L. Jewett, who has been a friend of, and a consistent worker for, school instruction in newspaper making for nearly two decades, both in the National and the Missouri Editorial Association, still stands loyal to the cause and to his convictions. In his paper, the Shelbina, Mo., *Democrat,* of August 18th, he logically and patriotically urges:

"It is certainly as important to the State to have well trained and competent editors, as to have educated lawyers and doctors. The physician relieves our pains and probably prolongs our lives; and the lawyer regulates legal codes and secures us a measure of justice. These are important. The journalist, however, stimulates our thoughts, brings to our attention facts, exposes evil, scourges the parasite and the viper, stimulates us to act worthily, and thus promotes righteousness"

There have been years of preparing the way, but, as Vice-President Dowdell believes, Providence so orders that all the good things come to the children of earth as soon as they are in a position properly to receive and use them. Practical, inspiring education, that gives a purpose for effort and prepares the way for more worthy accomplishment is one of Heaven's blessings.

* * *

Instead of issuing a special number for the purpose, the Jerauld County *Review,* of Wessington Springs, S. D., is running an illustrated history of the County in continued articles in chapters run on the first page of the paper from week to week. This plan has its advantages as each chapter that is published awakens a broad interest and brings forth many historical facts more difficult to secure by a short canvas and that might be entirely overlooked and lost. The *Review* is a good, clean, well-printed paper.

* * *

Past-President J. E. Junkin, of Sterling, Kansas, was kept from attending the Seattle Convention of the N. E. A. by his duties as manager of a Chautauqua. These people's colleges are doing a good work and claiming the attention and services of our best men. The true editor always yields to the call of duty from his home people even at the sacrifice of the benefits and pleasures of attending a convention and excursion of the members of his own calling. That Mr. Junkin was so thoughtful as to send a full and sufficient excuse for his absence showed that he still remembered and recognized a duty to the Association that had conferred upon him its highest honors, and to its members as well. We were glad to notice, on our return, by a dispatch printed in the public press, while we were absent enjoying the cooling, invigorating air and ocean breezes along the southwestern coast of Alaska, that Mr Junkin had been appointed by Governor W. R. Stubbs of Kansas, to the responsible position of Regent of the State Normal School of Kansas. Honored by the editors of the Nation, it is certainly fitting to know that he is not without honor in his home and State. We believe that the broadness of view that Mr. Junkin has secured by his association with editors of the whole Republic and his visits to the different sections of the whole country, and learning from the best and most progressive and representative men, of the best institutions, educational, industrial, and of their attainments and accomplishments, will prove to have fitted him for better and more intelligently performing the responsible duties of Regent of a school devoted to preparing teachers for the instruction of American youth.

Mr. Junkin is one of the best known, most representative and loved editors in Kansas and throughout the nation, and his appointment will please the members of his calling in his own state and throughout the whole country.

* * *

Indiana has many excellent newspapers and able editors and three or four active editorial associations which may, in a measure, account for the high character of the newspapers. The members of the Indiana Republican Editorial Association held their

summer meeting in and around South Bend, and the Tribune of that city, one of the best dailies in the State, told the story of their doings in a way that was not only pleasing and instructive to the newspaper men, but entertainingly informing to all the readers of the paper. This way of dealing with the advance agents of prosperity was of great benefit to the city. Other newspaper publishers whose cities are so fortunate as to entertain newspaper evangels of worthy and profitable publicity, should make a note and be alive to every such opportunity to spread abroad all that may tend to the promotion of the fame of local enterprises, advantages and opportunities. The citizens, educated thereto by the enterprising newspapers, were alive to all the advantages afforded and provided all possible means for the enlightenment of the editors and for their entertainment. We wish that our space permitted the reprinting all the good things about South Bend, its complete system of making the stay of the editors a constant joy, with a series of object lessons in a continual school of delightful lessons as to the ways of a city's true progress, upbuilding, intelligent pleasures and enlightenment. In addition to recording, daily, the association events, the *Tribune* gave a complete list of the names of the members of the association, the history of its organization, the portraits and brief biographies of prominent members, and entertaining matter, as to the editorial calling, its sphere, limitations and difficulties, and then did what all live newspapers should do, under like circumstances, sent marked copies of the paper to the NATIONAL PRINTER-JOURNALIST for every day covering the sessions of the convention. Besides the viewing of the city's notable improvements, industrial plants, etc., visits to lakes and parks, athletics, excursions by trolley and on Lake Michigan and feasts at popular resorts, the editors enjoyed a fish dinner tendered by the local newspapers, the *News, Times* and *Tribune*.

* * *

This city of Indiana, honored by the State Republican Editorial Association, has a worthy namesake in the far-away State of Washington. South Bend, Wash., is at the head of Willapa Bay and likewise has many attractions and beauties, and an able local press. The editor of one of the papers, F. A. Hazeltine, proprietor of the Washington, Southbend, *Journal*, is President of the Board of Regents of the Washington State University, that ranks among the best in the Nation and is becoming famous for its excellent, practical Department of Journalism, under the management of an able, all-around newspaper man, Professor Merle Thorpe, as Dean, whose brilliant intellectuality, *bonhomie*, good fellowship, and his analytical, logical and broadly informing address on "University Training for Journalists," won the hearts and the highest esteem of all the members of the recent National Editorial Convention at Seattle. It is no small responsibility nor slight honor to be at the head of the Board of Regents of such a University. The Washington State administration has good reason to honor the press of the smaller cities of that State. Through organization of a majority of the country press into a Cosgrove Press Association, Governor Cosgrove was nominated and elected, though he did not have the support of a single Metropolitan or big city daily of the State for his nomination. It was a distinct test of the comparative influence of the city and rural press.

Editor Hazeltine was chosen President of the Washington State Press Association at the last convention, on Saturday, July 17th. A romantic story is told with regard to Mr. Hazeltine, as to a very important event of his life, several years ago, in the Republic of Peru, that reveals something as to his persistency. A true newspaper man never gives up when in the pursuit of a good story or a good wife. He had decided that he wanted to marry a lady in

F. A. HAZELTINE,
South Bend Journal, South Bend, Wash.

Peru who was a Methodist missionary there, who was equally earnest in marrying the man of her choice in the country of her residence, and of having the right of such marriage recognized by the laws of the land—it was something that involved the missionary spirit and the establishing a right for others as well as for themselves. Under the then laws of Peru marriages could only be solemnized by the State or Roman Catholic Church, and it was a fight for religious liberty, and the fight was carried on for three years before the marriage was legalized, and Mr. Hazeltine had the united help of the liberal press of Peru. Their love for religious liberty was vitalized by a fellow-feeling for a brother newspaper man. Mr. Hazeltine has been for nineteen years the owner of the Washington South Bend *Journal*, and its editor all that time, except during the three years that he was in Peru trying to get married. His paper and marriage have both proved pleasingly successful.

Figuring Costs

PRINTING papers generally, are devoting much space to cost systems. Printing is yet in need of a still more vigorous campaign. While practically all large shops are now conducting systematically, country shops and smaller ones in cities are running wide open so far as costs are concerned. Competition is so keen that many are doing work at a loss and never find it out. These people do not always fail. The newspaper end usually brings a fair profit and any sane printer makes something on a portion of job work.

But the shop without a cost system is failing to get profits properly belonging to it and at the same time is reducing the income of other shops by the low prices. Newspaper men do not take kindly to the trust idea; nor is it necessary to make an agreement. Any sound business man who knows exactly what every job costs is going to raise prices that are too low or let the other fellow have the job and assume the loss. It sometimes requires nerve to get out of old ruts and put every job on a profitable basis. But more men ought to be required to face a weekly payroll and the needs of family and shop with a string of jobs done at a loss.

It is easy to write about cost, but more difficult to get exact facts. Two printers figured on a job. One made a price of $25 and the other estimated $50 or less. The latter used a cost system, doubling the cost of labor and adding the stock at an advance of ten per cent. The former estimated the cost based on a previous edition of the same job. He insisted that he made money on the first edition at $25, yet he had type to set only a few pages which were run two on, thrown in and the operation repeated. The printer who handled the job did it in the best possible manner and found that it actually cost $30. People may differ regarding the price to the customer but the cost must be paid by the shop.

Some argue that doubling the labor is not enough to cover salaries of manager, bookkeeper, solicitor (or other means of securing business) rent, insurance, taxes, light, heat, power, depreciation, interest on investment, ink, office supplies, postage, express, freight, telephone and other items. Each shop can and should determine this accurately for here is a pitfall which fools many. If competition is keen and machines are not producing full capacity, more than 100 per cent is probably needed.

Until printers learn to charge fair prices, this story will contain more truth than poetry. A salesman stated at the hotel that he called on a printer that day and found that he was regarded by the man of ink as a practical joker. "How was that?" asked everybody. "Why," replied the salesman, "I tried to sell him a cash register."

The New Third Vice-President

Alonzo D. Moffet, who was unanimously chosen third vice-president of the National Editorial Association at the Seattle meeting is a Hoosier born. He is forty-nine years old. He was graduated from the Indiana University in 1883 and received the degree of Master of Arts from his Alma Mater in 1889. Later he took a graduate course in English and History at the Johns Hopkins University at Baltimore, after which he was connected with the public schools of his state and had eminent success as teacher and superintendent.

Thirteen years ago he purchased the Elwood *Daily Record* and the Elwood *Free Press* (weekly) at Elwood, Indiana, since when he has been a prominent figure among the editors of the state. He is a member of the Northern Indiana Editorial Association, the oldest organization of newspaper men in the State and has represented the same in the National Association for the past four years. He is also a prominent member of the Democratic Editorial Association of Indiana, of which he is an ex-president.

Mr. Moffet is a type of the scholar in the newspaper field and his liberal education has stood him in good stead in the practical work of editing a newspaper in a manufacturing district.

Alonzo D. Moffett, Third Vice-Pres., N. E. A.
Daily Record, Elwood, Ind.

From Here and There

The Milwaukee *Evening Wisconsin* has installed one of the largest newspaper perfecting presses in that part of the country. The Milwaukee *News* not long ago put in a fine large new press and the *Journal's* new press is also up-to-date with as fine a press as any of them.

The rain-storm could not dampen the ardor of the 100 members of the Chicago German Press Club and their families who were entertained at Milwaukee, Aug. 15th, by the local German club. President Koenig delivered the address of welcome, to which Paul P. Mueller, president of the Chicago club, responded. Leopold Neumann, Chicago, made a short address presenting the Milwaukee club with a big beer stein, with a capacity of three gallons.

Original cartoons from the pen of John T. McCutcheon and Walter Briggs of the Chicago *Tribune,* Homer Davenport of the New York *World* and original paintings from Frederick Remington, Harrison Fisher, Howard Chandler Christy and Charles Dana Gibson, Arthur Barkalow and Jay Stilling of Des Moines, Carl Rawson of Minneapolis and Pat Monogahan of New York, will adorn the walls of the new Des Moines press club. All of these artists have promised to forward original sketches to the club.

Col. I. C. Copley of Aurora has become owner of the Elgin, Ill., Daily *Courier.* The sale includes both the newspaper and job printing plant of the *Courier* and the good will and name of the Courier Publishing Company. The Elgin *Press,* which has been the property of Col. Copley for several years past, will be discontinued and its circulation and equipment merged with that of the *Courier.* A. L. Hall, who has been manager and editor of the *Courier* for several years past, will continue with the paper for the present. Col. Copley owns the Aurora *Daily Beacon.*

MORE WORK THROUGH PUBLICITY

BY HARRY A. WOODWORTH,

Address all communications for this department to 314 Linden Street, Scranton, Penn.

I HAVE received a very handsome slip in red and black, advertising the *Optimist*, a New York magazine that is full of inspiring thoughts. Oh, if the *Optimist* folk would carry the same ideas of typography into the printing of the magazine! It is as gloomy and lugubrious a specimen of printing as I ever saw, and so is indeed depressing, for all its words of cheer. I remember how, as a sensitive lad of six, I found a copy of Bunyan's "Pilgrims Progress," with a dismal black cover, and funereal typography and pictures like those in the *Optimist*. How I suffered because of that book, which convinced me that I was the vilest sinner known, and got me to dreaming of the Day of Judgment and reading the Book of Revelations, which prophesied that there would be "signs in the skies" to announce the advent of that dreadful day! So much did this impress me that when I saw a kite flying for the first time, I got the biggest scare of my life, and was sure that the Judgment Day was at hand. That copy of "Pilgrim's Progress" became a terrible obsessing power; but I could no more resist reading it than I could dime novels at a later stage in my career, though I hated it with a deep and sincere hatred. I read it over and over again, until I left the house where I was visiting, and from that day until a month ago, I had never read it again—always had a horror of it. But last month, I saw a beautiful copy of it in the Public Library, full of pictures in color, and printed most cheerily. I read many pages of it, and found it full of interest and inspiration.

How is it that about all these New Thought and Life after Death and Psychic Power papers and books are so gloomy typographically and pictorially, and are so often printed on inferior paper? If their publishers would only make the typography in keeping with the sentiments therein, the bright thoughts they contain would be more popular than they are.

Leigh Mitchell Hodges' Department in *The Optimist*, must owe a considerable of its success to the fact that the Philadelphia *North American*, in which it appears, is one of the brightest daily papers (typographically as well as editorially) in this beautiful world.

* * *

Frank Roemmelt of Elmira, N. Y., advertises by sending some proofs of his work as proof of the excellence thereof. The envelope says, in 18 point, "This Fevelope Contains Proofs"—a remarkable "typographical" for such an advertisement. Each proof contains a price-schedule for one, two and three thousand. Some of the specimens are identical as to composition, the difference being in the stock. Below the prices are the words: "All other printing in proportion. Let me estimate on your wants. Satisfaction guaranteed or money refunded. A Trial Order Solicited." This advertising takes the place of a salesman with samples more effectively, than some printing-advertising, for it quotes the price.

* * *

The *Times* Printery of Scranton, ran for many months in the *Times* newspaper a notice which appeared in this department, and also used it in theatre programs and the Scranton directory. The following ad is now being run by this print-shop for advertisers with an appropriate cut, and attractive typography. The "unit" idea is one that is not brought to the attention of advertisers to the extent its attractiveness calls for, so this ad is quoted in its entirety as an argument which should appeal to any up-to-the-times advertiser who needs a stimulant to thought, and will take, if the dose is administered in such a form:

THE UNIT PLAN OF ADVERTISING.

If there were only one person in the whole world whose trade you wanted, it is plain that advertising to anybody else would be utterly wasted.

Why waste money in advertising to people from whom business is impossible or undesirable? If there is one person whose trade you want, advertise to *that person*. If there are ten thousand such persons, advertise to *each person*, individualy, directly, persistently.

This is the unit plan. The logical plan of holding and securing business. The plan you expect your salesman to follow—its the catalogue, booklet and follow-up letter plan. You control this character of advertising exactly as you control your salesman, dealing with people as separate units—one at a time. Either of these mediums carries your advertisement directly to each person whose business you want—right into the home or office—it reaches the person you are after. Where the demand for your goods or services originates. A more intimate, direct and persistent campaign of advertising cannot be imagined.

If you are planning or contemplate an advertising campaign and intend using high-grade printing, we can be of service to you—our experience in the handling of quality printing—our up-to-date equipment and skilled workmen, enables us to place at your command—quality service. ....

Call, write or phone us, and our representative will call on you with samples of quality printing done for satisfied customers, who believe in the Unit Plan.—THE TIMES PRINTERY, 220-224 Spruce Street.

* * *

A SUGGESTION FOR OTHER HARVEST MONTHS.

This blotter (1) has the rules in yellow, the picture in yellow and brown and the remainder in brown and gray. It has a dainty effect in the original, the harvest picture being decidedly attractive with its yellow apples and grain and straw hat.

* * *

THE AMBASSADOR'S AMBASSADOR.

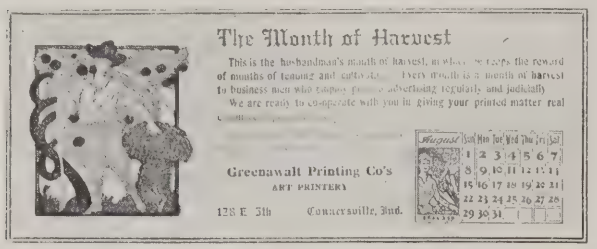
The *Ambassador* Company of Corning, N. Y., send ten cards like (2), each having a different color-scheme

as to type and stock. The *Ambassador* is one of the brightest magazines of the *Philistine* order, and is both wise and witty.

* * *

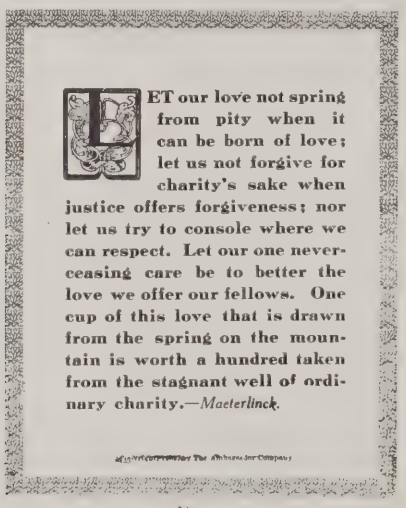
AN OCTOBER BLOTTER.

October—the most beautiful month of all the beautiful year, in my estimation—will soon be with us again, and in September there will be many an October blot-



No. 1

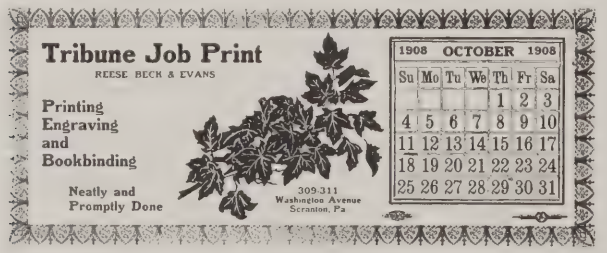
ter prepared by printer-advertisers. Truly a beautiful one is that issued last October by the Tribune Job Print of Scranton (3). I never cared particularly for a border of torches such as that in this design, with the bottom ones inverted, which was a sign of distress or death with the Greek designers. And still it is pretty,



LET our love not spring from pity when it can be born of love; let us not forgive for charity's sake when justice offers forgiveness; nor let us try to console where we can respect. Let our one never-ceasing care be to better the love we offer our fellows. One cup of this love that is drawn from the spring on the mountain is worth a hundred taken from the stagnant well of ordinary charity.—Maeterlinck.

No. 2

if we get the torch idea out of our minds. But those leaves, with their beautiful shading from green into red, are remarkably handsome and entirely appropriate. The coating of the stock is of a harmonious salmon shade, and the rest of the ink on the blotter is brown. The disposition of the type on this blotter is decidedly



No. 3

effective, and the lighting of the job (I refer not to the torches) is excellent. Another blotter of this concern which is unreproducible, is also a work of art.

* * *

EMBOSSING EMBELLISHED.

One of the handsomest monthly calenders I expect to see this side of the Calends of Greece is No. 4. The embossed portrait of Minerva brings forth her swelling bust most pleasingly, and in other ways gives the goddess a charm which she could not have displayed when Paris gave the apple to Venus as the prize of beauty. Minerva had beauty as well as brains, and this combination is a characteristic of this New York

No. 4

firm's work. The background to the picture is a delicate light green, and the type is in dark green, the stock being a rough faced white, save where it is smoother by the art of the embosser.

* * *

A WANT AD THAT PAID.

I never could understand the criticism of a friend of mine who is considerable of an artist that the Scotch

A FARM PAPER with a circulation of upwards of 400,000 and an advertising patronage which during the first six months of 1909 ran up to $123,619.60, or $39,264.74 ahead of the same period in 1908, might seem to be a pretty good basket of fruit to sit down and enjoy in comfort. We do not feel that way about it. We sort of got to "seein' things at night" away back last winter, got up in the gray dawn of February 10th and wrote out the following Want Ad:

WANTED—A born editor, progressive, keen-edged; a man with ability to visualize the future, with imagination, and above all, with optimism. He must be conversant with conditions, with methods, and above all with the viewpoint of the American farmer. He must have sympathy, born of respect, with farm life as it is today and a keen purpose to help improve it in a practical, homespun way.

He need not necessarily be a tech-

5a

face looked "cheap," as I consider it one of the faces that it is a pleasure to read. Nos. 5a and b are two at-

tractive opposing pages from a booklet entitled "A Foreword," issued by *Farm and Fireside* of New York to tell what we are to expect of this live paper in the coming year, and particularly to call attention to the fact that they have a new editorial writer who "takes no man's place but will create his own place, and is a six-foot, two-hundred pounder in mind and body." That word "Foreword" has been objected to by some

> nical man nor a scientific expert. Our assistant and associate editors can furnish that knowledge. He need not necessarily be a creative writer, but he must be able to edit an Editorial Page as never before in a farm paper, securing such contributions as will make it forceful, useful, comprehensive and, above all, readable—an Editorial Page that is a Power.
>
> There is a wave gathering off under the horizon and we can assure this fashion of a man a safe trip on the crest of it far up on the shore line.
>
> Do you know him?
>
> Very truly yours,
>
> THE CROWELL PUBLISHING COMPANY
>
> Springfield, Ohio. Madison Sq., N.Y.

WELL, on June 10th, just four months later, we got our man. His name is Herbert Quick, and he hails from Sioux City, Iowa, but more important, he has roamed at large through the United States. He has lived among farmers all his life, been a successful lawyer,

5b

writers, who sneer at those who use it instead of "Preface," and call it "stilted," but to my way of thinking it is much more beautiful and inspiring, in its sturdy Saxon, than the Latin invader. The pages are handsome. I would like to see more space after the word "A" which forms one of the initials.

* * *

The *Orange Judd Farmer*, of Chicago, is a believer in blotters innumerable. I suppose I have received one hundred blotters from this paper during the past

Why Grope in the Dark
when you buy circulation? Insist upon knowing that you're getting what you pay for. We can prove to your satisfaction we actually have the exact number of paid subscribers we claim. We guarantee, under a sworn statement, the circulation of that result-producing weekly farm magazine
Orange Judd Farmer
an agricultural journal definitely edited, by eminent authorities in their several fields, to meet the needs of the most progressive farmers of the central west for technical but practical information. A glance at our reading columns will convince you of the high character of our
90,000 Sworn Circulation
each week. Every copy goes to an interested reader who has paid a dollar a year in advance for it because he wants it. That's a proof of quality as well as of quantity. Our readers have the habit of buying advertised goods—from our advertisers—because we guarantee their reliability.

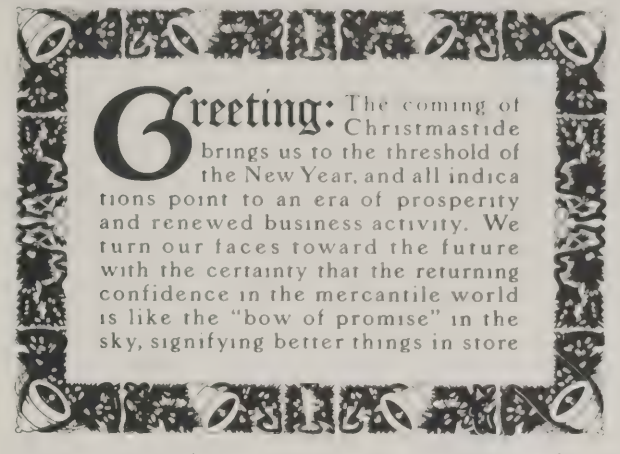
year, all of the same style (6). The very voluminity of this characteristic publicity must be effective.

CHRISTMAS IS AROUND THE CORNER.

Christmas is coming—none too soon to prepare. This page of a holiday catalogue of the American Type Founders Company is pleasingly suggestive. Border



Greeting: The coming of Christmastide brings us to the threshold of the New Year, and all indications point to an era of prosperity and renewed business activity. We turn our faces toward the future with the certainty that the returning confidence in the mercantile world is like the "bow of promise" in the sky, signifying better things in store

in warm green and orange; remainder in green. Surely delightfully Christmas-y is this typography.

* * *

What Counts in Life

Distinctions among men and pride of position, birth, station or wealth should be counted as delusions and follies of a brutal, ignorant past. Truth, industry, earnestness and contentment, worthiness and sweetness, goodness and human sympathy count for the most in every life. With these, great accomplishments and usefulness and true happiness belong to everyone in any position of life, and the influence may and is apt to be almost boundless. William Howland, editor of *Outlook* Magazine, in an address before the New York Press Association, said: "One-half of my business life has been spent in local journalism and one-half in the center of periodical activity. I have constantly felt and often said that the former has much to recommend it in the matter of substantial comfort and conscious influence."

He congratulated himself on the pleasure of being "permitted to tell how little difference there is between conducting a local country weekly with 500 subscribers and being the publisher of a national periodical with a circulation three or four hundred times as large. The difference is really one of degree rather than of essential qualifications or methods."

He might have well added that as to the real lasting, telling—good exerted and the results reached for the benefit of man, the difference in degree may often be on the side of the worthy editor and publisher of the home paper, for what is lost in the largeness of the field covered, may often be more than counterbalanced by the nearness and directness of the influence.

Peter Kelin, publisher of the Aurora, Ill., *Daily Volksfreund*, plans that the entire interior of his building be torn out and remodeled in the near future. The composing room will be enlarged and new presses installed, including a new cylinder press for issuing his daily paper.

Editors Seeing the Northwest—Land of Growth and Promise

THE TWENTY FOURTH ANNUAL CONVENTION AND EXCURSION OF THE NATIONAL EDITORIAL ASSOCIATION PROVES ESPECIALLY INSTRUCTIVE AND IMMENSELY ENJOYABLE.—A BIRD'S EYE VIEW OF THE TRIP.

N the character of papers presented, in the lessons obtained by travel and observation, and in the substantial, intelligent pleasures enjoyed, the Twenty-fourth Annual Convention and Excursion of the National Editorial Association reached the highest water mark.

A good start was made in Chicago through the examining the freight tunnel subways and learning how a great modern city handles the hundreds of thousands of tons of freight daily, eighteen feet below the busy, congested streets, over a network of sixty miles of railroad tracks, on twenty five hundred freight cars driven by electricity; by a visit to the largest dry goods store in the world, covering thirty-five acres of floor space, ascending thereto from the electric lighted subway station by electricity driven elevators, and examining of the wonderful displays of goods, the products of all climes from the furs of Alaska to spices of Ceylon and investigating the perfect system with which a business running into scores of millions annually, is carried on, and ending with a trip by a special train over a well equipped modern elevated railway to one of the greatest amusement parks of the whole nation; enjoying a rich banquet gotten up and served in accordance with the highest culinary and catering art, and at last viewing the innumerable, wonderful methods and devices by which the up-to-date, rushing, enterprising business men and workers secure quick amusement, blood-stiring thrills and concentrated recreation. Then followed the delights of the railway journey, and of comradeship in travel, on one of the best equipped trains of highest perfection in railway erection and operation, through the states of Illinois and Iowa, to the wonderfully progressive city of Omaha, giving highest pleasure and suggesting much as to present attainments and future possibilities. A stop at Lincoln, Nebraska, and the enjoyment, as the guests of the Lincoln Commercial Club, of a drive over that beautiful prairie city with its great state University and other institutions, its forty thousand refined, enterprising people, and then paying a visit to the farm home of one of the most noted men of the Republic, and enjoying a kindly reception by his noble, talented wife, followed by a sumptuous banquet at a splendid modern hostlery, taught how boundless is American hospitality and how rapid has been the upbuilding and how unlimited are the opportunities, the accomplishments, and the resources in this Heaven blessed free land of America.

At nearly every important stop on the journey, the members of the editorial party were augmented by added delegates coming from states as far south as Texas and as far north as Minnesota, until on starting from Spokane the party contained two hundred happy, observant excursionists. There had been surprises all along the line. At Billings, the daughter of one of the delegates, Irving Todd of Hastings, Minn., visited the party and journeyed to the next station. She and a girl friend settled on claims last September, twenty-three miles from Billings and are living there and developing fruit ranches, all by and for themselves. Miss Todd was an attendant with her father at the Convention of the N. E. A. at St. Augustine in 1895 and contracted typhoid fever from which she came near death. She has since been in frail health but her life in the open has worked complete restoration. The lesson is that the Northwest affords not only opportunity for acquiring homes but health.

At Spokane a city was viewed, in all the perfection of highest modern civilization that, in some eleven years, has grown from thirty thousand to over one hundred and thirty thousand residents and the increasing wealth has much more than kept pace with the increase of population. It is the center of a rich agricultural region, with unsurpassed water power, afforded by the Spokane River that passes through the city, with excellent timber, fruit and grazing lands near at hand and being the supply point of the famed Coeur D'Alane mines. Spokane has made good in the prophecy as to her growth which we made in the NATIONAL PRINTER-JOURNALIST after our visit there in 1898. We were glad to learn that Mr. Cowles, of the Spokesman *Review*, a former Chicago newspaper boy, who took us on a tour of the little city when there eleven years ago and with enthusiasm pointed out its beauties and possibilities, had shared in the general prosperity and is now a sure enough millionaire. He was out at his country home at the time of the visit of the editors.

North Yakima afforded the editors an object lesson in methods and benefits of proper irrigation and the delights and profits of raising the big, luscious, red apples and other fruits.

Seattle proved a crowning wonder in its growth, wealth and magnificent beauty, and grandeur. It is a city built on the everlasting hills, between great fresh water lakes, on one side, and the waters of Puget Sound on the other. The cutting down of the hills and the grading of the streets involves an outlay of vast amounts of money, but the material taken from the hills is being profitably used to fill in, and make most valuable property on, the water front. The city, in its splendid arrangement and construction and its magnificent business buildings, hotels, schools, churches and homes; in its provisions for healthfulness, in its perfect electric trolley car system, in its streets, drives, parks, and other institutions afforded the editors numberless useful object lessons, excelled if at all, only by the Alaska-Yukon Pacific Exposition, which the city's enterprising citizens originated, planned, and have carried to a crowning success.

The location of the Exposition is ideal, in an amphitheater, on the shore of Lake Washington, and, viewed from advantageous points in Seattle, day or night, suggests the prophet's vision of a celestial city. It is a place of enchanting loveliness, light and knowledge. It is compact, comprehensible, and unsurpassably lovely. It is not as large as some expositions but it is more perfect. The government exhibits, as well as those of Alaska, Washington, Oregon, California, Hawaii and Japan, are especially worthy of study. One feature connected with the different exhibit buildings, is especially worthy of note and commendation. Nearly every building has a lecture room, in which lectures are given constantly with panoramas and moving pictures showing the regions and objects treated, in a remarkably attractive and lifelike manner. In this way, industrial education, the scenery, the fauna and flora and products of different states, the value of good roads, their necessity and construction, are illustrated and shown in a most instructive and impressive manner.

In addition to the regular exhibits, "The Pay Streak" presents some interesting and educative features. Among these are the Automatic Railway carrying passengers, and operated by air pressure, the Esquimaux, Iggorote and Chinese villages; "the light-radiating painting of the 'Christ'," Battle of the Monitor and Merrimac, the Ferris wheel, and many others, more or less familiar to the visitors at other expositions. The different methods and means for teaching modern domestic economics, improvements and manual training in schools, are among the most edifying features of this latest "time marker of the world's progress." We were particularly interested in the department of Domestic Economy and the splendid showing by classes from the Olympia High School, in cooking and in drawing and wood working. We had good reasons to remember the cooking class of Olympian young ladies, for, to-

gether with the officers of the Association, we enjoyed one of their excellently prepared meals. We give herewith a view of the scene and the guests together with the bill of fare and its cost. We are going to give more as to this branch of training in the Olympia, Washington, High School, to help along the cause of more practical education in our schools, for we believe that there is recreation and inspiration in this sort of instruction that help instead of retard pupils in their literary studies and regular school work. We have no great faith in purposeless play but have absolute belief in re-creating of weary faculties through change and the employing of hands in mechanical creation and work. To excell in doing something worthy, while developing and harmonizing the physical man, is better than pounding a ball.

The entertainments at Seattle were numerous and enjoyed with a zest. Mr. Will A. Steel and his coadjutors fully redeemed their pledges. There was an automobile ride for the whole party over the city that revealed its wonderful improvements and beauties, an equally enjoyable trolley ride, a banquet at the New York Building on the Fair grounds, a banquet at the Kennedy Hotel by the Seattle Press Club, theater parties, etc. Every minute outside the convention

In Railway Automobile on Alaska Central R. R., Seward, Alaska, August 2d, 1909.

Reading from left to right:—Mr. and Mrs. Lyman King, Redlands, Cal.; Dr. Louise Harvey Clarke, Riverside, Cal.; Dr. Marion Lute, Dorchester, Mass.; Dr. Katharine Raymond, Wellesley College, Wellesley, Mass.; Dr. Charlotte J. Baker, San Diego, Cal.; B. B. Herbert, Chicago, Ill.; Standing in front left to right—Mr. E. P. Clarke, Riverside, Cal.; Dr. Fred Baker, San Diego, Cal.; Mr. James W. Hare, Chief Engineer Seattle, Wash., Str. Northwestern. Trip on Alaska Central R. R. Aug 2, 1909, Seward, Alaska.

hours, was filled with instructive delights. The excellent dailies of Seattle gave instructive accounts of the proceedings of the sessions and liberal notices of the members.

The excursion to Tacoma by steamer over the Sound, on Friday followed by a visit to the great saw mills, smelters and factories and a trolley ride out to one of the most beautiful city parks of this nation, where a banquet was enjoyed, was one round of edifying pleasure. The trip to Victoria and Vancouver proved alike enjoyable.

Saturday, July 24th, one hundred and thirty four members of the party started on a twenty-day trip to Southeastern and Southwestern Alaska. Two thousand miles were traveled on the good ship Northwestern of the Alaska Steamship Line,—four thousand miles in all, up and back. One continuous panorama of snow capped mountains was enjoyed. It proved an excellent object lesson, spread out by the Architect of the Universe, of grandeur, inviting to attainment and challenging highest effort and endurance. At times the excursionists seemed overcome with awe, love and praise and found expressions in the repetitions of the descriptions of nature by the inspired writers of the Holy Bible, who lived close to nature and to Nature's God. The sunsets were especially remarkable, and on Prince Williams Sound, the snow-crowned peaks, that had been passed and admired with ecstatic emotions, feelings and expressions, were suddenly transformed by the setting sun into a great white, heaven-reaching city of white castles presenting a scene of surprising grandeur. The expressions were, "See the Celestial City," "See the Holy City." Another still grander scene was witnessed during the return trip, where, in Clarence Sound beyond three nearer ranges of mountains, were witnessed at two different and distant points, great mountains of unbroken whiteness. At times, by the changing positions of the clouds and the shadows and the blue sky below the clouds, it seemed as though we were looking down on a distant city, of purest white marble, situated in a great lake of sky blue water. The other scene was still more entrancing and grand, as it was more extensive; besides the mighty structures of pure white, great white marble shafts seemed reaching from earth to the sky. These were probably great banks of white snow in the crevices of the mountains, the surrounding rocks, earth and trees being hidden by the darkness.

A description of the trip is here impossible and as a mere outline we print the following lines written on the return trip, by W. H. Greenhow, editor of the *Evening Daily Tribune*, Hornellsville, N. Y., and sung by the excursionists to the tune of "Marching Through Georgia:"

LEAVING ALASKA.

(Tune: Marching Through Georgia.)

We've sailed thy placid, inland seas,
  We people from the south.
We've breathed thy balsam-scented breeze
  As we passed the Dixon's mouth.
The mountains of thy channels crowned
  With everlasting snow
Like escorts ranged along our path
  To point the way to go.

Hurrah, Hurrah, Alaska was our goal.
Hurrah, hurrah, the people with a soul
  We'll sound thy warmest praises
  From Panama to the pole
    As we sail away from Alaska.

From Ketchikan to Treadwell's mills,
  From Treadwell to Juneau,
From Juneau to Cordovia's hills
  They kept us on the go.
Where Valdez camps upon their trail,
  Where Seward's pine trees grow
We've met thy people, Alaska.

Hurrah, hurrah, the land of many showers,
Hurrah, hurrah, the land of sweetest flowers,
  Thy memory will stay with us
  As we journey to our homes,
    Regretfully leaving Alaska.
We've seen thy mighty rivers flow
  As we hunted for thy gold.
We've climbed thy copper mountains,
  And we've faced thy glaciers cold.
We've seen thy salmon humping
  Their way up rocky streams,
And thy totem poles will haunt us, Alaska!

Hurrah, hurrah, we'll sound thy praises meet.
Hurrah, hurrah, we leave with memories sweet.
  We're going to our homes once more,
  We're on our sad retreat.
    To dream of thee, Alaska.

THE STORY OF THE TRIP AS RELATED ON THE RETURN, FROM INTERVIEWS BY THE SEATTLE, WASHINGTON, PAPERS.

(From the Seattle *Post-Intelligencer,* Friday, Aug. 13, 1909.)

With a party of 134 members of the National Editorial Association, who had completed an excursion of 4,000 miles to Southwestern Alaska as far as Port Graham and return, the Alaska Steamship Company's liner Northwestern, Capt. A. Croskey, arrived shortly after 10 o'clock last night. The Alaska trip, arranged through the Seattle Press Club, concluded the annual convention, business sessions of which were held in Seattle late in July.

Speaking the declared sentiment of every member of the editorial party, B. B. Herbert, editor of the PRINTER-JOURNALIST, of Chicago, founder and first president of the national organization of editors, said upon landing:

"Most of us went to Alaska for the purpose of sympathizing with the residents of that Northern region over the hardships imagined in their existence. Returning, we are positive that the country presents possibilities not excelled on earth. We found at Seward a half-acre garden from which a Scotchman had this season sold $800 worth of vegetables. At Ketchikan, we saw them taking fish in such quantities that the canneries were turning out enough to insure great revenue. We inspected the Treadwell mines, on Douglas island, where, on the 1,400-foot level, the rich mineral deposits grow steadily more valuable; we saw gold and coal mines being developed with a sureness that is convincing to us all that without other advantages an empire of wealth is available in Alaska.

"Coupled with the many commercial surprises met in Alaska, we were regaled with a voyage so magnificent with scenic features and nature's marvels that the attention of the world must surely be attracted there as a new wonderland. No feature has been more pleasant than the splendid courtesy extended by Capt. Croskey and his officers, and the generous hospitality extended by citizens of every community visited."

ALASKA'S GREAT FUTURE.

Supporting the statement of former President Herbert, Secretary W. F. Parrott, of the Waterloo Daily *Reporter,* spoke enthusiastically of the enjoyment that had marked every hour of the voyage. He predicts for Alaska, through its coal, gold and copper, fish and wood pulp, a future as one of the greatest countries of the world.

On the passage north the Northwestern called at Ketchikan, Treadwell mines, Cordova, Valdez, Seward and Port Graham. At each of the cities the brief stay allotted was given over to public receptions and entertainment, with brief side trips into the interior. In this way, trips over the Copper River & Northwestern railway, out of Cordova, and the Alaska Central, from Seward, were permitted. A visit to the Childs glacier was a feature of the itinerary.

In addition to the editorial excursionists, the Northwestern brought fifty passengers to Seattle and $10,000 in treasure consigned through the mail. Fifty-six Japanese sailors, seized by the revenue cutter Bear last year while illicitly sealing off St. Paul island, in the Japanese schooners Saki Maru and Kinsei Maru, were brought down by a party of guards directed by Horace Deline, deputy federal marshal at Valdez. The prisoners have served out a $500 fine in the Valdez jails, and were last night turned over to United States immigration officers for deportation. With the Japanese were two British subjects, a gunner and navigating officer, captured aboard the schooners.

Capt. Croskey describes the round-trip voyage of the Northwestern as most pleasant throughout, many of the usual difficulties of navigating Alaska waters having been missed.

(From the Seattle *Daily Times,* August 13, 1909.)

After an unusually fine trip through Southwestern Alaska, the steamship Northwestern of the Alaska Steamship Company, Capt. A. Croskey, arrived in port about 10 o'clock last evening with 134 members of the National Editorial Association, who made the round trip, all loud in their praise of the voyage and country. The vessel was gone twenty-one days and traveled about 4,000 miles and every day and mile was a new and pleasant experience, according to B. B. Herbert, editor and publisher of the NATIONAL PRINTER-JOURNALIST of Chicago, who made the trip.

"It is a wonderful country and the scenic splendors of the trip will make it some day the most popular excursion run in the world," he said this morning. "When the people of the United States realize some of the features of this trip, the rest and recuperation to be obtained from the heat and rush of city life, it will bring thousands of people here from all parts of the world."

From Seattle the Northwestern called at Ketchikan and then proceeded to Treadwell, where with a band to welcome them, the editors were shown through the mines and plant and entertained at a dance. Accompanied by the band they went to Juneau, where another dance was held in their honor. At Cordova, the next stop, the day was perfect, and as the guests of M. J. Heney and the Katalla Company, the editors made a trip on the Copper River & Northwestern Railroad to the Bonanza district. They viewed the Childs and Miles glaciers.

At Seward, about 100 of the editors remained ashore while the vessel went on to Port Graham.

Those who went to Graham were taken on a small boat of the Alaska Commercial Company to points of interest in the vicinity, while those at Seward were entertained by the Alaska Central Railroad officials and went to the end of the line. The Yucatan, George W. Perkins' private yacht, was at Seward and S. W. Eccles, of the Copper River Company, went to Port Graham with the party. At Valdez the editors were entertained at a dance and visited the points of interest in automobiles and other vehicles.

The transfer of Mr. Eccles to the Olympia at Ellamar gave them an opportunity to see the mines and to view the copper resources of the country. They expressed their appreciation of the country in songs and poems written during the trip and also thanked the captain and crew of the vessel before leaving the ship last night.

To be concluded in October issue.

Interesting Briefs

The Press Club of Des Moines will give a banquet in honor of Senator J. P. Dolliver, Senator A. B. Cummins and Representative John A. T. Hull later in the season. It was first planned to have the function at the time of the homecoming of the Iowa statesman, but later the committee decided to have the banquet at a more favorable date in September.

The Des Moines Women's Press Author's Club has outlined an interesting program for the coming year, which will open in October at Rosedale farm. Here the members will gather from different parts of the state to give their "Vacation Experiences" and enjoy a luncheon at this popular country resort. The November meeting will be at night and will perpetuate an annual custom of presenting Iowa authors, who read from their own works.

The two weekly papers of Grand Junction, Ia., have consolidated. G. W. De Wald sold the Headlight printing property consisting of office building, machinery, type, plant, etc., to W. H. Kettell of the *Globe.* The *Headlight* was a strong Democratic paper and was the oldest of its kind in the country. Kettell expects to continue publishing the *Globe,* but De Wald will take up his residence elsewhere.

The National Editorial Association at Tacoma, Washington

EMBERS of the Twenty-fourth Annual Convention of the National Editorial Association enjoyed so many excursions, feasts and happy occasions, that it has been impossible to record all, but we feel that it would not be right to omit an account of the day passed in visiting Tacoma, a city of much wealth in manufacturing, in commerce, in schools, parks and all other worthy institutions of the very highest modern civilization that tell of great prosperity, of an intelligent enterprise, high ideals and culture. We do this the more readily for the reason that we find the account prepared to hand in a most complete, and able article in the Tacoma *Daily Ledger,* and when we say that we only reached home from the Alaska trip on August eighteenth, with only ten days left in which to get out the September issue, all practical newspaper makers will appreciate the fact that such valuable aid as is afforded by the *Ledger* article is very highly prized. It is worthy of note, too, that when the papers of a city give adequate attention to the meetings or visits of editorial or other associations, they invariably secure greater publicity and thereby do most valuable service in the way of promoting the fame and interests of their own cities. The Tacoma *Ledger,* which is an excellent newspaper of metropolitan proportions, told the story of this happy occasion in the following very interesting and instructive manner:

Tacoma has given many parties during the present summer; she has lavishly entertained delegation after delegation of visitors, but the crowning effort of her endeavors—the jollification de luxe—was yesterday. More than 350 men and women of the National Editorial Association were her guests. They came from every State of the Union; they were dined and supped and taken to every point of interest, and they left enthusiastically singing her praises and shouting the slogan, "We Like Tacoma."

Everybody had a good time, guest and host alike, from President A. Nevin Pomeroy of the National Association to the girls who hurried good things to the tables in the closing dinner at Point Defiance Park. Sight-seeing and pleasure were the sole objects of the gathering, and there was a sufficiency of each to cause sighs of regrets when the time for parting came.

From noon until the last rays of a glorious Northwestern sun had disappeared behind the great Olympics, the newspaper men and women heard, saw or tasted of the good things of Tacoma. Many expressed their determination to return, and all united in a pledge to boost Tacoma. It is safe to say that fully 500 magazines and newspapers throughout the country will tell of this city's merits during the ensuing months.

COUNTRY'S MASTER MINDS PRESENT.

The gathering was a notable one and representative of the best in American journalism. Men and women whose influence has long been felt in shaping public opinion were there, and the fact that all were thoroughly pleased may well be taken as a criterion of the favorable publicity that Tacoma will soon receive throughout the land.

Not only did the visiting throng promise its aid in heralding the fair name of this city, but it also pledged its support in firmly establishing the name, Mount Tacoma, as the right one for the nation's highest peak. The meeting yesterday marked an important step toward fulfilling the desire of all Tacomans that the mountain be known only by the name it first bore, the one given it before the white man came.

Tacoma was honored yesterday by the closing meeting of the most successful convention ever held by the National Editorial Association. At sunset, on the broad verandas of Point Defiance Park pavilion, the scribes assembled for the last time in 1909, and as a fitting ending presented their leader of the past year—President William H. Mayes, publisher of the *Bulletin,* Brownwood, Texas—with a beautiful Tacoma sterling silver table service. Then, aboard the steamer Kitsap, which had been chartered for their use, they bade each other farewell. Today the party separates, one group leaving on a twenty days' excursion to Alaska and the remainder for other sight-seeing tours or for their homes in every section of the United States.

PULL FOR TACOMA IN 1918.

The National Editorial association left Tacoma last night determined to come again and it is more than probable that the members will come in a body in 1918. Nine years seems a long time to wait, say officers of the Association, but other sections of the country demand a visit and in that space of time delegates from the Atlantic Coast will be anxious to return and Tacoma will be the city. The invitation was extended by President Louis W. Pratt of the Tacoma Boosters' Club and accepted unanimously. From now on every effort will be exerted, and only by the city but by the Eastern delegates as well, for the fulfillment of this plan.

A greater number of the National Editorial Association members accepted Tacoma's invitation than had been expected, and with banners flying the jolly crowd steamed into Commencement Bay aboard the Kitsap shortly before noon yesterday. The visitors were accompanied by many members of the local reception committee who had gone to Seattle early in the day to greet them.

VISIT GREAT LUMBER PLANT.

Disembarking at the Gawley dock on the tidelands, the party was escorted to the mills of the St. Paul & Tacoma Lumber Company. There they were received by Maj. Everett G. Griggs, president of the company; Capt. Hart W. Palmer and Charles A. Foster. Although they arrived during the noon hour, while many of the employes were eating their dinner, the great machinery was immediately put in motion. The largest logs that could be found in the yards had been placed on the runs and were soon transformed into great planks by the saws.

The ejaculations of surprise began at the sawmill. Many of the visitors had never seen a great mill before and their astonishment at the methods employed in handling logs and the speed with which the logs were transformed into boards or shingles found expression in gasps of wonder.

From the lumber mills the guests were taken in special cars through the business and manufacturing districts of the city to the Tacoma Commercial Club, where luncheon awaited them. Regardless of the extra numbers, there were tables for all and the service was all that could be desired. The rooms had been profusely decorated with roses and at the close of the repast each of the visiting women was given a bouquet of flowers that had been brought to the rooms by citizens during the morning. Secretary O. F. Cosper distributed the flowers and made everyone feel welcome.

RECEPTION ENTIRELY INFORMAL.

Nearly 30 Tacomans, men and women, engaged in literary work, and members of the local A.-Y.-P. committee, greeted the party upon arrival and during the brief informal reception—formalities were entirely left behind throughout the day—made many new acquaintances or met friends of former days in the East. Nearly every resident of the city found in the delegation some man or woman whom he had known or who came from his former home city or state, and this meeting of friends had much to do with making the day a joyous one.

Upon leaving the Commercial Club rooms the visitors were taken to the new home of the Chamber of Commerce, where several hundred boxes of Puyallup raspberries were distributed by Secretary A. L. Sommers and his assistants. The Tacoma Hotel was the next stopping place and here the party rested for a brief interval. They strolled about the hotel corridors or, seated comfortably on the beautiful verandas, looked out across the tidelands to the bay behind; and ejaculations of pleasure and wonder at the beauty of the surroundings were heard on all sides.

Near the hotel four special street cars awaited the visitors and they were next taken out to the resident portion of the city. The routs of this trip lay mainly through the North End of the city where the miles of excellent pavement, the beauty of Wright Park and the enormity of the Stadium project—a stop of five minutes was made at the Stadium—were viewed. In the car service the only defect of the day's program was found. A fifth car seemed necessary, but none could be secured and several of the guests were forced to stand during the excursion about the city. They laughed at the inconvenience, however, being too greatly interested in the sights along the way to think much of personal com-

fort. At the end of the ride one carload of guests was sent directly to Point Defiance Park, while the remaining three went to the Flyer dock, where the passengers again boarded the steamer Kitsap.

WATER TRIP TO THE PARK.

The trip up Sound to Point Defiance Park was one of the most pleasurable events of the day. From the docks the guests obtained an excellent view of Commencement Bay, of the long lines of mills on shore and of the big Tacoma smelter. The location of the many beautiful homes along the bluffs overlooking the harbor caused many a comment of admiration.

Louis W. Pratt and John H. Williams, assisted by Park Commissioners Nelson Bennett and Marshall K. Snell, with Mayor John W. Linck and several other prominent citizens, were guides of the excursion parties and gave information concerning the beautiful homes, the parks and the various other points of interest seen from the street cars and during the trip up Sound on the Kitsap.

EXPRESSES IT IN THREE WORDS.

Joe Mitchell Chappell, publisher of the *National Magazine*, Boston, and a man who has visited Tacoma on several occasions, seemed most impressed with Tacoma's beautiful homes, during the car ride about the city.

"Every builder's fashion plate ever shown finds its replica in the architecture of Tacoma's residences. They are as beautiful as they are varied in styles and show the initiative of the city's people. I can sum up my feelings in about three words—'I Like Tacoma.'"

Mr. Chappel was a warm friend of the late Congressman Francis W. Cushman and paid his last visit to this city two years ago. At that time he assisted in the selection of the site for the Alaska-Yukon-Pacific Exposition and it was largely due to his urging that the natural amphitheater at the Fair was made use of. He declares the amphitheater one of the most wonderful phenomenas of nature he has ever seen.

DELIGHTED WITH POINT DEFIANCE.

Upon reaching Point Defiance Park the guests assembled but for a moment upon invitation and decided to spend an hour longer than they had intended as guests of the city. Then they separated into little groups and wandered over the park under the guidance of the Metropolitan Park Commissioners and the other members of the entertainment committee. The natural beauty of the park again brought forth the comments of pleasure that were heard on all sides throughout the day. The rose gardens were visited and, although the season is a little late for the best of the flowers, they were very beautiful. The "Zoo" also attracted interest and here the antics of the monkeys and the baby lions kept up the fun. The Alaska and American bears, the buffalo, the peacocks, and the guinea pigs—all these and many other animals were to be seen and all proved very interesting.

The great trees, the gulches and the beautiful shaded pathway were awe-inspiring to many of the delegates from the far East and they took advantages of the opportunity and wandered through the shady lanes or found comfortable seats upon the bluffs and looked out across the wonderous blue of Puget Sound to the distant mountains.

"Isn't this park delightful with its great trees and its wondrous vistas?" exclaimed Mrs. W. L. Black of Elgin, Ill., one of the women of the visiting party. "I believe nothing can equal it for natural grandeur. And our entertainers are also delightful. I believe Tacoma is the only city we have visited where every plan of the hosts has been carried out without a flaw of any kind. We have been dined and after seeing this pretty park we are now to be supped. Surely, there is nothing more that we could wish for."

After an hour's pleasure trip through the woods the party again assembled for the closing luncheon of the day at the park pavilion. Long tables had been arranged on the verandas overlooking the Sound and the floral beauty of Point Defiance was used in decorating each of them. There were seats for all and a delicious menu of clam chowder, fish salads, ice cream and cakes and many other good things were served. For an hour the guests were allowed to forget the beauties of scenic Tacoma and were regaled with the tasty dishes of the Sound country.

Before leaving the tables the women of the party were presented with souvenir spoons of Tacoma, bearing the picture of the Perkins building, by S. A. Perkins. A feature of the earlier afternoon was the giving of souvenir postcards by the *Ledger* and the *Daily News* and the presentation of a copy of the invitation number of the *News* and a copy of the special edition published in honor of the National Editorial Association's visit.

PRATT WELCOMES VISITORS.

At the close of the meal, President Pratt of the Boosters' Club called for attention and delivered a brief address of welcome. "We greeted you at early dawn with the glad hand of friendship and as the sun sets on the great Pacific we must soon bid you farewell. We are glad to welcome you and do so from our hearts. Our one hope is that you will come back again and that you will retain pleasant memories of the modest city which says, 'We Hope You Like Tacoma.'" Mr. Pratt then introduced Joe Mitchell Chappel.

"Amid these beautiful surroundings, dumb indeed must be the tongue that cannot express appreciation," said Mr. Chappel. "Opportunity has been ringing the refrain all day. We appreciate the great opportunities offered by this beautiful city. Yes, we Like Tacoma, and not only like, but love Tacoma. Now, the only bitterness in our cup of joy is that we meet but to part so soon."

TOKEN FOR RETIRING PRESIDENT.

The well-known Eastern magazine publisher paid a glowing tribute to the city and the entertainers. He then addressed his remarks particularly to members of the association and said: "I appreciate the honor of being called upon to say a few words to our departing president of the past year—W. H. Mayes of Texas. We have loved him always for his kindness and consideration in so ably managing the affairs of this association. And now his administration passes out in a blaze of glory for this day and its pleasures have surely been wonderful.

Mr. Mayes, I have the great pleasure to present as a token of the love and affection of every member of this association the silver table service you see before you."

As the speaker reached this point a small table was brought before the former president, who stood near him, and upon it was laid the silver set of four dozen table pieces that had been purchased by the members.

"They are of the same sterling stuff of which you are made and while carrying them home and after presenting them to your wife in Texas, think of the golden hours you have passed with N. E. A."

The recipient of the gift was very much affected by the words of the speaker and while he was struggling to control his emotion some one in the throng started that old song, "For He's a Jolly Good Fellow," and all joined heartily in the chorus. In an eloquent little talk Mr. Mayes then spoke of the association's past, of his affiliation with it and expressed his thanks for the beautiful gift.

A distinguished American poet, Miss Edna Dean Proctor of Boston, was introduced to the assemblage by Chairman Pratt. This elderly woman, for she is now in her 71st year, recited the following from her poem entitled:

COLUMBIA'S EMBLEM.

The rose may bloom for England,
The lily for France unfold;
Ireland may honor the shamrock,
Scotland her thistle bold;
But the shield of the great Republic,
The glory of the West,
Shall bear a stalk of the tasseled Corn—
The sun's supreme bequest!
The arbutus and the goldenrod
The heart of the North may cheer,
And the mountain laurel for Maryland
Its royal clusters rear;
And jasmine and magnolia
The crest of the South adorn;
But the wide Republic's emblem
Is the bounteous, golden Corn!

MT. TACOMA THE PROPER NAME.

Miss Proctor has been a student and writer of Indian lore for years and is greatly interested in Mt. Tacoma. "Tacoma," she said, "it is such a beautiful name. The other name is not right and should not be used. I don't like the idea of calling it Mt. Rainier. Strangers, you know, may always say what they please, and I shall say Mt. Tacoma.

"The old Indian name that antedates all others should be used. We owe it as a monument to the Indians, and I believe public opinion will some day change the new name back to the old and make that wondrous peak known universally as Mt. Tacoma."

"FATHER HERBERT" IS HEARD.

B. B. Herbert of Chicago, publisher of the NATIONAL PRINTER-JOURNALIST, the official organ of the society, who is known as the "Father of the National Editorial Association," was called upon for an address.

"It is twenty-four years since we organized this Association in New Orleans, and now I am sixty-six years young, for on such inspiring occasions I feel I am the youngest man in the Association," laughed the first charter member. Mr. Herbert gave a brief sketch of the life of the Association and complimented Tacoma upon her beautiful city and the warmth of the reception given by her people.

Carrie Shaw Rice of Tacoma recited a beautiful poem of welcome which she had written especially for the occasion.

W. F. Parrott, Waterloo, Iowa, corresponding secretary, after saying that he was long on announcements and short on speeches, outlined the trip of the Association from Chicago to this city, the success attending the national convention in Seattle and the future plans.

One of the most interesting and delightful speeches of the afternoon was made by a Southern woman, the owner of three newspapers—Mrs. M. L. Turnage of Belzoni, Miss. In her droll Dixie accent she said:

"I am dead in love with Tacoma, for here your hearts are as big as barn doors. I wish I could stay here forever, and my dearest wish is to return. We do like Tacoma. We like it so much that we will give its story the top of the column and the best space in our papers. I am as talkative as every woman, but am at a loss for words to express my appreciation of the courtesies you all have extended today."

Mayor John W. Linck and Frank B. Cole of Tacoma were among the other speakers of the afternoon.

In the closing address of the day Manager John H. Williams of the local A.-Y.-P. Committee told the editorial folk of the campaign planned by Tacoma for the establishment of the old Indian name as the only one for the great mountain peak nearby. He gave the history of the mountain's peak and urged the editors to use the original one and not that adopted upon the coming of the white man. In the campaign planned the local committee will send out literature on this subject to many Eastern publications, and the representatives of those present yesterady assured the Tacoma hosts that they would comply gladly with the request.

PRESIDENT POMEROY GIVES THANKS.

President Pomeroy, of the Editorial Association, editor of the Repository of Chambersubrg, Pa., voiced the appreciation of the visitors in an enthusiastic opinion of Tacoma and her hospitality.

representatives of those present yesterday assured the Tacoma's reception is simply fine," said Mr. Pomeroy. "I was in Tacoma ten years ago when the Editorial Association met in Portland. This city's growth since then is certainly remarkable. But what impresses me most is your magnificent harbor. It is far ahead of the harbor at Seattle or anywhere else I have visited."

At 8:30 o'clock the visitors again boarded the steamer Kitsap in company with many members of the entertainment committee and left Point Defiance for Seattle. Today 130 of their number will leave on a special steamer for a twenty days' excursion to Juneau and other Alaska points. The remainder will spend a few days in Seattle and then return to their Eastern homes.

With them on their homeward journey all are taking literature concerning Tacoma, newspapers of this city and other souvenirs of the most pleasurable day they say they spent in the Northwest. Other literature will soon be addressed to them from this city and Tacoma will doubtless receive such an amount of advertising as cannot be estimated as a result of her successful efforts in making the day the most joyous one that any party of visitors has known here this summer.

ONE GLANCE ENOUGH.

OFFICE LA GRANDE MORNING STAR.
LA GRANDE, OREGON, August 11, 1909.

Editor Printer-Journalist, Chicago, Ill.

DEAR SIR:—One glance at the sample copy of your journal convinced me it was just what I have been looking for. I am trying to run a newspaper worthy of the live western town in which I am located. I did not have special training in college but a liberal arts course and, consequently, hungry for something that will keep me up with the times on best newspaper methods. Hoping the enclosed subscription will start me as a permanent member of your circle, I am,

Yours truly, CALVIN THOMSON.

A Successful Newspaper Picnic

Arthur Capper, publisher of the Topeka *Capital*, gave a picnic for the children of Topeka Tuesday, August 17th, which was the biggest thing in Kansas this year. The picnic was held at Vinewood, the largest park in the city and over 12,000 boys and girls were the guests of the Daily *Capital*. All the concessions of the park were free to the children, and besides, there was an interesting special program of games and athletic contests with many prizes for the boys and girls. They were also invited to write letters to the *Capital* about the picnic and prizes were given for the best letters. The next day a large delegation of boys and girls called at the Daily *Capital* office to thank Mr. Capper for the fine entertainment he had given them. They were loud in their praises of the Daily *Capital* and the chief spokesman of the party declared that they were for Mr. Capper for President of the United States.

Prize Winners Gratified

ASHVILLE, N. C., July 12, 1909.

B. B. Herbert, Editor National Printer-Journalist, Chicago, Ill.

MY DEAR SIR:—Just received your letter of congratulations containing check for Five Dollars ($5.00) as first prize in letter head contest for the *Cement Era*.

It certainly was a pleasure as well as an inspiration to have received this reward, and while I "need the money" I expect to have your letter and prize framed and preserve same as an "heir-loom."

Thanks for your trouble in handing bill and statement to The *Cement Era*.

With kindest regards for you personally and best wishes for the NATIONAL PRINTER-JOURNALIST, I am,

Very truly yours, HOWARD C. HULL.

WORCESTER, MASS., July 14, 1909.

Mr. B. B. Herbert.

MY DEAR SIR:—Yours of the 8th at hand. I thank you for award made me in recent contest. Wishing the N. P.-J. a continuation of the success it has enjoyed in the past, I remain, Sincerely yours, WINFRED ARTHUR WOODIS.

LIMA, N. Y., July 20, 1909.

Mr. B. B. Herbert,

DEAR SIR:—I am in receipt of the prize money and book won in the letter head contest for which you have my sincere thanks. I have been a close student of the Job Department of the N. P.-J. for sometime and it has been a great help to me. Such a department not only helps a printer to strengthen his weak points but rather encourages one to strive for better work.

Wishing you the success which you richly deserve for publishing such an excellent Journal, I remain,

Yours for better printing, F. A. VAN GELDER.

CAMDEN, N. J., July 10, 1909.

National Printer-Journalist, Chicago, Ill.,

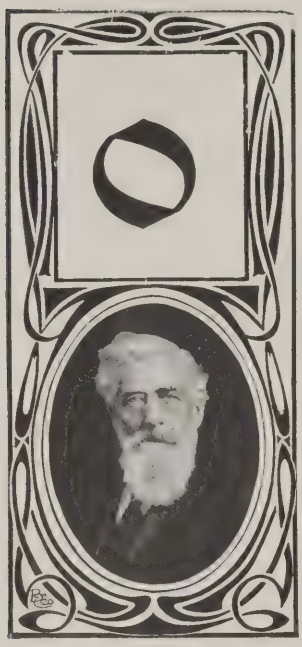
MR. EDITOR:—Well, I have never been more surprised and elated than when I received your letter today announcing I was one of the letter head prize winners. I certainly did not expect to bag one of the prizes. Its both interesting and educating to any compositor to enter these contests and its to be regretted that there are not more contests conducted on all kinds of job work.

Thanking you very much and wishing the N. P.-J. a prosperous future, I remain, Yours very truly,

WARREN S. DRESSLER.

EDITORIAL NOTES AND POINTS

BY BENJAMIN B. HERBERT, CHICAGO, ILL.



ON August 19th, the excellent paper of our friend, Wm. J. Kline, of the *Evening Recorder,* completed its third decade of service and usefulness to that old city of the Knickerbocker State, the name of which used to furnish the word and syllables for lively and puzzling charades away up in Minnesota, in our boyhood days, Amster-dam, which we used to portray in scenes made lively by words and action, with utter disregard to the orthography. The *Recorder* "Am" a "stir" ing paper and never "dams" the stream of progress, though as the editor states, in entering the thirty-first year:

"It never aimed to do what it could not do. It has steadily increased in dimensions, circulation and influence, with the growth of Amsterdam. It has not been lacking in any enterprise for the advancement of its own and the city's interests. Nearly all the improvements that have pushed Amsterdam toward the front have been attained during the thirty years of the *Evening Recorder's* activities, and their attainment always has had its hearty support, as other efforts for the betterment of life, morals and business in this city will have in time to come."

The record is one of which to boast and the principles and good resolutions, for active usefulness, such as should be exemplified by every home paper worthy the name of a newspaper. We notice that the Amsterdam *Morning Sentinel,* the competitor of the *Recorder* and of opposing politics, mentions, in a most commendatory manner, the fact that Mr. Gardiner Kline, who has been for many years associated with his father, W. J. Kline in the conduct of the *Recorder* as a junior member of the firm of William J. Kline & Son Co., is being urged for nomination on the Republican ticket as a member of the New York Assembly.

All of which shows that Mr. W. J. Kline has known how and has been able to raise a noble, worthy son, as well as to conduct a good newspaper—two more difficult accomplishments or two of more value to the State or more deserving of honor and praise are not known among men in this fast age in this free America.

Here is the Milwaukee *Sentinel* of August 24th, with a great Industrial Section of thirty-five pages, so that Brother Pierce of Massachusetts is not the only newspaper publisher who deems August a good month for extra effort. The *Sentinel* issued its Industrial Section in magazine form with pages 12 x17 inches in size and calls the same "Milwaukee in Tabloid," "Dedicated to the constructive new-time in the affairs of a great commercial and industrial city and an assemblage of notable concerns." The "Tabloid" is reinforced by a reproduction of the latest photograph, showing the skyline of Milwaukee's business on the first page of the regular issue. The magazine section has a tastefully designed first page, illustrating knowledge and progress, industry and commerce with glimpses of factories and ships in the background. On the opening page is a comprehensive article under the caption of "Greater Milwaukee," by William George Bruce, the comprehensiveness of which will be understood from the following sub-heads: "The Second Industrial City," "Our Principal Manufacturing Interests, (in which iron, steel and heavy machinery ranks first, leather second, packed meats third, and beer and malt comes fourth); "Trade and Transportation," "Manufacturing and Industrial Development; "Milwaukee's Commercial Sustenance;" "The Basis of Stability;" "Organized Effort for Trade Promotion;" "Has Competitive Qualities;" "Rounding Out Possibilities." This matter is all of high interest and value. In organized effort for trade Milwaukee has been persistent and successful. Annually, for ten years past, a large number of wholesale merchants and jobbers have visited, in a body, cities and towns in a chosen territory to advance Milwaukee's commercial interests. Hundreds of cities have been visited. Spring and fall buyers' excursions are promoted, two hundred thousand invitations being sent out by the Jobbers and Manufacturers' Association for each excursion.

From ten to fifteen inches of inside pages are given up to articles with about an inch of reading at the top of the first and second columns, and running from five to eight inches on each of the two right-hand columns, and the remainder is devoted to advertisements. This make-up is rather a reversal of the rule laid down in these pages, and we do not readily see why the advertising would not have been equally conspicuous and the pages have looked much more attractive and artistic had the length of the reading matter been the greater in the two first columns, closing, instead of beginning, with the inch spaces. There are from

thirty-four to forty inches of displayed local ads on thirty-three of the inside pages, the second and last containing full-page ads. It is to be presumed that this advertising was all specially secured for this "Tabloid Section," and certainly it is a wonderful showing for an August issue.

Hon. Ernest H. Pierce of Revere, Mass., was missed this year from the sessions of the National Editorial Association but he was remembered, and a copy, the "Prosperity Number," of the Revere *Journal*, bearing date of August 14, 1909, furnishes indisputable evidence that he was usefully and profitably employed and very busy. It was his busy time. It seems a little singular to choose August, the vacation month, for the issuing of a special number, but why not? The special features are liable to be given greater attention and the descriptive, historical, biographical and other special matter to receive more thorough reading than during the rush of the holidays and the opening of the new year. What could be pleasanter than when off in the mountains, or at the seashore, off in nature's loneliness and wildness or at some favorite resort, to get or receive a great, handsome, illustrated issue of the home paper and read, while resting or recreating, of all the accomplishments of the busy year, of the doings of the home people, with portraits of their well-known, kindly faces and to view the reproduced beauties of the home residences and grounds, historic buildings and beauty nooks. Then, if new friends of the vacation time are around, how pleasing to show such a paper and to discourse in a friendly, confidential and modest way, on all the attractiveness of your home-town. We are not so sure but that advertising in a paper at such a time is more effective than when the rush is on. There is a philosophy in advertising when people are at leisure and can read, consider, digest and remember, and when they are feeling needs in business, manufacturing, or printing.

This "Prosperity Number" of the Revere *Journal* is handsomely printed on excellent book paper and well illustrated with portraits and views in halftones. Revere, while really a part of Boston and, in Chicago, would be prized for its comparatively central location, keeps up its separate identity and township and village organization which makes it a better place than it would be otherwise for the conducting of a home paper. It is a pretty residence section or ideal home town with an estimated property valuation for 1909 of $15,550,000, an increase in wealth from $855,950, or eighteen-fold, which would be a pretty good showing for any town in the West, where we boast great growth and enterprise. Massachusetts is not a back number or moss grown. This Prosperity Number urges the fact that "Revere Offers Good Locations," and is "Well Situated for Large Manufacturing Plants and Industrial Establishments." Another heading of a well-written and convincing article is, "Prosperous Revere — This Town Entering Upon an Era of Business Success and Advancement." Then the subjects, "Revere Real Estate" and "Ideal Home-Town—Revere's Many Great Advantages and Its Desirability as a Place of Residence," are ably handled and show that town — named after the famous midnight rider, Paul Revere, to give the alarm to the Lexington patriots—is still in the full vigor of growth. A "Story of Thirty Years as a Moderator," by Albert S. Burnham, who has served his town in that capacity for three decades, is full of interest and instruction and reminds one of De Tocqueville's wise words on these "Miniature Republics." Mr. Burnham says:

"It is hardly to be doubted but that the doing away with the town meeting plan has been a retrograde fall from the highest and best ideals of a government by the people." In our large cities, even, it would be better for the people to meet by precincts, containing from two hundred to three hundred voters and freely discuss and pass upon measures and candidates than to proceed by the present cut-and-dried methods by which a single political boss or at most a few bosses, in the back-room of some law office or saloon, determine on political candidates or policies and ask the people to vote for them at a preliminary election or caucus.

This Prosperity Number makes a splendid showing of schools and churches and of the Revere Town Hall, described several years since in these pages, and of the world-known Revere Beach Reserve and Bath House under the control of the State of Massachusetts. The portraits prove that Revere possesses men of ability and enterprise and a view of a group enjoying an outing at Point Pines, Bethel, is especially interesting, showing as it does many of the prominent men of the State, among whom are Governor Draper and members of his staff, ex-Governor John L. Bates and his father, Dr. L. B. Bates of the Baptist Bethel, State Treasurer Elmer L. Stevens, State Auditor Henry E. Turner, Councillor Walter S. Glidden, Senator Lewis Burnham, Mayor Walker of Waltham, Mayor Wardwell of Cambridge, ex-Mayor Carter of Chelsea, Editor E. H. Pierce, and other prominent men of Revere. What we noticed was that the keeping of communities separate instead of merging all into one great city, gives rise to many mayors with individual responsibility for their respective municipalities.

This is a model special issue in every way and is characterized by liberal advertising patronage. Why not adopt Mr. Pierce's wise and successful plan and get out a special issue in the dull season when there is abundance of time for the preparation of matter and illustrations and when more business is much needed? It may take a little more work, but there is an abundance of time then for more work and we believe that the results can be made more satisfactory and more lasting than in the rush of busy times.

The Medics and Advertising

AY, George," said a country editor to a life-long friend who had just graduated from a medical school, "don't you want a card in the Journal?" "No, I don't believe in advertising," was the prompt and emphatic reply. The training of medical and dental students includes an alleged anti-publicity campaign. While it is granted that men have a right to disbelieve in advertising and that schools have a right to teach such disbelief, the fact is potent that these men and schools are persistently and intentionally untrue to their professions.

"Well, you must have it in for Jones. You never mention him as the attending physician. In your account of that accident last week you failed to state that he rendered medical aid." The questioner and Jones were both friends of the editor but both have been sore for years because the Journal has acted in accord with their alleged creed of no-publicity.

It might be argued that the policy of this newspaper indicates an attempt to force Doctors to advertise. Yet, if a doctor is consistent, he he will welcome such policy. But whatever the claim of the doctor or teaching of school, their whole system gives the lie direct to a non-publicity belief. For a year before graduation, each student is called Doctor by faculty and students. And by precept and example throughout life, all doctors and dentists teach the public to advertise their business every time their names are mentioned. A man may study law, engineering, bookkeeping, journalism or other professions and neither his alma mater nor his friends are instrumental in promoting for him a free advertising scheme every time they mention his name.

Yet that is what doctors and their schools do—and the dear public (including newspapers) are easy marks. They go on forever furnishing free advertising to men who claim they do not believe in publicity.

O, consistency, thou art a jewel with whom many doctors are not acquainted.

For newspapers to adopt a policy in harmony with the alleged belief of these medical men would, in some cases, make friction between friends; but until publishers unite and persistently accept in good faith these statements of doctors, newspapers are mere tools of medical men. The matter is made more difficult since some of these professional men believe in and purchase newspaper space—and these are not all quacks. One of the best doctors I know has a card in several papers.

The revenue lost by publishers is of small moment. The principle involved is the major consideration. The National Printer-Journalist will be glad to receive ideas from others of the fraternity along these lines.

Items of interest With the Trade

A. F. Leopold of Chicago,, will be identified with W. L. Odett of Elgin, in the new Kenosha, Wis., *Journal.*

The *Record,* Lewistown, Ill., is to have a new two-story building for which a Bloomington architect drew plans.

Frank A. Zenders, managing editor of the Lansing, Mich., Daily *Tribune*, since the death of O. T. Allen, has resigned. He is succeeded by Weld T. Burdick, well known member of the staff.

The Merrill, Wis., *Advocate,* edited by K. C. Thompson, the oldest paper in Lincoln county, was sold at sheriff's sale. It is reported that W. M. Allen, editor of the Merrill *Star*, has purchased the *Advocate* from John Van Hecke, who bid it in, and will consolidate the two papers under the name of *Star-Advocate.*

The Winnebago *Anzeiger,* a German weekly that has been published at Neenah, Wis., for years by John Klinker, has been sold to H. M. Meyer of Appleton, Wis., who will continue the publication.

The Chicago Press Club has arranged with the Central Trust Company for a loan of $30,000 for five years. The money is to be used in remodeling and beautifying the club quarters in the building at 116-118 Dearborn St.

M. J. Furry, editor of the Times, lawyer, ex-legislator and widely known state politician, died at his home in Alden, Iowa, Aug. 8. Death was due to paralysis, caused by anaemia, from which he had been suffering for the past two years.

The Rock County *Advance,* published in Beloit, Wis., under the editorship of W. C. Dean, has taken over the subscription list and good will of the *Good Citizen*, a weekly published by L. B. King at Neilsville, Clark county.

Franklin W. Heath,

The Newly Elected Secretary United Typothetæ of America, The Bourse, Philadelphia, Pa.

F. Grow and his son, Harold of Neilsville, Wis., have purchased a half interest in the Neilsville Times. The new firm name is Grow, Williamson & Grow. C. F. Grow is a leading attorney, president of the Neillsville bank and a member of the abstract, real estate and insurance firm of Grow, Schuster & Co. Harold has been in the *Times* office for some years learning the business.

Mrs. Mary E. Reese-Wheelock, wife of L. E. Wheelock, the young editor of the Hudson, Iowa, *Record,* who died recently after a short illness of Bright's disease, is displaying the true Spartan spirit in announcing that she will take up the duties laid down by her husband when death claimed him. Besides the wife, a two-year-old son survives Mr. Wheelock who was 31 years old and bought the *Record* from M. L. Boyd in 1907.

Manual Training and the Olympia, Washington, Exhibit at the Alaska-Yukon-Pacific Exposition

N the heart to heart talks of the editors and publishers on the S. S. Northwestern, during the trip to and from Alaska, one thing was made prominent and established by the relations of experiences of signal and permanent success. This was, that, aside from the giving of all the home and neighborhood news, newspapers should be made useful, in every possible way, to the communities and cities served thereby. To this end, there should be live editorials, founded on thorough information, earnest, pointed and enlightening.

In this day and country, when and where the conservation of resources is placed to the front as being of highest importance, the highest conservation of the youth and the development of their powers should not be overlooked. While the conservation of natural resources and keeping them within the control of the people, can not be too much prized, considered and enforced, the industrial, all-around development and training of the youth, who are to use and control and enjoy these, as responsible citizens, must not be neglected or given any secondary or subordinate place. Besides this, poor roads in this country cause in the aggregate, a greater loss to the Nation each year than does the destruction of our forests. We are glad to present elsewhere this month, in extracts from an able address by Past-President H. B. Varner, something as to the value of good roads and the ways of se-

curing them and the duties of the press with regard thereto, and are much pleased to give something of the successful methods of manual training as shown in the model exhibit of the Olympia, Washington, High School, at the Alaska-Yukon Pacific Exposition, as a means of opening the way for greater usefulness by the newspapers in that regard—affording the means of teaching and inspiring by example. As to the installing of this exhibit, the Olympia *Daily Recorder* gave the following interesting account, rich in suggestions as to how to accomplish a good work:

"The fame of the Olympia departments, seconded by an invitation to the exposition managers from Superintendent F. O. Kreager, brought every member of the state board of fair commissioners on a visit to the Olympia High School, where they were shown the unique and practical methods and work of the departments, and were served with a sumptuous luncheon cooked and served by the girls of the domestic science class themselves.

GIRLS COOKING WINS FAIR BOARD.

"So delighted were the fair directors that they at once fell heartily in with the plan of the superintendent for having Olympia install a separate model exhibit of the departments in actual working order, with the students in attendance. For this purpose the directors appropriated $3,000 for the construction of a separate building as a wing to the educational building, the High School by repeating the performance of the senior class play, "The Stubbornness of Geraldine," at the theater, raised about $250 and the county commissioners appropriated the further sum of $1,000, giving the necessary funds for installing and operating the departments.

BOYS EQUIP BUILDING.

The manual training department was first installed, following the methods in vogue at the school of the students building everything required as a part of the work. The boys worked like Trojans building their work benches, tool cabinets, etc., and other shop equipment, and then turning in and constructing the tables, chairs, shelves and other equipment for the domestic science department.

The latter consists of two rooms, the kitchen and dining room, where, all in full view of the fair visitors, the meals are cooked, and model luncheons served to exposition guest parties, with attention paid to decorations, etc., with the table service perfect in all its appointments. A regularly prepared menu, consistent in its courses, is prepared and served, and the host who is entertaining is presented with the menu, the cost of each dish, and he merely pays the actual cost of the meal. The boys, meanwhile, are busy building chairs, tables, picture frames, cabinets and various other articles.

Wide attention was attracted at the inception of this exposition educative scheme, and assistance offered on all sides. L. H. Burnett, jeweler of Aberdeen and member of the fair board, contributed all the silver required, which is to go to the domestic science department of the Aberdeen schools after

THE LADY HOSTS OF THE A.-Y.-P. EXPOSITION.

Left to Right around table:—MRS. J. A. FILCHER, Sacramento, Calif.; MRS. FLORA FONDA NADEAN (Wife of Director General Nadean) Seattle, Wash.; MRS. M. A. THOMPSON (Womans Building) Seattle, Wash.; MRS. C. B. CORBUSIER, Tanona, Alaska; MRS. H. W. ALLEN, Director Womans Dept. A.-Y.-P. E. Spokane, Wash.; MRS. ANNA M. CHILBERG Seattle, Wash.; MRS. MARY E. HART, Alaska Bldg.; MRS. J. C. McBRIDE, Juneau, Alaska; MRS. FRANK WIGGINS, Los Angeles, Calif.

the fair is over. The Diston Tool Company contributed all the Diston saws required. A turning lathe, band saw and other machines were contributed, and the model shop is running full blast.

OLYMPIA STUDENTS AT FAIR.

The boys and girls of the departments go from Olympia in regular contingents and remain for one month each. The girls are under supervision of a chaperon besides the instructor in domestic science in the schools, and the boys are also under careful supervision. Each member has several hours off a day and the evenings in which to take in the sights of the fair, and make a study of the lines in which they are especially interested. The exhibit is, therefore, of great educational value to the students, as well as demonstrating to the public the practical and valuable nature of the work and the instruction therein."

In company with the gentlemen whose signatures and portraits appear in the illustration, from photograph secured and furnished by Professor Frank O. Kreager, for three years in charge of the Olympia schools but soon to join the faculty

Editors at Dinner Given by the Girls' Cooking School Class of the Olympia, Washington, High School.

of the State School at Pullman, Washington, we were permitted to examine this interesting exhibit, under his charge, in the Domestic Science Building and to partake of the dinner prepared by the young ladies who are fitting themselves, nobly, to do their parts, as happy, thrifty home makers and keepers. From Prof. Kreager we secured the following informing facts, showing that this work can be successful in any neighborhood or city large enough to have a High School. Olympia has a population of 8,000 and a school population of 1,600 with a school enrollment of about 1,400:

In 1906 the District indebtedness was 110,000 dollars with no High School building, there were 3 ward schools, the High school was in the attic of one building, with High school enrollment 150. There was no instruction in drawing, music, manual training or domestic science.

In 1906-07, music was introduced and Miss Anna Reinhart (Stanford '06) put in charge for 3 months to give drawing lessons a trial at $30 a month; at the end of 3 months, a public exhibition of work was held and drawing was added permanently and Miss Reinhart placed on full salary and mechanical drawing added in high school. A new high school was built and the Women's Club interested in Manual training and Domestic Science, the Board was induced to add Manual training and Domestic Science courses for 1907-08, and Chas. Briffett was secured for Manual training teacher and Josephine McCaun (State College of Washington '07) for Domestic Science. The plan of the Supt. to start with lumber pile and tools and boys and build every thing was smiled at by the wise ones.

Olympia, Washington, High School Class, making a Study of the Western Woods.

In October 1907, $350 was appropriated for tools, $150 for kitchen equipment, $150 for lumber, and the boys, under Mr. Briffett started work. The shop and kitchen were equipped during the year and gasoline, gas and hot water plants were installed by the boys,—no plumber or steam fitter was employed or needed. The work proved an immense success.

In 1908-9, the second year course was added in both Manual training and Domestic Science. Through the serving of a model luncheon, Governor Hay, the Washington State Commissioner, became interested and decided to have the entire Olympia plan demonstrated at the A.-Y.-P. Exposition. Miss Boyles had taken Miss McCaun's place; Mr. W. F. Barnes succeeded Mr. Briffett in April 1909. Mr. Briffett is now in charge of the manual training at the State Training School, Chehalis, Washington, and is one of the very best teachers of Manual training.

Two years of the work in Olympia has convinced the most skeptical of the practical, educational, and moral value of both Manual training and Domestic Science.

The success, as indicated, by this brief resume, has worked not only to the great advantage of the city but to the teachers, whose success has brought them advanced positions. The way to introduce Manual training is to introduce it and then it will take care of itself, just as did the resumption of specie payments when the U. S. found "the way to resume was to resume." The following are the illustrations shown on another page with the lessons that they teach:

No. 1. O. H. S. Cooking Room. Near view of tables showing fineness of joinery work of manual training class. Individual cooking equipment displayed on table.

No. 2. O. H. S. First Class in domestic science 1907-08. Tables used built by the boys—are listed in cost at $150.00 to $250.00 each. Cost to build $37.50 each, 24 feet long, accomodate 12 girls each, gas piping done by the boys.

No. 3. O. H. S. Cooking. "The honeymoon ends where the soggy biscuit begins." First year class. Kitchen partially equipped. Domestic science has worked wonders for the girls of Olympia.

Olympia High School. Finishing corner of shop, showing a few of the many articles made by the boys. Value of furniture taken home by boys in 2 years, $1,500.00. Boys pay for material—the actual cost.

No. 5. O. H. S. Shop. Built by the boys. Work benches built, motor, shafting and turning both installed. Amount saved by school district in two years through work of the boys, $2,500.00.

No. 6. O. H. S. Shop. Working overtime, no thought of street gang, pool room, or saloon. Keep the boy in the right road by keeping his mind and body busy in the shop. A bad boy is nearly always made so by misdirected energy.

No. 7. O. H. S. Shop, Framing pictures for the schools. Through the Turner Art Co., $300.00 was raised and invested in unframed pictures. These pictures, after framing by the boys, are valued at $600.00 See blackboard, "Until further notice this shop will close at 6 P. M. C. H. B."

No. 8. O. H. S. Drawing Room. Free hand drawing constitutes 1/5 of the domestic science course. Mechanical drawing 2/5 of the manual training course.. Sketching from life. Stands made in shop.

No. 9. Sewing class. Girls learn to measure, draft patterns and make their own clothes, in the 2 year course of the O. H. S.

No.10. O. H. S. Botany class making a study of western woods.

President Pomeroy Appoints Postal and Legislative Committees

CHAMBERSBURG, PA., August 16th, 1909.

Mr. B. B. Herbert, Chicago, Ill.

DEAR MR. HERBERT:—I have appointed the following committees:

Postal Laws—B. B. Herbert, Illinois, Chairman; L. A, Sherman, Michigan; Wm. C. Hammer Esq., North Carolina; Henry B. Hale, Connecticut; Col. R. R. Perry, Kentucky.

Legislative—Hon. G. E. Hosmer, Colorado, Chairman; F. L. McKenzie, Alabama; W. L. Black, Illinois; John A. Metcalf, Montana; Hon. H. M. Wells, Nebraska.

As chairman of Postal Laws Committee, you will act as circumstances dictate and make your report at the next annual convention.

With kind regards, I am, Yours truly,

A. NEVIN POMEROY,
President N. E. A.

August 14, Colonel Joseph Eiboeck, editor of the *States Anzieger,* at Des Moines, Ia., celebrated his fiftieth anniversary as an Iowa editor. Friends of Colonel Eiboeck over the State joined in a reception in his honor on that day.

Views showing Exhibits of the Domestic Science and Manual Training Classes of the Olympia, Washington, High School at the Alaska-Yukon-Pacific Exposition, (See description in article)

THE PRINTING BUSINESS IS FLOURISHING

"WHAT is the state of business in the printing trade?" was asked of the American Type Founders Company. In substance the answer was: the printing business is flourishing. It is depressed in some limited localities, but nationally it is expanding wonderfully. We say this authoritatively, as our business comes from every section of the country. Our output is constantly and rapidly increasing. It is now mid-summer, and one of our difficulties is the inability to find sufficient trained type-casters. Last year we made an addition to our central type foundry which in itself exceeds the entire area utilized by what is in some quarters rated as a considerable type foundry. This year we have been compelled to make another addition of equal type-casting space. In no previous period have we cast so much type. Further, it is a fact that hand composition is increasing in the better class offices. As illustrating the magnitude of demand for a really popular type face, we are informed that the American Type Founders Company runs sixty automatic typecasting machines constantly on its Cheltenham types alone. Perhaps the depression complained of in some localities is due to a tendency to localize exertions to procure orders. The efficient printer, like any other manufacturer should know no geographical limits.

* * *

SCOTT PRESSES IN DEMAND

On account of the many orders received for latest improved Scott presses, the large plant of Walter Scott & Co., in Plainfield, N. J., is working day and night. This concern has been busily engaged in the making of newly designed printing presses that are marvels of perfection and efficiency. Their efforts have not been confined to one line, and nothing shows the capacity of this firm so well as the list of the new machines they have brought out recently.

In the flat-bed line they have placed on the market a new Drum Cylinder Press especially designed to fit the requirements of newspaper offices in smaller towns, and although the first machine of this kind was shipped only in January of this year, over twenty are now in operation and more than thirty are under construction on orders.

Their Rotary Offset Press met with instant success, not an inconsiderable achievement when the trials and tribulations which other makers first experienced are taken into consideration. Orders are on hand for quite a number of these machines, and they may well claim that the Scott Offset Presses are "Built by the people who know how."

In the Lithographic Line they have also put on the market their latest improved Standard Flat-Bed Press with Cylinder Ink Distribution, and orders for a number of these machines are being filled. The superiority of Scott Litho. Presses has been well established for many years, and this new press sets the mark still higher.

In Rotary Presses, of which they build a large number, they have made splendid progress. Their Sheet-Feed Rotary Two-Revolution Press has been in successful operation for over five years, and this experience has enabled them to further improve that machine so that a new style of this press is now on the market and will be sure to more than fulfill the purchasers' expectations.

Their famous All Size Rotary Presses are so well known that no extended description is required, but the new thing there is their patented All Size Rotary Folder which greatly adds to the range of this versatile press and increases its earning capacity still further. A valuable feature of this equipment is that it does not interfere with the usual flat delivery, so that anything may be done on the press.

Orders for a number of Rotary Magazine Presses are also being executed. The most interesting of these are mammoth machines which are capable of printing high-class magazines in any desired numbers of pages, in as many colors as wanted, and the still more marvelous part is that additional flat-printed cover and insert sheets are associated with the product of the rotary press and the entire magazine is delivered completely bound and wire-stitched, in book form, open on three sides. These machines are about forty feet long, twelve feet high, and twelve feet wide, yet the design is so perfect that every part of the machine is instantly accessible and no tapes touch the web-printed portion of the product.

There is also great activity in the newspaper press line which includes every size of rotary press from the smallest four and eight page press up to the largest used by the metropolitan dailies. Notable among these are some new style Quadruple and Sextuple Combination Color Presses that will operate faster than any other machines of that description due to their entirely rotary mechanisms, extreme simplicity, and excellent design. These machines will soon be in operation in some of the most prominent newspaper offices in the country.

Walter Scott & Co. also have orders for several of their "Speed-Kings" which is what they call their new "Double-Speed" Presses. These machines are the fastest newspaper presses in the world. They turn out twice the product of the usual machine, and one-third faster than the highest speed machines of any other make, but the greatest advantage is that the machine is simplified to the utmost, uses regular semi-circular plates and has the fewest possible parts. It is comparatively small, easy to work around and has all the exclusive Scott features.

From the above it will be seen that the Scott Company is very much alive. Eight new styles of presses out inside of eight months is a record to be proud of, and it certainly speaks well for the ability and capacity of the designers. To prospective purchasers it means that the Scott people are more than keeping abreast with the times and that Scott Presses are the latest and best machines, no matter what the requirements of the purchaser are.

THE UNITYPE

NEW YORK, August 12, 1909.

National Printer-Journalist, Ravenswood Park, Chicago, Ill.

GENTLEMEN:—We will be compelled to omit the Unitype advertisement this month. We have been so overwhelmed with inquiries that with five stenographers in our office and the assistance of three outside, we are not able to catch up with the work. We have had to have postal cards printed and mailed so as to explain the delay.

We hope you will find a place for this communication in your reading columns so it will reach the eye of those of your readers who have written us, and it will also serve to indicate the merits of good advertising to the users of your space. Please reserve a place in your next number.

Cordially yours,

WOOD & NATHAN COMPANY,

Paul Nathan, General Manager.

SO YOU APPRECIATE QUALITY—REALLY?

We all appreciate the man or firm who builds his or its business on quality lines. Such concerns alone advance the trades. We have noticed that the most successful business men are those who buy quality. Quality endureth long, is always on the job, is never tired, is really the cheapest, fooleth not its possessor and layeth up treasures for him. What foolishness it is to buy counterfeits of quality! Wesel, who has made "Wesel Quality" world famous, sends us these sentiments. Wesel's customers among printers are the most prosperous, for they are quality buyers and consequently quality sellers, profit gatherers and the real unfooled bargain-getters. Wesel is sending out to all applicants his catalogue of Printing Machinery and Materials—all "Wesel Quality," and we feel sure that those who have not studied this extraordinary catalogue will be well repaid by doing so. They will get new ideas, of the kind that has increased the profits of thousands of Wesel's customers. Printing Material is only one (although the original) branch of the Wesel business. He makes and supplies complete electrotyping, photo-engraving and stereotyping plants.

* * *

The needs of the smaller publisher, whose volume of business will not warrant the installation of a Standard Linotype are well supplied by the Two-Letter Junior, which occupies a field peculiarly its own. While the manufacturers make no extravagant claims as to its capabilities for doing job work, maintaining that it is primarily a newspaper machine, it is a fact that a majority of the users are performing some remarkable feats in the way of job work on the Junior. All of them set a large proportion of their ad work on the machine, while jobs that contain straight matter, such as fair premium lists, constitutions and by-laws, etc., in various measures are handled with the greatest ease.

With the exercise of a little ingenuity on the part of the operator many things can be accomplished on the Junior that are not always apparent to him at the outset. As he becomes accustomed to his machine, he finds it can be used for a greater variety of work than he at first supposed possible.

The Mergenthaler Linotype Company have recently issued a four-page newspaper called "The Junior Linotype Extra," which was set in its entirety on the Two-Letter Junior. It is a splendid exposition of what the machine is capable of, and interested publishers would do well to write for a copy.

* * *

One would hardly look for anything particularly characteristic or artistic in a gothic letter and yet in the Monotone Gothic and its companion face, the Monotone Title just brought out by the American Type Founders Company, the printer will find qualities which will commend these series to his favor. Beautifully cut, monotone in color and proportionately graded in sizes, both of these types will be found useful and attractive for stationery, business announcements, cards and a variety of every-day printing. Specimens of these faces are shown elsewhere in this issue.

* * *

During a recent visit to New York City, a representative of the National Printer-Journalist had the pleasure of an interview, at the famed Flatiron Building, with members of the Auto Paper Feeder Company, who sell the Monosheet Feed, and was especially gratified in meeting Mr. Carl S. Hanau, the President and General Manager. Information gained showed that the Auto-Feeder was gaining in popularity. The machine is characterized by simplicity and accuracy of construction. The salient points claimed for the machine are: speed equal to the capacity of press or folder, absolute separation of sheets, only one sheet and always one; feeds paper of different thicknesses without adjustment; easy to operate, reliable, convenient; no intricate parts, no blow-pipes, no suction, no sheet edges damaged, no smutting of sheets, and no expert operator required.

The Monosheet Feed works on an entirely new principle. It has not half as many parts as other machines of its kind.

The Monosheet Feed is simplicity itself. The top sheet is removed by two fingers gently pulling it away from the pile. These fingers never miss. The action of these fingers in sliding the sheet from the pile is important, as it overcomes electricity between the sheets. The position of the fingers and the gentleness of their movement do away with all risk of smearing the print when the paper goes through on the other side, or for another color, as the sheet is only gripped on the front margin.

The sheet is delivered to the press in perfect register. It is always kept in control and the patent side guide does not release the sheet until it is actually taken by the grippers of the press.

The Monosheet Feed adapts its speed to the machine to which it is attached. The machine need not be slowed down to suit the speed of the feeder. It takes any thickness and quality of paper without special adjustment, and changes for different sizes take so short a time that it pays to use the Monosheet on the shortest of runs. A simple throw-off device instantly stops both the press and the feeder when necessary.

A simple machine, is easy to manage and there is nothing to get out of order. A printer can easily master the Monosheet after running it for a few hours.

The mechanical device for separating the sheets is ingenious, consisting of a soft rubber roller and a hard rubber pad approaching to, if not excelling, the method of separating sheets by the trained, sensitive human hand and doing the work more speedily and accurately.

* * *

The Linley Box & Paper Company announce that their business has increased so much during the past few months that they have been compelled to enlarge their manufacturing department and have recently purchased another first-class plant at Gas City, Ind. The business of the firm will be conducted from the Gas City office. The Louisville, Ky., office will be maintained as a city office only and all inquiries, orders, etc., will be handled from the general office at Gas City.

* * *

One of the latest machines installed in the new U. S. Government Printing Office, Washington, D. C., is a large size Brown & Carver high-speed Automatic Cutting Machine, built by Oswego Machine Works, Oswego, N. Y.

* * *

A. T. H. Brower has favored this office with a most unique and satisfactory book of instructions for the erecting and adjusting the No. 7 Brower Drum Cylinder Printing Press. It is unique in its fullness and completeness, not only enabling any printer to understand each part, its use, position and adjustment but any one, with sufficient knowledge to operate a Washington handpress, to erect, and adjust the press and put on a job and run without mishap, turning out as fine, clean and sharp work as is possible to any expert pressman. In addition to the enumeration, description and illustration of the parts, their positions and uses, there is a "Conspectus" or general outline, giving all desired facts as to the floor space required, height, weight, size of parts, etc., and also a large outline illustration on a sheet, folded in the back of the booklet, showing nearly one hundred numbered parts of the press in proper position, and the names of each

part printed beneath with corresponding numbers. These names indicate the uses. This "map method" of showing each part of a machine is certainly most perfect and satisfactory and is believed to be entirely new. The result of such a complete showing is educative and notably convenient and must result in a clearer understanding than would otherwise be possible and is a great saving of time and the securing of greater efficiency by the thoroughly informed operator. It is the method of teaching by the strikingly clear object lesson, that is always clearer and more lasting in the impressions made and freer from the possibilities of misconceptions or misunderstanding than is any other method. There is no little wisdom in the traditional demand of the Missourian "to be shown." The booklet is issued by the American Type Founders Company, the exclusive selling agent of the Brower Press, and is worthy of note for its typographical excellence; one feature, that of forming every two opposing pages into one panel by means of brass borders shows a feat in registering, folding and binding that would be found difficult to equal in neatness and perfection.

* * *

In 1859 John and Henry Lindenmeyr formed the firm of Lindenmeyr & Brother, their first place of business being at No. 13 North William Street, a site now occupied by the Brooklyn Bridge. Owing to the rapid increase of their business, they soon moved to 18 Spruce Street, and again in 1869 changed their quarters to 15 Beekman Street, shortly after, adding 17 Beekman Street. By this time the firm of Lindenmeyr & Brother had become an important factor in the paper business.

John Lindenmeyr retiring in 1875, the firm became Henry Lindenmeyr. In 1892 Henry Lindenmeyr admitted his sons, Gustave and Henry, Jr., in partnership, changing the name of the firm to Henry Lindenmeyr & Sons, by which it is known to this day. Henry Lindenmeyr died September 11, 1895.

* * *

As evidence of the rising tide of prosperity in the printing trade, the Lanston Monotype Machine Company reports that its sales for August have broken all previous records.

The sales of its Type Caster (see insert elsewhere) were particularly gratifying and prove that this machine is filling a long-felt want in newspaper ad-rooms. Judging from the number of inquiries the Monotype Company has received, no machine placed on the market in the past decade has aroused so much interest in newspaper circles. This interest is no doubt due to the fact that it is the fastest machine ever invented for casting type—it is guaranteed to turn a pound of metal into type in less than three minutes.

The wonderful Monotype Mold is responsible for this great output. Seldom can it be said of any mechanical device that it has reached a point where no further improvement is possible, but that is what the Monotype Company is confident it has attained in its reciprocating water-cooled mold—that it is the most perfect device that can be made for transforming molten metal into type.

That this confidence is justified is shown by the fact that every newspaper publisher who has made a thorough investigation of the different type-casters on the market has unhesitatingly decided in favor of the Monotype.

In speaking of the economy of the Monotype as a type-caster, the Jersey City *Journal* says: "We are keeping the machine busy casting up sorts, which we are storing away for future use, as we believe that business activity will be very much in evidence this fall and we are, therefore, preparing for the rush between times.

By the end of the year it would not surprise us much to find that we had saved from one-quarter to one-third the original cost of the machine by making our own type."

When one considers that casting display type is a "by-product"—one of the lesser advantages,—of the standard Monotype in a newspaper ad-room, some realization will be had of the truth of the statement that the Monotype pays its own way wherever it is installed.

* * *

From Henry Lindenmeyr & Sons, N. Y., comes a sample sheet of what is believed to be the lightest halftone paper in the market, on which is printed a 150 screen half-tone in black and a heavy cover design in duotone green. The paper takes and shows the cuts and type and ink in a very satisfactory manner, proving that it possesses the necessary surface, and opaqueness for fine half-tone, and carries color in a way to illustrate its adaptability for color work. Its extreme lightness is of importance where saving of weight is an object.

* * *

The Challenge Machinery Company of Grand Haven, Michigan, have sent us a sample of their new Quoins named the "Humplox," which locks and unlocks automatically without the use of springs, catches or other objectionable devices. It is as easily used as the ordinary Hempel Quoin and can be operated with the same key, the difference consisting in the "humps" on the center rib and in the jaw of the Quoin. These secure firmnness and hold the Quoins in place. Forms locked with these Quoins stay locked. There is no danger of their slipping and permitting the pying of forms, or of the Quoins slipping into the working parts of the press and causing breakage.

George West, political writer on the Des Moines *Register* and *Leader* for the last six months, goes to Santa Barbara. Cal., to accept a position on an evening daily, the Santa Barbara *Independent.*

Editors of *Once a Year,* the annual publication of the Milwaukee Press club, have been appointed for 1909, the issue to appear in November. George F. Lounsbury is editor, Walter Haight associate editor. The Press club plans to issue an unusually elaborate edition.

THE BEST EVER.

ELKINS, W. VA., August 21, 1909.

Benjamin B. Herbert, Chicago, Ill.

DEAR BROTHER HERBERT:—I think the August number of the NATIONAL PRINTER-JOURNALIST was the fullest of good things of any number I have ever read—and I have read a good many of them.

With kindest regards, I am,

Yours very truly,

HERMAN G. JOHNSON, Manager,
The Inter-Mountain Printing Company.

AN APPRECIATORY LETTER FROM THE BOOSTER BRANCH OF THE N. P. J. FAMILY.

Mr. B. B. Herbert, Chicago.

MY DEAR SIR:—The subscription cards sent me some days ago have been mailed to prospective subscribers, and I sincerely hope you will receive some returns from them. I have just returned from a two weeks' trip in the mountains—my native heath of Western North Carolina. I met our friend Hull in Asheville, and gave him the hearty-shake on his success in contest. I desire right here to express my appreciation of the award made in my entry. If I had not been so busy I would have given it more thought. As I passed through Marion, N. C., I gave Mr. S. E. Whitten your address, and urged him to subscribe for the N. P.-J. He is editor of Marion *Democrat.* Anything at any time I can do for you, command me. Very sincerely,

S. H. WHITE.

Photo-Engravers Lunched at Elka Park, Home of Ferdinand Wesel

One of the most enjoyable incidents of the Photo-engravers Convention was the entertainment feature for Wednesday afternoon and evening. After a short session Wednesday the Association proceeded in carriages and automobiles to Elka Park, ten miles through the mountains, to accept the hospitality of Ferdinand Wesel, of the F. Wesel Manufacturing Company. Elka Park is a restricted area in the Catskills, owned by an association of New York people who all have summer residences within its limits. Mr. Wesel is the president. His summer residence is in the form of a spacious Chateau, high on the mountains and commanding an extensive view. On their arrival, Mr. Wesel served a bountiful luncheon in the German style on the veranda of the club house as shown in the picture. Afterwards the company was received by Mr. and Mrs. Wesel in their residence.

Photo-Engravers at Elka Park Club House, Catskill Mountains, July 7, 1909

Value of a Newspaper Home

The *Sun-Republic* of Dodgeville, Wis., has shown its enterprise in the erection of a thoroughly modern building, constructed of brick with a fronting of cement blocks, as a permanent home of its own. Scarcely any one thing adds more to the giving to a newspaper a reputation for permanency and success than the possession of a home of its own, built for and adapted to the proper carrying on its business. This is especially promotive of greater growth and more business, when as, in this case, a handier and much more desirable location is secured. The *Sun-Republican* rightly congratulates itself over the accomplishment.

"No Man in the Business Should Be Without It."

J. West Goodwin, Pres't

THE BAZOO.
For Those Now on Earth.
No. 119 and 121 Ohio Street
SEDALIA MO

Aug. 8, 1909.

My Dear Herbert:-

I beg to enclose exchange for four dollars in full for your bill. I must have the Journalist. I think I have every copy since the Journalist was started. No man in the business should be without it, and I tell every one of the craft I meet to take it.

With best wishes, and kind personal regards, I beg to remain,

Very sincerely,

J. West Goodwin

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order.

LEAGUE BALL RESULTS FOR MORNING PAPERS, $1.00 per week. General news for evening papers. Special correspondence. Yard's News Bureau, 166 Washington St., Chicago, Ill.

THE VAN BIBBER ROLLER CO., Sixth and Vine Sts., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

A COLD SIMPLEX STEREOTYPING OUTFIT, $17.00 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

FOR SALE—BEST PAYING ONE-MAN WEEKLY PAPER and job office in Texas. $750.00 buys plant. Address TEXON, Mobeetie, Texas.

EXCHANGE YOUR OLD TYPE FOR NEW DURING this dull period. Three lbs. of old for 1 lb. of new; 6 lbs. soft, stereos, electros, etc., for 1 lb. new. EMPIRE TYPE FOUNDRY, 868 Ellicott Square, Buffalo, N. Y.

NEURNBERGER-RETTIG FOR SALE—One Neurnberger-Rettig Type Caster. Only reason for selling, have installed a Monotype. Address Robert L. Stillson Co., 122 Centre St., New York City.

ONE LANSTON MONOTYPE CASTING MACHINE, WITH keyboard. New within five years and in first-class condition. Cottrell, new high speed, Series No. 5, style K, printing press complete. In first class condition. Bed 34x46, 4 form rollers, Front fly delivery. Latest style bed movement, geared table, vibrator rollers, direct drive, C. & C. electric motor. First-class condition, complete. 3½ h.p., 220 volts, direct current, 950-1250 revolutions, resistance and latest style Cutler-Hammer controller, wire and switch. For lowest cash price address Willis D. Porter, 33 Broadway, New York.

THE CORDAY & GROSS COMPANY WANT A BINDery Foreman at once—the best in the business—one with strong executive ability; thoroughly competent on all catalog, booklet and folder work. Strictly sober, clear-minded, loyal man, has here a fine chance with all modern plant. Write fully your experience, present location and salary you hold your service worth to THE CORDAY & GROSS CO., 113 St. Clair Ave., Cleveland, Ohio.

NEW TYPE FOR OLD, 1 lb. for 3 lbs., or 1 lb. new Empire for 6 lbs. stereos, electros, etc. Beautiful faces like the Caslons, Cheltenhams, Winchell, etc. EMPIRE TYPE FOUNDRY, Buffalo, N. Y.

Only Daily in Fast Growing City of 20,000.

Large outside field in rapidly developing section. Extreme competition resulted in a consolidation and present opportunity for a constructive manager to buy right, develop a very profitable business and greatly increase the value of the property. Price $20,000.00. A reasonable cash payment, balance deferred, will buy this property, which, in a disorganized state, has a gross income of $18,000.00 annually. Well equipped, including two linotypes. Proposition No. 504.

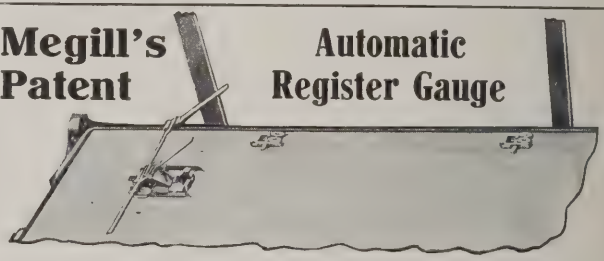
Megill's Patent **Automatic Register Gauge**



The sheet as shown, is fed short of the gauge and yet it will register. When the press closes, the "Automatic" extends forward and gently pushes the sheet to exact position. It does not bite the sheet and prevent it from registering. It never pushes it out. It registers cardboard or paper. The ordinary gripper operates it. No extra fixtures. The gauge simply forms a stop for the sheet nnd then registers it. Feed ordinarily, but as fast as you like.

The Automatic Register Gauge, including a pair of the Double-Grip Gauges for the bottom, to your door for $5.95. *Testimonials and booklet.*

IF the readers of the National Printer-Journalist are interested in buying electrotypes from halftone plates, which will print as the original cut, they can, by examining the recent back numbers of the National Printer-Journalist, look at an example of what Manz Lead Mold Electrotypes do while in actual service.

READ THIS CAREFULLY

The Manz Engraving Company made an advertising halftone plate showing views of their photographing, engraving, and electrotyping plant, which building they designed, occupy and own, and also a picture of the building in which their sales office is located, and sent the National Printer-Journalist one lead mold electrotype for use on full page advertisement to run in the April number. This same electrotype has been running in the four succeeding editions, and by looking through the files, you can see how this electrotype has retained the brilliancy of this rather difficult plate to print clean.

Lead Mould Electrotypes cost but 5 cents per square inch, 50 cents minimum, but as they are just as good as the original engraving, and print long runs perfectly, we recommend that you send us a trial order.

3d Announcement

The Unitype

To the Out-of-Town Publisher:—

If you are setting your paper by hand—no matter how low the wages you pay—a UNITYPE can set it for enough less to enable you to pay for the machine out of your savings, and have a handsome weekly profit left.

Tell us the average weekly amount of your straight matter, and its cost, and we shall submit to you so profitable a plan of purchase and operation that, however little able to buy a composing machine you may have believed yourself to be, you can no longer do otherwise than put in a UNITYPE.

It will pay for itself; and it will pay you a profit for letting it pay for itself. Its cost, and your profit, both will come out of what is now the dead expense of wages.

If we cannot show you that the machine, and its earnings, will be velvet from its first galley of type, we shall not ask you further to consider the UNITYPE.

If you are skeptical, investigate. To do so will cost you nothing but the trouble of changing your mind; and it may lead to your discovering new sources of profit.

To the printer who has much straight matter, upon a type-body of any standard size, we make the same suggestion. For him the UNITYPE will be a decidedly profitable revelation.

Wood & Nathan Company

Costly Make-Ready With Sort Caster Type

Printers before putting in casting machines should calculate the loss of time in make-ready by using inferior sort caster type.

The expense of operating a sort caster, the purchase of matrices, the purchase of parts and supplies, cost of metal, heat, etc., will make many a printer sick of the purchase, but in some cases pride may prevent an admission of the fact.

Half the cost of operating a sort caster plant, and half the cost of matrices and supplies, would buy all the type in Weight Fonts that any job printing office in the United States would require, outside of a few of the largest—besides saving in room, annoyance, trouble, tribulation, sorrow, regret and money.

AMERICAN
TYPE FOUNDERS COMPANY

SET IN CLEARFACE BOLD

Weight Fonts and Hell Box

A twenty pound Weight Font in the case is worth a hundred pounds in the hell box, and a hundred pounds in the hell box will buy a Weight Font for the case.

Saving Labor and Time

The enterprising printer realizes that the chief expense of his composing room is the labor employed and time wasted, and a far greater amount of work can be produced with an ample supply of type, spaces, quads, leads, slugs, brass rule, and other labor-saving devices, without increasing the labor cost.

The enormous increase in the sale of Job Type in Weight Fonts, and the enormous increase in the sale of spaces and quads and brass rule, show that low prices will induce increased purchases, and the careful printer well knows that the cost of an ample supply of such material can be more than saved each year by the saving in time of employees, and the surplus plant is, therefore, acquired for future use and profit by the saving in labor cost.

New type faces bring new business and repeat orders.

A SURE WINNER

MADE BY
The Pica-stick
H.B. ROUSE & CO. CHICAGO

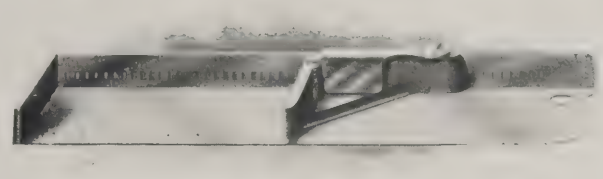
Sets to Picas Instantly and Accurately

Costs fifty cents less than any similar stick, and but a trifle more than the old style set-by-guess, never-twice-alike sticks.

Length	Width 2-in.	2¼-in.	2½-in.	Plating
6-inch	$1.25	$1.35	$1.45	25 cts.
8 "	1.50	1.60	1.70	30 "
10 "	1.75	1.85	1.95	35 "
12 "	2.00	2.10	2.20	40 "
15 "	2.50	2.60	Not made	50 "
20 "	3.25	3.35	Not made	50 "

Is the same as the well-known Rouse Job Stick, ***except that it sets to picas only.*** It can be used in setting at least 95% of the usual run of work.

You can't afford to be without these sticks. You're sure to get them some time; why not now —*today?*



Mailed to any address on receipt of price.

Sold by dealers everywhere.

MADE ONLY BY **H. B. ROUSE & CO.** The Composing Stick People

The Babcock Optimus
The Babcock Optimus

To get a square deal, give it.

We begin to give away back with the blue prints, which demand unusual weight and strength, and with the raw material. Whatever is used in the Optimus is the best. Some of the steel is of our own special analysis, and better than any other for the purpose.

All is worked and fashioned by skilled men long trained in their jobs. Some of the machines and tools of precision are not found in any other factory.

The utmost care is taken in assembling and fitting. All important bearings are scraped and hand finished to perfect contacts. There is no other way to excellence.

The finished machine is given thorough inspections and trials before it is shipped. Not one man does this, but a number, each an expert in his special feature of press construction. No shipment is possible without their united O. K.

Nothing is neglected. Every detail big or little gets exact attention. The ability to take pains is constantly invoked; for a perfect whole is only the sum of perfect parts.

As a result the Optimus goes out as good as human foresight and vigilant painstaking can accomplish. No machine can be better.

It moves off smoothly. It gives little or no bother all the years of its long life. It can be depended upon for the maximum always—in work, in endurance, in satisfaction.

From pattern to packing, from selling to settlement, the Optimus is a square deal.

This is returned to us by customers who order it again and again; by those who substitute Optimus quality for the less efficient, and in other ways that bring us a constantly increasing business.

No matter what your requirements are, you are doing yourself an injustice if you fail to get full information about

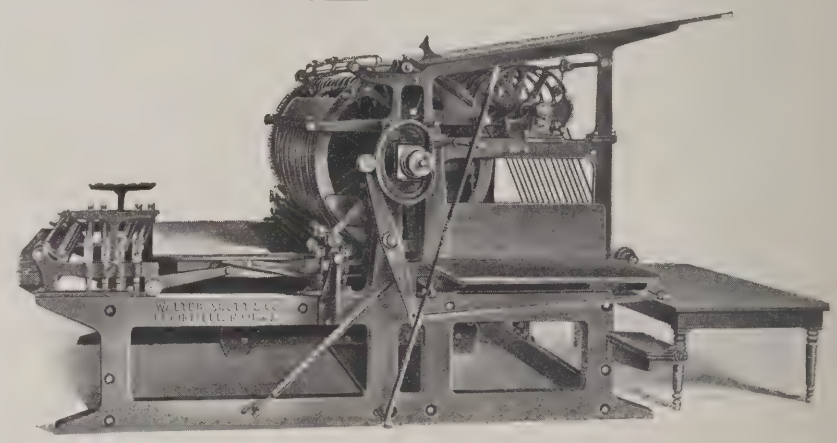
SCOTT PRESSES

They are built in many different styles to properly and economically fill various demands. Below are illustrated two extremes. If your paper is too big for the first or too small for the last, we have several intermediate styles, one of which will suit YOU. We also make bigger presses—in fact, we have the only complete line.

SCOTT CLASS C. T.

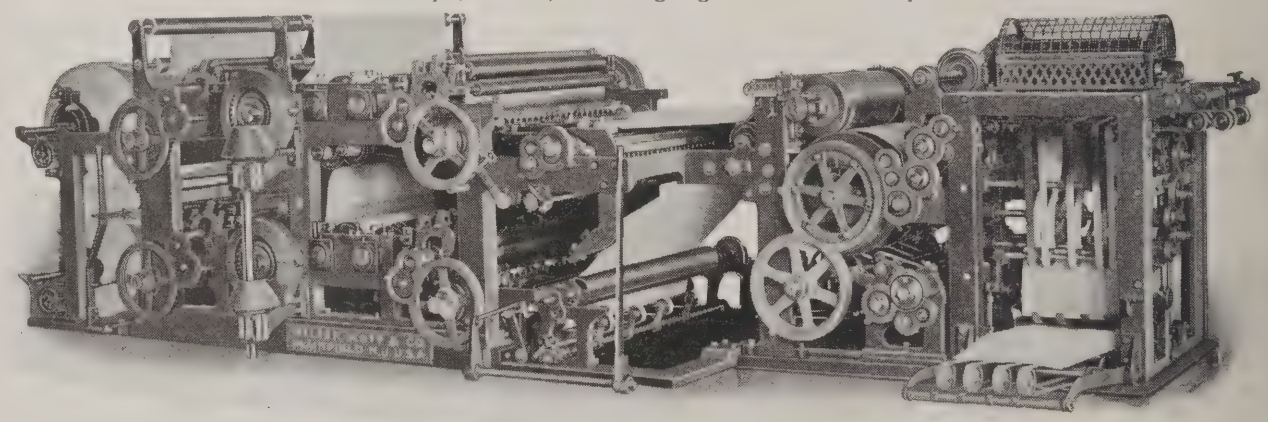
This is the latest improved machine especially designed for the requirements of the newspaper office in smaller towns. It is so accurately constructed and of such excellent design that it is also used by job printers for the economical production of ordinary job work.

This press is the finest machine of its kind that it is possible to build at any price, and it has become so popular that orders for a large number of these presses have been received, although the first machine was only shipped in January of this year. Send for descriptive matter and price.



SCOTT CLASS XX. The Latest—The Best.

Enormous speed attained from fewest plates, without increasing number of cylinders, surface speed of webs or number of paper rolls, and using regular semi-circular plates.



There is no machine ever offered the publisher that combines so many advantages and at the same time has no drawbacks. It is made in many sizes. The press illustrated feeds from 2 two-page-wide rolls of paper, has 4 plate and 4 impression cylinders, 4 ink fountains and distributing apparatus, and a single rotary folder, and it will easily produce 24,000 per hour of 4, 6, 8, 10, 12 and 16 pages from practically a single set of regular semi-circular plates—all pages inset.

THIS PRESS HAS NO EQUAL IN THE WORLD—INVESTIGATE IT.

TELL US YOUR REQUIREMENTS—WE HAVE THE PRESS

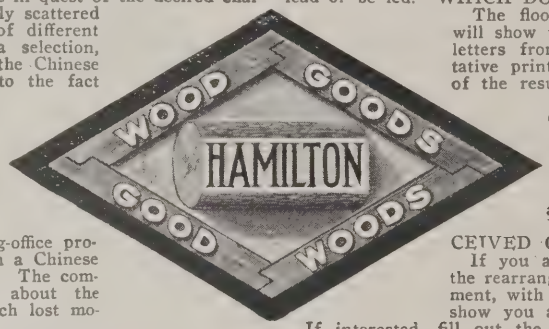
CHINESE METHODS IN AMERICAN PRINTING OFFICES

The Chinese alphabet contains a character for each word or a combination of several words. It is, therefore, virtually Chinese in shorthand. Not so very far behind the Roman alphabet when you look at it in that light

It is said that a Chinese compositor consumes a large percentage of his time in traveling about the office in quest of the desired characters, which must be somewhat widely scattered on account of the many thousands of different types from which he must make a selection, but the time wasted in traveling by the Chinese printer is largely recovered, owing to the fact that he does not work with single letters, and each character he puts in



place represents a word or a combination of words.

But what of the American printing-office proprietor who runs his establishment on a Chinese basis, with material widely scattered? The compositor and other workmen travel about the office in search of material, with much lost motion and useless waste of energy.

There are thousands of American printing-offices where this condition exists, and these offices are in direct competition with other printing-plants which have been modernized in recent years.

We can prove the fact that we can save from 25 to 50 per cent in floorspace, and from 10 to 25 per cent in the labor cost of composition, by installing up-to-date furniture that will save the cost of installation in one year. That's a pretty good return for the money invested.

Every printing-office proprietor must blaze the way for others or follow the beaten path. There is no other alternative. He must lead or be led. WHICH DO YOU PREFER?

The floor-plans of "Printing-office Economy" will show you ow it is done. The testimonial letters from proprietors of thirty-two representative printing-office establishments will tell you of the results accomplished.

This valuable booklet is free to every printing-office proprietor for the asking. SEND FOR A COPY, IF YOU HAVE NOT ALREADY RECEIVED ONE.

If you ask it, we will show you a plan for the rearrangement of your composing-room equipment, with an estimate of the cost. If we can't show you a saving, we don't want your order. If interested, fill out the attached coupon and mail it to us. If you do this, it may prove the turning point of your business.

Do IT NOW.

Letus send you a copy of "Composing-Room Economy"

Results obtained in the plant of Redfield Bros., Inc., 311-319 W. 43d St., New York City

THE HAMILTON MFG. CO., Two Rivers, Wis.:
Gentlemen:—The articles of furniture of your make which we have installed in our composing-room has proven to be most satisfactory. We find not only a great saving of space, but also a great saving of time and expense to the workman in the use of your Steel-run Cabinets and Stands over the old style of wood-run goods. The material and workmanship are of the very best, and as for durability and good service, we have no doubt they will stand the test of years. We always regard your articles as standard, and always feel in placing an order with you that we are getting the best that can be bought.
Yours very truly,
REDFIELD BROTHERS, Inc.,
Jud H. Redfield, Treas.

We are interested in the question of Modernized Furniture and we would like to have your representative show us a floor plan of our composing-room as you would re-arrange it, with a view to our installing such furniture as you can show us would soon be paid for in the saving accomplished.

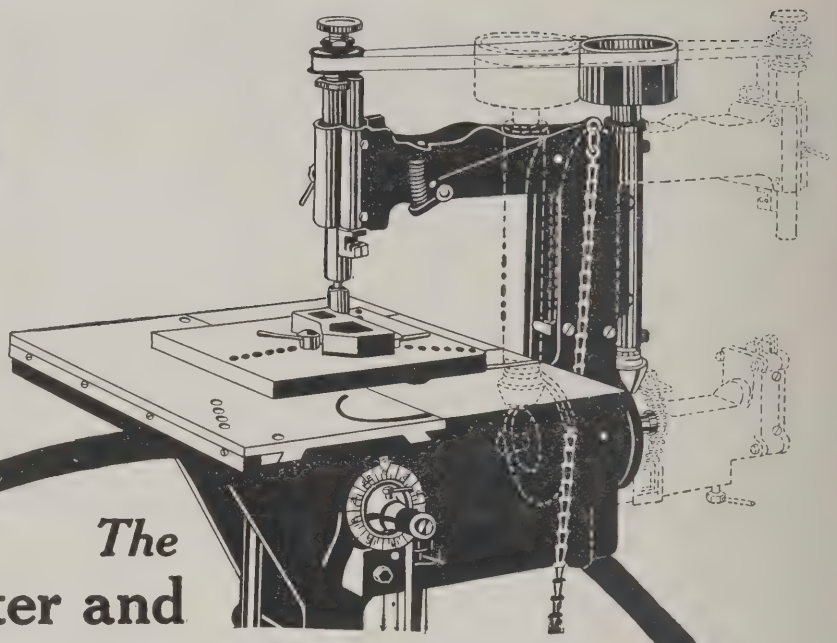
Patented, April 9th, 1901, and May 18th, 1909. Other patents pending. The Miller Saw-Trimmers are fully covered by U. S. and foreign patents and pending applications, controlled exclusively by Miller Saw-Trimmer Co., who will vigorously protect its rights therein.



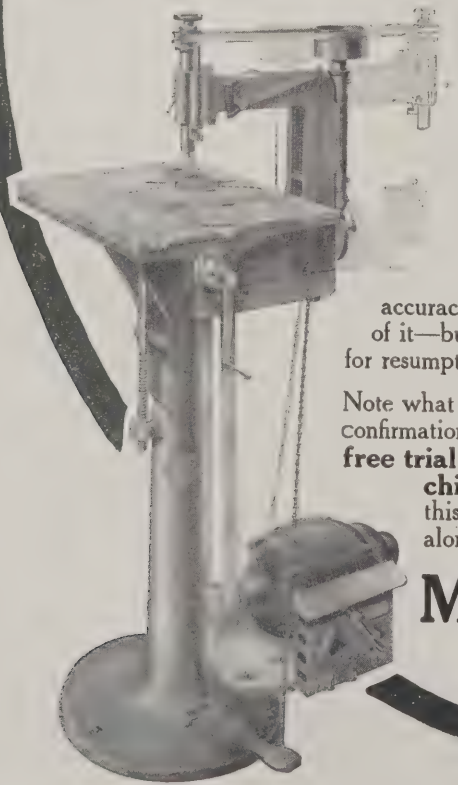
The Router and Jig Saw Attachment *for the* Miller Universal Saw-Trimmer

Now $200
Instead of $300

Increased output and perfection of tools and facilities permit us to make this hundred dollar reduction on the router and Jig Saw Attachment. The price is now $200, complete, ready to attach instantly to any universal type of the Miller Saw-Trimmer—but not to the new "Special Purpose" type which is not fitted to receive this attachment.

THE MILLER UNIVERSAL SAW-TRIMMER (Standard Equipment without Motor or Countershaft)

For use with Linotype Slugs, Electrotypes, Stereotypes and Wood—Sawing—Trimming—Mitering—Outside Mortising—Under Cutting—Squaring Cuts—Cutting Large Inside Mortises..... **Price, $300**



ROUTER AND JIG SAW ATTACHMENT..... Price, $200

Increasing Scope to Following:—Planing Type High—Straight Line Routing—Free Hand Routing—Inside Mortising—Key Mortising—Drilling—Jig-Sawing—Routing or Cutting Perfect Circles.

$500

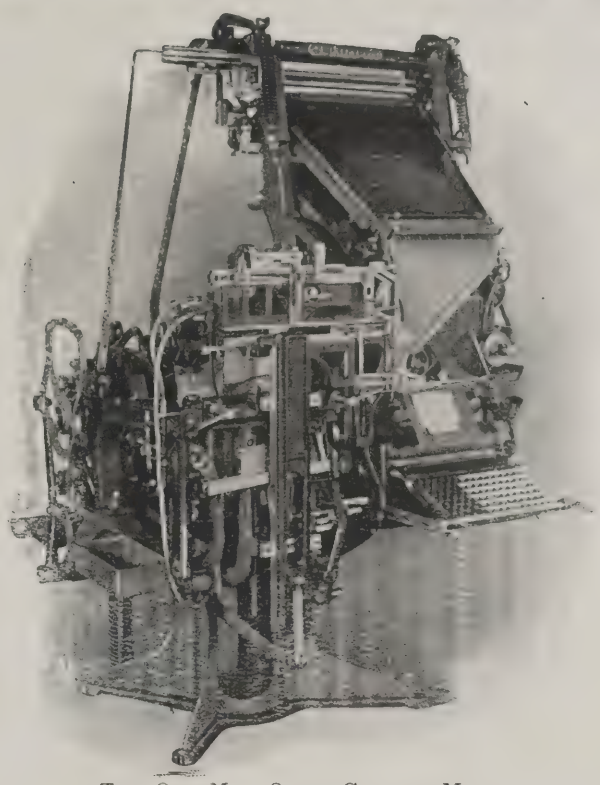
Understand that this attachment, working absolutely to exact point measure, with all its settings and adjustments made by hand without wrench or tools is constructed with the same standards of accuracy as the parent machine—becomes in operation part and parcel of it—but instantly swings clear without removal (see dotted lines) for resumption of regular sawing-and-trimming work.

Note what it accomplishes—write us or our customers for confirmation and proof—and accept at once our **riskless free trial offer of thirty days' use of the machine under your own shop conditions,** this offer covering the complete machine or the attachment alone if you already own a Miller Universal Saw-Trimmer.

Miller Saw-Trimmer Co., Milwaukee

MAKING IT PAY

The publisher of the Atlantic (Iowa) Daily News was skeptical about a single Linotype being profitable.



THE ONE-MAN QUICK-CHANGE MACHINE
Model 5, single magazine, $3,150
Model 4, double magazine, 3,600
SOLD ON VERY EASY TERMS

THIS IS HIS ANSWER

George E. Lincoln, Esq.,
Manager Mergenthaler Linotype Company,
Chicago, Ill.

Atlantic, Iowa, August 24, 1909

Dear Sir:

Herewith is a statement of what we are doing with the Linotype.

We are making it pay for itself in the saving of composition, easily. It grows better each day, and it is a genuine pleasure to get out a daily paper with it, when before it was one long continued round of grief.

Some months ago I concluded that I could learn to operate it and began working on it evenings. This evening, between five and six o'clock, I set almost 5000 brevier, and I expect to set 5000 an hour within sixty days, **when I want to.** This puts us in position where no combination of circumstances, sickness and trouble with the help can beat us to it. **We are absolutely independent.**

It gets better with each day. We have taught it to eat out of our hands and it comes when we call it. It is simple as a, b, c, and we simply couldn't keep house without it.

You can't say anything too strong of the Linotype for us. It would be impossible to exaggerate what it can be made to do in an office like ours. Yours very truly,

(SIGNED) CHAS. F. CHASE.

A GATHERER AND HANDLER OF NEWS

The Sure Source of Success as Taught by Character and Work of Curtis J. Mar

THE resignation of Curtis J. Mar from the management of a news service, which he has successfully built up to magnificent proportions, in order to take the management of the new and growing Publishers Press, calls attention not only to the magnificent success he has achieved, but to the characteristics of the man and the methods that have made his great achievements possible. We have frequently enforced the view that broad understanding of, and a real, active, sympathetic interest in, all the people and all their doings, trials, joys, and sorrows, undertakings, successes, and failures are essential requisite to signal success as a newspaper man—the very spring or real root of the news sense, that amounts to an instinct.

Mr. Mar built up the Hearst News Service to its present magnificent proportions and early won its recognition by Congress and the full privileges of the floor. It now appears that no other man has been so quick and so successful in organizing measures and securing means for relief in time of great calamities. At his appeal the purses of the wealthy have opened and the active influence and co-operation of the great of earth, as well as of all others, have come at his bidding. He raised a great fund to relieve the sufferers by the Galveston flood, secured $80,000 in twenty-four hours for the relief of the suffers by the San Francisco earthquake, organized and carried out for several years the plan by which no child in the great city of New York should be deprived of a share in the joys of Christmas time, raising from $20,000 to $25,000 annually for the purpose by which thousands of children were made happy and thousands of the hungry were fed. He has organized many other movements for reform and relief and secured symposiums of views of the most prominent men in the nation on labor and capital, on the negro question, on the problem of success for young men and so on. These instances show the broadness of his sympathies and that he knows the hearts of men and how to reach them. Mr. Robert Walter Davison, writing in the Pittsburg *Leader,* of Mr. Mar and of his work in founding the Hearst News Service, last April, said many things that are not only valuable as showing his character and how he works, but also in pointing the way for higher attainments by others in the newspaper field. Mr. Davison wrote:

Mr. Mar is a positive force in whatever he undertakes. He has gone far in the newspaper world already, and he is still a young man, has barely reached the forty mark, and I miss my guess if he does not go into newspaper history as one of its greatest men.

Endowed with a keen intelligence and intuitive knowledge of what a newspaper needs and how to get it, an abnormal capacity for work and a genius for detail, he is an ideal newspaper man. Beyond this he has in a marked degree that faculty which is the hall mark of the successful leader of men—the faculty of inspiring in his subordinates unswerving loyalty and a determination to give to their work the very best that is in them.

Mr. Mar has been a marked man since his entry into the newspaper business twenty odd years ago, a raw boy, when I first knew him, and he was the city editor of a New York newspaper at an age when most of us were doing police court assignments, and managing editor by the time the average successful nespaper worker is beginning to force recognition of his ability.

I can recall the time when C. J. Mar first broke into the business. It was when the New York *Press* made its initial bow. He came on as a cub reporter, a tall, slender, rather diffident boy.

I may say here that a better school for the learning of the newspaper business never existed than that same old *Press* office in its first days.

Genial Ashley W. Cole, the prince of city editors, afterward a member of the New York State Railroad Commission, had the city desk; Howard Irving Smith, afterward an authority on Wall Street and finance, was managing editor; Robert P. Porter, statistician, later superintendent of the Census and confidential adviser of more than one president, was editor-in-chief, and Frank P. Hatton, newspaper man from his toes up, and politician on the side, afterwards editor of the Washington *Post* and then postmaster-general, was general manager.

It was a pleasure and an honor to work with such associates. Young Mr. Mar made good from the start. The work in those days was all on the space basis.

The first week's bill turned in by Reporter Mar was more than $50 clean space.

Ashley Cole, when he came to it, called young Mar over and remarked, dryly: "That's a pretty good bill for a boy. I guess I'll put you on salary."

In a few weeks the "cub" reporter was placed on the telegraph desk, a position rarely achieved except after some years of hard work.

Desk work did not agree with young Mr. Mar, and he accepted a place on the staff of the old *Star,* doing general work. The *Star* was then under the management of Governor Dorsheimer. with W. F. G. Shanks, one of Horace Greeley's trusted lieutenants on the *Tribune,* and a newspaper man of exceptional ability, as managing editor.

A vacancy occurred in the city editorship of the *Star.* Mr. Shanks took a novel method of filling it. He announced that the man on the staff who, within a certain time limit, brought in the greatest number of suggestions for exclusive news feaures, should receive the appointment.

Mr. Mar won out with ease, and was made day editor, a position which he filled with honor to himself and with profit to his paper.

In organizing news service, securing special features, stories and syndicate matter of the greatest and highest quality, Mr. Mar has been signally successful. He brings to his new position broad experience as well as great abilities, thoroughly trained by successful experience. The Publishers Press have been fortunate in securing the service of such an able and well known man. In a recent interview with the *Publisher and Printer* of New York, when asked for his reasons for resigning a position in which he had won such signal success, Mr. Mar replied:

"They are very simple; a business opportunity offered, affording me a wider scope and greater opportunities for effective work which I did not feel justified in refusing. That is all."

He is a man of initiative, of resourcefulness, of originality, and, very naturally, a free open field for independent action in carrying out his ideas and exexercising his powers, appeal to him. This power of originating or the initiative, is in great measure a gift, yet it is something that can be developed and cultivated, its possession is of no greater value anywhere else than in the newspaper business. A newspaper is compelled, in this age of rapid progress and unlimited competition, to be able to orginate and successfully introduce, push forward and make effective new measures and methods or fall behind in the race for attainment. The newspaper and the newspaper-worker must not only gather and give the news, but many times must take an important part in those things that make or originate news, or, at least, must give to news a zest, a breadth, a human interest that would not otherwise exist or be discerned.

SYNDICATING NEWSPAPERS

IT would be a glorious thing if society were so organized that every one could be given a square deal—while, independence, individual initiative and personal incentive and ambition were retained and stimulated into the promoting of highest efforts and all worthy work be efficiently and joyously performed—and still, through wise combination and co-operation of capital and effort, all possible accomplishment be reached, improvements made and desirable ends attained, in the most economic manner, with greatest and most perfect production, wherein the special abilities of each would find proper and most profitable use.

It would make little difference, as to the actual ownership of capital could it be used in an entirely equitable manner for the employment and rewarding each and all in accordance with their several abilities and efforts and for the common or public weal. Capital, the product of labor, is just as worthy in itself as is labor, it is the misuse of capital, as of any other power, by selfish, narrow-minded individuals, who do not realize that the highest good to all is the highest good of each, which causes all the injustice.

For carrying on many of most needed enterprises in this day of great things, large aggregations of capital are absolutely necessary, and many other things can be best and most effectually accomplished thereby or through co-operation.

As an illustration, take existing conditions in Alaska. All those editors who recently visited that portion of our country, were convinced, and were unanimous in the expression of their view, that the great mineral and other resources of that section could only be developed through the aid and use of great aggregations of wealth or through the co-operation of many men of abundant combined capital, backed up by courage, enterprise, industry, energy and endurance.

America has been fitted, by the accumulation and centralization of great wealth for the stupendous undertaking and it is easier and more expeditious for centralized capital to act than to wait for co-operation, even if that can be secured through organization.

There are vast beds of coal in Alaska and coal is necessary to all development, to comfort and to life itself, but individuals can not reach and develop these coal or other mines—the work must be done by centralized capital or by the Government, and if the Government cannot protect the people in their rights from those who alone have the means of carrying out the work, then the Government should do the work and secure the benefit for the people. The prejudice against the Government doing necessary work is wrong. It is just as wise to open and work mines as to provide irrigation. But we are wandering, in our illustration, from our text. We only set out to write an introduction to an able article on the "Syndicating of Newspapers."

The great economy of co-operation by newspapers has been established. In no other way than by intelligent co-operation could the news of the world be gathered and published on the same day of its occurrence in every land where newspapers are read. The ever-present question as to the most economical and effective conducting of newspapers, as with regard to many other things, is whether or not more injury than good will result from united capital and control. It is generally conceded that the press should be free and independent so far as government control is concerned, and it must be admitted that independence from the influence or dictation of special interests adverse to the general interests of the people, and to good and equitable government, as well as untainted loyalty to all the people and to the country, to city, state and nation, are just as essential as is freedom from governmental control or dictation.

Along this line of newspaper syndicating, combination or co-operation, the following practical editorial by editor Frank D. Throop, in the Muscatine, Iowa, *Journal*, one of the Lee Syndicate of Newspapers, will be read with interest and profit. It would seem to indicate, if not to prove as possible under all conditions, that there is a way to secure all the economy and benefits of intelligent co-operation while avoiding the destruction of individuality, personal responsibility and healthy independence:

The recent purchase of the Council Bluffs *Nonpareil* by the men who conduct the Marshalltown Times-Republican has been the cause of quite a little talk among the Iowa papers concerning the so-called syndicating of newspapers.

The Nevada *Representative* in a thoughtful editoral on this theme inspired by the event referred to, declares that "the processes of consolidation and monopoly are at work in the newspaper field as well as in the domain of manufacture and that even those who make a specialty of progressiveness are not exempt from the influence of the time." Mr. Payne, the Nevada editor, however regrets "this apparent surrender of individuality to commercialism in newspapering."

Commenting upon these utterances of the Nevada paper, the Cedar Rapids *Republican* says:

"Mr. Payne thinks that an editor and publisher can give his own personality to only one newspaper. That is perhaps placing too many limitations on a newspaper man. He is apt to have more than one personality, as a cat is supposed to have more than one life. But in the two cities, Marshalltown and Council Bluffs, conditions are enough unlike to make the same newspaper policy impossible. This is especially true on moral questions such as prohibition. A publisher and an editor will in a measure desire to conform to the opinions that are prevalent among the people for whom his paper is published and edited.

"What Mr. Payne is thinking about is the old-fashioned editorial personality. But it should be taken into consideration by him that that has to some extent departed from newspaper offices. It was the glory of the press in the days of Horace Greeley and the great men of whom Henry Watterson is the last remnant. Newspapers have departed from those standards largely, whether it is for better or for worse. They are much more commercial than they were in those days. Nowadays they are apt to be business propositions, largely. There is more stress laid on the news than on the opinions of the editors. The opinions are largely a by-product of the publication. The supreme thing is the news. Most people want to do their own thinking, all they want to know is what is going on and what the leaders in the various fields are doing—then they form their own conclusions. The editorial page does not have the same influence it had in the earlier days and the most successful publisher is apt to be the most energetic news gatherer.

"However, the syndicated paper has not been wholly a success, Mr. Hearst has attempted it on the largest scale. At one time he thought that he could control the thought of the country by a string of newspapers reaching from ocean to ocean. But as papers of opinion or influence the Hearst papers have declined rapidly and they are not now taken very seriously. In Iowa, the late Mr. Lee, of Ottumwa, organized a syndicate of five newspapers, three of them in Iowa, which has been very successful. But the commercialization of newspapers is not apt to proceed very far, without invidiality. The Scripps-McRae and Clover leagues have spelt, for the most part, failure and those leagues are now disintegrating. There was too much sameness in those papers, not enough individuality."

In a discussion of this kind, it is rather in order that the *Journal*, a member of what possibly is the largest and most successful "syndicate" of papers of the class published in cities from 20,000 to 60,000, in the country, a syndicate that was practically the pioneer in this movement in Iowa at least, should have a word to say.

The *Republican* is kind enough to say that the Lee Syndicate has been very successful. We believe that the facts will amply justify the assertion. Whatever of success it may have attained the men who now are responsible for the five different properties do not claim as the result of their own abilities and energies so much as that it is due to the faithfulness with which the organization he built up, has followed the plans of the founder, who was taken from his work in the prime of his life and activities.

We mention his taking away—a sad memory for all the men who were under his guidance and direction—simply because we wish to acknowledge that though it is the earnest endeavor of every Lee Syndicate paper to maintain its individuality separate and distinct, yet there is a certain sameness, we hope, about the five papers in that all of them have absorbed a little of the personality of the founder of our organization, a measure of his directness of purpose, his contempt for the little questionable by-paths of life and his determination and energy to march steadily forward, overcoming all obstacles, toward the goal of real true success.

But beyond this "sameness," of which, if we possess it as we hope we do, we are proud, there is little of a "sameness" in Lee Syndicate papers.

Each has an individuality distinct and separate from the others. Some of them even have different political policies. One paper, the La Crosse, (Wis.) *Tribune,* always an independent paper with ultra-progressive and even democratic leanings, was during the last political campaign a tacit supporter of Bryan.

Another paper in the organization is a republican paper and proud of it. The *Journal* itself is a republican paper, but not so proud of its republican raiment, in light of the activities of certain republican gentlemen at Washington, as we would like to be.

There is no taint of trust methods or monopoly about the Lee Syndicate properties. It is merely an organization of entirely distinct properties joined together by a common bond for mutual benefit.

Has this made the various properties more successful? We certainly think so.

Has anyone else been benefited besides ourselves?

Listen: Ask anyone who knew of the Davenport *Times* before it became connected with the Lee Syndicate. Ask that one which paper was the most powerful force for the good of Davenport, the old or the new *Times?*

Ask anyone who knows the facts whether the La Crosse *Tribune* is the same paper to-day that it was three years ago. Yet the same men who were then its conductors, conduct it now, assisted by Lee Syndicate men and Lee Syndicate methods. Before the Lee Syndicate entered the LaCrosse field, LaCrosse did not have an independent newspaper. Two of its papers' prime purposes of existence was to fight the battles of the local public service corporations and the purpose of the third newspaper was to fight those same corporations.

Northeast Missouri never had a modern small city daily, until the Lee Syndicate entered the field at Hannibal.

The success of the Lee Syndicate lies in this very factor which Mr. Payne has called the commercialization of newspapers, but which we prefer to call the "NEWSpaperization," if the term is allowable. In the first place modern business methods have been introduced into the counting room. The Lee Syndicate was one of the first organizations of publishers in Iowa to welcome the abolition of railroad passes, and has been a leader in the movement to cut out all of the petty grafts of which publishers have allowed themselves to be made the victims by means of "free tickets" of all kinds. In the next place the Lee Syndicate has realized that to gather and disseminate the news was the first and greatest consideration of the editorial end of the plant. It is believed that a newspaper's duty is not so much to think for its readers as to make its readers think.

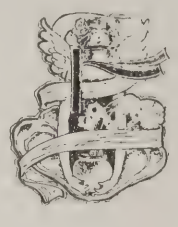
The Lee Syndicate has no political ambitions of its own. Lee Syndicate papers have only the interest in politics that all good citizens should have to secure the election of the candidates they believe to be the best candidates and to encourage them, once elected, in a faithful performance of their duties.

Lee Syndicate papers strive always to stand for the right in their communities yet do not set themselves up as censors over their fellow citizens, and believe that he who differs with us is damned.

And above all the Lee Syndicate papers can have an individuality of their own, can be independent, can be free from any selfish or foreign influence because they stand on their own bottoms, are indebted to no one for favors, pay their way as they go, and are straightforward business propositions.

As we stated above there is no taint of trust methods or monopoly about the Lee Syndicate papers. All that a competitor has to fear from them in the high standard of efficiency in every department and in every line of newspaper endeavor for which they strive. They are, however, admittedly not of the namby pamby sort. They believe so thoroughly in the square deal that they are willing to fight for it, for others or for themselves

SIXTH ANNUAL OUTING, MANSFIELD, O., NEWS



FOR sixteen years the Mansfield, Ohio, *News,* has given an outing to the children of the city and vicinity at Sherman-Heineman Park in Mansfield. These have been given on the last Monday in August of each year. It is interesting to note that every year, save one, and that was the occasion of the thirteenth outing—and no one could expect much of that unfortunate number—each day has been ideal for the glad occasion and even on the thirteenth the ill omen could only work its evil influence for a short time in the morning, after which the rain ceased, the clouds cleared away before the smiling, happy children, and the sun shone forth in all its benign effulgence. The last was bigger than any that had gone before. How popular these entertainments have become, as well as how conducted and how thoroughly remembered and looked forward to and enjoyed, may all be gathered from the following notice of the last event published in the *News* of August 30th:

Suppose that the teacher in one of the grade schools of the city should say to her class some time during the school term, "Now, children, which of you can tell me what important event occurs the last Monday in August every year?"

Can you guess the result?

Every hand in the room would shoot up as if operated by machinery and every child would exclaim in unison, "Teacher, I know."

And supposing the teacher should say, "You may all answer," can you imagine any of those children making any answer other than to exclaim, "It's *News* outing, teacher.

Some might hesitate on the bounding of a state, the parsing of a word or the date of the battle of Bull Run, but there is nothing doing in the uncertainty line when it comes to telling the day of *News* outing.

And there's another of them here.

This is the day.

The sixteeth annual.

A day set aside for the entertainment and enjoyment of the children of Mansfield and vicinity.

As Mansfield has grown and shown progressiveness along all lines and as the Mansfield *News* has enlarged and improved in keeping step with this general advancement, so have the *News* outings been added to in attractiveness by the constant bringing out of distinctively new features and novelties which have had the effect of holding the interest of both children and adults.

Fifteen of these outings have gone before and it is a pleasure to the news to know that among the best friends of this paper are some of the men and women of Mansfield whose first acquaintance and interest in the *News* was gained as a result of their attendance at some of the earlier outings while they were still within the age limit prescribed for free tickets. And, would you believe it, some of those same men and women who attended the first *News* outing now have children of their own old enough to march up to the counter at the *News* office, hand in their coupon and say, "I want to get some tickets, please."

By the way, you should have seen the onslaught made on the counting room of the *News* office, following the publication of the outing coupon last week. Hardly had the

ink rested on the paper long enough to get a good hold when the first of the coupons began to come in, and the days since then have been busy ones for the office force upon whom devolved the work of handing out the free street car tickets and badges in exchange for the properly filled out coupons.

Did you happen to be so fortunate as to catch a glimpse of the *News* corner at 9 o'clock, when Mansfield's big city band began to get busy on the fine special program which had been arranged for this occasion?

It was a sight worth seeing.

Multitudes of happy children, their faces aglow with pleasure, chattering incessantly about the outing and their plans for the day's enjoyment, skipping about from one place to another, eager, excited, expectantly looking for some little friend who had not yet appeared—making in all as pretty a picture of innocent and exuberant childhood as one would care to see.

Once again the weather was fine, as it has been for every *News* outing, with the possible exception of the thirteenth, when for a short time during the morning hours the weather was threatening, and there was some rain, but even on that occasion the sun came out a little later and the greater part of the day was all that could have been desired.

There were special cars at the corner of Fourth and Main Streets to convey the children to the park and the large crowd was handled in a very satisfactory manner, a number of police officers having been assigned to special duty at this point to see that none of the children got in danger.

For this outing there was a special anxiety on the part of the children to get to the park early so as to be sure of not missing the free special matinee given at the Casino, which began at 10:15 o'clock, although there must have been a lingering idea on the part of some of the children that unless they were on guard the actors might start in a couple of hours earlier than that, as some of the children were waiting around the Casino entrance the very first thing in the morning for fear they would miss the first act, and that would not have done at all as the play was the king of detectives, and who could tell what the great detective might do at the very start-off in running to earth the bold, bad villain who was using the pretty lady in such a cruel and altogether heartless manner?

After the show the lunch baskets were brought out and dinner was enjoyed, following which, at about 1:30 o'clock, Prof. Leo Earl, the daring high wire performer, gave one of his thrilling exhibitions on a wire strung between two high trees to the west of the swimming pool, such a splendid location that the performance could be witnessed by the many thousands of children and adults without any interruption of their view.

As usual the residents of West Fourth Street have shown their interest in the children of the city by attractively decoraing their front porches and yards with flags and bunting, giving a gala effect along the entire street.

Along towards 5 o'clock this afternoon Prof. Earl will give another of his remarkable high wire performances and the balloon ascension and parachute jump is also scheduled for as nearly that time as the wind conditions are found to be favorable.

Past-President W. S. Cappellar, who with E. S. Histand, has editorial charge and direction of the *News*, is evidently as young in heart as in years past, though his presence has been missed at the last two sessions of the National Editorial Association—as joyous in heart and feeling as the children whose happiness his paper so successfully promotes. One of the attractive things about conducting a home newspaper is that the work never grows old, the oncoming generations of young people, with all their pleasures and interests, take the places of those passing before in a way that keeps the stream ever full, sparkling, bright and pure. The supply of the youth is never wanting. It must be most gratifying to a publisher to realize, as is stated in the quotation, "That the best friends of this paper are some of the men and women of Mansfield whose first acquaintanceship and interest in the *News* was gained as a result of their attendance at some of the earlier outings, while they were still within the age limit prescribed for free tickets." This very fact, too, brings the children of these close to the hearts of the editors. Look to the children and you have found the fountain of eternal youth for your paper, from which you may drink the sweetest and most refreshing draughts.

The *News* is a well conducted paper that keeps in hearty sympathy and close touch with the people. The paper sells at 2 cents a copy daily, except Saturday, when the price of the larger paper is five cents. It is delivered by carrier at ten cents a week or for three months, paid in advance, at $1.25; by mail the price is one dollar for 100 days or three dollars by the year. The normal daily circulation is over five thousand copies—the population of the city is about twenty thousand. It has a weekly edition at $1.00 a year, and has one competitor in both daily and weekly field.

Serving an Iowa newspaper for fifty years is certainly a career of which any one might feel proud. The Nestor of Northern Iowa Journalism is the Hon. A. K. Bailey, who if he lives until the thirteenth day of April will have completed his half century in newspapering. He has not skipped more than four issues of the Decorah *Republican* in all these years, and there has hardly been an issue which did not contain more or less of his writings.

Commercial Printing and Advertising

Bolivar, N. Y., 6/9/09.

Mr. B. B. Herbert,
1319 Ravenswood Park,
Chicago, Ill

Dear Sir:-

I take pleasure in enclosing check for $2. for renewal of my subscription for the coming year

In nearly every issue of your most excellent journal I find some article that is worth the subscription price.

With best wishes for you, I am,

Very truly yours.

THE PIONEERS AND THE NEWSPAPER

THE GLAD REUNION AND UNVEILING OF A MONUMENT, FOLLOWED BY THE DEATH OF A WORTHY EDITOR.

COPIES of the *Dakota Republican,* of Vermillion, S. D., of August 26th, and September 2nd, contain accounts of meetings of old settlers and of the dedication of a monument to "the old log school house." The *Republican* is of the right quality and spirit and certainly deserved the high compliments paid in a poem that formed a part of an address by the State Historian, Hon. Doane Robinson, before the Clay County Old Settlers and the "Log School House" Association. The remarks preceding the poem were equally happy, in portraying the real services to a new community of the newspaper, that never ceases to be a pioneer of all worthy undertakings, no matter how old, conservative and wealthy the community served may have become. Mr. Robinson said:

Clay County has been and is peculiarly favored in the means for recording the events of her career. The modern newspaper is the greatest of historians. What was formerly done at great expenditure of labor, in long hand, upon expensive parchments, to be sedulously guarded and read to the unlettered masses from the synagogues, the modern nawspaper does much more efficiently and comprehensively and lays before its constituency for their edification and instruction, and preserves carelessly, but successfully, to succeeding generations.

No other rural community of my acquaintance has so ably conducted and comprehensive and conscientious recorders of events as has Vermillion in the splendid newspapers published here. I am sure Brother Colvin will understand that no suggestion, invidious to his excellent newspaper is intended, when I pay an especial compliment to the Nestor of Dakota Journalism, *The Dakota Republican*:

I've sponged some pretty notions from Old Dana, in his day,
And Horace Greeley steered me in the proper way to vote;
I've always read them careful, and I love them still, ye'll note,
But I'm here to testimony, as I heard the justice say,
Ain't no paper circulated 'mongst us farmers down in Clay—
We've got them here from Boston and Alaska like as not,
From London and Wakonda, ain't no telling what we got—
Can't any of them measure with that old *Republican*
What's printed off by Willey and the Little Fellow Dan.
Now papers, they have spirits, I always will maintain,
And kind of human feeling that is pictured on the type;
Some is smiley, bright, refreshing, as a shower of summer rain.
And their columns throw off sunshine like waving green-ripe grain,
And they yield a crop of sympathy and trust and common sense
That has market value, can't be reckoned in per cents.
And for sense, and faith and sympathy, no other paper can
Match one that's made by Willey and the Little Fellow Dan.
You are smoothing down rough places. Help us stand against the pricks,
Teaching us that every setler is in duty bound to-day
To holler for the country in the good Abe Lincoln way.
You are loyal to Dakota; make us love our prairie sod;
Put trust in fellow-being and confidence in God.
O, I tell you for pure giftedness, no other paper can
Match one that's made by Willey and the Little Fellow Dan.

Messrs. Willey and Danforth are the editors and publishers of the *Republican,* which is now in its forty-ninth volume. The paper passed through all the trying pioneer days—and South Dakota had her full share of hardships and disasters, when existence was a struggle—and still the higher ideals were never forgotten, nor efforts neglected for their full attainment. We can but feel that these editors speak from the depths of the trials and difficulties encountered, in the following appropriate words in the leading editorial of the paper on this occasion:

The Old Log School House—1869. The Beginning of Public School Education in Vermillion, S. D.

Monument to "Old Log School House", Vermillion, S. D.

Even though the roof-tree, in many cases, no longer may cover the descendants of the earlier settlers, and though an alien people may come and take possession of the field and farm—a possibility altogether dim and distant in its remoteness—still is the work which was done here fifty years ago no less potent; the sound of the voice no less clear than if those very heroic figures again trod our ancient and historic thoroughfares and with their kindly hospitality and dignified yet gracious mien cheered our hearts by their veritable presence among us to-day.

The religious and educational and moral and political ideals that were here early, and fostered, are still a "possession forever" of all our people. The deeds of heroic sacrifice with which these homes were begun and built in the heart of a wilderness, and in constant peril of a savage foe, and despite

the hard conditions of mere existence, the patience and self-denial in the face of every danger and disaster and discouragement—all these have not perished, nor can they perish. The old pioneer spirit lives and leavens the mass of the multitudes peopling this goodly land. It resides not in the lovely valley below, it lurks not hidden in the fields and orchards on yonder prairies; but it makes its influence felt nevertheless surely in unseen and unsuspected ways. We suppose it would be a mistake for us to maintain that the old pioneer life—which has about it a flavor of romance—was purely ideal from the more modern standpoint. But we should love to glorify the past and take great pride in it. A people who do not glory in the deeds of their ancestors will never (or rarely) do anything worthy of them as descendants. For it was the influences flowing from the institutions they founded—the church, the school, the convention—which formed the bud of which the present is the flower.

And so, to-day, we are gratified and glad to remember these strong men of the elder-time and to rejoice in all that they did and all that they were.

made in education and in this the press has not only led the way, but has made a like creditable advance in the field of newspaper publishing. The Monument to the "Old Log School House" grew out of an organization founded in 1905, when a number of teachers and pupils met to welcome back one of their number. A permanent association was formed and a committee appointed to take up the securing of a monument, and now the Old Log School House and its site and many of its associations will be perpetuated The idea is a good one and the plan might well be followed in many other counties in the West, and the home editors are best equipped for the work.

We had progressed this far in reviewing the interesting and instructive matters connected with what we have written, when we noticed, in the *Dakota Republican* of September 2nd, the account of the

Buildings of the University of South Dakota at Vermillion, showing the Progress of four Decades

Future generations should return to these sacred sites and shrines, not only because there is romance and beauty about these vales and bluffs and prairie-plains and the shining streams that must appeal to even the coldest and the most irresponsive heart, but because they may again stand in the places where once their forefathers stood and catch the spirit that animated their strong hearts, and make the resolve that nothing that was good in them shall perish in their own lives.

Vermillion is the seat of the South Dakota State University and the City and County, urged forward and aided by the able, public-spirited local press, have had very much to do with the splendid success of the University. The *Republican* gives, in its issue of August 26th, a most comprehensive history of the County, the illustrations in the article of the *Republican,* and reproduced herewith, show most strikingly, by contrast, the wonderful progress that has been

death of Editor Colvin. The story of the life and death of this co-worker with those whom we have had occasion to commend, while giving a touch of sorrow to that which had seemed so suggestive of the glory and brightness of accomplishment, yet enforces, the more, the lessons contained therein. William Robinson Colvin, the editor of the Vermillion, S. D., *Plain Talk,* was born in West Bend, Wis., August 2nd, 1867, and died August 27, 1909. He went into newspaper work at thirteen years of age and followed the calling all his life. He had published the paper at Vermillion since July, 1897, or for twelve years. The editors of the Vermillion *Republican* say of him:

Our friend and fellow-frater, after long lingering and much suffering, has fallen, answering the final summons on Friday morning last. The sad event profoundly moves our

heart, even though we have felt for months the end was coming; we had striven to put the thought of it away, and tried to believe that it was not possible—"hoping against hope."

For twelve years we met him almost daily; engaged in the same profession and business, we early formed acquaintance and this easily ripened into relations of intimate fellowship. In many respects our contact with him was probably closer than that enjoyed by most others outside his own business establishment, and so we came to know very much about his personality and its various characteristics. But after what has been truly said of these by the two discerning and discriminating pastors, and by many others, it were seemingly superfluous for us to attempt to add to the weight of testimony altogether in his favor.

He was sympathetic, liberal, cheerful, true. His heart was great, yet in it there was no room for hatred. His smile was a benediction, and his pleasantry would illumine a problem or carry a point as quickly as it would blot out the blues that were holding some other soul in the bondage of doubt or despair.

He was the personification of public-spiritedness, and in his departure a potent force in our municipal affairs has been removed. He ever loyally labored for the material interests of this city and its tributary comunity.

We always reckoned him as alert, intelligent; possessed of a strong will; of no inconsiderable energy; of strict integrity. He was a typical citizen of this section of our fair young commonwealth in his unassuming and approachable manners, yet endowed with an ever-ready nature for responding to any needful call or emergency.

Whether as printer, publisher, editor, he was possessed of more than average ability and each and every task was performed in a conscientious manner. In the gathering and presentation of local intelligence he was unexcelled. He was just with every client, and generous with every employe.

The familiar name of "Billy" Colvin will linger long on the lips and in the minds of many Clay County citizens, and in giving expression to it, the love and respect prompting its utterance from the heart will serve as a living monument to his memory.

We offer this broken tribute in honor and remembrance of one who here served well and faithfully as a fellow-laborer in the same field with us for twelve years. He said his farewell "Good Morning" last Friday; to-day we tearfully and sincerely tender our last "Good-bye, Brother Billy."

In all this is displayed a deep and true fraternity between members of the press, co-workers for and in the same community—rivals but warm friends. This is as it should be everywhere, when men are worthy and actuated by the high principles of duty. Herein, too, are set forth, as exemplified in the life of the deceased brother, the noblest and best instincts of the worthy newspaper man. These good qualities were rcognized not only by his co-workers in the calling but by the community. One of the ministers, officiating at the funeral with the pastor of Editor Colvin's own church, said of him:

Hopefulness was his constant mood of mind. One of our merchants said to me after he died: "I always liked to meet Mr. Colvin. He always had a good word for everyone. His optimism was contagious. He wished well for all and did what he could to help everybody." Such a disposition is the very heart of a gracious ministry. Such hopefulness and well-wishing are like bursts of sunshine upon out spirits. Their touch fills our word with beauty. Their influence helps us to believe in ourselves. Through them we feel an undergirding of strength, so that we face with renewed courage all our difficult problems. Such men we miss most when they are taken from us, because we need them most.

While walking down the street yesterday with one of our oldest citizens, I said: "Talk to me about Colvin. What do you regard as especially characteristic of him?" After speaking with warmest appreciation of his large-heartedness, he said: "Mr. Colvin was a man of the people. It made no difference whether it was one going home from work all begrimed with sweat and dirt or one dressed in elegant clothes; whether one in high station or in low; whether rich or poor; Mr. Colvin always had a pleasant greeting for him, for he valued men not according to wealth or poverty, but for their worth as men." No finer commentary could be spoken upon anyone than this. One of the most inspirational things in our Lord's life was just this, that he valued men not for the accidents of their lives but for their worth as men. And when we lay away such a man in the grave we feel an irreparable loss.

Fairness was one of his prominent characteristics. He never took undue advantage. He knew nothing of rancor and bitterness. In the strife of political parties, his opponents would often say to him, "Brother Colvin, all that I ask is that you tell the truth about me." From him would come that hearty "I will." And he never failed to be as good as his word. That is the kind of journalism that makes for good citizenship, that builds up a community, and helps to preserve a noble spirit in all citizens.

The late W. R. Colvin, Vermillion, S. D.

Mr. Colvin was a public-spirited man. He believed in the people and in his community. He wanted to see our city forge ahead. Much of his own time and labor he gave to the general good without thought of compensation. He was a man of strict integrity, and was held in high esteem by our whole community.

Neither rivalry in business nor denominational lines could leave unrecognized the good qualities nor dim the lustre of the glorious character of this true editor.

Editors Seeing the Northwest—Land of Growth and Promise

(CONTINUED FROM SEPTEMBER NUMBER)

Editors, when on an outing, are always ready to embrace all means for improvement as well as for intelligent recreation. Largely through the appreciated management of H. B. Hale of Connecticut, who is an experienced ocean voyager, every evening aboard the good steamship Northwestern, during the twenty-day Alaskan trip, was filled with entertainment. One of the most enjoyable and valuable of these was devoted to newspaper-shop talks, the editors giving, off-hand, their methods as to different departments of newspaper work, editorials, country correspondence, circulation, advertising, etc., etc. This interchange proved so interesting and valuable, that the talks were resumed and a whole afternoon, profitably given up thereto on the return trip. Questions were asked and answered, and many declared that they had gained more practical knowledge therefrom, and the conversations following, than from all the papers and discussions of the convention. Such remarks as "that point is worth a hundred dollars to me," were frequently heard. Why not keep up these experience meetings in the pages of the NATIONAL PRINTER-JOURNALIST throughout the year? To this end we will be glad to provide an "Experience and Query at East Corner," open to all, free of charge, for the interchanges of ideas, the enumeration of trials and difficulties and asking how they may be, or telling how they have been overcome; for queries, and answers, discussions, views, suggestions, opinions and experiences. Such a department can be made worth a hundred dollars a year to every contributor thereto or faithful student thereof. Come, let us talk and reason together.

However, we started out to tell how usefully and pleasantly the time—not devoted to viewing the heaven-reaching, snow-capped mountains, the rolling ocean, the circling, gliding albatross, seagulls and spouting whales, watching the ice fields and the wonderful glaciers or to reading—and it must be remembered that there was daylight from 3 A. M. to 10 P. M., for sight-seeing and reading—was occupied by the editors. One evening Mr. Levi Chubbuck, of the U. S. Department of Agriculture and a graduate of the Agricultural College of the University of Missouri, who is engaged on the investigation of agricultural possibilities and farm management in Alaska, gave a talk along his lines of observations and work; and on another evening a Mr. Clark, who had eleven or twelve years' experience as a miner and quite broad information as to farming possibilities and gardening, addressed the editors.

One evening was given up to an Alaska experience meeting, each of the speakers giving what had most impressed them on the trip, on the theme, "What I have Seen in Alaska."

Three Sundays were passed on the steamer and at 11 A. M. of each, services were held. On the first Sunday, Rev. E. L. Conklin, a Universalist minister and editor of the *Universalist Register* of Chicago, preached a sermon on "Doing," from the text, "If ye know these things, happy are ye if ye do them." The second Sunday, Rev. Crafton a Presbyterian minister and editor of Mitchell, S. D., conducted a song service, giving briefly the biography of the author and the facts with regard to each hymn and showing that our most stirring and popular hymns were written by members of many different denominations though having the same religious spirit and feeling, as "Lead Kindly Light," by a Catholic; "Jesus, Lover of My Soul," by a Methodist; "Nearer My God to Thee," by a Presbyterian, and so on. It was a most delightful service and all joined heartily in the singing.

The services on the third Sunday were conducted by the ladies and were the most interesting of the three. Mrs. Greenhow of New York made a very instructive address on missionary work in Alaska and showed, by the great number of interesting facts she related, gathered on the trip, that she was a genuine newspaper woman. Mrs. Jewett, editor of the *Union Signal*, of Chicago, spoke most pleasingly and sweetly on temperance work, and showed a broad spirit of human charity and love, and another lady followed with an address on the work of the Y. W. C. A. in Alaska and throughout the world; her remarks were bright and pleasing, informing and inspiring.

Indians and Editors at old Russian Prison and Coal Mine,
Cook's Inlet, near Port Graham, Alaska

At a called meeting, on the last evening on the boat, resolutions of thanks were voted to all those from whom courtesies had been received, including therein the Alaska Steamship Company, the captain and officers of the boat, and Mr. Will A. Steel of the Seattle committee, who was declared to have redeemed every promise, and the following rhymes, written by Mrs. M. L. Turnage of Mississippi, were read:—

Mrs. Stephen Putney of Virginia, proposed a most expressive and fitting toast to Alaska and spoke briefly of the pleasures of the trip.

The excursionists were not so thoroughly cut off from direct communications with the rest of the world as many had expected. The steamer was furnished with a wireless and excellent service was rendered. A little paper, printed on a type writer, was issued each day, giving brief news items of especially important events from all parts of the country together with the baseball scores of the leading teams, and the local news.

The paper was called the *Northwestern Wireless Tribune*, and had "Ampere Sparks" for editor and manager; Messrs.

Glenn C. Taylor and W. M. Glenn as associate editors and Mrs. M. L. Turnage, society editor.

The following from the issue of August 4th, will be found of interest and will afford a sample of the local news and notes:—

"The ship unloaded 600,000 pounds of freight at port Graham yesterday, most of which went up Cook Inlet and the Susitna River. It kept the men busy for twelve hours unloading it. The four horses that were loaded at Seattle unloaded and they seemed to feel pretty good after their long ride standing, with no chance at all to lie down, for ten full days. But they did enjoy the grass and the rolling they got on shore.

Mr. S. W. Eccles is one of the passengers we picked up at Seward and he will go back to Valdez with us. Mr. Eccles is the president of the Copper River R. R., and vice-president of this ship line, and his home is in New York. He is closely connected in a business way with J. Pierpont Morgan, the Guggenheims and other prominent capitalists of New York.

—*Courtesy of Drs. Fred and Charlotte Baker, San Diego, Calif.*

At the McPherson Ranch, on Central Alaska Railroad, six miles from Seward

Some of the party at Port Graham yesterday took a small boat sailing and went up to the head of the little bay and into the river for a picnic and had a most enjoyable time. They say the river was filled with a million salmon, so many that they caught a number of them with their hands.

Most of the party at Port Graham yesterday spent part of the forenoon chartering the little steamer Tyonic and going up the Inlet to the old Russian penal colony and viewing the ruins. There are about forty natives there who are fishing and running the coal mine that is there. The Russian government had a penal colony there about 100 years ago and worked the convicts in a coal mine. We saw the ruins of the old stockade and the coal mine and several of the party got some old relics, such as spikes from the old ruins. Many pictures were taken of the natives and all concluded that it was a very precarious existence the natives had with none of the comforts of life.

At Port Graham we reached our most western point, 152 degrees of longitude and 59 degrees and 21 minutes of latitude, about two degrees south of our northern point, which was Valdez. A good idea of the location may be had when we say that it is about 160 miles east of Honolulu and in time it is five hours west of H. B. Hale's town in Connecticut.

We had a fine view of Mt. Ilianna, 11,000 feet high and Mt. Redoubt 10,000 feet high and Mt. Douglass nearly 7,000 feet high, as we went up the bay to the penal colony yesterday at Port Graham. These three mountains are on the chart as volcanoes, but Ilianna is the only active one. It was a fine sight to see the volcano sending up its black smoke and steam with white snow for a background, as all three of them were covered with snow with hardly a tree or land showing at all. Ilianna is near the coast, but sixty miles away, and it was easy to imagine the hot lava running down to the sea, although with the black smoke we could not see the lava. This is one of the few active volcanoes in the United States possessions and we were mighty glad of the chance to see it work.

Coming out of Cook Inlet last night we passed close to Sea Otter Islands, but as the killing of these valuable fur animals is prohibited by law, Capt. Croskey would not stop the ship and let the passengers kill any of them which live on the islands and which we imagined we saw on the rocks of the island.

Passengers on board last evening witnessed one of the grandest and most beautiful sights of ocean scenery of which the mind of any traveler could dream. About 9:30 the last dim ray of golden sunshine glistened across the dreary waste of waters from the west, and the sun sank into the blue ocean, leaving a horizon blazed by the varied hues that the artist, Nature, could make and never was cloud and color texture more beautifully blended. We gazed at it in

—*Courtesy Drs. Fred and Charlotte Baker, San Diego, Calif.*

Childs Glacier, with falling Ice

rapturous amazement when some one called our attention to the east and there we beheld the great old moon peeping above the surface of the distant ocean like a dull red flame, making the water gleam like silver, from its light. Some thought it was a ship on fire and were unable to comprehend that it was the full moon until it was well up. The aurora borealis was plainly visible at midnight, and it seemed that the heavenly wonders would never cease."

Mr. Charles Overton christened the "inland passage" traversed by the editors with the new name of "Grand Oceanic Canyon of Alaska"—1,100 miles long and penned in from end to end by snow-capped mountains.

Be a Live Wire

A letter has reached our desk, on the envelope of which, printed in red ink, is the slogan, "Come, be a live wire in a live town." If your newspaper is a "live wire" it will go a long way towards making your city " a live town," besides, being "a live wire," and living an active, earnest life filled to its utmost possibilities with cheering words and deeds and all kinds of useful accomplishments, is the way to live a hundred years and is much more important and helpful to true success and happiness and beneficial to mankind than is the size of your field of work or the positions of honor you may occupy or any office, however great, you may be called upon to fill.

EDITORIAL NOTES AND POINTS

FOR that permanent interest, goodwill and trustful faith in the press, as counsellor, guide and friend, as well as imparter of reliable information, expounder and interpreter of truth, the newspaper should ever be as an open forum to all the people, in which to champion their own rights, and to advocate improvements in all conditions of life. It should be the open, free, independence hall of debate for every rational advocate of improvements in the industrial, in education and government as well as for correcting abuses. Men can not generally meet together for discussions in these days of our great and complex population, but the newspapers reach all and should be open to all. In this opening of the pages of the paper, for the promotion of all good and the correcting of all wrongs, is not only a public duty performed but the course of highest business wisdom is pursued. All men should be treated as free and equal with the inalienable rights of defending life and liberty, good government and the intelligent pursuit of happiness, by every conductor of a newspaper, so long as there is no effort to interfere with, do injury to or in any way to discommode others, but the rather to advance the interests and freedom of all under just laws and regulations.

* * *

No other calling than that of journalism presents such opportunities of gathering and dispensing to others the richest fruits and flowers of human lives. It is doubtful whether any benefit ever results in portraying the badness of the bad. It is questionable whether any one is warned or made better by such publications of misdeeds and it is pretty certain that many are led to copy wickedness, through too great familiarity, rather than to flee its influence. It is, at least, to be regretted that so much is expended in finding out and telling the stories of crimes and criminals, of lust, jealousy, hate, avarice, envy and covetousness and of their resulting violence, injustice and murder, while there is so much of purity, love, friendship, benevolence and goodness with their saving deeds of heroism, self-sacrifice and devotion to all good works—for the promotion of well-being, peace, comfort, prosperity, justice and righteousness—to record and to tell by way of encouragement, example, helpfulness and inspiration to all who may be weak or in doubt or buffetted by the evil that is around or in them. Reproof of wrong and wrong-doers and the laying bare those things that tend to private injury, or public wrong and injustice, is profitable to all newspapers, as well as a duty, but evil communications corrupt public morals and lead individuals into vicious ways. The highest mission of the newspaper is to find, to make known and to exalt all that is best, most helpful, uplifting and worthy in human lives, in the community, city, state, nation and the whole world. This world is, after all, one of light, love, life and beauty, of flowers, blossoms and fruits, with benevolent design manifest on every hand, and to get all the love, the light and goodness and all the seeds of kindness and good deeds into the minds and hearts of men, promises much more for a rich harvest, than the sowing broadcast evils, doubts, and crimes.

* * *

There is no other calling than that of newspaper-making out of which the workers therein may reap such rich harvests to themselves in the way of knowledge of men and of affairs, of broadness of view, of government, of the many openings to thrift and usefulness and of all the workings of society, of politics, finance, trade and commerce. If you are not getting more out of newspaper work, from week to week, than your wages, salary or money-profit, you are making a failure of yourself and missing the grandest opportunities afforded by the calling for advancement and usefulness therein and for thorough preparation to fill the highest positions of usefulness in city, county, state or nation.

* * *

The newspaper is bound by no theory or creed except to narrate events as they occur, truthfully, clearly without fear, favor, prejudice, self-interest, or bias of any kind; for this reason, it is ever the handmaiden of progress. Every new idea, discovery, suggestion or helpful thought or interpretation of phenomena, of cause, or effect, may and ought to be given as news, with all the rational claims on which new thories rest,

without giving any cause for blame. In this way the trades, sciences, commerce, transportation, and all the arts of living, of healing, or governing, methods of higher production and of conversation, are served and men all over the world, at nearly the same time, are able to reap the benefits.

* * *

Aspirations for greater things, broader opportunities and larger influence are not to be counted as vain or useless, when they inspire to worthier efforts in the lines of one's work, but frequently, opportunity, time, energy and needed preparation and concentrated effort on the work at hand, are all frittered away by vain longings for a bigger sphere, while not half cultivating the field that one has and that might be made to yield riches to bless all mankind. One work thoroughly accomplished, though it be in a corner, or one life thoroughly inspired and lead into a noble career, has a power of multiplying and extending until the whole world may be reached and benefited. We have good authority for saying "that which is done in a corner shall not be hid," and "that which is spoken in the ear in closets shall be proclaimed from the house-tops." All great movements, reforms, inventions and discoveries have come from some "corner" of the earth, from some village, or neighborhood, some study, sanctum, workshop, or humble home, and has received its first impetus, been recognized, encouraged, tried, worked out and adopted in some narrow circle, where intimacy and confidence had their abiding place. It is the intelligence, the conscientious, delving and tilling—the thoroughness of the work and not the broadness of the field—that yield the most precious harvest.

* * *

We are pleased to notice, by a recent issue of the Patchogue, L. I., *Argus,* L. B. Green's continued activity in the interests of Suffolk County, Long Island, N. Y. Mr. Green is President of the Suffolk County Board of Trade as well as editor of the *Argus*, and both as Editor and President, he is ever active in advancing his town and county, in a way that shows the true spirit of the useful, successful newspaper man. A second annual outing of the Board of Trade was held on the last Monday in August and Editor Green presided at the banquet and acted as toastmaster.

"In his introductor remarks he outlined the purposes of the Suffolk County Board of Trade—the improvement of all Suffolk County—and spoke of the great beauty of the spot where the dinner was served and of the excellence of the repast itself. He urged every member to take an active interest in the board and to secure all new members possible, as by having a larger membership the organization would wield a greater influence in the development and improvement of Suffolk County."

There is always work for the live editor in the promotion of home improvement and prosperity whether in the old State of New York or in the new States of the Great West.

President Green had secured the following noted men as speakers, which shows that he has gained a wide influence in his work: Judge Wanhope Lynn, Congressman William W. Cocks and Dr. Booker T. Washington, each of whom he introduced in an appropriate and graceful manner.

Judge Lynn referred to the inland waterways as of the greatest possible importance to Suffolk.

Congressman Cocks "made plain his earnestness in the project for deeper waterways. He spoke almost exclusively on that topic and its benefit not only to Suffolk County, but to the state and nation, from a commercial point of view"

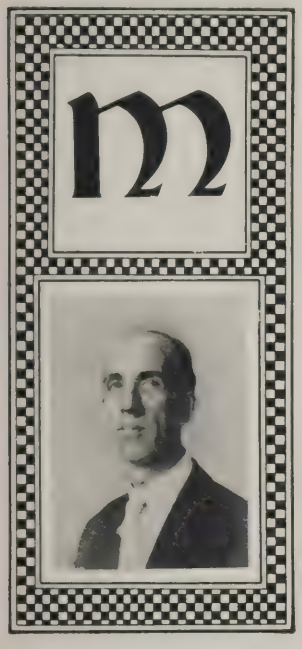
We refer to these points to show our readers how generally the cause of deep waterways has taken hold of the best men in all sections and to suggest and urge the necessity of the newspapers, everywhere, keeping up the agitation for deep waterways and good roads.

Booker T. Washington naturally devoted his remarks largely to industrial education or manual training, which is of vital importance to every citizen, to every boy and girl of the Republic, for it is not only the natural method of education but it is the only effective education that prepares youth for the activities of life, while aiding to the highest mental and moral development. "A sound mind in a sound body" was not only the motto of Greece and Rome in the days of their strength and glory, but has been the practical, underlying, guiding principle of every nation or people that has attained greatness.

Dr. Washington said, in part, "that he had learned to love Long Island because here he could get his feet on the earth, and that he was trying to teach his people, to keep their feet on the earth. He said he liked to get out and dig in the earth after visits to the city. He told of sixty outside schools of which his institute has charge. Each school teaches principally the industry most needed in that particular section. The old-fashioned school houses are superceded. In their place are pretty little houses where the teachers reside and where the pupils learn not so much from books as from nature and the particular surroundings of that neighborhood. Dr. Washington interspersed his talk with many amusing anecdotes. In closing he urged the Suffolk County Board of Trade to do all it can to have industrial teaching advanced in the schools of Suffolk County, to make education touch the life of the people. Conditions should always be studied and the matter of education should always conform to them.

REVIEW OF JOB PRINTING

Address all communications to E. S. HANSON, 925 Linden Ave., Wilmette, Ill.



MOST of us are now wearing ready made clothes. Several years ago we thought they were not good enough for us; and those of us who are tall and slim, short and fat, or otherwise do not conform to the standard model of person, could not be supplied by the ready-made dealer at all. The manufacturer of ready-made garments has, however, risen to the occasion and is making goods which not only fit all of us, but which also make an appearance fairly satisfactory for general purposes; so much so, in fact, that the tailors have seen their business fading away from them, and within the last few months have entered upon a campaign of co-operative advertising in an attempt to convince us that the made-to-measure product is in every way superior.

I have brought this up simply because it furnishes us a case analogous to that of the typographer and the engraver. The typographer is using stock materials, and may be said to correspond to the manufacturer of ready-made clothing. The engraver, on the other hand, makes each design for one particular use, thus representing the custom tailor. Here the analogy ends, however; for while the custom tailor seems to be losing business, the engraver seems to be creeping up on the typographer and capturing much of the good work that the latter should rightfully have as his own. It is simply up to the man who handles type to adopt the tactics of the manufacturer of ready-made clothing and fit his product to all conditions, so that it will be considered entirely satisfactory in almost every case.

I take a large amount of pride in the art of typography and I believe it has practically unlimited possibilities. I am extremely anxious to see these possibilities developed to their full extent, rather than having our craft overshadowed by allied lines. I am anxious to see a number of typographic artists develop to such an extent throughout the country that it will not be considered necessary to call in an artist and engraver to get up designs for every booklet cover or title page which comes up.

* * *

We must, however, get away from the idea that the type founder has done everything for us that is to be done, and that we are simply mechanics employed to put together his designs. The multiplication of type foundry designs and the introduction of mechanical processes has of course been extremely advantageous; at the same time it has given to the less persevering members of the craft an idea that they can get up satisfactory designs without the expenditure of any gray matter on their own part. To this extent these innovations have actually been a detriment. The man who has but a few fonts of type and a small case of brass rule realizes the poverty of his equipment; and if he is worthy of the trade he makes every effort to make up for this deficiency by an expert handling of the material at his command. I am not arguing that we should have less equipment; but I do insist that we

should take into the use of this increased equipment the same spirit with which we handle a smaller amount of material. The type founders have not undertaken to supply brains for the man at the case; they have simply tried to give him a superior equipment by which he might with the same expenditure of energy on his part turn out superior work. In a large number of cases, however, printers are relying too much on what the foundries have done for them and too little on their own efforts.

I sincerely hope that this does not look like scolding, for that is of little value either in a publication or elsewhere; but I have a pride in typography and am jealous of any inroads made into the field which really ought to be ours.

* * *

We are to have another contest in the very near future. I am not at present able to announce the details of it; but I can say this much, that it will be directed along the line of getting up some attractive department headings for the NATIONAL PRINTER-JOURNALIST. These headings are changed from time to time, sometimes being set in type and at other times being engraved. It has occurred to the publishers that there are among our constituency a large number of printers who would be glad to see their work in the headings of this journal, and who are competent to get up headings which will be not only creditable to themselves, but to the publication as well. I should like therefore to have our friends start to thinking along this line. I do not know as yet what the prizes will be, but I believe one of them ought to be the imprint of the successful contestant underneath the heading which he has designed.

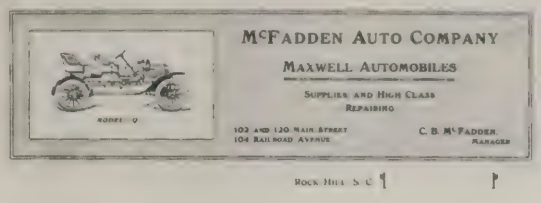
of it. I think, however, I could name several of my friends of this department who could get up a head of which all of us would be proud; and there are no doubt many others. This month we start out with some engraved headings, which will be used for a few months, at the end of which time I hope we shall have something in from this contest, which the publishers will consider a desirable substitute. Details of the contest will probably be given next month.

The samples and catalogues which are sent out by the paper houses are a part of the education of almost every printer, and every office should see to it that these samples reach it regularly. A large number of them are printed in the highest style of the art, and one of their greatest values is in the color schemes which thy show. These samples are gotten out for the most part by artist printers, who are well trained in color combinations and who understand how to bring out the value of the colors and qualities of different kinds of stock to best advantage. I have before me a number of samples from Henry Lindenmeyr & Sons of New York, which bring out the point I have suggested. One of them is a little book of samples of



No. 6

Translucent bristol, each one having printed upon it a small design in an ink appropriate to the color of the board. Even this one example furnishes me sugges tions in color schemes which I had not thought of be-

fore. Other samples sent out by this house are Minton enameled embossing cover, and an enameled book paper which is called Colored Woodcut.

I am showing also two pages of a little folder sent out by the J. W. Butler Paper Company of Chicago, together with samples of index bristol. This house sends out from time to time some very handsome advertising and I would advise any one within its territory to get on its mailing list.

* * *

A little folder from the Queen City Printing Ink Company suggest to me also to say a word in regard to advertising matter sent out by the ink manufacturers. While to a considerable extent such literature attempts to include as many colors as possible rather than pleasing and harmonious combinations of two or three tints, they are extremely educative in showing the different colors which are being manufactured.

* * *

There is a call very frequently for a letter head which will accomodate a small amount of writing. For this purpose the note head is almost obsolete and very many people do not care for the memorandum head, believing that it looks "stingy." To take the place of this the American Type Founders Company seems to be using a head of unusual size with a wide border around it, reducing the space for writing to a small compass and thus giving the letter the effect of filling the page. This head is 7¼x10½ inches. Of course, the only disadvantage in the use of such a head is that is has to have a special sized envelope to fit it. In the present instance it is folded in three folds, and enclosed in a large envelope. It could, however, be folded in quarters and sent out in an envelope somewhat approaching a baronial in shape.

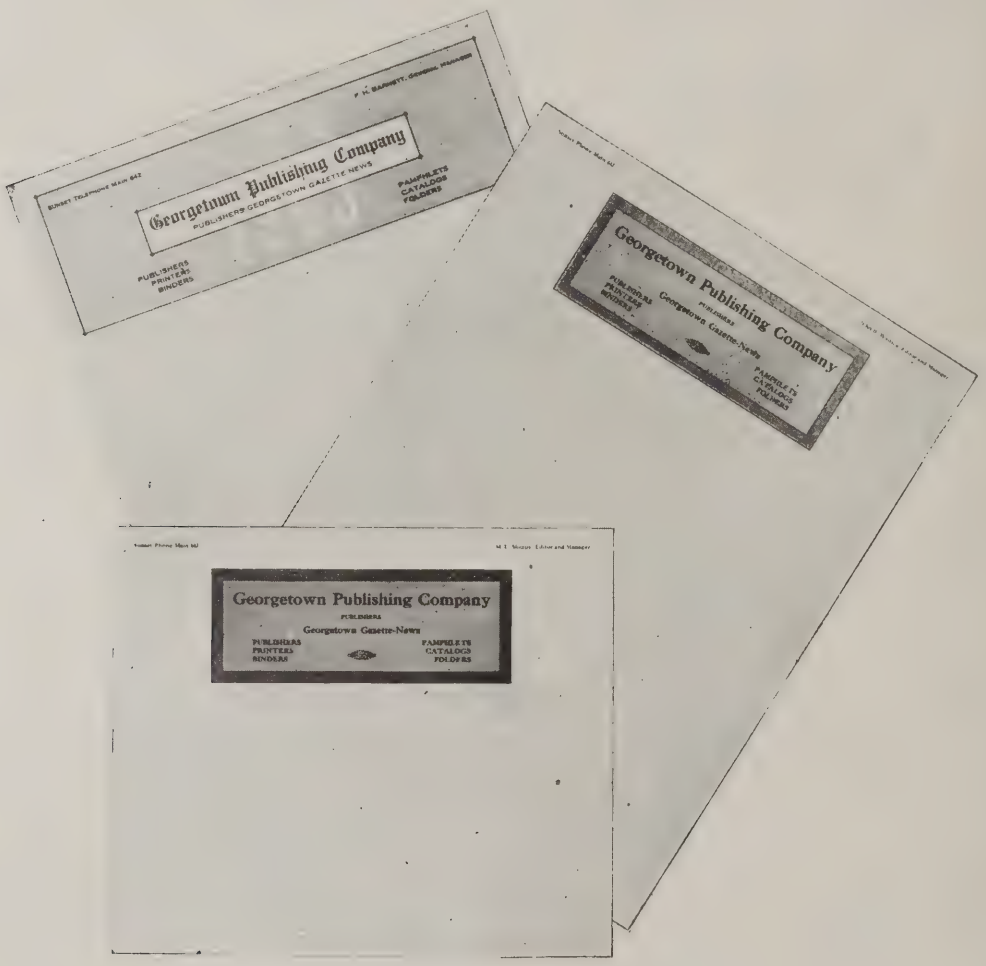
I am here showing two pages taken from a little catalogue sent out by the Dodge Manufacturing Company of Mishewaka, Ind. It is gotten out in two colors, the cuts and descriptive matter in small type accompanying them being in black and the rest of the page in brown. It presents a decidedly attractive appearance all through.

* * *

I am here showing a post card sent out by the Northern Pacific Railway. It is 6¼ x 8½ inches in size and is printed in two colors, the familiar red and black which this company seems to delight in.

* * *

Sam H. White, Rock Hill, S. C., sends a letterhead of the McFadden Auto Company which is well worth reproducing. I wish I might give it in the three colors of the original but will do the best I can with a half-tone. The tint as shown there is a very light green, the rule work is in orange and the type is in brown. It is not only well designed but is superbly executed.



Work of J. C, Farmer, Georgetown, Wash.

* * *

I have from Warren S. Dressler, Camden, N. Y., a bunch of specimens of considerable excellence, several of which are being shown in this issue. To me the most interesting are those to which he has attached the original copy as submitted to him. The improvement in each case is to be seen at once. These originals look like some of the work which was turned out in the early days of my apprenticeship. Possibly

some one will be able to guess my age from this statement, and I am willing to confess that it was a long time ago.

* * *

I have from J. C. Farmer of the Georgetown Publishing Company, Georgetown, Wash., three different letter heads for his company. I do not like the larger one with the tint background. It has the appearance of being larger than necessary, and having this back ground simply to fill in black space. The other heads are fairly satisfactory, though there might have been a little more care on the press.

* * *

The *Monroe County Democrat,* Sparta, Wis., sends

A Neat Letter Head

heading is used. In this case, however, it is not to be deprecated by any means. The pages are much larger, being 8x10½ inches, and for the most part there is little other illustration. In this case, therefore, the

By Warren S. Dressler, Camden, L. J.

in a bunch of work which I am glad to see. Many good specimens have from time to time come from this office and I believe it is capable of producing many more. I am showing a number of these specimens in this issue.

* * *

A couple of months ago I took occasion to comment on a booklet sent out by the one of the railroad companies in which a half-tone running head was used on the pages. This I did not like because the pages were small and nearly every page contained in addition a large half-tone illustration. I am showing here a page from another catalogue in which this same style of half-tone head is used to very good effect. This page is taken from a catalogue printed by the Stewart-Simmons Press, Waterloo, Iowa.

* * *

I am here showing a title page taken from a little booklet which has just reached me, regarding an exhibit of American periodicals. This exhibit is intended to be taken from city to city and placed on exhibition for a period of days or weeks. While I have nothing to say about the merits of such an exhibit, the booklet which announces it is well worthy of inspection from a printer's standpoint.

Alaska and the Exposition

(From Ontario, California *Record,* August 26th.

Alaska contains 590,844 square miles of territory, or, roughly calculated, an area equal to about one-fifth of all the other main land possessions of the United States.

Texas contains 265,780 square miles, California contains 158,360 square miles, Oregon contains 96,030 square miles, and Washington contains 69,180 square miles. Total, 589,350 square miles.

Alaska, therefore, has an area equal to these great states with a trifling surplus, about equal to the state of Rhode Island. Her coast line is about 26,000 miles long, or greater by 1,000 miles than the circumference of the earth, at the equator.

The big Treadwell mine on Douglas Island has alone produced more gold than this government paid for all Alaska. She has enriched the nation with $52,000,000 worth of furs; $50,000,000 worth salmon and has produced $165,000,000 in gold.

A Shipping Scene on Puget Sound

Alaska produced $19,000,000 in gold during 1906 and geologists assure us that there are many great mineral deposits still undisturbed by the prospector's pick. Vast deposits of copper and coal exist at the headwaters of the Ianana and elsewhere, and their development has now begun. Tin is found on the Northern coast of Seward Peninsula and the quantity and quality of this deposit has been reported upon favorably. No census has been taken of Alaska since 1900. The population at that time was 63,592, of whom 30,507 were whites, 29,536 natives and the rest negroes and Asiatics. There has been a considerable increase during the past ten years and the white population is probably over 75,000 now.

* * * * * * * * *

In southeastern Alaska the islands and main coast are covered with very dense forests of spruce, hemlock and cedar. In this section some twenty small mills operate, supplying a quantity of lumber of fair grade for home consumption. Along the Yukon are vast forests of spruce, birch and willow. The timber varies considerably in quality and size in different sections. Dawson mills, for instance, furnish from native sources a large percentage of the timber used in mining operations on the Klondyke.

* * * * * * * * *

One thing Alaska does not need, that is boosting. She has more loyal citizens than any country I have seen, population considered. The various towns vie with each other for commercial supremacy and while the rivalry is a pleasant one, yet it is sufficiently keen to keep each of the municipalities alive. As a result every community is bending every effort to outdo its nighbor. In the dozen or more towns I visited I made it a point to interview as many business men and others as possible and without exception they were loud in their praise for Alaska and a unit in proclaiming it the only place on earth to live. They say that if one lives there a year he will not be satisfied to live elsewhere. Californians, while they are a loyal lot for their state, yet there are many, especially in the smaller towns like Ontario, who are given to decrying anything and everything about their own community. From these Alaska boosters they could learn a valuable lesson.

Several things are needed to give to Alaska the full share of what the country is entitled to. For instance, your Uncle Sam has spent no money along the coast line of the territory. With more miles of coast line than there are miles around the world there are no light houses, beacons, bouys, or other coast aids, for the ships that ply the waters of that country. The route known as the inside passage takes the traveler along hundreds of miles of Canadian shores, and let it be said for the northern neighbor that they have proper assistance for the vessels that travel that way.

Here are some entertaining views, incidents and facts by Editor Orno Strong, published in his papers—he has three—*The West Coast Trade,* Tacoma; *The North Coast Trade,* Spokane; and *The Oregon Tradesman,* Portland:

THE BEGINNING OF THE END.

The last stage of the journey was decidedly interesting. The Northwestern steamed down beautiful Resurrection bay, through the great gates, guarded by three mountain sentinels, and out into the ocean. After a blessed day's work the sun went down in a glorious blaze of color, with the serrated peaks of the coast line of the Kenai peninsula silhoutted against the evening sky in artistic profile. Then, from far across the waste of waters to the eastward came another light, which took the form of a great red globe and the full moon rose stately from the ocean. Within the next two hours the beautiful Aurora borealis lighted up the northern sky, and the significance of the term, "Land of the Midnight Sun" dawned upon us.

Port Graham, Aug. 3rd, is the place and date that marks the westerly end of the editorial excursion of 1909. The place consists of a good wharf, warehouse, small store and agent's

residence; the day a perfect summer one, warm and clear. Port Graham is situated on the west coast of Kenai peninsula in a sheltered harbor off Cook Inlet.

* * * * * * * * *

NATURE'S PICTURE GALLERY.

The scenery presented to our view was as beautiful and sublime as ever pleased the eye of man. The port opens directly into Cook Inlet and the granite peaks that line the shores and protect the entrance of the harbor show the wear and tear of ages. Wind and wave have cut great caverns clean through the rocky cliffs and honeycombed them into a thousand fantastic shapes. Three magnificent mountain peaks stand out distinct and vivid on the far shore of Cook Inlet. caught on the return trip. While steaming through Sumner strait, Aug. 9th, near the close of the day we had a sublime

Courtesy Northern Pacific Railway

Scenes in Seattle, Washington

Seattle from Elliott Bay — On Capital Hill — Second Avenue

view of a cluster of mountain peaks designated as the Devil's Thumb, Kates Needle and Castle mountain. In the foreground were the smooth waters of Sumner strait, then the The largest of these is the volcano of Mt. Iliamna clothed in a spotless garment of white reaching down to the water's edge, and emitting a volume of white smoke from one of its craters. It is 10,900 feet high and 60 miles away.

* * * * * * * * *

THE NEW JERUSALEM.

Many of the beautiful views missed on the going were forested hills, like the green hills of Eden, and above all, mountain peaks in garments of spotless white lifting their spire-like forms above the clouds into the light blue of Heaven. It was an entrancing scene of rare beauty and reminded us of the New Jerusalem written about by St. John in the Book of Revelations.

* * * * * * * * *

FATHER DUNCAN'S METLAKATLA.

The most interesting place we visited on the return trip was Metlakatla, the unique but successful sociological Indian colony, founded by the venerable Wm. Duncan. The party was met at the wharf and welcomed by Father Duncan, conducted to the church and thence to the town hall where he gave a reminiscent talk on his work among the Indians. Father Duncan is hale and hearty at the age of 78 years and says he has never been sick a day. He has devoted his entire life to missionary work among the Indians. First, for thirty years at Port Simpson, B. C., when, owing to some disagreement with the Church of England, he left with about half the tribe and settled on Annette Island and transferred his allegiance to the United States. The government gave him a grant to the whole of Annette Island, about 133 square miles of land. He has been and is still the brains of the colony and transacts all its business; has educated the Indians and taught them to work. Heretofore the principal industry has been fishing and hunting, but Father Duncan says the fur-bearing animals have grown scarce and the white man seems to have a monopoly of the fishing, therefore he will now turn his attention to farming. The business of the colony is represented by a

cannery, saw mill and store. There is a fair class of frame buildings and a large cathedral, containing a pipe organ. There are no streets, but good broad walks and commons and playgrounds, and a definite municipal system of government.

Alaska, designated as the outcast territory, is just coming into its own glorious heritage. The government now makes an annual appropriation for the construction of military and post roads, bridges and trails. It has already constructed 452 miles of wagon road, 397 miles sled road and 256 miles of trails. The appropriation for 1908 was $250,000.

The government has also constructed 2,524 miles of submarine cable, 1,403 miles of land wire and 879 miles of wireless. Its service covers every industrial center and prominent mining camp. The wireless has been one of the most useful factors in the development of Alaska, as during the winter frequent breaks occur in the land wires. The intervening mountain ranges do not interfere a particle with the transmission of wireless messages.

* * * * * * * * * *

A Montana Trout Stream

SOME WORD PICTURES OF THE ALASKA-YUKON-EXPOSITION.

From the Ontario (Cal.) *Record.*

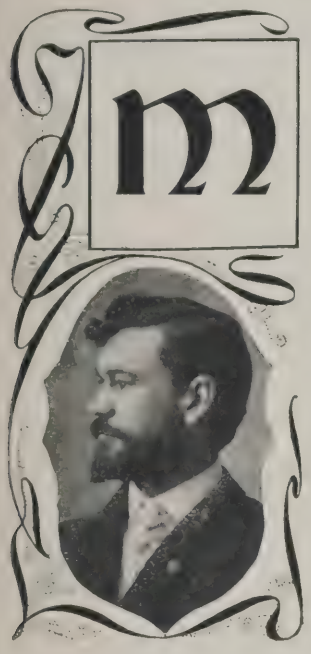
The grounds are very beautiful. The Grand Central Court of Honor with its cascades and geyser basin makes a beautiful vista. In the view from the upper part of the court can be seen in the distance, the Olympic Range, Mount Rainer and Lake Washington. Terraced up from the walks to the buildings are wonderful beds of flowers. They consist for the most part of the immense Shasta daisies, poppies, pansies and Sweet Williams. There are many roses, but to us of Southern California where roses grow abundantly, they seemed few in number. The flowers were arranged with wonderful taste as to coloring, and grew in such profusion that they made a beautiful setting, with velvety green grass, for the buildings. The buildings are of a deep cream or ecru and blend in harmoniously with the trees, the flowers, the water and the sunshine.

* * * * * * * * * *

One of the buildings overlooked by many visitors, because small and perhaps unattractive, is the Spokane building. I spent quite a little while in this building. True it is small but I could only think what a labor of love had been expended on the interior. As is usual in such a building, were the displays of fruit, vegetables, grains, etc. But that which appeals to me were the wonderful panels in the sloping roof. Here were depicted scenes from actual photographs. There were a mountain scene, railroad, river, Indian, hunting, lake, a farm in all details, and many others, and these were all produced by the use of the various grains raised there. In all the details as to light and shadow they could not be improved upon.

We walked down Pay Streak to wait until the beautiful sunset should disapear and the hazy twilight creep on and then in the misty twilight we wandered back again to the Court of Honor. As if by magic wand, waved by an unseen hand a transformation scene took place. The crystal cascades now became cascades of color, now red, now green, now blue. The buildings a creamy white by day, now scintilated with myriads of dazzling lights and became palaces of gleaming jewels. Turn where you would, a scene of dazzling brightness greeted you on every hand. Overhead the vaulted blue skies, studded with stars, on either hand below a scene of beauty and brightness never to be forgotten, and as we slowly wended our way homeward, we turned for a parting look to take home with us a memory picture of the beautiful Seattle fair.

NEWSPAPER CRITICISMS



MR. H. G. BISHOP, in his department of Business Management, in this journal for last month, asks why there are no millionaire printers. There must be a reason—possibly there are many. The term printer covers too wide a field for me to attempt to consider here, but I believe I can throw a little light upon the subject as to why there are no rich country

were once pitted against liars of the community

tion: The two notorious

—but it will bear repeti-

editors. You have doubtless all heard that old story

—I am not sure that I have not rehearsed it myself before in these very columns

each other at a public gathering, it being agreed that the one who could stretch the truth the furthest should win a liberal purse of money. Accordingly, Liar No. 1 took the floor, cleared his throat and began his story: "Once upon a time," he said, "there lived a rich country editor—" "Give him the prize," shouted Liar No. 2, "I can't beat that." To me it is the simplest thing in the world why there are no rich country editors. The condition of modest comfort or sheer poverty prevalent among country newspaper-makers is plainly due to the fact that here is a class of business men who year after year sell their chief product, namely, the newspaper itself, at the least possible profit, and frequently for no profit at all. As the cost of raw material rises, so the tinker and the tailor raises the price of their products, and I know of hundreds of newspapers that have sold for $1.00 per year without change for the last fifteen years, notwithstanding that recent years have witnessed a steady increase in the cost of nearly everything that has gone into their manufacture. I have in mind a young country editor who is putting out an ideal little paper. In size his is a small sheet, but a big one in point of contents, each issue containing from six to eight galleys of ten point solid. This young editor, although a very busy man, keeps exact records of every transaction in a complete set of double entry books. He therefore knows to a cent just what each department of his business costs him, and likewise just what each nets him in profits, and he tells me that on each one of his 800 subscribers he would clear ten cents per annum, provided each and every one of them would pay up promptly at the end of the year; but, it is needless to add, like all subscription lists, there are always enough who do not pay up so that the interest on their accounts alone would probably more than eat up the $80 representing the 10c per capita profit. The consequence is that this editor just about strikes even on his subscription accounts at the end of each year. Just think of it: Printing a paper fifty-two times a year, working at least three days out of the week to perform a labor which barely pays the expense of itself without netting the owner a cent of profit. The yearly subscription price of this paper is $1.00. Now, if it were $2.00 instead of $1.00, the proprietor would find the business of publishing his little newspaper, together with the advertising patronage, far more profitable to him than his attention to all three branches are at present. He would be able to run the office entirely without help, and in that event, too, the work would doubtless be of a higher grade than the kind of workmen he is able to employ are doing for him to-day. But as it is, my poor young friend is living a very strenuous life, grabbing a gripful of samples and rushing to neighboring towns after business whenever there is a momentary lull in the regular routine work, poring far into many a night over his books or his typewriter, slaving at the job cases, and breaking many a Sabbath, simply that he may make both ends meet, feed his wife and babes and pay his help and his current bills—and all on account of this folly of the dollar-a-year paper. And why does he not raise the price of his paper, do you ask? Simply because he might just about as well lock the office door and move on. It would all be practically the same in the end with two big county-seat papers and as many as a dozen other contemporary dollar-a-year papers in the field. A newspaper is pretty much only a newspaper to the public, after all, and size of page is always a strong selling point. My young friend runs a small office, works like the "devil" (in the truest sense of the print-shop term) does about $2,500 worth of business annually, and hasn't the capital with which to start a fight with his richer county competitors. If there are no rich country editors, they have their fool dollar-a-year rate to blame for it.

* * *

Mr. O. Byron Copper, De Soto, Wis.

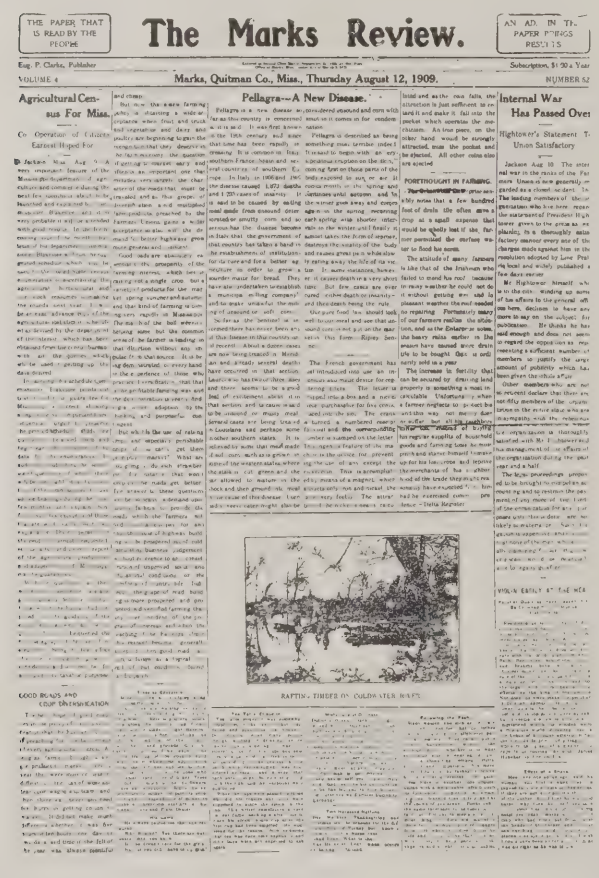
DEAR SIR:—The N. P.-J. for September is at hand. I notice by it that the copy of the *Herald-News* which I sent you found very little favor in your department. While the criticisms offered were duly appreciated, I am going to take the liberty as an interested reader of the NATIONAL PRINTER-JOURNALIST and particularly, of your department, to explain the situation and to ask you a few questions.

You advocate a front page which contains no ads of any kind for the country weekly. In this office about five galleys of news matter is set every week which puts into service practically all the body type in the office. This together with our ads—and there are no deadheads—fill up the four pages of the paper which we print at home. If I were to attempt to make up the front page without the use of ads, I would have to run front-page articles, editorials and locals all on the same page, and would thus have no distinctly separate departments whatever. On the other hand our inside pages would be filled with nothing but advertising matter. This, in my opinion, would make the crudest kind of an appearance for a paper.

There are a few papers in the state of North Dakota that can boast of a front page made up entirely of news matter. Some of these are run for political purposes by men of wealth; some of them are almost as free from advertising matter on the other pages as the first one, while a comparatively small number of them are run on a paying basis. It seems to me that it is time that the newspaper business was employed as a means for owners to make a comfortable living, rather than to work for the "glory of the cause" alone.

Another proposition: If all papers would adopt your methods of making up a newspaper throughout, would there not be a tendency to make all newspapers alike, in mechanical appearance? Would you recommend a monotonous samesess in the make-up of every newspaper in a state for example? It seems to me that by advocating your method as the only sane way of making up a paper, you are discouraging any attempt to incorporate anything new and original into the general make-up of the paper.

A printer, however ambitious and painstaking, has in a small country print shop almost always some adverse and trying conditions to contend with. With a scarcity of good material, and customers who have ideas of their own and are willing to pay special prices to have their ads run on the front page it is is hard for the employe to get things done the way he might want them. Those are things for which I think it is hardly fair to blame them.



The Marks Review.

Marks, Quitman Co., Miss., Thursday August 12, 1909.

Agricultural Census For Miss.

Pellagra—A New Disease.

Internal War Has Passed Over

Exhibit 1

I am sending you this because I want to learn, principally, if you believe there is only one right way to make up a country newspaper.

Yours truly,

R. A. Qualey.

I find my work on this magazine in effect identical with my regular newspaper work: If I praise a man, he is pleased; if I censure him, he is incensed. And how can it be different, when in both cases I have to deal with human beings? Of course, one might expect a little different results when dealing with men of his own calling; but we cannot get away from the fact that we are all human. I welcome this objection from Brother Qualey, however; but I consider his contention that the clean front page is impracticable and only a luxury which the oppulent and influential newspaper can enjoy, is the purest kind of nonsense. I have run small country newspapers, under the most trying circumstances that a printer ever went up against, without a cent of political boodle to buoy me up, either, and knew just what it is to be overburdened with displayed advertising, too; still, I never found it impossible to maintain a front page that would have compared favorably with any of my richest contemporaries. "Where there's a will, there's a way." I want to add, too, that never yet to my knowledge have I lost a dollar's worth of business on account of my high ideals; quite to the contrary, I know of many a job of advertising I have landed merely because I maintained a neat, dignified paper, a paper that gained a reputation in its field for bringing results for its advertising patrons. I recommend nothing to the fraternity here with a view to causing them to lose money; but I am urging them all to adopt such methods as I

have tried out and found both practical and profitable, both from the standpoint of the artist and the commercialist. If the Edmore *Herald-News* hasn't enough "dress" to cover her, more ought to be provided; and a paper that is so overcrowded with business as this one, cannot consistently plead poverty. If there isn't enough room to provide the proper proportion of reading matter, then the size of the page ought to be increased, else the all-home print system adopted. There's no use trying to prosper by hampering pros-

Exhibit 4

perity with makeshifts. As regards the brother's complaint that my recommendation of similar method of makeup for all newspapers must tend to destroy individuality, he might just as logically contend that the upright physical likeness of mankind leaves no chance for human individuality. In my own country there are as many as half a dozen newspapers, anyway, which are made up mechanically almost exactly alike, yet individuality is just as strong in each as the distinction between blondes and brunettes. There is not the slightest hint of monotony. Moreover, in all the hundreds of papers that I have reviewed in these columns that maintain clean front pages, I have yet to find two so near alike that distinction seems to have been lost. That Brother Qualey thinks the rules I advocate would tend to discourage originality in the makeup of newspapers, convinces me that he is either a confirmed pes-

simist or had been suffering from acute indigestion when he wrote me this letter; for radically to the contrary does the folowing out of my suggestions tend to inspire and encourage the makeup man to newer and better things. And now, in conclusion, it affords me an abundance of pleasure to reply most emphatically from the bottom of my heart that *I do believe there is but one right way generally to make up a newspaper* —first page clean; ads on all other pages graduated, with largest space at bottom, and all to the right hand sides of the pages—exactly as there is but one technically right way to spell "cat." The novice and the unschooled may write it "kat," but that doesn't look good to those well versed in orthography.

* * *

MARKS, MISS., August 14, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending four latest copies of the Marks *Review* for your criticism. Don't want any compliments unless deserved. Have just recently made the *Review* in this form, having recently put in a small cylinder press. This paper is published in a town of less than 800 people. With an ordinary, but new, outfit, am trying more and more every week to carry out your ideas of a clean title page.

Thanking you for your opinion, good or bad, I am,

Fraternally, EUG. P. CLARKE.

An examination of Brother Clarke's paper is gratifying. A clean front page is maintained (Exhibit 1) with fairly good contents, a pretty creditable print is

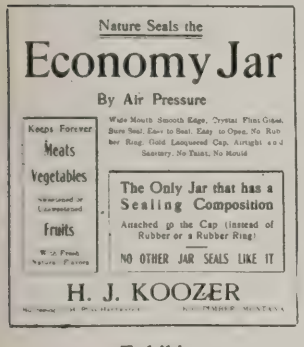

Exhibit 5

Now is the Time
To Spring the Question Again
Are You Going to Build this Season, and do You Want the Best Stock at Right Prices?
Crane-Johnson Company

Exhibit 6

secured and excellent modern type faces figure throughout in the typography. I have particularly noticed the modern ideas in evidence in the ad composition. This is, of course, not flawless, but constructed along promising lines. I do not particularly admire the present style of heads employed, as evidenced in the reproduction, and would earnestly advise something better, as so frequently described in this department. Especially are cap lines to be preferred and all end punctuation should be omitted.

* * *

Exhibit 2 illustrates the unique method by which the Covington, Tenn., *Leader* advertises its ad genius, Brother Tom McGregor, and the department over which he presides. This was a neat little blotter—a commendable form of publicity.

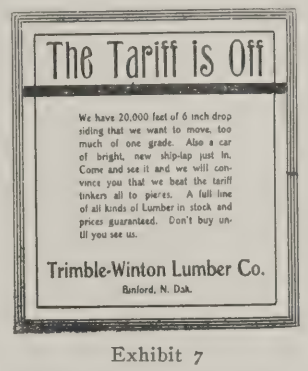
* * *

Because the following letter voices a sentiment that I have long cherished, I reproduce it herewith. The problem in a print shop is to get the work, do it well, and then deliver it in the least possible time. Now in this day of keen competition one cannot expect to continue or even begin to get the work unless he can turn it out in first class shape and do it quick. Nor can he reasonably expect to do either of these latter things without good material. That stated, the whole problem solves itself: Get the material first; this facilitates the work, enables the printer to deliver the goods in the shortest length of time, printed in the most up-to-date faces and fashion, which in turn insures future business. Following, then, is the opinion of men who trying this plan:

GLIDDEN, IOWA, August 13, 1909.

Mr. O. Byron Copper, De Soto, Wis.

FRIEND COPPER:—I am writing you this time to correct an impression you have gained to the effect that the firm of Orchard & Rubey have the means to improve their plant as they see fit. This is incorrect. I wish it were as you think. However, you had something in the N. P.-J. which pleased me much and set both of us to thinking. It was that if you had to borrow money to improve your plant you would get what improvements were needed. I have long contended that material and plenty of it was cheaper than labor. You seemed from the article to think similarly. We decided to try the experiment and did. The result is some radical improvements. The machine seemed a necessity as it is not always easy to secure good help and we do not desire to employ help less efficient than ourselves for we can do enough hard



The Tariff is Off
We have 20,000 feet of 6 inch drop siding that we want to move, too much of one grade. Also a car of bright, new ship-lap just in. Crockery | Glassware | Shoes
Dry Goods | Furniture | Clothing
We think you will be interested in knowing where you can buy your harvest supplies most economically. We venture to tell you that we are in a position to sell you groceries as cheap and in many instances cheaper than you ever bought them before. We handle only those goods which we know are good values—only goods which we know will satisfy you and every customer in every way. Quality cannot be shown on paper. Let us show you what we have to offer.
BUCHHEIT, BAKKEN & Co.
BINFORD NORTH DAKOTA

Exhibit 8

Exhibit 3 is an ad specimen from the Glidden *Graphic*, the paper of which the author of the above letter is one of the publishers. It shows the beauty of simplicity of typography and perfect massing.

BIG TIMBER, MONT., August 10, 1909.

Mr. O. Byron Copper, De Soto, Wis.

MY DEAR SIR:—Inclosed you will find a couple ads on which I would like very much to have your criticism.

Thanking you in advance, and best wishes, I remain,

Yours fraternally, RUDOLPH SMITH.

I am exhibiting both of these specimens from this contributor, as Nos. 4 and 5. Both are neat, pleasing examples, denoting the advantage of natural, simple composition and care of treatment in detail. The attention to design, massing and display has been almost perfect and therefore the result is pleasing. In No. 5, however, the inter-spacing of the word, "Sealing," while the balance of the line remains normal, is a grave error which should never be repeated. In such cases of letter spacing, treat every word in the line alike.

* * *

BINFORD, N. D., August 13, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending you under separate cover this week's copy of the Binford *Times* and hope you may find

room in your valuable publication to give me such pointers as may suggest themselves to you. They will sure be appreciated.

The *Times* is a one-man shop—all the work from soliciting advertising and job work down to washing rollers and sweeping out is done by myself.

Trusting you find commendable work in the paper, I remain,

Yours,

C. E. PETERSON.

Notwithstanding that Brother Peterson fails to maintain a clean front page and isn't exactly following my ideal method of making up his other pages, I still find much excellence in his paper, the Binford *Times*. There's good editorial work, excellent press-work, and first-class typographical work in evidence. Truly one who can achieve such standards of excellence in three departments of the calling is exceptional. The *Times* may be a "one-man paper," as Editor Peterson says, but the amount of high-grade advertising matter and clean, well-set straight matter in its six-column pages would never hint it even to an experienced newspaper maker. So excellent is Brother Peterson's advertisement composition that I cannot forgo showing several of his fine ad-specimens as Exhibits 6, 7 and 8. Note well their fancy, yet simple, design, their clean strong masses of black, gray and white, and their exquisite balance throughout.

Exhibit 10

In many respects Brother Clore's Warsaw *Leader* is highly complimentary to this department, inasmuch as it has been the confessed endeavor of its publisher to plan it along the lines advocated herein; and particularly is this true with reference to contents. And yet the advertising support is limited, and hence there is column after column left for reading matter. Contrary to custom, none of these contain plate, but are all filled to overflowing with crisp, spicy home-set local news. The fine, clean front page may be seen as exhibit 9. On the inner pages, letters from some two dozen correspondents appear—and this is going to be one of the principal features in deciding the *Leader's* future success. At the time these papers under review were printed the Leader was sending to Atlantic City the young lady who would secure the greatest number

of Leader subscriptions. This is an excellent scheme for popularizing and advertising a country paper. Thus far I have forgotten to say that the *Leader* is a six-column folio, printed wholly at home. Its impression is highly creditable, and, while at present the typography is plain, this may improve, I trust, as the paper becomes better established and settled down to profitable work. Personally I wish the *Leader* an abundance of success.

* * *

The next letter I have to present is one of rather a personal character, but it contains so much that is pleasing, such a fine sentiment—the sentiment of the man who has got the print-shop odor in his nostrils, the smear of printers' ink on his hands—and loves 'em both, that I want to share it with the rest of you. ST. MARY'S MISSION—ITS ACCOMPLISHMENTS AND AIMS IN THE REALM OF EDUCATION

Exhibit 11

"circular" to which Brother Johns refers in the following epistle is really a newspaper—a store newspaper—but quite unlike the average store newspaper, for it bears the touch of the master newspaper man on every page, in every column, and in every paragraph. For convenience sake, I reproduce two pages of this folio (Exhibits 9 and 10). The first shows the first page, a fac-simile of that of the perfect modern newspaper. Scrutinize this exhibit carefully; note the news that this man with a "nose for news" has gathered from the shelves and counters of the Wolbach store. No one but an experienced newspaper man could have done it so well. The second page shows another feature of the "circular" (the last three pages of which were full page ads). In this ad the "marks" were in red, making a unique effect. Throughout the typography of this circular was fully up to the eminent grade of the text. Here is the letter from the writer of this gigantic and creditable advertisement:

GRAND ISLAND, NEB., August 5, 1909.

O. Byron Copper, De Soto, Wis.

DEAR BROTHER COPPER:—I am in receipt of a letter today from Col. Herbert, containing a clipping from the "Newspaper Criticism" department of his excellent publication. I wish to thank you very much for the kind words that you have said in my behalf, and although I have not yet seen a copy of the PRINTER-JOURNALIST, I know that the ads are reproduced in an excellent manner.

Do you know, Brother Copper, that if you don't receive any returns in this world for the roses that you throw in the paths of your fellow workers, and the kind words of help and encouragement that come from your pen, which cheer, comfort and make us better newspaper men, that somewhere and some time in the Great Beyond there will be a reward for you for the good work that you have done and are still doing. I cannot find adequate words to tell you of my appreciation of the kindnesses showered upon me. While they might not have been wholly deserved, yet I know that they have caused me to strive and to reach forward for better things.

If It's in the Okanogan Country

BLACKWELL'S DEPARTMENT STORE

Has it in its Merchandise Stock

Why should you spend valuable time waiting for some small local merchant to order what you want?

SEND US YOUR ORDERS FOR ANYTHING IN OUR VARIED LINES. WE PROMISE THE BEST SERVICE OF ANY HOUSE IN THE COUNTY AS WELL AS RIGHT PRICES

Items of interest to most people now are

GENERAL HARVESTING SUPPLIES

We have everything in this line---McCormick Rakes, Mowers, Binders (Machine Repairs for the above), Steel Cables, Manila and Sisal Rope, Jackson and Harpoon Forks, Hay Pullies and Carriers, Hand Forks, Oil, Oil Cans, Machine Wrenches and Tools, Binder Twine, Grain Bags, hay Slings, Trip Catches

Exhibit 12

I love the newspaper work. I am in touch with it every day. I can't break away from it and feel right. I love those who are in the work and especially those, like myself, who are working for cleaner and better newspapers.

Under another cover I am sending you a copy of my latest circular. Seven thousand were used besides three pages of the circular in two papers. It brought business and lots of it, too.

To be sure, I will send you my work from time to time, not with the idea of praise or publicity, but with the idea in view that if it will be of any assistance to the newspaper men of this great country you can use it as you see fit.

Again sincerely thanking you and wishing you all kinds of success, I remain,

Fraternally yours, C. C. JOHNS.

* * *

RIVERSIDE, WASH., August 21, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I mail you two copies of the Riverside *Argus*. I submit them to you for criticism, with especial reference to the ads, the full-page ads. I do all the mechanical, reportorial and office work on this paper single-handed, and let me assure you, it keeps a fellow going

some all the time. I exclude all ads from front page, but in the case of the county fair ad I made an exception as the fair is a home affair and is entitled to all the prominent boosting it can get. As to grading the items on the local page, I simply have not the time to do it at present. The full-page ad in the issue of August 20 took me just nine hours for composition, part of it night work.

With best wishes,

Yours,
J. A. Bristol,
Editor *The Argus.*

THE GUYMON DEMOCRAT

Vol. 1. Guymon, Texas County, Oklahoma, Thursday, August 20, 1908 No. 32

OUR MOTTO "Pro Bono Publico"

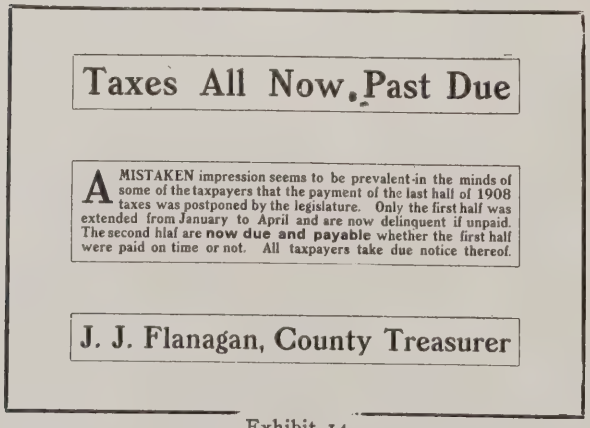
STATE UNION

WILDLY INSANE

BE READY NEXT WEEK

Exhibit 13

As the single-handed creator of the Riverside *Argus,* Brother Bristol need offer no apologies. It surely must keep him "going some" all the time to get out such a creditable little paper and keep the standards of all departments up to such an eminent gauge. There is not a single feature about the *Argus* that I could censure, and many that I would praise. Especially



Taxes All Now, Past Due

A MISTAKEN impression seems to be prevalent in the minds of some of the taxpayers that the payment of the last half of 1908 taxes was postponed by the legislature. Only the first half was extended from January to April and are now delinquent if unpaid. The second hlaf are **now due and payable** whether the first half were paid on time or not. All taxpayers take due notice thereof.

J. J. Flanagan, County Treasurer

Exhibit 14

gratifying is the fine print and the enterprising tenor of this sheet's contents. It is a six-column folio, all home-printed, and with a type of typography that is enviable. Editor Bristol's advertisements, particularly his full page specimens, are masterpieces, neat and artistic and generally correct. Exhibit 11 is one of the *Argus's* picturesque front pages, while Exhibit 12 is one of the page ads mentioned above.

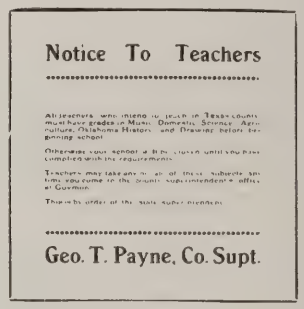
* * *

Mr. O. Byron Copper, De Soto, Wis.
Mr. Byron Copper, De soto, Wis.

Dear Sir:—Under separate cover we are mailing you a copy of our special booster number of the *Sentinel,* of which we ask criticism.

Respectfully,
D. W. Watsabaugh.

Talk about special editions—as I have talked for the past several years—but one could scarcely mention



Notice To Teachers

All teachers who intend to teach in Texas county must have grades in Music, Domestic Science, Agriculture, Oklahoma History and Drawing before beginning school.

Otherwise your school at Hardesty will not be paid until you have complied with the requirements.

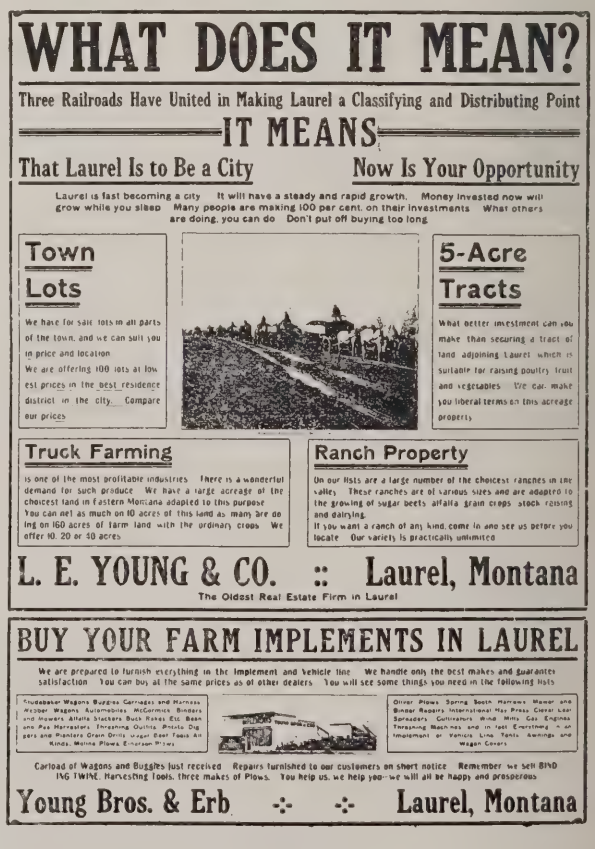
Teachers may take any or all of these subjects anytime you come to the county superintendent's office at Guymon.

Thanks to office of the state superintendent.

Geo. T. Payne, Co. Supt.

Exhibit 15

one that is finer in every respect than this special booster edition of the Laurel, Mont., *Sentinel,* now lying before me. In spite of the breadth of the foregoing assertion, that well applies to both contents, me-



WHAT DOES IT MEAN?

Three Railroads Have United in Making Laurel a Classifying and Distributing Point

IT MEANS

That Laurel Is to Be a City — Now Is Your Opportunity

Laurel is fast becoming a city. It will have a steady and rapid growth. Money invested now will grow while you sleep. Many people are making 100 per cent. on their investments. What others are doing, you can do. Don't put off buying too long.

Town Lots

We have for sale lots in all parts of the town, and we can suit you in price and location. We are offering 100 lots at lowest prices in the best residence district in the city. Compare our prices.

5-Acre Tracts

What better investment can you make than securing a tract of land adjoining Laurel which is suitable for raising poultry fruit and vegetables. We can make you liberal terms on this acreage property.

Truck Farming

is one of the most profitable industries. There is a wonderful demand for such produce. We have a large acreage of the choicest land in Eastern Montana adapted to this purpose. You can net as much on 10 acres of this land as many are doing on 160 acres of farm land with the ordinary crops. We offer 10, 20 or 30 acres.

Ranch Property

On our lists are a large number of the choicest ranches in the valley. These ranches are of various sizes and are adapted to the growing of sugar beets, alfalfa, grain crops, stock raising and dairying. If you want a ranch of any kind, come in and see us before you locate. Our variety is practically unlimited.

L. E. YOUNG & CO. :: Laurel, Montana

The Oldest Real Estate Firm in Laurel

BUY YOUR FARM IMPLEMENTS IN LAUREL

We are prepared to furnish everything in the implement and vehicle line. We handle only the best makes and guarantee satisfaction. You can buy at the same prices as of other dealers. You will see some things you need in the following lists:

Studebaker Wagons, Buggies, Carriages and Harness, Weber Wagons, Automobiles, McCormick Binders and Mowers, Atlanta Shockers, Buck Rakes, Etc. Bean and Pea Harvesters, Threshing Outfits, Potato Diggers and Planters, Grain Drills, Jumper Seat Tools, All Kinds, Moline Plows, Emerson Plows.

Oliver Plows, Spring Tooth Harrows, Manure and Binder Repairs, International Hay Press, Cletrac Tractors, Cultivators, Wind Mills, Gas Engines, Threshing Machines, and in fact Everything in an Implement or Vehicle Line. Tents, Awnings and Wagon Covers.

Carload of Wagons and Buggies just received. Repairs furnished to our customers on short notice. Remember we sell BINDING TWINE, Harvesting Tools, three makes of Plows. You help us, we help you—we will all be happy and prosperous.

Young Bros. & Erb ⁘ ⁘ Laurel, Montana

Exhibit 16

chanical work, size and object. The edition consists of twenty-four pages—six seven-column folio sections on heavy calendered stock, containing write-ups of a limitless number of interesting local subjects and all illustrated in a most elaborate and attractive fashion.

In no other "special" which I have ever viewed have I seen a higher grade of typography exploited than that in evidence throughout the pages of this edition of the Laurel *Sentinel*. The man, or men, who are responsible for this part of the work are past masters of the craft. And none the less should I neglect to confer the proper amount of praise upon him who superintended the pressing of this mammoth paper, for I think one might search in vain for a flaw in any of the whole twenty-four pages. The half-tones are as clear and distinct as ordinary photographs. And how excellent generally are all the several articles that form the contents of this fine issue, to which I have

Exhibit 17

alluded before. To contemplate the finished product. one marvels that a publisher has the courage to undertake the creation of such an enormous newspaper; but surely, when results are ultimately like these represented in this special edition of the *Sentinel*, the creators can easily be excused if they entertain a little personal pride in their achievement.

* * *

GUYMON, OKLA., August 23, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Inclosed a recent issue of my paper. Mine is a two-man shop—I did all the work on this issue, except, of course, the straight matter. While I have been taking the NATIONAL PRINTER-JOURNALIST only about three months, I

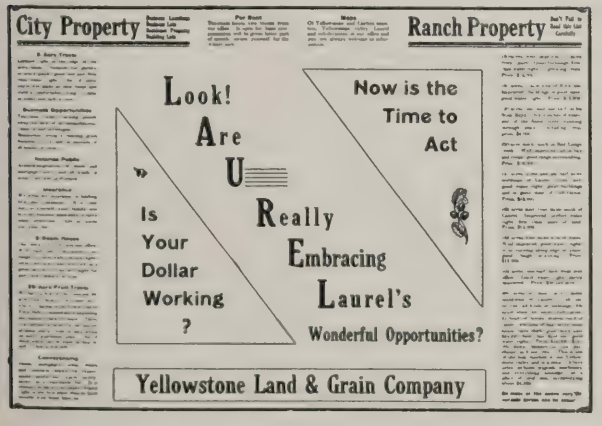

Exhibit 18

have taken greater interest in your criticisms than in all the remainder of the publication. Will be glad to know through that source what improvement you would have me make on my paper. I am a youngster and have been in the business only about three years. Yours very truly,

J. PORTER WRIGHT.

In view of the information offered above together with my inspection of the copy of the Guymon *Democrat* at hand, I am moved to assert that Editor Wright is a veritable prodigy. That a man with but three years' experience in the calling could produce a paper of so much excellence generally seems incredible. But here we have the paper and Brother Wright's testimony to prove it. Ten well printed, six-columned pages make up the *Democrat*. The first of these is made up very neatly and without a displayed ad, as may be seen by the accompanying reproduction (Exhibit 13). The other pages are imposed quite as correctly as the average country weekly, and the advertisement composition and press-work are both of a considerably higher character than that commonly met with in this class of publication. Nor are the mechanical departments of this paper the only features that provoke praise: Both the reportorial and editorial work shame that of many a man I could name who has been at the business for years. The contents of the *Democrat* are extremely commendable, consisting of headed stories, short locals, editorials, a fine budget of

How Laurel Has Grown
Is Shown by the Many Substantial Buildings

O. M. SOLSO, CONTRACTOR
LAUREL . . MONTANA

Exhibit 19

county news letters, etc. It is not easy to suggest improvements for so good a paper as this one, but, of course, it is not perfect, and I trust as time goes on, and Brother Wright continues to read the NATIONAL PRINTER-JOURNALIST, innovations will occur to him, which, when inaugurated, will materially better his paper.

* * *

Exhibits 16 to 19, inclusive, are a few of the beautiful displayed specimens from the pages of the Laurel, Mont., *Sentinel* special booster edition reviewed some paragraphs back. They certainly form an interesting group.

* * *

Many contributions have been received that I am unable to consider in this installment of Newspaper Criticisms; but as I shall endeavor to do them justice in next month's reviews, my patrons are therefore begged to bear with me in the inevitable delay.

O. B. C.

Editor O. E. Smith of the Grundy County *Republican*, Iowa Falls, Iowa, has sold his paper to F. J. Stillman of Riceville, Iowa. Mr. Stillman is an experienced newspaper man and is now interested with his brother in the Jefferson *Bee*.

CHICAGO, OCTOBER, 1909

The editor, who, at the Institute of Journalists' convention, Plymouth, England, in reply to a university President's evident concern over the danger of sacrificing scholasticism for practical training, said that he noticed a department in brewing had been introduced and hoped to see newspaper making receive, at least, equal recognition, certainly put the scholastic in a position requiring explanation. Some of the old school presidents and professors, now, as in days past, are very jealous of the dignity, the rank and distinction of scholarship.

That kind of learning, acquired at many colleges and universities, which creates an exclusive class, a sort of self-centered, conceited aristocracy and that brings to the individual only a certain self-glorification, congratulation, distinction and eminence, through the fact of knowing some things, however useless in life, that others do not know, and that fosters pride and narrowness rather than broadness and practical usefulness, is not only worthless but a curse. The idea that useful, applied knowledge, does not carry with it true and highest culture has been the bane of many great minds. Paul's great learning in the schools and at the feet of the greatest scholar of his day, did not prevent his becoming the persecuter and murderer of the enlightened, earnest, simple hearted Christians, and he had to be knocked down and blasted to physical blindness, befort he could be saved from his conceited scholasticism and brought to practical, sympathetic views of life, and it took the ministrations of Peter, the humble fisherman, to bring him to see men otherwise, "than as trees walking." We have had occasion, once before this, to refer to the story, told in the schools, of the Greek professor, who, dying, regretted that he had largely wasted his life because he had not given all his time and efforts to the mastering and writing a book about, the Greek verb. This was the spirit of scholasticism carried to a ridiculous extreme. There must be specialists but specializing is only glorious, inspiring, and ennobling, when it has some noble end in view and springs out of a desire of beneficent service to mankind.

Thought is quickened, intellect and body strengthened when knowledge is sought for and applied to some worthy accomplishment. God has created us knights or servants to our fellows and to all life and made worthy service the highest inspiration, and the exercise of the creative faculty, with mind and hand and eye, to the end of pleasing, useful service, the first, the highest and the most lasting joy, as well as the source of most complete recompense and dominion. It has decreed, in the very nature of things, and especially in the economy of human relations, society and government, that he who would hold the dominion, who would have real power, who would be the true ruler of all, influencing, directing, holding to true loyalty, hearts and minds must of needs be the true, practical, loving servant of all. To learn service is the first and greatest concern of life, and God has decreed that the learning of service should ever be the greatest aid and inspiration to the acquiring of all worthy knowledge and practical wisdom.

The discussions as to newspaper training in schools at the notable convention in which Dean Williams of the University of Missouri, took a leading part in the Institute of Journalists at old Plymouth, England, are given in brief outline elsewhere in this issue of the NATIONAL PRINTER-JOURNALIST, and deserve careful reading, study, and consideration.

* * *

Speaking of news service, how wonderfully are all men, all interests, and all nations, bound together thereby. What a power for unity and goodwill; of mutual understanding and interest; of broader views, sympathy and helpfulness there exists therein. The whole world on the same day of their occurrence, are enabled to read and be inspired by the same heroic deeds, services rendered to science, to humanity or religion, and to feel a common bond of knowledge and sympathy.

* * *

The complete and quick handling of the news of the discoveries of the North Pole, by two noted Americans, furnishes another remarkable and creditable instance of American enterprise and preparedness, only second in the newspaper world, at least in importance to the discoveries made. There is little reason to doubt that both Cook and Peary reached the North Pole, so there were two great events to cover within a week and never were great news events more thoroughly covered. Not only was this possible to the great dailies, but through the American Press, the Kellogg and Western Newspaper Union and other like agencies, was almost equally possible to all the smaller

dailies and weeklies of this conutry. There is not only a glory but a lesson to all live newspaper men in this. It is the lesson of preparation for the handling and illustrating of news events. The wise editor has everything in the way of facts, data, incident, and illustration, ready for use when important events occur and anticipated the news and is on the spot ready to give every important connecting detail at a moment's notice.

* * *

We have received a copy of the *Inland Observer,* of Spokane, Wash., devoted to a weekly review of situations and events in "Eastern Washington." It is handsomely gotten up, printed in tabloid form on good book paper, and we like its spirit. We are writing our editorials in New York City, and just after reading and writing about the lecture of Dr. Chas. W. Eliot, that appeared in that model paper, the New York *Times,* we took up this copy of the *Inland Observer*—published in the most northwesterly state in the union and yet properly named "Inland," and we were at once cognizant of the fact that this new publication was in harmony in appearance, object and thought, as is the beautiful city it represents, with all that we had been reading and writing. The title of the first editorial in this issue is "Public Spirit": Here are three principles that are given in this editorial that apply no less to a newspaper or printing office, building for the present and for the future, than to the development of a city: "A great city is created not by aggregation but by organization; ultimate gain far more than compensates for an immediate loss; the æsthetic development of a city expresses the ideals, public spirit and altruism of its citizenship." We notice that the Spokane Chamber of Commerce, that has a membership of 700, has decided on a "City Plan Committee," as suggested by Mr. A. L. White at the Optimist dinner last winter. "The City Plan," says the *Observer,* "is a comprehensive and permanent scheme for æsthetic and economic development of the city." Newspapers, all over this country, could do most valuable service to their respective municipalities by advocating the adoption of a similar scheme by their local chambers of commerce or city councils. Chicago has just got a "scheme" or plan after nearly three quarters of a century, and it is a good one, but will cost something like a hundred million dollars more than it would had it been adopted even fifty years ago, or, for that matter, right after the great fire in 1871. There is nothing like a city beginning right and the local press should help loyally and intelligently at that right beginning. Spokane has begun right and it is a city beautiful.

* * *

Here is a copy of the Mandan (N. D.) *Pioneer,* of September 10th, that shows in its handsomely printed and illustrated pages, an appreciation of the true mission of a newspaper in working to build up home interests and institutions. This number is devoted largely to promoting the Morton County Fair and takes advantage of this occasion to tell a most creditable and interesting story about "The Transformation of the West Missouri Slope," and to picture the schools, public buildings, and the handsome homes of the people as well as to give views of the Fair Grounds. Mandan is not a large city, but the Pioneer shows that it possesses business men of enterprise and push who appreciate and liberally support a newspaper that does honor to its town, and great growth and prosperity are assured. When the press and the people work together there is no end to what can be accomplished in a rich and growing country for the future of a city.

* * *

The Belleville (Kan.) *Telescope* recently published a "Booster Editorial," in which it printed a half-tone plate on the first page, containing seventy-three portraits of members of the Belleville Commercial Club. Brief sketches were given of all. These contained about twenty-five words each, and were exceedingly catchy and pithy. Here is an example that will show the style and will not be without usefulness in suggesting the way to other newspapers: "Guy V. Myers, of Myers & Myers, general merchandise firm. Always moving, always keeping something doing. An optimist by nature, who practices it." Each one of the seventy-three is portrayed with clearness, spirit and brevity. The issue also gives portraits of all the city officials and devotes a considerable space to the local Chautauqua.

* * *

The *Reporter* of Iron River and Stanbaugh, Mich., commenced its twenty-fifth volume Sept. 12th. The paper has been for twenty years under the management of Editor Obrien, but he is joined at this issue, at the beginning of the twenty-fifth year, by Mr. Wilber E. Campbell, recently editor and publisher of the Manitisque *Courier,* who is also a practical newspaper man, who has been getting out a good paper. The following from an editorial, taking note of the anniversary and of the added member of the firm and editorial force, shares a record of growth that has been pleasingly frequent throughout the country during the past two decades:

"When the writer first assumed management of the paper it was a primitive affair, housed in the Campbell block, now Mercy Hospital. It is now housed in its own building, which for light and ventilation cannot be duplicated by any print shop in the peninsula. It has an equipment for doing work the equal of any in this northern country."

* * *

The wisdom and necessity of preparedness is something men in all callings should fully understand and appreciate, but no other more than members of the press where time is the every essence of service, for that which is stale is not news.

A Master Printer Gone

THE phrase of Carlyle, "Blessed is the man who has found his work," has been used in the literature of many enthusiastic master-printers whose work was reviewed in the NATIONAL PRINTER JOURNALIST. Possibly there have been few printers to whom this term so well applied as to William A. Browning, late superintendent of the Times Printery, Scranton, Pa., whose death occurred on Labor Day. If ever a man found his work and loved the work he found, Mr. Browning did.

Mr. Browning was born in Monmouthshire, England, and reached his forty-first birthday on April 19th last. In his boyhood he came to this country and learned the printing trade on the Pittston (Pa.) *Gazette*. He later worked on several of the Wilkes-Barre dailies as a compositor and job printer, and afterward secured a position on a paper in Avoca, of which he was for a short time proprietor. It was there that he was married, about twenty years ago, to Miss Myrtle Morse. Mrs. Browning and nine children survive him.

From Avoca Mr. Browning went to Scranton, where he secured a position on the *Republican*. Later he took charge of the Scranton Times Printery, which was then only a small

WILLIAM A. BROWNING

concern with two presses and little else. For ten years he has been the leading spirit in this print shop, which under his able management has developed into one of the noted job offices of the United States. From the time when the *Times* entered its new building and the Times Printery was established, the proprietor placed Mr. Browning at its head, giving him absolute discretion regarding its supervision. The choice was as wisely made as the trust was faithfully and ably discharged. As the Scranton *Tribune* said, "Every person who came in contact with him or who had any business relations with him, recognized in Mr. Browning a man who lived in his work, and it may be said, died for its sake."

Mr. Browning suffered a stroke of paralysis on the twenty-fifth day of April of the present year, but had so far recovered as to be able to get down to his office frequently. The Saturday before the Monday he died, he paid a visit to the printery and it was confidently hoped that he would be able to resume his full duties in a short time. On Sunday he had a spasm, but upon reviving said he never felt better in his life and talked freely of matters that dated back several years. When he got out of bed after a spasm he dropped his watch on the floor, stopping it at exactly 12:20. Late in the afternoon he was stricken with another attack of paralysis from which he never regained consciousness. He died on Labor Day at the exact time that his watch stopped when it fell the day previous.

Mr. Browning was always in sympathy and love with his work. He took no holidays, preferring to be constantly at work in his beloved occupation. Every piece of work that went out of the Times Printery bore its tribute, not only to his artistic temperament, but also to his painstaking love for detail. In a printery which has so greatly increased its business of late as to run night and day, the strain was undoubtedly more than it appeared to be. However, it should be remembered that, untimely as was the death of this good printer, he lived more usefully than many who have lived twice as long.

Mr. Browning's connection with the picture-card industry is worthy of note. He early saw the advantages of this class of printing in connection with the ordinary job printing business. Some of the most artistic of all picture post-cards are the four-color cards in the preparation of which he took such great care. He had a keen eye for beautiful scenes and strong subjects with which to create a post-card that would gladden the heart of the recipient.

Many labor men in the great labor town of Scranton were shocked during the Labor Day festivities to hear of the death of such a strong friend of labor on the day set apart to honor it. Mr. Browning was a most active member of the various typographical unions of the city where he was employed. In a long article on his death which is, at this writing, in proof, the *Industrial Advocate,* the organ of the Pittston Central Labor Union, expresses its gratitude to Mr. Browning for saving the life of the paper at the time when there was an effort made to put it out of existence for the part it had taken on behalf of the Iron Moulders' Union on its strike several years ago.

In the old typesetting days, Mr. Browning was always able to get up a big string, and as job compositor he has won considerable fame. He was particularly interested in the combination of the advertising and the printing arts, and was connected with various advertising enterprises which were very successful. He was a great believer in the printing trade journals and a warm friend of the NATIONAL PRINTER-JOURNALIST.

At the time of his death he was a member of the Masonic order and the Royal Arcanum as well as the Scranton Typographical Union and the Master Printers' Association.

His death is deeply mourned not only by the printing fraternity, but also by all who were associated with him. The deepest sympathy goes out to his bereaved wife and family.

The excellent half-tone of Mr. Browning which accompanies this article was made at my request and presented to the NATIONAL PRINTER-JOURNALIST, by J. Fred Carpenter, the well known representative of Gatchel and Manning, Philadelphia, and one of Mr. Browning's most intimate friends.

HARRY A. WOODWORTH.

Wants It Every Month

STANLEY, N. D., September 11, 1909.

National Printer-Journalist, West Ravenswood Park, Chicago, Illinois.

GENTLEMEN:—You will find inclosed my check for two dollars, for which please enter my name on your subscription list.

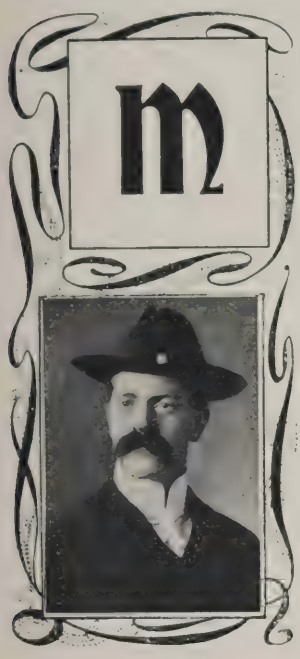
I have been a reader of the PRINTER-JOURNALIST for several years, and have decided that buying it at the news-stands is not the proper way to get it, because I want it every month and the news dealer sometimes fails to get it for me

LEO N. SANFORD, Mgr. Job Department. The Stanley *Sun*

MORE WORK THROUGH PUBLICITY

BY HARRY A. WOODWORTH,

Address all communications for this department to 314 Linden Street, Scranton, Penn.



MORE crops have been produced this year in the United States and Canada than in any previous year, and many have been the congratulations showered by the newspapers and magazines of these countries on the farmer. It is, however, a paradox of Agriculture that as regards some of the more staple crops farmers have obtained a smaller *total* amount of money in fat years than they received for crops not nearly so large. Big crops have brought in less dollars to both the farmer at large and the *individual* farmer than small ones!

I have not the latest Year Book of Agriculture on hand, but I have a report of Secretary Wilson which shows this amazing discrepancy. Secretary Wilson said with complacency that the potato crop of 1904 was the largest ever raised, exceeding by over seventy-two million the crop of 1905. And, yet, it was worth ten million dollars less! It was worth less, too, than the crop of 1903, which was nearly one hundred million bushels less, and but little more than the crop of 1901, which was one hundred and forty-five million bushels less.

In 1905 the second largest crop of potatoes the country ever produced was raised. Yet few potato crops ever undersold it since crop records were kept. As an example of the disadvantages of fat years, one may mention the wheat crop of 1901. It was the largest ever, up to that date. But despite the congratulations that newspaper men showered on the farmer in that year, the wheat it brought forth was not worth nearly fifty millions of dollars what was obtained for the crop of 1904, which was nearly two hundred million bushels less. Nor did it sell for what the lesser crop of 1905 brought by over fifty million dollars.

I garnered this interesting crop of statistics from the very Year Book whose figures probably keep the Department of Agriculture awake nights. Such figures as these should. The nightmare of the doom of the modern fat years should cause Secretary Wilson and the farmers to sit up and think.

Secretary Wilson said in 1906: "Wheat may this year be worth over $450,000,000, a value that has been exceeded in several years; but in quantity this year's crop, with its 740,000,000 bushels, is only 8,000,100 bushels below the largest crop grown—that of 1901."

And here is his cheering report concerning all cereals grown in 1906: "While they dropped about $40,000,000 below the total value of 1905, and about $12,000,000 below the total of 1904, the number of bushels in 1906 exceeded the number in 1905 by 120,000,000 and were 570,000,000 above the yield of 1904."

Now doesn't that bit of consolation remind one of the optimistic rhyme of the returned whalers:

"We didn't get a drop of oil,
We didn't sight a whale,
We came back bare as when we went,
BUT we had a damn good sail"?

What was the advantage of all the additional labor and trouble in growing and marketing these big crops, when they sold for a smaller total than the small ones? And what was the cause? It could not be overproduction, for we know that all the corn or wheat raised is consumed and would be if there were considerably more of it.

Verily, instead of teaching how to fight the supposed plagues of insects, blight and drought, would it not be better to encourage them, if crops must needs be marketed on the old system? For it would seem that had the crops of 1906 been reduced 120,000,000 bushels, $40,000,000 more would have gone into the farmers' pockets than in 1905—a condition which would benefit the advertiser as well.

These reflections have largely been brought about by a book which was lately sent me entitled, "The Print Shop of *Up-to-Date Farming.*" The large prices which have been obtained for smaller crops of recent years have undoubtedly been due to a considerable degree to words of J. A. Everitt, editor of *Up-to-Date Farming,* of Indianapolis. He has prescribed for years only one sovereign remedy for such a condition, but during the last two years he has been extremely unfortunate in many ways. However, he has had a recent triumph over some of the most surprising and adverse conditions that ever befel an editor or public man in this country. And now *Up-to-Date Farming,* with renewed vigor, is again in the forefront of a campaign to bring about a condition of affairs when the farmer will cease to glut the market in the interests of speculators, but will hold their products for a profitable minimum price. Then the farmer will, as a unit, apply to his business the business principles without which any other business would fail.

When that time comes, and it is coming very soon, the splendid yields which are made possible by the Almighty, the Department of Agriculture and three hundred farm papers will not fail of harvesters. For farming will then draw people from the overcrowded cities, besides being made profitable for the now "discouraged small farmers." Moreover, the problem of keeping boys on the farm will be solved.

But as to the booklet, which is sent me by Sibley F. Everitt, son of Editor Everitt, and advertising manager of *Up-to-Date,* as this paper is called "for short," by its friends. It is a handsome production, which is doubtless largely due to the painstaking care of the younger Everitt. It is in two-colors, the photo-brown being used for the rules of panels as well as for the

comprehensive halftones, which show the editor's office, the office of the advertising and subscription departments, the work of making stencils for each subscriber's name, the composing-room, the job printing, binding and imposing department, and scenes of the great Goss perfecting press built especially for this "paper with a mission." Such advertising gives an impressive impression of a printing and publishing establishment which is sure to influence both advertisers

1a

and the great class for which the paper is intended. This includes everybody, for *Up-to-Date's* expressed mission is to help the farmer and the consumer, and even speculators and boards of trade fall into the latter class.

Back in the Game
To win not only the '09 Pennant, but to win the "Rag" for many moons to come for the people of Frankfort
The Support of our Business Men is all that's Needed
SOME people thought that we were out of the game in Frankfort for all time to come, but after considering our case for several weeks "they" decided that it was best for all parties concerned that we should don our togs once more and work hard for the Capital City, and now we are going to play the best game of our lives. With the proper encouragement from the business men, we are satisfied that at the end of the season our batting average will be at least 800. When we decided to re-enter the game, we at once began selecting the very newest things made in Printing Machinery, Type, Paper, Inks, etc., etc., and we are vain enough to believe that we have gotten together the best equipped plant of its kind in Central Kentucky. With our knowledge of the wants of the people of Frankfort and our many years experience in the Printing business we are satisfied that our productions will be far superior to anything ever seen in Kentucky

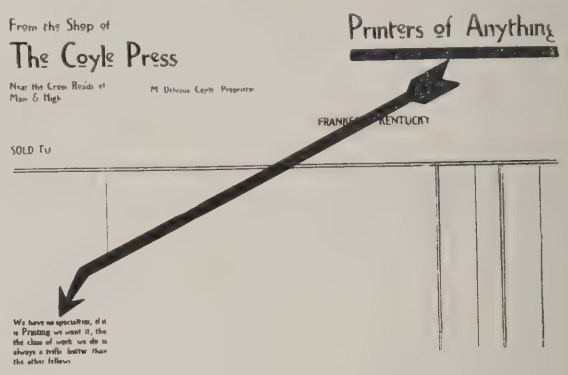
REAL ART AS EXPOUNDED BY A REAL ARTIST.

An American of whom America may well be proud—whose eccentricities, so-called, were really an exposition of true American humor—was James McNeill Whistler, an artist of the modern type if ever there was one. His pictures are marvels of modern art, and his views on art are worthy of the fullest acceptation. And this is what he says of a picture:

A picture is finished when all traces of the means used to bring about the end have disappeared.

To say for a picture—as often is said in its praise—that it shows great and earnest labor, is to say that it is incomplete and unfit for view.

Industry in Art is a necessity—not a virtue—and any evidence of the same, in the production, is a blemish—not a



1c

quality; a proof not of achievement, but of absolute insufficiency, for work alone will efface the footsteps of work.

Now this is worthy of the attention of all would-be artist printers. Substitute for the word "picture" "a piece of job work" and learn of a true artist what art in typography really means.

harvest. Quite a bit of "general publicity" about this, but surely there is much psychological force.

* * *

The money that a printer or publisher saves nowadays by not advertising will never make him enormously rich.

* * *

AN OLD CONTRIBUTOR HEARD FROM.

MY DEAR SIR:—I have just received the September issue of the N. P.-J., and find that you are again back in harness. Well, you know that "while the light holds out to burn, the vilest sinner may return," and I have once more returned to "my first love." While I am not located "at the Cross Roads of Main and High, opposite to where Dick Lynch makes tombstones for dead people," still you will observe that I am near the same old place.

A little history: About two years ago, I sold my shop to a big corporation and took stock in the company myself, and I had charge of the mechanical department of the plant. We were working about fifty-five men and I had my hands full. Well, things went on very nicely for a while, but failed to suit my "fastideous taste" and I became tired, and as soon as I was able to dispose of my holdings, left "the big fellows" and took a long vacation. About four weeks ago I concluded that I would again "don my togs" and now I am "burning the midnight oil" in order to fill the orders that have been pouring in on me. Disposing of my old shop was the first mistake of any size that I have ever made and you can bet the last dollar that I will never do it again. I know my place and will keep it in the future. I have a brand new outfit, and I think I have a very nice one. The better trade of the town is coming to me and are paying my price, which is a great deal higher than the other fellow's, and I believe that I will do a better business than ever before. I am sending you a few samples of my new work, but as I have been very busy taking care of the customers' orders I have not had time to get out very much "stuff" as yet, but you can form some idea of the class of work I am doing from these. I will try to send you some of my "stunts" from time to time in the future, and I want you to treat me as you did of yore—to give me your candid opinion in every instance.

Well, as the 'phone is ringing I will have to make a period and stop and get that order.

With the very best regards, and looking forward with pleasure to your department of the October number of the N. P.-J., I beg to remain,

Yours very truly,

M. DELVAUX COYLE.

Frankfort, Ky.

Back to the Cross Roads marches Coyle, and I am burning the midnight oil; for "while the light holds out to burn, the vilest sinner may return."

We're sinners all—but are we vile if like "a villain" we can smile, though one was tired, and one was sick? —From "stand-at-ease" let's "double-quick"!

Let Lynch still advertise the dead; our old friend Delvy Coyle, instead, is printing anything at all for which *live* advertisers call.

"For he lives in old Kentucky, where the meadow-grass is blue; where the Irish-French are plucky, "and the whisky's bully, too" (or is she dry "the noo"?)—if you don't get shot you're lucky—ain't you glad that you are you?

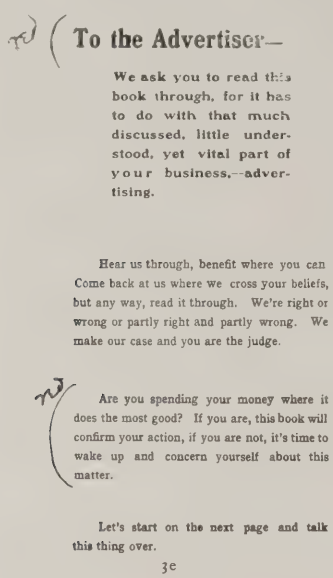
3c 3d

It is a long time since I have heard from Mr. Coyle, but his letter explains all. Glad to see he is "back to the army again." No. 1a is a very attractive little card, the bricks being brick-colored, and the remainder black. The long-line-short-line typography is truly artistic when so graded and so embellished.

The announcement "Back in the Game" (1b) with the brick border, and the remainder black (and white) is indeed a novel and handsome piece of composition. The cuts are most artistically arranged, besides being

fully appropriate to the wording, and the wording is as catchy as the catcher. "The support of our business men is all that is needed," says Coyle, and if what I hear is correct, if they do not patronize this aggressive printer, it is a question if they are business men.

Mr. Coyle was always inclined to be original, and if he ever let his originality carry him into freak realms, he was always pleasingly freakish, or, if he likes it better, picturesquely and not brazenly bizarre. I do



To the Advertiser—
We ask you to read this book through, for it has to do with that much discussed, little understood, yet vital part of your business,—advertising.
Hear us through, benefit where you can Come back at us where we cross your beliefs, but any way, read it through. We're right or wrong or partly right and partly wrong. We make our case and you are the judge.
Are you spending your money where it does the most good? If you are, this book will confirm your action, if you are not, it's time to wake up and concern yourself about this matter.
Let's start on the next page and talk this thing over.
3c

not know what type foundry is responsible for the underscored and under-sized letters; but Coyle knows how to handle freak typography like this (1c). I may have been responsible for the great vogue in the arrow in advertising; I know I had many arrows cast several years ago, to use in pointing morals and adorning tales. But mine were mostly straight arrows. Now all kinds of ads have them of all shapes, but they manage to point to the point which it is desired to emphasize. I used to shoot with bow and arrow once upon a time; but fear if "I shot an arrow into the air" of that particular pattern, I might not find it any quicker than Mr. Longfellow did his famous one.

However, if I found this arrow had touched the heart of an advertisement reader—but there, I'll drop this, or I'll have an awful mess of metaphor.

This (1d) shows another brick design, which may be meant to designate the walls of Sparta. I believe that in a print-shop operated by Mr. Coyle, he would try to see that "every man was a brick."

Another two-color blotter (1e) is likewise appropriate as to ornamentation—a very effective point in advertising matter. Mark the expression of the 'phone number. The shoulder on "Printing" should have been allowed for, the space under the word being incongruous with any of the rest of the job.

Mr. Coyle sends me several blank checks of the Coyle Press, but neglects to sign 'em. How careless!

* * *

A good ad—one that is well written and well displayed—is worth more in any part of the paper than a poor ad in the best position that can be selected.

* * *

A LITTLE MORE ATTENTION TO DETAIL NEEDED—THAT'S ALL.

The display type in this small pink blotter (2) is thoroughly harmonious with the heading, and the job is very pleasing on first glance. Would it not, however, have been better to have started the line with "Is Behind," leaving the heading to form part of the sentence? The extensive quadding between the sen-

tences is of a "different' nature, no doubt, and might be effective on a job containing considerably more reading matter, but here it has not a particularly pleasing effect. The excessive leading between the lines at the start of the small text does not help the spacing between the sentences any, and it is not in keeping with the remainder of the leading. If any extra leading was done it should have been right under the display line. The choice of a DeVinne "I" for the initial might have been improved upon. The signature would have looked better in display type, and been placed farther to the right. The wording of the blotter is excellent, and a little more attention to details would have helped the composition wonderfully.

* * *

"Top of column next to reading matter," or "broken column among pure reading matter" will not make a bad advertisement good.

A KNOCKER WHO KNOCKS KNOCKING, AND STILL KNOCKS.

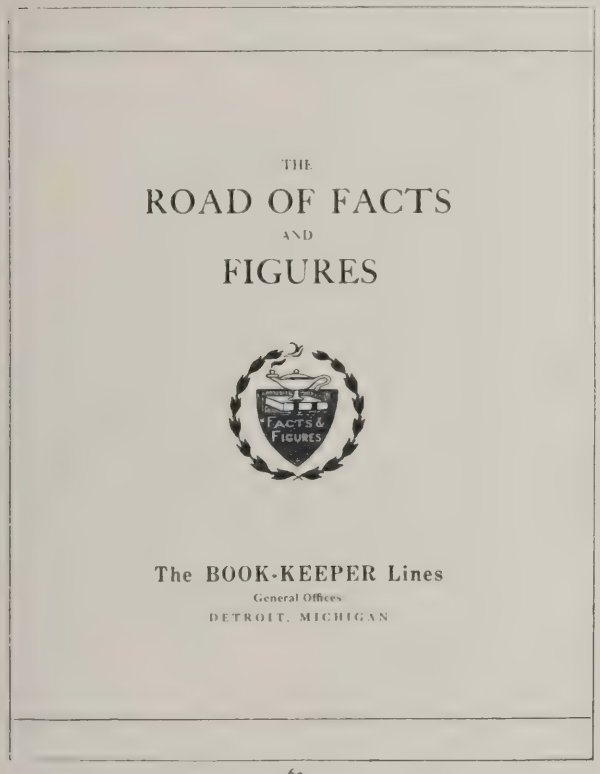
A knocker is knot knecessarily a knincompoop.

Aggressive advertising sometimes brings results of the kind the advertiser desires.

W. D. Boyce Co., of Chicago, is a big enough concern to use the hammer with avidity. They have a very Thor in their camp, in the person of Col. William C. Hunter, author of that wonderful business book, "Dollars and Sense," and, presumably, of the 48-page bound volume, "The Rattle, and The Hammer, and The Scales," which is a plea for what this concern considers (with considerable force in some instances) rational advertising.

However, the only hammer for which the Boyce Co. have any respect appears to be their own wepping. Like the 'eathen in his blindness, Col. Hunter "don't obey no orders unless they is his own."

On page 12 the writer is severe on the "beautiful cover rattle," and this very book has a beautiful cover which cost money originally, and added to the postage.



6a

Col. Hunter says: "The 'better classes' rattle is used to distract your attention from the greater classes." The people referred to as "the better classes" are not better than anybody else in a great many cases, but they are better fixed, and so appeal to certain advertisers to a far greater extent than the greater classes. And rightly.

Poor old "General Publiciy' gets it hard in this book—yet he has led many advertisers to victory. And what are several pages of this very book—including the front page of cover—than the ear-marks of this skirmish-warrior.

Col. Hunter bears the mark of the man from Missouri, as is evident from his "show-me" literature. But he not only expresses a desire to be shown; he shows. And so despite his inconsistencies, and his failure to see himself as ithers see him, he makes a great plea for advertising to the masses who take the Chicago *Blade* and *Ledger* as against the classes whose taste for horrors, mush-and-blood tales and near-comic pictures has not been cultivated.

THE BOOK-KEEPER LINES

6b

Col. Hunter disparages "the circulation hammer" on page 14, but uses it in a stealthy way on page 42, when he says, "How many would dare to make an offer like this?" and follows it with a proposed circulation test.

On page 14 he makes derogatory remarks anent the personality hammer, but on page 18 he is so extremely personal concerning Mohammed, one of the greatest advertisers that ever lived, as to stick "T. Percy" before his name, making him out to be what Bill Nye called "a blanked dude," said by the late Bill of anybody who wrote his name like that.

The Colonel talks of "the testimonial rattle," and says, "The publisher never prints the criticisms he receives, but only the testimonials." This may be so as regards the testimonials and adverse criticisms received by the publisher of the Chicago *Blade* and *Ledger*, but it is not so concerning, for instance, to the publisher of the NATIONAL PRINTER-JOURNALIST.

And so "The Rattle, the Hammer and the Scales" should be read by everyone interested in publicity.

It puts the claims of the publishers of papers of large circulation among the people Abe Lincoln said God loved, because he made so many of them, into the vigorous, hammer-and-tongs language of which Col. Hunter is master.

He has undoubtedly greatly helped, by his seven years' war some of the advertisers who did not realize that the whole of the United States and Canada is their oyster.

Others upon whom he has urged his views seem to be getting along pretty well in the old paths.

The other fellow has a story as well; but that is no proof that much Col. Hunter says is not straight facts.

The man with an advertising appropriation should use the scales, and weigh carefully what all sellers

of advertising space have to say, including what Col. Hunter feels impelled to disgorge in his admirable nervous English.

Col. Hunter reminds one of a certain other Colonel who now commands a dollar a word, in his strenuousness, in his common-sense in many matters, in his virile language, and in his sweeping disapproval of anybody who does not agree with every word he essays.

The most telling of the pages of the book in which he advertises the publishing house of which he is secretary and advertising genius are the pages in which he uses big type in black and red, and white space. Here 3a, b, c, d, and e) are some of 'em, with the red specified. They are worthy of careful consideration

C H A R A C T E R

superb examples of the printer's art which convey a message without being read at all, and, being read, invest every word with a convincing power which is all but irresistible.

Is it worth while? It surely is, for it becomes a great influence instead of a mere commodity, a living, breathing argument instead of a mass of inert words.

You have seen printing of this kind. You ought to use it in your own business.

Loyalty to the boss! a rare jewel.

The Griffiths-Stillings Press, of Boston, has originated a clever idea, and done a handsome piece of printing as well, in "The Diary of the Home." It is a book intended as a record of family life — the important events, as well as the sayings of the children, the little incidents which make for the life of the home, photographs, etc. So many books of a nature similar to this fall into the hands of printers who have neither taste nor skill, that it is a matter of congratulation that this work has been executed by this noted Boston house, insuring its execution in a worthy manner. (Price, full cloth, $4.00, less 25 per cent if you mention "CHARACTER.")

— National Printer Journalist.

One man power is the only kind that counts. The man who has to explain and get another's O.K. before he can act, sees his enthusiasm ooze and the idea escape.

— The Fra.

2?

7a

by every student of display, and they contain some of the vitalist truth in the whole book.

Take 3a, the first reading page of the book. The sentence about advertisers' likes and dislikes resembles hints given in this department many times, and applies to editors as well as advertisers. The application of this principle has undoubtedly given the *Blade* and *Ledger* their great circulation. Still, some of the editors and advertisers who have done the most good in the world have educated their readers up to the measure of what they like and what they don't.

As to the pretty pictures, the statements are undoubtedly true in many cases. In others, as Sir Roger de Coverly would say, "much might be said on both sides." And so it is with many statements made by so aggressive a thinker as Col. Hunter.

* * *

Fake advertising is adapted only to a fake business.

* * *

MR. BLANK IN TACOMA.

Years ago, when this department was young, I claimed that what was known as the "picture postal craze" was a permanent lunacy, and was indeed, in most cases, far from being an expression of mental aberration. What a blessing picture postals have been to busy people with many friends! Here (4) is a particularly bright specimen of a post-card and a newspaper ad. The humor is very striking, and will serve to advertise both Tacoma and the Tacoma *Daily News* in many distant homes.

* * *

The worst error a printer or publisher can make in his advertising is not such a serious mistake as not to advertise at all.

* * *

A TYPE-FOUNDING NEWSPAPER.

Brother Copper showed the first page of the *American Advertiser* in his department last March, and so I

Advance Estimates or Cost Plus 10 Per Cent

LONG experience has demonstrated to us and our best customers, that the method of making catalogs and booklets on a basis of cost plus a fixed per cent (say ten per cent), is a good proposition and one which is fair to consumer and printer alike.

It is especially applicable when all the details cannot be determined in advance, or when it may be desirable to change certain features as the work progresses, this being something more liable to occur than in any other business unless it be that of building construction.

It is for the interest of the printer to keep the cost as low as possible consistent with good work, for the purpose of maintaining his reputation.

It is also for his interest to expedite the work, in order to make room for other jobs which will bring him in return.

On the other hand, there is absolutely no inducement for him to skimp the work, and the customer is reasonably sure that the results will be satisfactory.

While we prefer to operate on this plan, we are always glad to furnish definite estimates on all printing, including writing, designing, engraving, etc., and being catalog and booklet specialists our prices will be found reasonable, especially when our unusual and effective service is taken into consideration.

GRIFFITH-STILLINGS PRESS
Boston, Sept. 1, 1909

7b

will do the same for the *Barnhart Flyer,* issued by the Barnhart Type Foundry, New York (5). The panelled synopsis of the earthquake situation will surely prove suggestive, and I do not believe Mr. Copper confines his hatred of first-page advertising to anything but the ordinary display ad of the ordinary newspaper, and so would find no particular objection to this page. It is a blanket-sheet, however, and something nearer the tabloid form should certainly show off the type as well. The paragraph on "Logography" is interesting; get your magnifying glass and read it.

* * *

A STRIKING FOLDER, AND A BRIEF TALK ON "PLAGIARISM" IN TYPOGRAPHY.

I don't know how this page (6, if you can manage it) is going to reproduce, as all but the reules is in lavender, or what I think is lavender, though I remember once as a boy being laughed to scorn by a feelingless family because I announced that a neighbor had painted his barn that elusive shade. The rules are a warm green. This is part of a circular issued

by the *Book-keeper* of Detroit, Mich., which tells of "the *Book-keeper* lines," and is couched in railroad vernacular throughout several of its pages.

The composition, which brings in a vertical rule, is very much like that which, when used lately by one of the greatest print-shops in the country, aroused the ire of the advertising manager of one of the leading weeklies, who rushed into print in an advertising paper to claim that the great printing establishment has stolen his idea. His idea!—I wish I had the paper at hand which demonstrated this "plagiarism." Years and years ago, if I am not mistaken, Hal Marchbanks and J. Arthur Livingston and others of the old-time contributors to this department were using the idea of vertical lines, with side readings, one of them exactly the same as the weekly's advertising man originated this year! Possibly it *was* his idea—the consensus of opinion at this writing is that Peary reached the Pole as well as Cook—but even if it was, he should be glad, for the sake of good typography, to have it used in a place where it could do no harm. Who originated the panel in advertising?—many of us who were doing typographical stunts when it came in vogue doubtless thought we did, but maybe it was an ancient idea in the days of old Wynken der Werde. And that weekly's advertising has been alive with panels and other devises whose use is exactly similar to that of other compositors, whereas the print-shop's use of the vertical rule idea was not. Every day we see a new variant of an old idea, or of a new idea, which testifies to the true originality of the compositor. Stutes and Anger and Bradley and Fitz-Gerald and Biggers have had their imitators, some of them as good and as original as some of *them*—but they still shine on, and I never knew any of them to kick.

But I was starting to talk about the *Book-keeper's* railroad, but got switched off. This is the way they state their route:

NEW YORK WASHINGTON, JACKSONVILLE TO SEATTLE, SAN FRANCISCO AND SAN DIEGO

Sunday	We Reach the
Monday	
Tuesday	Whole Country
Wednesday	
Thursday	Every Day in
Friday	
Saturday	the Week

Would it not be better to arrange the above like this?—or in some other similar way?—

Sunday	*We Reach*
Monday	*the Whole*
Tuesday	*Country*
Wednesday	*Every Day*
Thursday	*in*
Friday	*the*
Saturday	*Week*

May be not. Here is the schedule of "The Road of a Thousand Wonders," "The Road of Facts and Figures," and whatever else it is called in the booklet:

THE BOOK-KEEPER ROUTE
TRAINS TO PROSPERITYVILLE—NO RETURN
(No Excess Baggage)

This Schedule is in Effect all Year

Lv. ..... Contemplation

(This train does not return)

We Never Miss Connections

This is pleasing enough foolery and though not "show-me" publicity, I believe it helps some.

is possible to make changes in copying photographs and add details that were not in the original scene. Drawings with photographic effect can also be made from buildings, machinery, etc., which have not yet been completed. It is wonderful what the engraver's artists can do nowadays with even a poor photograph or without any photograph at all. The example on this page shows a square finished half-tone made from a photograph that has received no attention from the artist.

8a

The example on this page shows a half-tone after the photograph has been "painted" or retouched by the artist. Note how the objectionable details have been eliminated and how the lines and contrasts are brought out. The selling qualities of your catalog is considerably enhanced by paying for this additional service. It will make a pleasing picture out of an unsightly object. The question of reproducing half-tones with or without retouching is up to you, Mr. Advertiser; you can have a sightly picture—or the other.

8b

The outside of the booklet is in time-table style, and very beautiful. It gives a map of the U. S. A., but really "the Book-keeper Lines" extend far and away beyond it.

* * *

There is a wide difference between self-conceit and confidence.

* * *

My Dear Woodworth:—I was very much interested in reading your criticism of the February *Character*. It was good of you to devote so much space to it.

Under separate cover I am mailing you December and January issues, and I have no doubt you have received the

8c

March issue ere this. If not, I will be glad to send you a copy.

I might add that of all the advertising we have done, none has brought so much direct business as these four issues of *Character*. It seems to be just the thing needed after the elaborate issues of "Peter, the Printer."

Yours truly,

Griffith-Stillings Press,

Boston, Mass. J. Evelett Griffith, President.

The August and September "we-hope-you-had-a good-time" issue of *Character* has just arrived. A page will give an idea of it (7a). Nearly every page has a quotation from some famous or should-be-famous author, which is put in the olive-green which is used for the running-head rules and the initials. The quotation on this page from the *Fra* is an example.

Example 7b is a slip issued by the Griffith-Stillings Press which is not only a worthy study in simple effectiveness, but also shows that the concern is still advancing its idea regarding advanced estimates. However, they seem unable to convert all to their ideas, which would seem to be reasonable in connection with such a firm, and so are willing to be as definite as some of the public seem to desire.

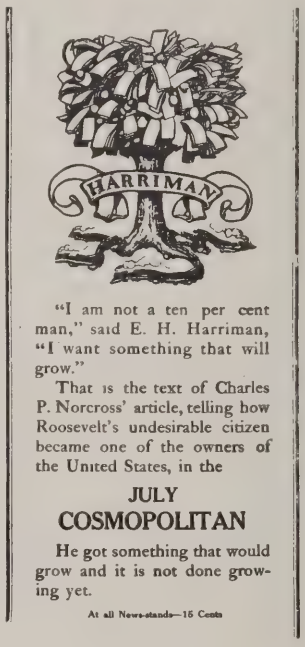
* * *

The confident man bases his judgment upon a knowledge of facts and may be depended on in an emergency. The judgment of the conceited man is founded on self-appreciation and is valueless at any time.

* * *

FROM AN ORIGINAL PRINTER.

All in Gothic is the small mailing card sent me by James G. Brazell, of Milwaukee. I remember him as having done the most original advertising of envelope



HARRIMAN
"I am not a ten per cent man," said E. H. Harriman, "I want something that will grow."
That is the text of Charles P. Norcross' article, telling how Roosevelt's undesirable citizen became one of the owners of the United States, in the

printing I ever saw. I am glad he is still 'in business," although I have no doubt so original a printer must now have enough to retire on:

IN BUSINESS

competition is so fierce that you need every advantage *over your rivals you can get if you are to be successful.*

When ordering your printing don't be under the thumb of any printer. Get your printing done where you can get it the cheapest—where you get the most for your money.

If my work is not the best, and my prices not the lowest, don't patronize me. Don't send me your orders for any other than purely business reasons.

I know I can do good printing. There would no excuse for my doing any but the best, when I have one of the best plants in the country, the best printers I can get, and use only the best of materials.

I want to figure on your printing, but I don't expect to receive your orders unless my prices are the lowest that good work can be done for. Big orders and little orders receive the same careful attention.

I do pretty much everything in the line of printing and would like to add you to my list of satisfied cus-

tomers. Are you willing to let me try? A telephone call or a letter will bring a representative promptly to your place of business.

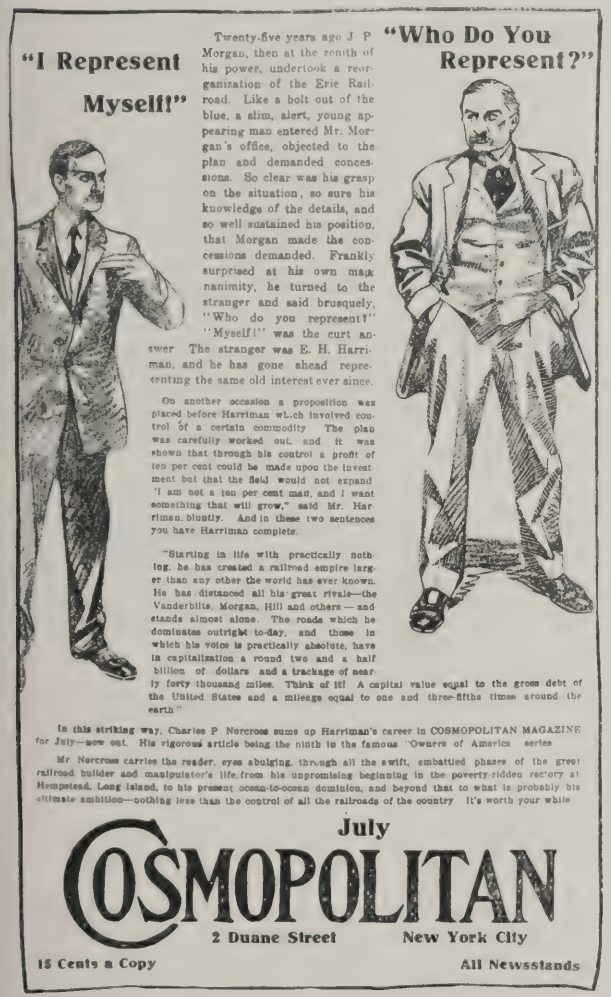
* * *

Plain practical common sense is an excellent business qualification, and it cannot be better employed than in the preparation of advertisements.

* * *

"WORTH KNOWING."

One of the finest pieces of printing-advertising I have seen for many a long day and night is the 48-page booklet, "Worth Knowing," issued by the *Times* Printery, Scranton, Pa. The title is apropos. The title is die-stamped and embossed on Kabistan Sultan, Rhino-finish stock, and the body pages are 120 lb. enamel white. The plate-blocks on the inner pages are buff, the titles of the various articles being Litho Roman on tint panels and the initials being Macfarland in orange. The various subjects discussed are, "Planning the Catalogue," "The Writing of Copy," "The Editing of Copy," "Don't Hurry the Pressman," "Color Harmony Hints," "Four-Color Printing," "Illustrations," "Harmony in Composition," "Screens of Half-tones," "Finishes of Half-tones," "Illustrations in Colors," and "A Little Personal Experience." All of these subjects are treated in a bright and edifying way, and will doubtless give many a present and prospective customer just the information he hankers for. Moreover, its absorption on the part of the aforesaid customer will doubtless save the *Times* Printery much wearisome explanation. The article on "Four-Color Printing" is beautifully illustrated, a magnificent scene being taken as the basis of the pictorial description. The various plates and printings are captioned as follows: "1. Proof of YELLOW plate. 2. Proof of RED plate. 3. Proof after printing RED on YELLOW. 4. Proof of BLUE plate. 5. Proof after printing BLUE on No. 3. 6. Proof of BLACK (key) plate. 7. Final proof after printing BLACK on No. 5."



"I Represent Myself!"
"Who Do You Represent?"
Twenty-five years ago J P Morgan, then at the zenith of his power, undertook a reorganization of the Erie Railroad. Like a bolt out of the blue, a slim, alert, young appearing man entered Mr. Morgan's office, objected to the plan and demanded concessions. So clear was his grasp on the situation, so sure his knowledge of the details, and so well sustained his position, that Morgan made the concessions demanded. Frankly surprised at his own magnanimity, he turned to the stranger and said brusquely, "Who do you represent?" "Myself!" was the curt answer The stranger was E. H. Harriman, and he has gone ahead representing the same old interest ever since.
On another occasion a proposition was placed before Harriman which involved control of a certain commodity The plan was carefully worked out, and it was shown that through his control a profit of ten per cent could be made upon the investment but that the field would not expand "I am not a ten per cent man, and I want something that will grow," said Mr. Harriman, bluntly. And in these two sentences you have Harriman complete.
"Starting in life with practically nothing, he has created a railroad empire larger than any other the world has ever known. He has distanced all his great rivals—the Vanderbilts, Morgan, Hill and others—and stands almost alone. The roads which he dominates outright to-day, and those in which his voice is practically absolute, have in capitalization a round two and a half billion of dollars and a trackage of nearly forty thousand miles. Think of it! A capital value equal to the gross debt of the United States and a mileage equal to one and three-fifths times around the earth"
In this striking way, Charles P Norcross sums up Harriman's career in COSMOPOLITAN MAGAZINE for July—now out. His vigorous article being the ninth in the famous "Owners of America" series
Mr Norcross carries the reader, eyes abulging, through all the swift, embattled phases of the great railroad builder and manipulator's life, from his unpromising beginning in the poverty-ridden rectory at Hempstead, Long Island, to his present ocean-to-ocean dominion, and beyond that to what is probably his ultimate ambition—nothing less than the control of all the railroads of the country It's worth your while

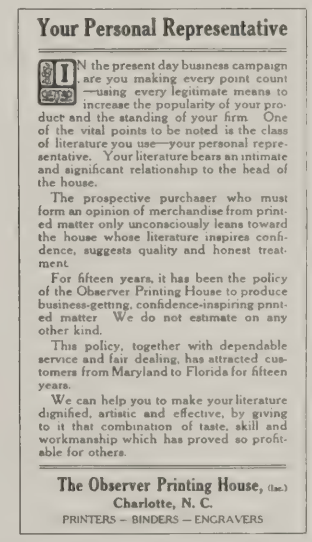
Another page shown 8a and b) with the half-tone from photograph and the one from the retouched photo show how explicitly interesting details are explained. Another page (8c) is in two colors, so interdisposed as to give the effect of various shades besides black and gray. The text concludes with



Your Personal Representative
IN the present day business campaign are you making every point count—using every legitimate means to increase the popularity of your product and the standing of your firm One of the vital points to be noted is the class of literature you use—your personal representative. Your literature bears an intimate and significant relationship to the head of the house.
The prospective purchaser who must form an opinion of merchandise from printed matter only unconsciously leans toward the house whose literature inspires confidence, suggests quality and honest treatment
For fifteen years, it has been the policy of the Observer Printing House to produce business-getting, confidence-inspiring printed matter We do not estimate on any other kind.
This policy, together with dependable service and fair dealing, has attracted customers from Maryland to Florida for fifteen years.
We can help you to make your literature dignified, artistic and effective, by giving to it that combination of taste, skill and workmanship which has proved so profitable for others.
The Observer Printing House, (Inc.)

11

A LITTLE PERSONAL EXPERIENCE.

A few years ago we made a call on a Scranton firm that sent most of its fine printing out of the city. The head of the business had the idea that a job that came from New York, Philadelphia, Chicago, or Cleveland—anywhere a long way from home—was certain to be better than that done at home.

"I don't think you can do our work. We want high-grade printing, not the ordinary kind, we want printing that shows our individuality," said this gentleman.

We explained to him that all we wanted was a chance to

show him. "Of course we can't, if you don't give us the chance," was our reply. "May we show you?"

He agreed. We got the making of his Spring catalog, and we have done his work ever since.

The handsome work-mark of the *Times* Printery makes a fitting tailpiece.

But hold! There is a brief and modest explanation on the back page which makes a fitting finale to a fine piece of printing, a fine piece of advertising.

* * *

Don't act as if you were doing your customer a favor in taking the money. Even if you are giving better value than they can get elsewhere the favor is a mutual one.

* * *

A MAGAZINE'S NEWSPAPER SPACE.

These newspaper advertisements (9a and b) with which the *Cosmopolitan Magazine* announced an article in the July issue are of particular interest now that the greatest railroad man has paid the penalty of an over-strenuous life. The "money-tree with dollars on every limb" and eke its train-roots (and many train routes centered in Harriman) is a particularly clever adaptation of an old form of ornamentation. The *Cosmopolitan* is a liberal advertiser since it passed under the control of W. R. Hearst, and every important article and story is thus announced. A collection of the various newspaper ads is forwarded to prospective *Cosmopolitan* advertisers each month, the object being to show believers in advertising how

12

the *Cosmopolitan* must surely increase its subscription lists and news-stand sales by such publicity. This method is used by many advertisers—and is extensively adopted by wholesalers and manufacturers in order to encourage the retailer. But how easily the *Cosmopolitan* plays into the hands of those who uphold the newspaper end of the great controversy as to newspaper vs. magazine advertising now so strongly waged! Why does the *Cosmopolitan* use newspaper advertising instead of space in the magazines? is the natural query. But then Hearst is considerable of a newspaper owner himself, and can afford to have the argument take either side.

* * *

The advertisement that is read and believed is the one that does the work. The advertiser who can make his announcements both attractive and convincing has mastered the essential principles of the advertising art.

* * *

AN ITALIC JOB.

This round-cornered card (10) is sent me by Edgar L. Noura, of the Argus Printery, Dalton, Ga. It is an interesting piece of one-series typography. The other side of the card is likewise italic, and is starting with its display line, half-way through the text, *WHICH ROAD ARE YOU TRAVELING?* Doubtless this display will cause some people to look at the milestones.

* * *

The printer who believes that advertising does not pay would be better satisfied if his competitor had the same belief.

* * *

"YOUR PERSONAL REPRESENTATIVE."

The Observer Printing House of Charlotte, N. C., uses a slip of onyx stock to talk of Your Literature, which it rightly considers Your Personal Representative. The slip is reproduced (11), perhaps more for its wording than its typography, though the latter is

their pens in honey or gall or muriatic acid, whichever is handiest;

A land where hens lay lavishly and cackle in proportion, where mules gambol on the green and are not ashamed of their pedigree;

A land where no one dies except through accident or over-eating—the geographical center of the United States, the center of the Thought zone.

Generous, alive, alert, happy, prosperous Kansas, where I once left my pocketbook under my pillow in an Atchison hotel, and did not miss it until I got on board the train when I asked the first man I met—a stranger—to loan me five dollars—"make it ten," said he and handed me out a sawbuck with the gratuitous advice, "If there is any change, get your hair cut;"

A land whose finest products are its young men and women, with their superb physical health, their proud ambition, their high appreciation, their capacity for useful work and their right intent;

A land where there is so much that is noble and pure and true and beautiful and good that if men in Kansas occasionally lapse, God in love and pity engages Gabriel in conversation, points to the Pleiades, looks the other way and forgets it —happy, prosperous, smiling Kansas.

ELBERT HUBBARD

Honestly now,
How much would you give
For the trade in your line
Of 100,000 good families
In Kansas and Oklahoma?

Honestly now,
How much of that trade
Do you think you could get
If you sat down with the head of the house
And told your whole story
From A to Z?

You can tell your whole story
Through the pages of
Farmers Mail and Breeze,
And tell it at a very small cost.
Any issue in July, August or September
For only $180 a page

dignified, and with a little filling in and a little whiting out would be of an even higher artistic order.

* * *

The printer who does the most business is the one who makes the greatest efforts to get business to do.

* * *

A FAMOUS ARTIST'S PRINTING-ADVERTISING.

Some of the leading magazine artists are also leaders in the advertising field. Miss Blanche Greer, whose wonderful work in illustrating stories for *Everybody's* and other leading periodicals, has brought her a wide fame, has produced many pictures for the Banning Advertising Agency of St. Paul and Chicago, which are even better known, though her signature does not appear thereon. Horace Taylor, who is one of the best of all the humorous artists in the magazine field, inclines to help the printer in his publicity, and one of his suggestions for printing-advertising appeared in this department some time since. Here (12) is a blotter design executed by Mr. Taylor for the print-shop of W. F. Powers & Co., Philadelphia. The

phrase, "All Under One Roof and Management" is particularly and humorously appropriate to a picture of the patriarch who had enough sense to get in out of the rain.

* * *

The true test of the value of an advertisement is the amount of business it creates.

* * *

THE ORGAN OF ORGANS.

Arthur Capper, who is not a capper in the approbrious sense of the term, but who caps many other publishers in places of many times the size if not the importance of Topeka, sends me a recent number of the *Capper Bulletin*. All of it is worthy of reproduction, but lest we have not space therefor, let's show the left-hand side of the envelope, at any rate, (13a). This is in cheery enough language to induce anyone to "inquire within." It is a bully house organ—it's the *Philistine*, and the *Mail Order Journal*, and "Dollars and Sense" rolled into one, and its typography is refreshing. It gives a good deal of the news that's fit to print, and boosts a number of good fellows in the advertising field. Well, one page of it then (13b),—the end of a little journey to the home of great men—Kansas—by Elbert Hubbard.

* * *

"New ideas bring new business," says a valued printers' house-organ. This sounds well, but its accuracy depends upon the character of the ideas and the use that is made of them.

Pres. Pomeroy Asks Co-operation

To the Members of the N. E. A.

I want to take this opportunity to thank you for the confidence you have reposed in me by selecting me as your President for the forthcoming year year. I appreciate the compliment highly, for a great compliment it is to be placed at the head of such a distinguished and worthy organization. I will do my utmost to meet the requirements of the position, but to accomplish results and maintain and advance the interests of the Association the President must have the hearty and united support of each individual member. This I have reason to believe will be accorded me in full measure. The Association can accomplish much through united effort, and my ambition is to make the succeeding year one of the most noteworthy and most profitable in the history of the organization.

We will celebrate our Twenty-fifth Anniversary at the next annual meeting. This should be an important epoch in the life of the Association. I hope that this may be accomplished, and I will be very glad indeed to have any suggestions that the members may feel inclined to send me. I want the support and hearty co-operation of each individual member, but above all I want their suggestions for making the year upon which we have entered one that will be not only memorable but of lasting influence to the great body of men and women that compose our organization. Kindly send me any suggestions you may have that this may be accomplished.

Again thanking you for the compliment you have bestowed upon me, and trusting that our relations may be pleasant and profitable, I am, Very sincerely yours,

A. Nevin Pomeroy.

A New Numbering Machine

An entirely new Typographic Numbering Machine is offered by the American Numbering Machine Co., of 291-295 Essex St., Brooklyn, N. Y. This new machine is known as Model 30 and sells for $5.00. This is not an old model reduced in price, but an entirely new machine designed and so constructed that it can be sold at a low figure and still maintain the highest standard of merit.

The case is made altogether of steel, the drop ciphers are made of tool steel, and the plunger in one solid piece. There are no screws or staples of any kind in connection with the plunger mechanism which is built upon entirely new principles. The plunger is released from its housing by simply depressing by hand. Machines are quickly re-assembled in half a minute.

Parts Released for Cleaning and Oiling. Impression of Figures

In design, construction and workmanship, it is claimed that this machine surpasses any other machine on market, notwithstanding they are sold at a higher price.

The figures are deeply cut on steel wheels and the ratchets and actuating pawls are made of tool steel.

Model 31 is built upon exactly the same lines as Model 30 with the exception that it is made with six wheels instead of five.

Model 32 is a two-wheel machine, numbering 1 to 50 and repeat, and of particular interest to those manufacturing cash salesbooks.

New folders describing these machines may be obtained by applying to the company direct.

Printer Gains Many Points

Vandalia, Mo., Sept. 20, 1909.

National Printer-Journalist, Chicago.

Dear Sirs:—Enclosed find draft for $1.50 which you will please credit to my subscription. I am more than pleased with the paper. Have not missed a copy for some time and I am certain that I have gained many practical points from it. I would like it just twice as well if it was published twice a month. Yours fraternally,

Claude Syler.

Notes

W. T. Buchanan, for the past ten years managing editor of the Des Moines *Daily Capital* has resigned his position to enter other fields.

R. C. Keagy has resigned his position as city editor of the Manchester, Iowa, *Democrat* and as private secretary to the law firm of Bronson, Carr & Sons. He has accepted a position on the *Daily Union* at Enid, Oklahoma.

John J. Hamilton, for years the moving spirit in the Des Moines *Daily News*, is arranging, it is said, to close out his business interests and remove to the North Pacific Coast, probably Seattle. He probably will go into the newspaper business in the west with his sister, Mrs. Ella Hamilton Durley, for years one of the editors of the *News*, but now editor of one of the publications of the Homestead Company. Mr. Hamilton last year was one of the candidates for the Republican nomination for governor.

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

THE Lanston Monotype Company have designed and gotten up in the best style of typography a most effective piece of advertising in the shape of a bond with coupons. It is as perfect as any thousand dollar bond issued by a municipality. The bond itself gives authoritative statements with regard to the Monotype and each coupon contains a clear and strong claim of some one advantage or excellence to be found in the use of the machine. The work is so ideally arranged and executed as to be convincing in itself of the high qualities contained in the machine.

The Herrick Press, 717 Music Building, 246 Michigan Ave., Chicago, makers of drawings of all kinds, have issued four booklets showing cuts in two colors designed for use in advertising. The cuts are novel, show action and enforce ideas. Each design has a head-line to help in preparing copy for an ad. The booklets are sold at 25 cents a copy or four copies for 75 cents. Catchy illustrations have come to be universally recognized as a necessity of modern advertising, to attract attention and illustrate an important point or enforce a truth as well as to awaken an interest and to please.

The announcement in this issue of our magazine to the effect that C. B. Cottrell & Sons Co., have appointed Keystone Type Foundry their General Selling Agents throughout the United States for the Cottrell Two-Revolution and Drum Cylinder Presses will doubtless be a surprise to most of our readers, because up to a few months ago that foundry practically confined its sales to its own products.

If the Keystone is anything it is progressive and wide-awake to changing conditions, and the broadening of its field and selling proposition at this time shows it. The largest of printing plants required for general printing, newspaper, magazine and other publication work can now be fitted up completely by one foundry, and the buyer can place the entire order for his plant with one concern, making and dealing in only the best.

In addition to its own extensive manufactures, consisting of Nickel Alloy Type and other materials, the Keystone is Selling Agent for the leading manufacturers of Printers' Furniture and Wood Goods, Job Presses, Lever Paper Cutters, Proof Presses, Round Cornering, Punching and Perforating Machines, Stapling Machines, Wire Stitchers, Saw Trimmers, Power Paper Cutters, Folding Machines, and now this splendid line of Printing Machinery is rounded up by the addition of the Cottrell Presses.

The newspaper that is still being set by hand is beginning to be pretty generally regarded as a "back number." Daily papers are now almost universally machine set, while even the smaller weeklies in the more remote districts find that it is more economical in the long run to install typesetting machines than to worry along with incompetent and indifferent help. The help problem in large measure is being solved by the Linotype—either Standard or Junior. Publishers are no longer being deterred from installing machines by the false fear that a single machine will not pay. Two thousand one-machine Linotype users and 500 Junior users have demonstrated that that idea was a fallacy. Progressive printers everywhere are learning to submit to the inevitable and bringing their offices up to date by adopting the slug-set way.

Washington Branch
American Type Founders Co.

Mr. W. Seton Kent, Manager

Mr. W. Seton Kent, whose acquaintance with the printers of the territory tributary to Washington and the whole South is unexcelled, has been appointed manager of the new branch house of the American Type Founders Company at 1210 G Street, N. W., Washington, D. C. He was given carte blanche as to stock, and consequently Washington has now at its service the best and most varied line of type, machinery and materials.

W. Seton Kent was born in Baltimore in 1871. He entered the employ of Barnhart Brothers and Spindler in 1892, and in 1900 established for them the Southern Printers' Supply Company in Washington, of which he was manager until

June of this year, when he resigned. No man is better known in the printers' supply business. He has been in that business all his life, has been uniformly successful, and has personally visited from time to time every printing house and newspaper from Delaware to Florida. His last move is a progressive one not only for himself but his customers, and his friends predict for him a great success.

The word "clever" is overworked, but no other adjective so aptly describes the little four-page magazine, called "A Jolt and a Joke," issued by the Wood and Nathan Company, the first number of which has agreeably jarred our sensibilities. This particular kind of literature affords keen pleasure after one has read much in a perhaps more elevated style. Frivolous facts have a peculiar habit of lingering around in one's memory chambers long after other dignified and respectable guests have gone.

to make the advertisements in their papers profitable to the advertisers their success will be curtailed. The first obvious means at hand is up-to-date display with live type, and now that display type like the Cheltenhams, Century Expanded, Clearface, Century Bold, and other winning designs are sold at the lowest prices on record for display types—now, we say, is the time to test the business-bringing power of good type faces at the least outlay.

OSWEGO MACHINE WORKS.

1909 CATALOG NO. 8.

This catalog is said to be the finest illustrated catalog in the machinery line yet published. There is rarely anything new in the catalog line, but the unusual catalog of Oswego Machine Works, Oswego, N. Y., of which Niel Gray, Jr., is the proprietor, contains valuable suggestions for catalog making, as well as valuable information regarding cutting ma-

A Reproduction of The Monotype Company's Clever Circular

Many publishers overlook the fact that an advertiser knows when his advertisement is ineffectively displayed, although he may not know why. He also knows when it is set up effectively, and he is more willing to pay for it when it is. The publisher is in need of advertisements. How can he expect a liberal response to his need if he is illiberal with the advertisers he has already? Liberality pays. Liberal treatment is responded to with liberal returns.

We notice great improvements in many papers since the American Type Founders Company decided to sell its display types at the same price as body types, in weight fonts. Type *talks* for the advertiser, but if a publisher dishes up the advertisement in back number type faces, all kinds mixed up as if the compositor had selected them in the dark by his sense of feeling, his types only *whisper*. The big dailies that are overrun with advertisements, and have a great deal to think of, pay special atention to getting satisfactory type display for their advertisers. The publishers of smaller papers will find the same policy profitable. Unless they do their level best

chines, and is worth possessing whether one is interested in these products or not. A picture index locates the kinds of machines easily. This is followed by a "Size" index, which locates all the various styles of each size instantly. A third index gives information of all kinds about cutting cloth, paper, tinfoil, leather, etc., etc. Instead of having to read the entire catalog for the points of superiority, these are condensed on one page devoted to generalities, and on another page devoted to specific points. It is therefore possible to ascertain easily and quickly what points are claimed as superior for the Oswego cutting machines. The illustrations are made from the finest cuts obtainable. Ninety sizes and styles of the Oswego and Brown & Carver and Ontario cutters are shown, and a scattered geographical list of users all over the world shows the general esteem in which Oswego Machine Works is held.

Right through the usually dull summer months the American Type Founders Company has been kept busy and many

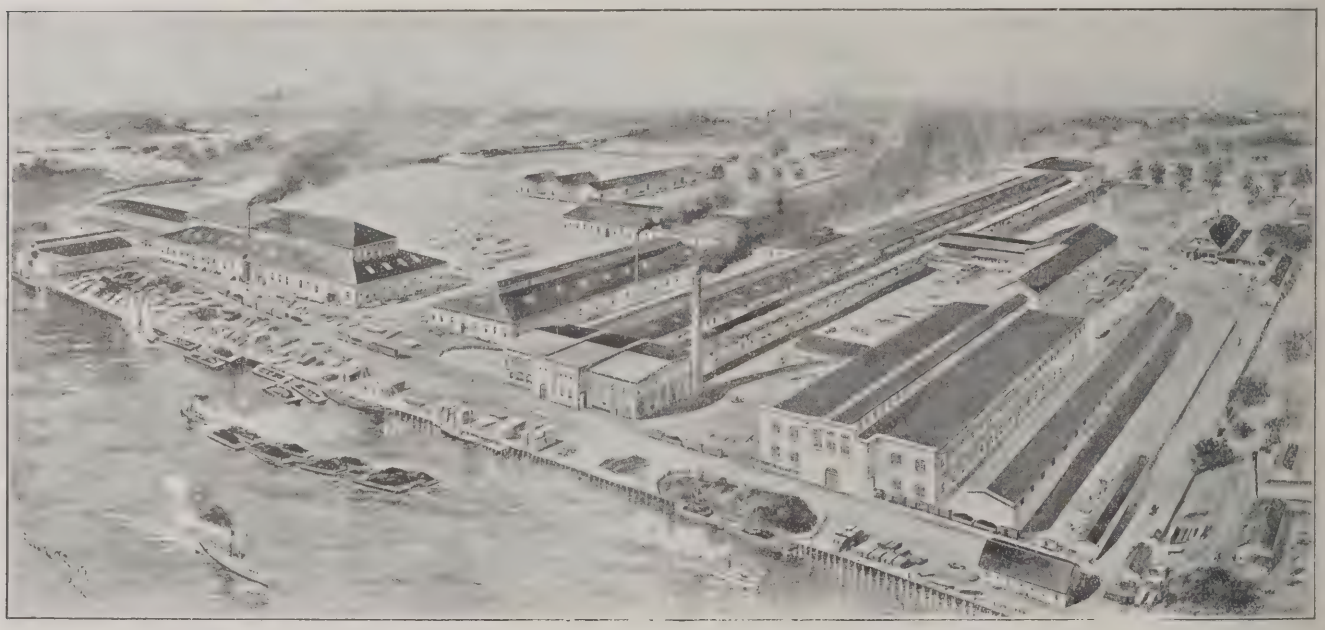
of the selling houses are now on the lookout for experienced type and printing machinery salesmen. "Nothing succeeds like success," and one of the biggest type successes is the Cheltenham family. The selling of this face in weight fonts at body type prices has of course had much to do with the big increase in business. All of the American display type is now sold in weight fonts at body type prices.

Wedding Text is the latest addition to the large Copperplate family of type faces cast by the American Type Founders Company for imitating the work of the engraver. The utility of such types has been greatly enhanced since the American initiated the custom of selling its display type in weight fonts at body type prices. Whereas text letters were formerly bought only in the regular job fonts the Foundry now receives more orders for weight fonts of twenty-five and fifty pounds. Printers appreciate the economy of full cases of such type for use in printing invitations, announcements, etc., for there is no delay in hunting for sorts, or picking from other live jobs.

cently issued by Oswego Machine Works, Oswego, N. Y., who are glad to send it for the asking. Their 1909 catalog is a little different.

In an advertisement printed on another page it is stated that over 1800 printing and binding concerns are now using and will endorse the Boston Wire Stitcher. The "Boston" is the youngest stitching machine on the market, and such popularity must be gratifying to its selling agent, American Type Founders Company.

C. B. Cottrell & Sons Company have been compelled to enlarge their factory accommodations at Westerly, R. I., and with the recent additions to the plant, it is one of the largest of the kind in the world. The illustration affords an idea of the extent of space covered by the buildings. The large buildings in the immediate foreground are the most recent additions to the group. The popularity of the Cottrell presses has continued to increase and the demand has been phenomenal in spite of the business depression of recent years, even to the extent of requiring the employment of a day and night force during the summer months.



Where the Cottrell Presses are made

In place of the cast stereotype bases commonly used in newspaper offices, the Wesel Manufacturing Company has introduced solid iron adjustable bases in fonts which are said to be great economizers. The use of adjustable iron bases by the Boston *Post* brought about a dispute between the Boston photo-engravers' union and the publishers of that city, which was settled after one week's arbitration in favor of the publishers. On a test a plate of irregular shape was securely mounted by a compositor using adjustable iron bases in one minute and ten seconds, while the photo-engraver took ten minutes, using a base previously cast and shaved in the stereotype room. The iron bases are indestructible, whereas cast stereo bases cannot be used more than once or twice, losing their accuracy under the steam tables. The importance of this detail in a newspaper office was brought out in the evidence, which showed that a return to the old method of using cast stereo bases trimmed by the photo-engravers would make it necessary for the Boston *Post* to engage two extra blockers and one extra stereotyper. Yet the whole cost of the adjustable iron bases was little over $100. This is an economy well worth investigation and adoption.

Some valuable new attachments for cutting machines for cutting special shapes, etc., are shown in the new catalog re-

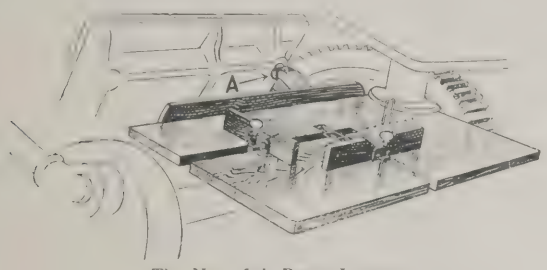
---

The Wood and Nathan Company have a third full page announcement in this month's National Printer-Journalist that contains matter of considerable importance to the smaller publisher and printer. The statements made in this advertisement are strong and in their straightforwardness will not fail to carry conviction. The injunction to investigate the claims made should be heeded. Too many printers and publishers are content with things as they are and in allowing themselves to drift into a state of innocuous unpreparedness, they fall easy victims to the attacks of enterprising competitors. Procrastination has stolen more than time. He is the same thief who has robbed many honorable printers and publishers of the ambition to excell, a jewel than which there is none more valuable if an iota of permanent success is to be attained.

The Automatic Platen Press Co., Patentee and Manufacturers of the Kavmor Press, have moved their headquarters to the New York Life Bldg., 346 Broadway, New York City, where they will maintain their general offices, and show room

placing on exhibition there, their Kaymor Press, where same can be seen in operation by printers in general.

One of the latest devices for the benefit of the job printer is that of a Jogger attached to the Gordon Press by R. A. Hart, who is so well known in the United States and Europe as the manufacturer of the Cylinder Press Jogger that fills at the present time so important a place in nearly every press-room in the country. There never was an article placed on the market that has paid a greater per cent on the investment to the printer than the paper jogger. No up-to-date printer today would think of doing without a jogger if they cost ten times their list—simply because they could not afford to do it. Now as these Gordon Press Joggers are made and adapted to the Gordon and Universal presses, there is no reason why they will not serve the printer as well as the cylinder press joggers. There is not a printer who is doing a paying business, but who spends at least 10c. in valuable time to even up



The New Job Press Jogger

paper every day a press is run and usually double that. Should a man figure up the investment to find whether it would pay he would find that the expenditure would pay him more than 100 per cent and when the job printer sees the small investment and the great saving of time, there is no question but what they will be as universally adopted by the up-to-date printer as the cylinder press jogger. The paper is evened up while the air is under the sheet so that there are but few jobs that will ever off-set by being jogged and then the job can be delivered at once to the customer. If the printing is done and turned one side before it is jogged, then you must let it remain for about twenty-four hours as the ink will smear the paper in rubbing together, when jogging the sheets. The fact that these joggers are sent to good reliable houses on approval is a guarantee that they are a device that will be appreciated by the up-to-date printers.

Charles T. Root, of the *Dry Goods Economist*, and W. H. Taylor, formerly publisher of the *Engineer* of Chicago, and their associates, have purchased the *Iron Age* from the David Williams Company. The policy of the paper will remain unchanged. The deal was negotiated through the offices of the Harris-Dibble Company, New York.

That enterprising German weekly, the Lincoln *Freie Presse*, is always doing something to keep its name and claims before the public. This, time it is a novelty in the shape of a magazine lead pencil, fountain-pen-like in appearance. Around the barrel is a sheaf of celluloid on which are the words, "The National German Weekly, Largest Circulation in America. Lincoln Freie Press, Lincoln, Nebraska, U. S. A. Average 142,440 each issue. Rate, 35 cents per agate line."

The management proudly reports that the leading advertisers of this country are showing a marked preference for the Lincoln *Freie Presse* and that the German reading public seems to consider the publication indispensable.

Mr. E. N. Farkas, publisher of the *Trade Journal Advertiser*, has favored the NATIONAL PRINTER-JOURNALIST with a copy of the "Advertisers' Hand-Book." The book is small in size but is all that it purports to be—a manual for trade journal advertisers. The information presented is a remarkably compact compendium of what is necessary knowledge to anyone connected with a trade journal either as publisher or advertiser. A few of the chapter headings will give an idea of the practical value of the book:—"How to Write an Advertisement," "Cuts, their proper uses and average costs," "Something About Paper," "How to Make Rough Sketches, etc., etc.

Novelty in advertising, if it be intelligent, impressive and contain an idea with a go in it, is to be always compelling and useful.

have seized upon the favor of the telegram to effectively get the interested attention of customers. The idea is a good one and is capable of nearly genarl use. Here are the forms that they have adopted and the matter as well as the those of a telegraphic message, is taking.

DETROIT PAPERS AS PURE AS THE SAPPHIRE STRAITS.

The sightless sufferer who was miraculously healed said: "One thing I know, that whereas I was blind, now I see." This one thing I know and declare unto you, that whereas the press of my home city was once blind to its moral responsibility in the matter of offensive advertising, now it sees!

Detroit hasn't a daily paper now whose columns do not comport with the purity of her sapphire straits or the unflecked serenity of her August skies. It's progress, beloved, when you don't know whether you are looking into the unsullied book of nature, or at the last edition of a Detroit newspaper.

"So, bringing you these tidings of great joy from the press of Detroit and from the newspapers of the nation, all hail the era of upstairs and downstairs, and let us look forward confidently to the time when the editor of advertising will sit in the journalistic circle!—JAMES SCHERMERHORN, Publisher of the Detroit, Michigan, *Times*, in an address before Convention of Advertising Clubs of America.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . . . .

WANTED—LADY COMPOSITOR TO PURCHASE INterest in live weekly paper in thriving Idaho town. Address, "Idahoan," care NATIONAL PRINTER-JOURNALIST.

WANTED—Type Casters: hand, steam and automatic; also type founders' other expert help wanted; steady work, full hours. Address Wm. F. Capitain, Superintendent American Type Founders Company, 300 Communipaw Avenue, Jersey City, New Jersey.

FOR SALE—TWO HUBER TWO-COLOR PRESSES. Bed 39x52. These presses have been thoroughly overhauled, and are in excellent condition. Price very low. Address, J. A. ROESE, P. O. Box 897, Pittsburg, Pa.

Different—of Course

A good many printers imagine their situation is exceptional—think honestly, that they are different from everybody else. The main difference we have been able to get a focus on is that some men who make a living out of *other* people's advertising think *they* can do business without advertising.—If you are a real believer in advertising, get our proposition on building business for your job department—and do it now.

Megill's Patent Automatic Register Gauge

The sheet as shown, is fed short of the gauge and yet it will register. When the press closes, the "Automatic" extends forward and gently pushes the sheet to exact position. It does not bite the sheet and prevent it from registering. It never pushes it out. It registers cardboard or paper. The ordinary gripper operates it. No extra fixtures. The gauge simply forms a stop for the sheet and then registers it. Feed ordinarily, but as fast as you like.

The Automatic Register Gauge, including a pair of the Double-Grip Gauges for the bottom, to your door for $5.95. *Testimonials and booklet.*

CHANDLER & PRICE CO. CLEVELAND, OHIO U. S. A.

4th Announcement

The Unitype

To the Out-of-Town Publisher:—

The UNITYPE is a poor man's proposition; it is for the man who finds it hard to make money.

There are many tools the wealthy printer can afford to use that would drag the one under water who must carefully count his dollars.

No publisher of modest means can afford wastes; he must work without them, or his income vanishes.

We took up the UNITYPE first and foremost because it gets down to the dead hard bed-rock of economical operation; because it is the only composing machine in existence that works without wastes.

When we saw that it could be run at a profit where any other machine would be losing money for its owner, our decision was instant; we knew that a large field awaited the UNITYPE. Therefore we were able to give the pledge, which the machine has since made good, that it can make dollars in places that are too barren to support the wastes which necessarily must accompany the casting of slugs. It can earn a profit where a hot-metal machine cannot make the price of the gas it uses to melt its metal.

Therefore we say the UNITYPE is a poor man's proposition, and is put out on substantially a profit-sharing basis. It goes into a low-wage office and divides the slice it cuts from the pay-roll between the publisher and ourselves. The publisher thus gets his machine for nothing, and a weekly profit besides.

Even for the wealthy man, the man who can afford wastes but prefers to save the money they cost and put it legitimately into strengthening his business, the UNITYPE is undeniably the best investment to be made in composing machines.

Were it not easily able to under-save the slug caster we should not now be selling it. Write us.

Wood & Nathan Company

Number 1 Madison Avenue

NEW YORK CITY

The Degradation of an Art

He who is familiar with the books printed so beautifully in years past by the great house of Blank & Brothers, or Blank & Company, feels shivers run down to the extremity of his spinal column at the wretched typography, imperfect characters, crooked lines, soft paper and blurred presswork resulting from the use of inferior casting machine type.

Some one in the publisher's office figures out a saving of $200 on a book by setting it on casting machines. He has no artistic sense, would not know the difference between a beautifully printed work and a bargain house catalogue, but $200 can be saved (?) in the composition of a book, of which the edition might be 10,000, 50,000 or 100,000.

To offset $200 are the delays and expenses of preparing the forms for electrotyping and expensive "make-readies," while if printed direct from such inferior type there would be the constant expense for replacing broken and badly defaced letters, and the increased cost of paper necessary to print the same number of words, and above and beyond all the soft and inferior paper necessary to use to hide the glaring defects of imperfect type; but the $200 has been saved (?), and a thousand dollars—often much more—wasted and quality and character lost.

What would the master printer of the past think of the books printed today? What will the master printer of the future think of the books printed today?

American Type Founders Company

Set in Century Oldstyle

The Tide Has Turned

We recently supplied 6,000 pounds of type to a very important book printer who has been using casting machines, and has awakened to the imperfection of his work compared with that of a few years previous.

We are now casting 22,000 pounds for one of the largest book publishers in the United States. This house rejected book after book produced by casting machine methods by printers who had "thrown out founders type," and has at last been compelled, through love of the art and fine printing, and actual saving in expense, to decide that in future its books must be produced from type founders type.

If it is true that "the cheap coat makes the cheap man," then cheap typography surely makes the cheap printer.

In these days when printers are striving for better profits, they can only secure them by better printing—not by poorer printing.

The composition is a small item in the cost of a book, but it is the foundation, and the printer or publisher who starts to cheapen at that end is like the builder who puts wooden foundations under concrete buildings.

Perfect type is the foundation of perfect printing.

Century Oldstyle

An Oldstyle Without a Hair Line

Century Oldstyle is the newest and by far the best oldstyle ever designed, and the early showing has indicated that it will be enormously popular, as we have several machines continually engaged in casting live orders. We are just completing the Italic.

We prophesy that Century Oldstyle will have the largest sale of any oldstyle ever designed. It has both strength and grace and is devoid of hair lines. The matrices being cut on the Benton Matrix Cutting Machine with absolute accuracy, the faces will wear with perfect uniformity, which is impossible with faces cut by hand.

It is completed in sizes from 6 to 72 point, with Italic now being completed of the corresponding sizes. A few specimen lines of Italic are shown herewith.

In our opinion it will replace in many of the big book offices the oldstyles heretofore used. Send in your order now.

Century Oldstyle Italic

18 Point 9 A $1 60 20 a $1 70 $3 30

PRINTERS SENDING TYPE
Furnish many exclusive designs
together with very popular sizes

14 Point 14 A $1 40 29 a $1 60 $3 00

MENTION ENORMOUS RECORDS
Many compositors must hunt for sorts,
spending more actual time in searching

The Babcock Optimus
The Babcock Optimus

The driving motion is the vital point.

The simple directness of a short shaft, with a driving pulley on one end and a star gear on the other, is all there is of the Optimus driving motion. A device of balls and sockets, made a part of the shaft, permits one end of the shaft to be deflected, so that in one direction it drives the bed above the rack and is below it at the other. Nothing else can be as simple or have fewer parts; nor can anything else give the advantage of driving bed in both directions from the same point.

This simplicity gives splendid precision in action, so that runs of a million from one set of plates are possible; it gives fast and quiet operation with easy reverse; positive register between bed and cylinder; long continued use without delays or expense. We have records of large machines at hard work for more than ten years that have cost the owners nothing whatever in repairs or delay.

Competition has sought less direct and more complex contrivances, which are constantly changed. Some of these, widely exploited awhile ago, have been cast aside for something else that offers no assurance of permanence. Why are they changed, and why did one of the loudest voiced get out of the market entirely?

In only the Optimus driving motion has there been stability, and only here can it be expected. This mechanism is a perfect motion containing the basic principle for best driving a reciprocating bed. It is the only correct and wholly satisfactory device for the purpose. Since its adoption it has not been necessary to change it. Not a single user has complained of it. Examined after years of hard use no ball and socket motion has shown appreciable wear, nor has it cost one user one cent.

The Babcock Optimus

IMPORTANT and of BUSINESS INTEREST to PRINTERS and PUBLISHERS

WE call your attention to our electrotypes made by our NEW PATENTED LEAD MOULDING PROCESS which represents the latest and best method of duplicating halftone engravings to print in one or more colors.

They print like originals and assure perfect register.

For the past thirty years we have furnished steel-face electrotypes for work where a large number of prints were to be made. Our New Lead Moulding Process enables us to make steel and nickel deposits direct on to the lead mould, which assures the most perfect and durable printing plate from which unlimited long runs can be printed without showing much wear.

Send us a trial order and be convinced.

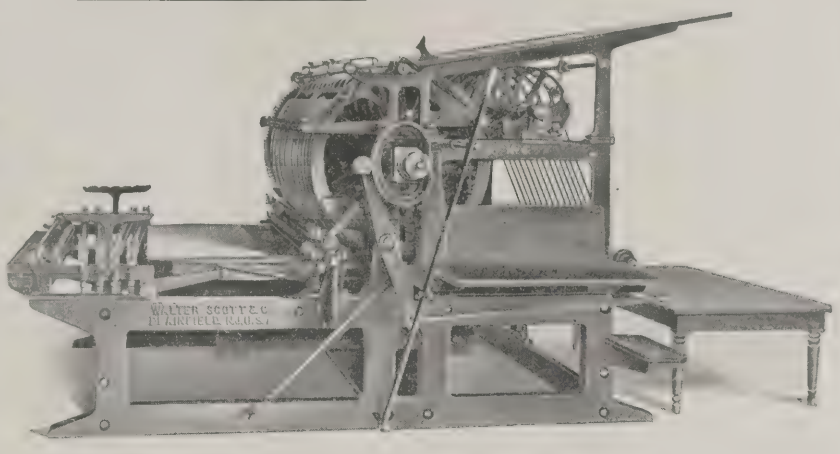
SCOTT PRESSES

They are built in many different styles to properly and economically fill various demands. Below are illustrated two extremes. If your paper is too big for the first or too small for the last, we have several intermediate styles, one of which will suit YOU. We also make bigger presses—in fact, we have the only complete line.

SCOTT CLASS C. T.

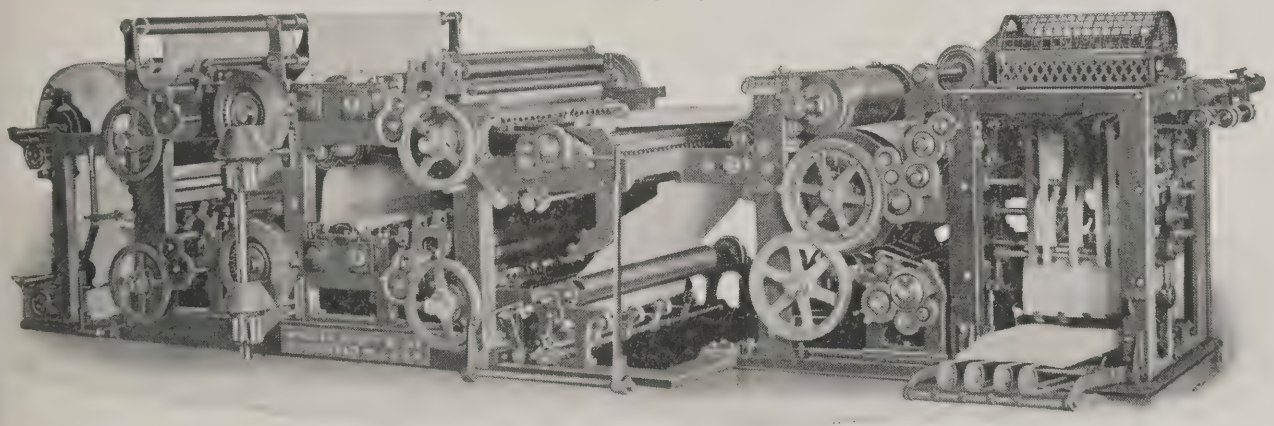
This is the latest improved machine especially designed for the requirements of the newspaper office in smaller towns. It is so accurately constructed and of such excellent design that it is also used by job printers for the economical production of ordinary job work.

This press is the finest machine of its kind that it is possible to build at any price, and it has become so popular that orders for a large number of these presses have been received, although the first machine was only shipped in January of this year. Send for descriptive matter and price.



SCOTT CLASS XX. The Latest—The Best.

Enormous speed attained from fewest plates, without increasing number of cylinders, surface speed of webs or number of paper rolls, and using regular semi-circular plates.



There is no machine ever offered the publisher that combines so many advantages and at the same time has no drawbacks. It is made in many sizes. The press illustrated feeds from 2 two-page-wide rolls of paper, has 4 plate and 4 impression cylinders, 4 ink fountains and distributing apparatus, and a single rotary folder, and it will easily produce 24,000 per hour of 4, 6, 8, 10, 12 and 16 pages from practically a single set of regular semi-circular plates—all pages inset.

THIS PRESS HAS NO EQUAL IN THE WORLD—INVESTIGATE IT.

TELL US YOUR REQUIREMENTS—WE HAVE THE PRESS

HAMILTON'S MODERNIZED COMPOSING-ROOM FURNITURE AS A FACTOR IN COST REDUCTION

Thousands of the largest and best printing concerns throughout the country are wrestling with the cost problem in an effort to ascertain correct selling prices which will leave a satisfactory margin of profit.

The ascertaining of actual cost under existing conditions is not the whole problem by any means, and the printing-office proprietor who stops at that point will soon find himself far behind in the race. There is always the question of *reducing* the cost of production, and here waste prevention enters as a large item. There is waste in material as well as waste in labor, and waste in labor is largely influenced by a corresponding waste in floor space.

By economizing floor space, the rent or interest cost is lowered, and by having all material conveniently and compactly arranged at the hand of the workman, much useless traveling about the office is avoided. This has reference to lost motion by hand and by foot, and the countless movements of workmen in the course of a year, when reduced by a small percentage, have a direct influence on the profits.

When it is possible to reduce the floor space fifty per cent in offices not equipped with modernized furniture, and a corresponding saving of from ten per cent to twenty-five per cent in labor, a great reduction in the cost of the output will be at once apparent.

That such saving can be accomplished has been abundantly proved, all of which is explained in "Composing-room Economy," a copy of which will be sent to any interested printing-office proprietor.

The testimonial letters from the best-known and representative printing concerns throughout the United States prove conclusively that such savings can and have been made.

We are continually re-equipping composing-rooms throughout the country, and this movement, now well started, will eventually cover the entire field, and those who are slow to take advantage of our offer to modernize their composing-rooms will be the last to secure the additional profits which are made possible with modernized composing-room equipment.

All our furniture is completely illustrated and described in our new catalogue and supplements. If you haven't copies, write us, or apply through your dealer.

If you are interested in this vital question, fill out the attached coupon and return it without obligation on your part. We stand ready to prove our claims, and we must prove them in order to secure your order.

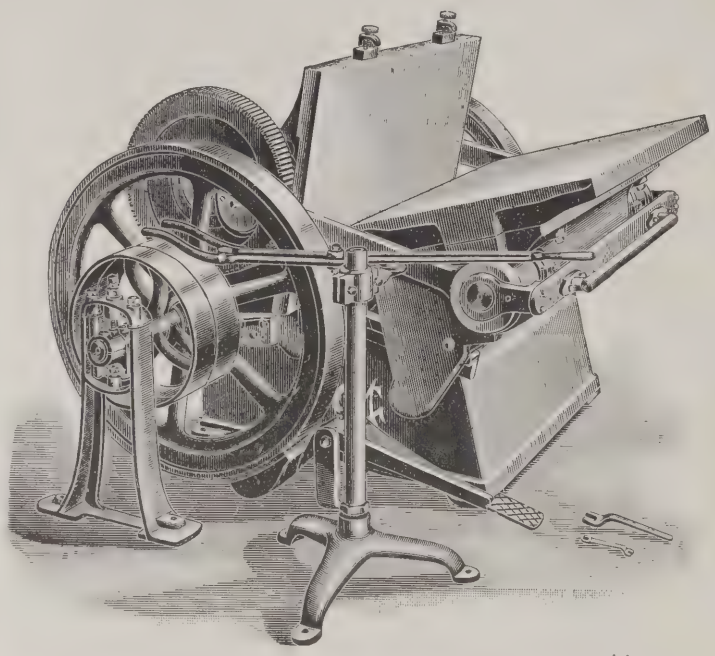
Duplex Printing Press Company, Battle Creek, Mich., U.S.A.

The National Machine Company

Sole Manufacturers

111-113 Sheldon Street, - Hartford, Conn., U.S.A



EARLY in 1876 the first printing presses adapted to the work of cutting and creasing paper and pasteboard for boxes were made by M. Gally, since which time there have been placed hundreds in most of the paper-box manufactories of the United States. The press now offered is the latest improvement, and is the most powerful and easily handled machine ever produced for this purpose. It has the improved platen movement of the Universal Press, it is remarkably simple, and being extremely solid in its build, it is peculiarly adapted for either stamping or paper-box cutting. All sizes have the extra steel gibbed lock and are also provided with phosphor-bronze bushings between the draw bars and impression cranks.

In these presses are combined unequaled power, speed, strength and facility for operating. The speed is limited only by the expertness of the feeder. The platen is under absolute control by means of the instantaneous throw-off. These presses are double geared, extremely powerful, durable and effective, and will not "stall."

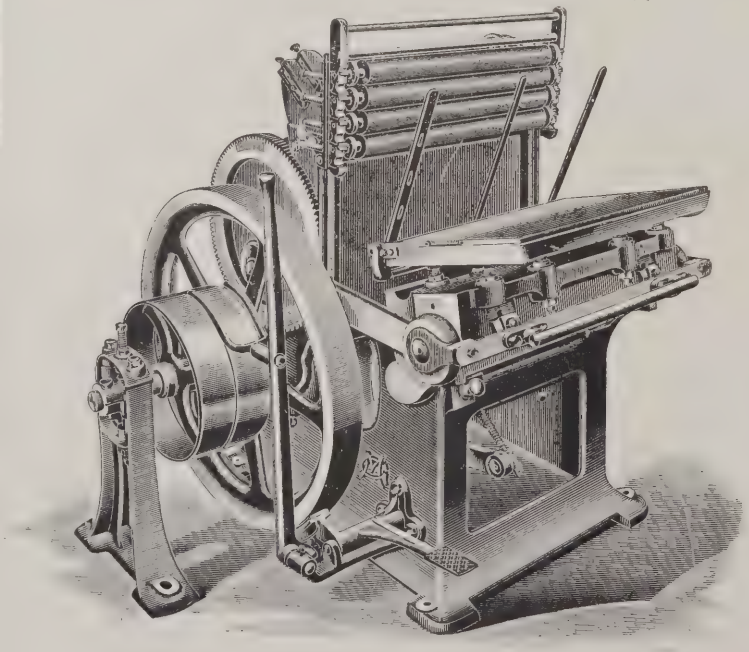
Cutting and Creasing Presses, 5 Sizes



Super Royal No. 4. 17x25 inside Chase.

TO meet the demand of those printers who require a larger press than the 14 x 22 inches; to publishers using ready prints, in small towns, for one-page work; blank book makers and others who do not have constant need for a cylinder press, we offer the Style No. 4 Universal. This press is built in one size only—17 inches by 25 inches inside chase, on new lines and no expense has been spared in this new production, now offered to the trade for the first time.

The frame is of a solid, modern design, and is proportionately heavier than the 14 x22 inches; the bridge, fly-wheel, hook connection and cam lever are heavier; the cam-way in the large gear wheel is of an improved design, requiring a larger friction roller; the gear wheel has the steel sections in the rim and cam-way like the Style No. 2 and Style No. 3 Universals; the carriage ways are of a new design, the carriage slot being perpendicular its full length; this press has the long pinion shaft with the outside floor support like the Style No. 3 Universal and the new style double inking device without springs is a part of the regular equipment.

The following small parts are included:—FIVE STEEL CHASES, one roller mould (for which a set of cast rollers will be substituted if preferred), eight form roller stocks, six distributor roller stocks, two vibrator or ductor roller stocks, sixteen roller wheels, (eight large and eight small,) three iron lateral distributors or changers, two feed tables and one set of wrenches. No treadle fixtures are supplied with this press. Each press is shipped complete with ink fountain and side power fixtures, including tight and loose pulleys, and the improved belt shifter and brake combined. Gross weight complete, crated for domestic shipment, 3,500 pounds; floor space required,—including feed tables and stands in position,—44 inches from front to back and 60 inches sideways; Pulleys, 16 inches in diameter with 3¾ inches face, carrying a 3½ inch belt; the flywheel makes eight (8) revolutions to each impression and the press will require about 1½ H. P. to operate it. Price furnished on application to Agents or The National Machine Co.

NATIONAL PRINTER JOURNALIST

A JOURNAL FOR PRINTING AND ALLIED TRADES

Volume Twenty-seven | Chicago, November, 1909 | Number Eleven

FIRST INTERNATIONAL COST CONGRESS OF EMPLOYING PRINTERS

NO more important convention of printers was ever held in America than the one that assembled at the Auditorium Hotel, Chicago, beginning Monday, October 18th.

Delegates were present from the leading printers' organizations—men who have made a special study of cost accounting as applied to printing. Owners and representatives of leading printing establishments from Montreal, Boston, New York, Philadelphia and other cities on the Atlantic Coast, to Winnepeg, Tacoma, San Francisco and other western points and intervening cities, North and South, joined in the deliberations and discussions.

W. J. Hartman, President of the Ben Franklin Club of Chicago, was chosen chairman and opened the convention with a statement of the objects had in view, in calling the printers together for deliberation on the one important subject, that above all others had vexed employing printers—the cost of production.

One of the first and most satisfactory papers presented was on the topic, "What a Cost System Has Done for Minneapolis," by Gilbert L Byron of that city. Results from experience had proved the value of a Cost System. The great trouble has been from the giving of unprofitable prices through a prevailing ignorance that has occasioned a price cutting that it is impossible to meet or to provide against.

When printers are able to ascertain and to show cost the main difficulties as to securing reasonable prices are removed. Business men are willing to pay cost with reasonable margins of profit to the printer, but the trouble has been that there has been no way but to accept the lowest price received in competitive bidding as the right one. He believed it was often wise, where any question was raised, to show customers the items of cost and when this could be done clearly, correctly and convincingly, the work would be secured. The results in Minneapolis, while somewhat surprising to many, had been entirely satisfactory.

F. I. Ellick of Omaha, formerly Secretary of the Ben Franklin Club of Chicago, and who is especially well informed as to the work covered by his topic, gave a most instructive paper on "Installation of Cost Systems." The first thing is the understanding that there is an exact cost to be ascertained, then the showing of how and the value of such knowledge.

Herbert Johnson of Chicago, illustrated the value of "Practical Systems of Cost Finding for Small Offices." He showed that no less than the larger establishments, the smaller offices were benefited by methods of knowing the cost. It is the only sure way to profit and growth.

"Cost of Handling Paper" was most informingly presented by A. W. Finlay of Boston. He convincingly demonstrated that there should be a charge of at least ten per cent added to the purchase price of all paper, to cover the cost of handling, storage, and this, too, even if the paper were furnished by the customer. A leading printer of Indianapolis thought that where stock had to be purchased in bulk and held against the time of use, as was the case in many offices in the West, a charge of fifteen per cent should be made and had practiced charging even more when stock was furnished by customers, to cover risks, storage, etc.

"Depreciation" was a topic ably handled by Mr. H. P. Porter of Boston and his conclusions as to charges to be made therefor, of 15 per cent on presses and 33 1-3 per cent on type, etc., were subsequently included in the findings of the Cost Committee, printed further along in this report. This paper lead to a considerable discussion. Mr. T. E. Donnelly thought that the depreciation of presses should be charged by the hour. A press costing three thousand dollars, on the basis of the life of the press being fifteen years, would require a charge of 12½ cents per hour or $1.00 a day, against the different jobs, to make good for the wear of the press. A question was raised as to the wisdom of charging off depreciation against machinery as the value would be, in this way, wiped out and would cause trouble in the adjustment of insurance. It certainly is an arbitrary method and inaccurate as some presses will live much longer than others. The whole trouble can be obviated by simply ascertaining the average deterioration and then charging against the work by the hour, the right per cent, as recommended by the committee for replacement of worn out material or machinery It is a legitimate charge of cost of the work but there is no invariable standard that justifies the charging off the value of each press or other articles.

"Distribution of Overhead Burdens" was ably treated by C. P. Cummings of Philadelphia, and was presented in a most practical manner, and as his conclusions were also included in the report of the Cost Committee, they need not be given here. The papers all elicited animated discussions

and enough of important truths were brought out to fill a book. The printers of America have reason to congratulate themselves that all these discussions were taken down in shorthand and, together with the papers and all the proceedings, will be published in full for the benefit of all who are interested.

Tuesday morning's session opened with the Auditorium crowded and the delegates displaying the tensest interest in every word pronounced.

FIRE INSURANCE FOR PRINTERS.

Mr. Alfred J. Ferris of Philadelphia, read a paper on "Fire Insurance." Mr. Ferris declared that the men in the printing business pay more money for fire insurance than those engaged in any other occupation. He spoke with the accurate knowledge gained by actual experience in connection with the conduct of the Graphic Arts Mutual Fire Insurance Co., a corporation organized in Philadelphia, which has had remarkable growth since its inception a little over a year ago.

Mr. Ferris was emphatic in the statement that the printing business has practically sustained "old line" companies. He showed clearly that 25 per cent of the cost of maintenance of Fire Insurance companies was in getting the business, and in the conduct of district offices. He spoke of the benefit to be derived by patronizing a company which had no expenses in securing business, and a minimum of cost in office or clerical and executive expense. Mr. Ferris was decidedly of the opinion that printers, like the lumbermen, could organize and conduct a Mutual Insurance Company, and save 25 per cent of the premiums now being paid. He asserted that the printer is the good natured customer who makes good all the insurance man's losses. The latter part of his address described the work of the Graphic Arts Mutual Fire Insurance Co., stating that the company had paid a dividend of 25 per cent to its policy holders, and had paid all fire losses sustained. He urged the importance of printers' keeping their offices in better condition and using all safeguards against fires and told them to "sweep up" and put waste paper in proper receptacles. The printers in the assembly were struck with the pertinency of the speakers' remarks and heartily applauded him.

Mr. Ferris was followed by Mr. Fell of Philadelphia, who is President of the United Typothetae of America, and thoroughly familiar with the Insurance Company referred to. Mr. Fell was given an enthusiastic ovation as he stepped to the platform. Mr. Fell declared that the printer is a "dirty house-keeper," and that the Insurance Companies charged the printer for being dirty. Mr. Fell advised the printers not to argue, or talk, but to buy a broom and clean up. He spoke to the effect that thousands of printers could secure a lower rate of insurance by burning oiled rags, adding water buckets, and by installing sprinkling systems. He described his experience in securing a reduction in rate from $2.01 per $100 to $1.60. He declared that the principal fault with the printing trade to day was the fact that printers do not take the time to look into the condition of their own business. He said that the installation of a sprinkling system would pay a handsome profit; that the entire cost would be paid for within two or three years by the saving in the payment of insurance premiums. Mr. Fell's parting word on this subject was, "If you want to keep dirty, you ought to pay for it." A general discussion followed which indicated that several of the leading printers have appreciated the importance of making improvements in order to reduce rates.

RELATION OF THE CREDIT MAN TO THE PRINTER.

Mr. F. Y. Norris of the J. W. Butler Paper Co., of Chicago, presented a most interesting paper on the "Relation of the Credit Man to the Printer." Mr. Norris opened up a new line of thought and startled his hearers to an appreciation of the importance of co-operation between the credit man and his customer. He indicated that the credit man must have some knowledge as to how well his customer has sold his product. He showed that the extension of credit seemed to be a necessity; that credit makes the transaction of business easier and enables the avoidance of errors. Mr. Norris pointed out that banks furnish little of their own capital, that they do business largely through the use of money deposited. The speaker was of the opinion that borrowing money of a bank was a good deal like taking strychnine for certain diseases—a good thing if taken with full knowledge of conditions but surely fatal, if taken without prudence. He indicated that it was reasonable for printers to ask a years' time to pay for a press, but that it was unreasonable to ask for the same term in paying for printing ink. He dwelt upon the value of discounting bills and asserted that the benefit to the printer was found, not only in the fact that money was saved, but in that it led to a study of costs and more careful management of business, which had a natural beneficial effect. Mr. Norris declared with fervor, that "no man has ever reached his full share of success until he discounts." He urged that the terms, which the printers should insist upon, in dealing with customers, should be thirty days at the longest, with no discounts, as the largest expense in the production of printing is the item of labor. Mr. Norris pleaded for a more cordial feeling of co-operation and friendship among printers and the credit men of supply houses. He was certain that the credit man could be of very great assistance to the printers in offering valuable advice.

In closing his remarks, he paid a tribute to printers as a class, declaring that, for honesty and integrity, they were without peers in any line of business. So great was the enthusiasm of the Convention over Mr. Norris' address that a unanimous vote of thanks was tendered him when he had finished. The address of Mr. Norris is printed in full elsewhere in this issue.

The morning session adjourned at about 12:00 o'clock and the conference resumed its deliberations at 2:30 P. M.

HISTORY OF PRICE MAKING ORGANIZATIONS.

Mr. Charles Paulus of New York City read a paper on the subject of "History of Price Making Organizations." He showed that the first agitation for making prices was in 1730, when Ben Franklin accused a competitor of "questionable practices." Mr. Paulus read a code of ethics which had been adopted by the New York Board of Trade one hundred and fifty years ago. One clause defining the purpose of the Association of Printers and Publishers was to "promote social fellowship and encourage fair prices." According to a price list issued in 1865 in Philadelphia, when work days ran from ten to twelve hours in length, book composition was reckoned at ninety-five cents per hour, job composition seventy-five cents per hour, extra work $1.00 per hour. The printers in early days had the same difficulties, experienced by their descendents in securing right prices. Mr. Paulus had words of praise for Theo. L. Devinne of New York who was one of the earliest exponents of the "get-to-gether" idea and told of his experience in connection with the Printer's Board of Trade in New York, in getting information from the printers of the Metropolis. He said that, when he asked for information by letter, many of the printers, in answering, were frank in acknowledging that they had no cost system, and, therefore, were entirely incapable of furnishing him with the desired knowledge. In closing his address Mr. Paulus praised the Board of Trade system of finding costs, and declared that

BANQUET FIRST INTERNATIONAL COST CONGRESS OF EMPLOYING PRINTERS, AUDITORIUM HOTEL, CHICAGO, OCTOBER 20, 1909

this system obtained accurate results and was most economical in operation. A brief discussion followed.

OUR RELATIONS WITH THE SUPPLY MAN.

Seneca C. Beach of Portland, Oregon, addressed the Convention on the subject of "Our Relations With the Supply Man." Mr. Beach's remarks aroused great interest and started a discussion which surcharged the air with excitement. In his introductory remarks, Mr. Beach declared that the International Cost Congress was the beginning of the end of the printer's troubles. He was confident that the result would be the elevation of the craft. He pointed out that the bone and sinew and blood, of the trade in America was represented by the delegates. He was emphatic in his assertions and opinions, and offered thoughts which struck his auditors with no uncertain effect. He urged that the printer should think better of himself and of his trade.

In considering the subject upon which he had been asked to speak, "Our Relation with the Supply Man," Mr. Beach said that he had a quarrel with the system now followed by the supply houses. He pointed out that the art of printing had made prodigious strides, but the business management had not kept pace but that in all other lines the advance in this direction had been great. He declared that ninety per cent of the printers failed and said that the printer suffers from an acute handicap, viz.—"That of being forever in the supply man's debt." He asserted that the terms of the supply man were always the same and illustrated his point by telling how a man of his acquaintance, with no business experience whatever, had been able to secure $2,900.00 worth of material, by a cash payment of $500.00, and that the freight alone on the material cost the supply company $175.00. Mr. Beach declared that no protection was ever given to established printers,—that many of the supply houses would lend their capital to whom-so-ever came. The speaker said that he had a record of a plant that broke twenty-one men. He said that the result was that prices were cut and trade taken away from legitimate printers. Mr. Beach urged that an effort should be made to drive the supply man "out of the banking business." The method advocated was, that the trade should be withdrawn from the supply house which failed to protect the established offices, and encouraged amateurs. It was his opinion that each city had only so much business to be done, and that an advance, or decrease, in prices would make no material difference in the total amount ordered. He declared that newer and better conditions could be brought about in each city by the better class of offices.

A representative of the Latham Machinery Company spoke in reply to Mr. Beach's arguments, and was not contradicted in the statement that most of the men in the printing business today owed their existence to the generosity of the supply houses in extending credit. He told of one man who had saved $250,000.00 who always bought supplies on time. Lively discussion followed.

Mr. Schraubstadter of the Inland Type Foundry, St. Louis, was of the opinion that supply men were at fault and that some protection should be offered to established houses. He urged that the delegates should take some action towards improving conditions.

A motion asking that a committee of nine be appointed to draft a statement defining the position of supply men and printers was briefly discussed, but finally laid on the table.

PRINTERS' COST COMMISSION AND UNIFORM COST FINDING SYSTEM.

The most important work of the Convention was the adoption of a report of the committee of twelve appointed to draft resolutions as to the purpose and scope of the Convention.

Upon motion by Mr. T. E. Donnelly of Chicago, the Convention resolved itself into a committee of the whole, and chose Mr. Lawrence Fell of Philadelphia as chairman. Mr. J. A. Morgan of Chicago, chairman of the Committee presented a report and the items were voted upon separately. The following is the text of the report as adopted by the Congress:

We recommend that the work of the First International Cost Congress of Printers be perpetuated and continued by the election of a permanent Commission of fifteen members to be known as the American Printers' Cost Commission.

We further recommend that this Commission be elected by the delegates present; the chairman appointing a nominating Committee of three which shall present the names to be voted upon by this Congress.

We further recommend the adoption of a uniform Cost Finding System in all printing offices throughout the United States, Canada and Mexico.

1. For the purpose of arriving at the cost of production of printing, we recommend that the standard unit of product shall be the hour in the several departments.

2. That the standard hour cost shall be the gross cost, namely labor, plus all overhead expense, department and office.

3. That the standard method of caring for the overhead expenses shall be to charge direct to each department all necessary items and to distribute office or general overhead expense on the basis of total department costs including payroll.

4. That stock handling, storage and shipping shall be kept as a separate department or departments and may be included as an item of the general overhead to the end that same be included in gross cost of mechanical departments. To cover cost of handling stock it is suggested that a minimum of 10 per cent must be added to the delivered price at the plant. Profit to be added to this amount.

5. That the standard rate of depreciation on standard machines to be charged to cost of production shall be 10 per cent annually of original purchase price.

6. That the standard rate of depreciation on type shall be 25 per cent per annum of its original cost.

7. That the standard rate of depreciation on type stands, chases, stones, etc., shall be 10 per cent per annum of their original cost.

8. That the standard rate to be charged off for bad debts shall be 1 per cent of volume of yearly sales.

9. (a) It is the judgment of your Committee that in the operation of a printing plant to its average capacity, that a minimum profit is 25 per cent added to cost of production

(b) That the standard scale of credit shall be 30 days.

(c) That the printing ink used on cylinder press work shall be charged to the job.

10. As a requisite for determining costs we endorse and deem necessary the use of an efficient loose leaf inventory system.

11. Experience has demonstrated that inventories for insurance adjustments by appraisal companies have proven most satisfactory.

12. We further recommend that the proceedings of this Congress be printed and distributed to the delegates in attendance at this meeting and to such other printers as the Commission may deem wise.

13. We recommend that this body direct the permanent Commission to proceed at once to the preparation of an International Uniform Cost System.

As a means of assisting the Commission, all those having cost systems are requested to forward them to the secretary of the Commission, 1327 Monadnock Block, Chicago, Ill.

14. We recommend that this Commission be empowered to raise the necessary funds to defray its expenses and that

a voluntary subscription of ten dollars be taken from all firms represented at this Congress.

Respectfully submitted,

F. Alfred, N. Y. City,
R. N. Fell, Philadelphia,
A. M. Glossbrenner, Indianapolis,
T. B. Morton, Louisville,
S. C. Beach, Portland, Ore.
Albert Finlay, Boston,
C. D. Kimball, Minneapolis,
Stewart Scott, St. Louis
F. I. Ellick, Omaha Neb.,
Geo. M. Rose, Toronto,
H. W. J. Meyer, Milwaukee,
J. A. Morgan, Chicago, *Chairman.*

Article 3 caused the most discussion. Mr. F. I. Ellick of Omaha spoke for nearly an hour in defense of his motion to strike out the words "costs including." After a lengthy discussion in which many of the delegates took part, the article was adopted as originally written.

In accordance with the first clause in the report, a Nominating Committee of three was appointed with instructions to report Wednesday morning. Members then adjourned to the Banquet Hall on the ninth floor of the Auditorium hotel where an elaborate banquet was served. The company numbered over three hundred printers and supply men.

After the dinner, Mr. Hartman of Chicago called the meeting to order and presented Hon. Geo. E. Cole as Toastmaster. The address of Welcome was delivered by Hon. W. P. Dunn, who was followed by Mr. John C. Hill, of the Printer's Board of Trade, Baltimore. Mr. E. Lawrence Fell, President of the United Typothetae delivered an inspiring address, in which he urged that the printers should endeavor to put into practice what they had learned at the sessions of the Congress. Mr. Thomas M. Ball of Chicago was then introduced by the Toastmaster, and with surprising despatch raised the sum of $3,000.00 for carrying on the work of the Cost Congress. Over one hundred subscriptions of $10.00 each were made by printers, and many of the larger offices pledged $100.00 each, thus insuring the success of the Commission.

The following were the committees in charge of the entertainment of the delegates:

Entertainment—O. A. Ross, Chairman, H. L. Ruggles, and J. W. Hastie. Banquet Com.—W. J. Hartman, Thomas M. Ball, J. A. Morgan. Auto Ride Com.—Geo. H. Benedict, Morton S. Brooks, Forest Hopkins.

The delegates assembled at 10:00 o'clock Wednesday morning, and received the report of the Nominating Committee, which was presented by Mr. Fell. The following were the fifteen members selected to serve as the Commission:—J. A. Morgan, Chicago, Ill.; A. G. Finlay, Boston, Mass.; H. W. J. Meyer, Milwaukee, Wis.; Frederic Alfred, New York; F. I. Ellick, Omaha, Nebr.; P. T. White, Seattle, Wash.; E. A. Kendrick, Buffalo, New York; A. M. Glossbrenner, Indianapolis; L. E. Fell, Philadelphia, Pa.; Stewart Scott, St. Louis, Mo.; T. B. Morton, Louisville, Ky.; Edward Stone, Roanoke, Va.; G. H. Saults, Winnipeg, Canada; C. D. Kimball, Minneapolis, Minn.; E. H. Clark, Memphis, Tenn. The report was adopted by unanimous vote.

Chairman Hartman spoke at some length, and with much feeling as to the objects and work of the convention and urged that each should take home the lessons learned and go right to work to carry out the plans and the principles that had been adopted. Messrs. Norris of Chicago and Beach of Portland, Ore., spoke interestingly in a conciliatory and explanatory way as to matters brought out in the discussions of the relations of the supply men and the printers. Both argued that these relations should be amicable, cordial and mutually helpful. The newly chosen Commission assembled in an ante room and held its first meeting.

During the closing moments of the Congress enthusiastic praise was given to Mr. Fell, Mr. Hartman and Mr. Morgan for their work in assembling the great number of printers to this First International Cost Congress. Sixty-eight of the larger cities were represented in the Convention and over 200 leading employing printers of the United States and Canada were present at the sessions.

The Congress adjourned at eleven o'clock Wednesday morning and the delegates were then tendered an automobile ride through the Chicago Park systems with a dinner at the South Shore Country Club.

Recent Libel Decisions

BY D. M. BUTLER, LINCOLN, NEB.

The St. Louis *Republic* had published certain statements concerning Glover C. Branch, a representative in the General Assembly of Missouri.

The newspaper had stated in substance that the member of the General Assembly had been induced by the hospitable attentions of a candidate, and had announced that he would vote for him though the public had been previously informed that he could not reconcile his conscience to vote for him.

The jury in the trial court found a verdict in favor of the plaintiff, and upon appeal the supreme court reversed the case for reasons of no particular interest to newspaper men, and yet announced the following principles of law which are of interest to publishers: The court held that the language did not charge the member with bribery and was not libelous in view of the evidence of the candidate's campaign for the office of senator and the member's position toward the candidate; that it is not libelous to point out seeming inconsistency in a public officer and his acts are fairly open to criticism and comment. An action for libel based on an article in a newspaper published in one county and circulated in another county may be brought in the latter county.

We have a recent case from the court of appeals from Kentucky which sustains recent decisions of courts on the question of the right of privacy.

The picture of J. P. Chinn was published in the magazine issued by the company, which publication was for the purpose of advertising the Doan's Kidney Pills. Accompanying the picture was the following announcement, which it seems was published without the consent of the party plaintiff:

Foster, Milburn Co., Buffalo, N. Y.: "I join in endorsing Doan's Kidney Pills which were recommended to me a few months ago when I was feeling miserable. Had severe pains in the back and was restless and languid. A few boxes of pills effectually removed the ailment and I am glad to acknowledge the benefit I have derived."

Jack Chinn, who was described as the famous Kentucky horseman, etc., brought an action asking $25,000 damages. The jury gave him a verdict of $2,500. The court held: First, a person is entitled to the right of privacy as to his picture, and that the publication of the picture of a person without his consent as a part of an advertisement for the purpose of exploiting the publisher's business is a violation of the right of privacy and entitles him to recover without proof of special damages. Second, that in an action for the publication of forged recommendation of a patent medicine, evidence that plaintiff was ridiculed and laughed at by his friends is admissible as was also admissible evidence that there was a scale of prices paid for cards of this sort, the amount paid depending on the office held by the person as tending to show that the people might conclude that plaintiff had sold his signature.

Past-President Walter Williams at the Institute of Journalists, Plymouth, England

INSTRUCTIVE ADDRESSES ON JOURNALISTIC TRAINING AND TOPICS CORRELATED THERETO.

TRUE newspapers in all free lands have a common bond. This is made evident as to the members of the newspaper calling in Great Britain and America by an account of a day's session of the Annual Conference of the Institute of Journalists, held at Plymouth, in Devonshire, England, at which Past-President Walter Williams was one of the speakers. There were two sessions and a banquet in the evening.

We judge the Institute of Journalists to be composed of practical, working journalists as distinguished from publishers or proprietors. Among the matters considered or incidentally brought before the members were "a scheme for unemployed benefits" for members of the Institute out of work, and a gift of five hundred pounds sterling ($2,500) by one Mr. Catling to the Orphan Fund of the Institute "as an installment and not a final payment."

In an introduction to the account of the day's proceedings, the *News* says:

The annual Conference of the Institute of Journalists was resumed at Plymouth yesterday. The day was occupied by two sessions of the Conference and the annual dinner. The major portion of the time of the Conference was occupied by a discussion of a scheme of benefits for members of the Institute when out of work; but about three o'clock that subject was postponed until to-day in order to hear two distinguished visitors on the subject of professional training of journalists in connection with local Universities. Professor Walter Williams, Dean of the Faculty of Journalism in connection with the University of Missouri, U. S. A., gave an interesting account of that newly formed school of journalism, and he was followed by Dr. Griffiths, Vice-Chancellor of the University of Wales. During the afternoon the ladies accompanying members paid a visit to Mount Edgcumbe, under the guidance of the Ladies' Reception Committee.

In speaking of this entertainment in another article in the paper the *News* said:

The efforts of the Ladies' Committee to find entertainment for the ladies of the members of the Institute have met with gratifying response. No reunion of the Conference could be more successful or enjoyable than the party which took place at Mount Edgcumbe yesterday afternoon. By the kind permission of the Earl of Mount Edgcumbe, the whole of the gardens were thrown open, and thither a steamer specially chartered conveyed a party of 140 from West Hoe Pier. The gardens were in very beautiful condition, and the ladies did not know which to admire most—the charming orangery, the Italian garden, the old-world French little corner, with its arched paths and exquisite begonia blooms, or the sweet-smelling rosery, where some perfect specimens were still in bloom. Cedars, magnolias, and other trees and shrubs were pointed out, and the fine vistas were much admired. Tea was served under the trees of the lodge, and before it was over several gentlemen arrived from the afternoon session of the Conference. The steamer took the party back early for the banquet in the evening.

This establishes the fact that newspaper men of the New and Old World enjoy alike entertainmnets and banquets and what follows as to the proceedings given in the *Western News* well shows that there is "a common bond" as to principles and aspirations:

PROFESSIONAL TRAINING FOR JOURNALISTS.

The President introduced the question of the education of journalists, and offered an especial welcome to Professor Walter Williams, M.J.I., of the School of Journalism at Columbia University, Missouri, U. S. A. They welcomed Professor Williams as a distinguished American journalist, and through him they extended a very hearty appreciation of their brother journalists on the other side of the water. They were glad, through him, to shake hands with the whole profession of journalism in the United States and to say how pleased they were that that great host of English-speaking writers were all engaged in one great civilizing work of communicating in the very best sense between nation and nation, people and people, community and community. (Applause.) They also recognized and welcomed him as a representative of a federation of States which they regarded as their child. After all, this was the mother country, and he had been happy to find in Americans a very great respect and affection for the old country. They might be slow in Britain, and in many respects lack much of the go-aheadness of their youthful progeny in the United States, but they were proud of their development and progress in all good things, and they took a paternal pride as Englishmen in America's success, together with a fraternal pride in their journalistic success. On every ground—personal, national, and professional—they welcomed Professor Williams. (Applause.) They had looked forward to his visit also because he was enabled by his experience to give them some information as to the development of journalistic education in the States. They in this country were, so to speak, merely at the beginning of things in regard to special education for journalists. In several of the States, Universities and schools of journalism had already been adopted, and it was a peculiar privilege for them to hear at first hand from one of the apostles of journalistic education in the States of what was being done over there in that matter. (Hear, hear.)

AN AMERICAN VENTURE.

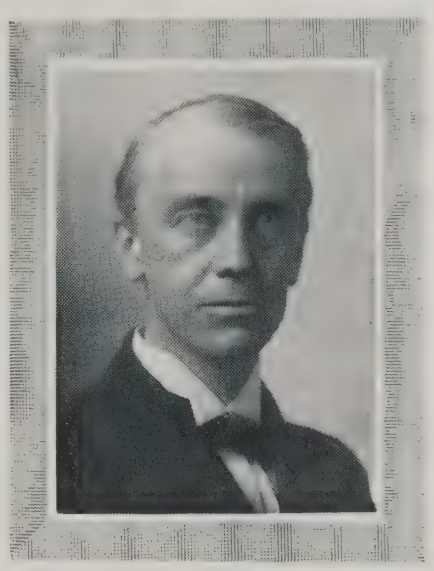
Professor Williams, in his address, said journalism is the profession of the interpreter, and to him who used journalism for the interpretation of the world's events it was a high and noble profession. The journalist was more than interpreter: he was tribune, advocate, guide; he was the modern prophet. Should there be no school of the prophets? The argument for training for journalism seemed unanswerable. Natural aptitude must be supplemented by special training. But how should there be training for journalism? Must it wait the practice of active journalism, a practice of the unskilled upon the body politic? It was to give practical reply to the question that the School of Journalism of the University of Missouri was established. The University was a State institution, and enrolled students of both sexes, who were admitted upon special examination after a four years' course in a State high school. The year's enrollment in all departments of the University was 2,850. The University consisted of the College of Arts and Science, a grammar school, and six professional schools—education, law, medicine, engineering, agriculture, journalism. Entrance to these professional schools was after completing two years in the College of Arts and Science, or its equivalent. The course of study in the professional schools covered three years. The School of Journalism was the latest of the professional schools at Missouri, and had been organized only one year. Training for journalism was older at other American Universities, but Missouri was the first to place this training upon the same plane as training for other professions, with separate organization, separate faculty, separate courses of study. In the first year they enrolled 97 students, of whom 74 were working for the degree in journalism. The faculty of the school numbered 13, ten of these being also members of the faculty of the College of Arts and Science, while three gave courses only in the School of Journalism, and were men who had had actual experience of newspaper work. On the academic side courses were given in English history, English sociology, economics, political science, Government, psychology, logic, while all knowledge helpful to the journalist, and that which best fitted for effective leadership, was emphasized. On the professional side, courses were given in the history and principles of journalism, in the ethics of journalism, in newspaper administration, in reporting, in editorial writings, in copy reading, in magazine journalism, in newspaper jurisprudence—the law of libel; in illustrative art, in comparative journalism in newspaper making—a general survey of all branches of newspaper work. A distinctive feature at Missouri was a newspaper laboratory course, and published "The University Missourian." It was not expected that the awarding of a degree in journalism made a journalist any more than the conferring of a diploma made a doctor, a lawyer, or engineer. But the students who faithfully pursued these courses would be more thoroughly equipped for high service than he who has had no such training. It was too early for him to say

what success had been attained at Missouri. Journalism was just finding itself. Always the Fourth Estate, it had become the first power. Professional training for journalists was needed to raise the standard of journalism and make it indeed "a learned profession." He counted himself fortunate in speaking to a body which had done much in this direction, and would do more—(applause)—and despite difficulty and disappointment, had not been weary in well doing. In due season the profession of journalism, and the world which it served, would reap if they fainted not. Except the purely professional courses suggested, all he had outlined as necessary might be found in the best Universities and colleges. It needed, however, that these studies should be organized, correlated, systematized, and to have added the professional thereunto. Whether this be done in separate college or the grouping within a school by lectureships, professorships, or faculty control, was not essential. The essential, as he saw it, was specialized training, separate or intentive. The State by education and legislation, aimed to raise the standard of the medical profession in order to protect the lives and health of the citizens, and the standard of the legal profession in order to protect the property rights of the citizens, how much more, in the new civilization, was it necessary for the State to assist in raising the standard of the journalistic profession, who promoted and protected the morals of the citizens, morals which were more important than health or property rights or life itself. (Applause.) Schools of journalists were, in the last analysis for the service of the State, above all other professions. Journalism was the profession of public service. The newspaper was the text-book of the masses; the university of the people, who had to determine the fate of Governments, whether the Britain of to-morrow should be the less or the greater Britain, whether righteousness should prevail against the tyranny of the mob. Upon the training of the whole people depended the future of this great empire; and here must the journalist do his public service. (Applause.) * * * There were many journalists who did not believe in that particular method of promoting the welfare of the profession and elevating the ideals and encouraging the ethics of the profession, but whether in or out of a great organization such as that, they might say, "We are interested in the result of every movement that looks forward to the elevation of this profession of journalism, and wherever there is a man who seeks to carry forward this great purpose he has aid, and comfort, and approbation from us." To them in the Institute of Journalists, fellow members with him of an organization which meant much for the profession, he gave his heartiest gratitude, his personal thanks, and his most earnest Godspeed. (Loud applause.)

The President expressed the thanks of the Conference to Professor Williams for his noble and inspiring address, and assured him that they would all feel better for having heard it. (Hear, hear.)

THE UNIVERSITY VIEW.

Dr. Griffiths, vice-chancellor of the University of Wales, thought there were practical difficulties which would have to be overcome in this country if they were to succeed in their aim. He trusted nothing he said would be thought out of sympathy with what they were aiming at or that he in any way differed in aspirations from the previous speaker. What was a journalist? In his younger days he regarded him as a kind of omniscient person, who spoke in the plural, and he wondered what he really wanted seeing that he seemed to have everything. (Laughter.) He had come into contact with them since those old days, and had found out that after all they were really human. One of the first stages was to find out what the journalists wanted, and then how far they who had the direction of University education could meet them. The United States were more free than in this country, where many traditions necessarily hampered them. The problem before them—"Was it possible to have a University education in this country for their profession?"—was no new one. It had occurred in many other professions—engineering, medical, and others. To some extent it had been solved, but the journalists' problem was more difficult than those of the other professions, for their requirements were not definite. It seemed to him a journalist ought to know everything. He would like journalists to know a little more science, but perhaps that was because that was the only thing he himself really cared about. (Laughter.) To exclude science from the education of the journalist appeared to him to be a mistake. But surely they could say the same of almost any subject they cared to mention. Again, the question was an especially important one at the present time. He did not know how it appeared to them, but to him it seemed there was danger of deterioration. The great spread of elementary education in the country had given them a different set of customers from what they had in former times, and the pressure to arrange their wages to meet those customers was becoming greater. If they turned up their journals of forty years ago, and compared them with the journals of to-day, they knew in many respects there was no comparison in favor of to-day. This was above all the time when they wanted to maintain a very high level of culture and knowledge in those who had the guidance of the people, the more so that they had now readers in millions where formerly there were thousands. Men of high character and high standing were more than ever wanted to lead and guide their newspapers. But on the other side let them ask themselves what was the function of a modern University in this country? The first was that of instilling a love of knowledge for its own sake. Once that was achieved the next duty was to assist the professions and the industry of the country, but the first was essential. The second might be done by technical schools. Thirdly, it was the duty of the Universities to encourage research. They needed more mental culture. They required to give more attention to the problem of the secondary education of the



WALTER WILLIAMS
Dean of the Faculty of the School of Journalism
University of Missouri

young people before they came on to the Universities. Granted this was done, he did not see that there were any difficulties in the way.

A JOURNALIST'S OPINION.

The Hon. H. Lawson, received with applause, thanked the Conference for the signal honor they had done him in electing him as President for the coming year. He felt it the more because of the manifold merits of Alderman Campion, and the hard work he had done. He was moved to speech because he did not think there could be anything of more wide or vital interest to them than the discussion which had been opened by Professor Williams and followed by an illuminating speech from Dr. Griffiths. Both gentlemen had emphasized the importance of their profession, and he had always felt the same way as does a great statesman—with whom he was not in political agreement—who said the other day to him, "You cannot aim too high." Personally, he thought they did aim high. (Hear, hear.) Nobody could dispute that the life of the newspaper Press was at that moment fuller and better informed than it ever was before, and that the knowledge they tried to impart to the millions of their readers was certainly more accurate and on the whole better in form and precisenes than it had been. For 99 out of a hundred the only means of education and information that existed was found in the pages of the daily Press. There never was a time when the papers counted for so much.

Mr. Hill (London) said they wanted in the education of the journalist a blending of the academic and the practical, and they would never make progress in the Missouri direction unless they could first convert the dons and head masters.

Mr. W. J. P. Giddings (Adelaide, South Australia) said the cities of the Commonwealth were too far apart to allow of much joint action among journalists.

Mr. Horton (Birmingham) described what had been done to enable journalists to get into touch with the University of

Birmingham. That University had set apart a school for brewing—(laughter)—and he thought they might ultimately be persuaded to set apart a school for journalism.

The Ladies' Orchestra performed during the dinner, and afterwards a musical program was performed, under the direction of Mr. J. H. Lucas. Songs were sung by Miss Elsie Ackland and Mr. W. P. Toby, and two recitations in the Devonshire dialect were given by Jan Stewer (Mr. A. J. Coles).

MR. QUILLER-COUCH.

In opening the speaking:

Mr. Quiller-Couch, proposing "The Institute of Journalists," remarked that a distinguished French critic, having to lecture on poetry, opened with these words: "It is always a somewhat ticklish business to talk about poets, especially when you happen in your time to have done some poetizing yourself." That, or something like it, was the matter with him, for quite an appreciable number of sins of his past, as the phrase had it, were "connected with the Press." (Laughter.) But there was a graver difficulty that he saw inherent in that toast itself and in the occasion. It was always, as they would remember, a somewhat delicate matter for a stranger finding himself in Ephesus to thoroughly unburden his mind on the pursuits of the deities of the Ephesians, and it seemed to him, standing there to propose a toast which they were already resolved unanimously to drink with enthusiasm—(laughter)—he must navigate between the Scylla of monotonous praise and a Charybdis which he hardly dared to contemplate.

After further felicitous and harmonious remarks, Mr. Quiller-Couch continued:

Seriously, he meant that conferences like that did exalt the spirit of the profession, did give them a sense of unity and of solidarity which in nine directions out of ten no doubt, as their President so eloquently pointed out in his opening address, were all for the good of discipline and of esprit de corps, and for the good of the regiment, but which, perhaps, in the tenth case, were not all to the good—were, perhaps, even mischievous, were conceivably even fatal; and for that reason precisely the journalists of Great Britain were not a regiment, and not an army. They were citizens of peculiarly pliant minds, and citizens of the great and free republic of letters. He would not say anything about what he understood to be a growing opinion among them—even the movement that young men should pass certain professional tests before becoming members of their body. The President most ably expounded that point of view. He had no opinion that was worth putting before them in opposition to his, but he would quote one word from Aristotle, who after all was a journalist—(laughter)—who said he was the greatest critic—and after all two-thirds of their business was criticism in life—who without being an expert in any particular art or science had, by his training, such a general sense of those arts and sciences as gave him a just sense of their proportions. In the situation created by the Tenby Corporation, their council, upholding the right of Press access, in his opinion most rightly upheld it not as Press access, not as the privilege of the profession, but as the public right of citizens—(hear, hear)—and he did think that certain law-givers were much less wise who placed it on a narrower and less philosophic, and possibly a less secure foundation. The author, or the journalist, or the artist, or sculptor, was first of all in his opinion a citizen, and his work was part of the work of the State, and his labor part of the total labor of the State, and should be a pattern woven into the garment of the State. Still, they made a very great mistake when they robed themselves in those esoteric professional functions. Surely on the one side they tempted the public to say, "All this is beyond us," or, on the other hand, they encouraged the author to robe himself in a false pride and throw over himself a mantle of mystery which after all

ALASKA VIEWS

From Photos by Felix J. Koch, Illustrator of Travel Features, 325 Hearne Ave., Cincinnati, Ohio

only too often covered a gnawing stomach which after all hurt. (Laughter and applause.) He thought they could carry professionalism too far—(hear, hear)—that at any rate it had its dangers. It tended to exalt the machine above the cause for which that machine existed, and it tended to make too many rules. With rules it was as with the rules of a club; they might make a thousand, and a recreant member would pass them all by. They might make six, and they would be too many for the man who had pride in his calling. He confessed he was a little overwhelmed by the reports he read of the address given them by those eminent men who attended their Imperial Press Conference. Their calling was to be to each one of them that of a watchman over the State —not the old-fashioned watchman on the wall with his clumsy alarms, but a delicate instrument, a needle, a nexus of nerves responsive to the thousand currents that came to them from all parts of the world, and on top of that the cool decision of a man to guide the course and command it before the rest of the sleepy world was even out of its bed. The honor of the profession was not a question of flippancy in the estimate of any true citizen. It was a service which was a service of the tower and the lamp—the tower which was the "turris fortissima" of their escutcheon of Plymouth, and the lamp which was to be "the eye which, watching ever holy, watches always and never slumbers or sleeps." (Applause.)

THE PRESIDENT.

The President, responding, said they would try to lay to heart the warnings of Mr. Quiller-Couch, that distinguished Cornishman who was the pride and honor of his native country. (Hear, hear. Mr. Couch was the embodiment of the poetry and romance of the West. They were all thankful that the gifts of imagination bestowed upon him had not prevented him from placing himself at the service of the community in many useful Civic directions. (Applause.)

* * * They had met this year in a spot sacred to history. From Devon and Cornwall had flowed influences that had largely made English history, and molded the English spirit. The old Devonshire heroes were the watchdogs of the Elizabethan age; so journalists were the watchdogs of our present-day civilization. The better the Institute fulfilled its great aims, the greater would be its beneficial effects. While Plymouth had been the pioneer of that magnificent influence which had permeated to the ends of the world, so the Press carried the force of the English character to the four winds of heaven. It was interesting to reflect that they represented in that room two hemispheres of journalists. They had there friends from the United States, mighty children of a mighty empire; and they had overseas representatives from the Antipodes, and from South Africa and other parts of the empire —all meeting with the mutual desire to advance the interests of a great profession; and as this great world-spirit of the British race grew they might feel that the Institute of Journalists meeting at Plymouth were helping in that great world movement for building up the fabric of civilization, and advancing the great millennium to which we hoped they were all fervently and reverently looking. (Applause.)

THE MOTHER OF ALL THE PLYMOUTHS.

Professor Walter Williams, Missouri, U. S. A., proposed "The mother of all the Plymouths." He said in the name of all the Plymouths—the Mayor of Plymouth had counted them and there were two score or more—he brought to the mother of all the Plymouths the greetings of her children. (Applause.) Daughters were they in their mother's house, but mistresses in their own. (Applause.) He brought the greetings from the Plymouth of Canada; from South Africa now being welded into a great empire under the British flag; from the Plymouths of Australia, that great continent now working out more thoroughly than any other experiments in London; and from the Plymouths of his own country, that Plymouth which was the first-born child of the older Plymouth. (Applause.) He brought her greetings to the mother of all the Plymouths. No one could study English history, which they taught still in the United States, possibly with a little difference of interpretation of some of its events—(laughter)—without imbibing a love of Plymouth—a place which was an inspiration to their children in the United States and a lesson that faith was to be held dearer than life. (Applause.) They taught their children that lesson from English history. He did not remember the day which he did not hold Plymouth dear, although that was his first visit to that historic place. He should carry away from Plymouth great lessons of public service, and concluded by the story of a great city of ancient times, who so long as it regarded its motto, "From each according to his ability, unto each according to its needs," flourished, and when it forgot that motto it perished. If they did not live up to that motto of public service, then the historic mother of Plymouths would go the way of that ancient city; but now he gave them the toast of "The mother of Plymouths—God bless her." (Applause.)

The Mayor of Plymouth, responding, said he was grateful this toast had been entrusted to Dr. Williams, because he had the liveliest recollections of the manner he was treated in the Western hemisphere. When wandering on the prairies of Canada in the snow, the fact that he (the Mayor) came from Plymouth was quite sufficient to secure him a hearty welcome, and when he faced some 900 men and women of color in the handsome University from which Dr. Williams came, that he was from Plymouth was quite sufficient without any speech from him. They still hoped to establish in this mother of all the Plymouths a dock where they could receive visitors from America in their thousands. An American teacher was present when he (Mr. Spender) received the robes of office as Mayor, and he himself learned much from his visit to America through the instrumentality of Mr. A. Mosely. He learned enough of juvenile courts to induce him to work in season and out of season for their establishment here, and had the happiness of presiding at the first children's court in Plymouth. He thought in the interests of the child those courts should not be reported. He acknowledged with gratitude the fair and generous way in which he had been treated by the Press during his Mayoralty, which he thought spoke well for the fraternity of the Press in the West, and, in conclusion, he thanked Dr. Williams for the kindly way in which he had spoken of the mother of Plymouths; long might all the Plymouths scattered throughout the world live in mutual respect and affection one to the other. (Applause.)

OUR GUESTS.

Mr. Woodhead (Durban) proposed "Our guests."

Dr. Griffiths, vice-chancellor of the University of Wales, responding, described Plymouth as the Mecca of all students of the history of Britain, and described how in his earlier holiday times the boat always came to the port of Plymouth, and also to Fowey.

'Varsity Teaches Writing by Mail

NEW COURSES SHOW HOW TO WRITE ENGLISH FOR BUSINESS OR LITERARY PURPOSES.

MADISON, WIS., Oct. 6.—The scope of the courses in composition offered by the extension division of the University of Wisconsin has been enlarged in order to train those who wish to write English more effectively for either business or literary purposes. In addition to the elementary courses already given, there have been added others giving advanced work in the composition of public addresses which are designed to aid those desiring to become proficient as public speakers. Another new course has as its subject the short story, and includes the history of the aim of developing the critical appreciation of such work, as well as the production of original stories by the students. A consideration of the effective presentation of technical and scientific material is given in one of the new courses in advanced composition. Professor Arthur Beatty of the English department will have charge of all of these courses.

G. F. Althouse, publisher of the Ackley, Iowa, *World*, has purchased the plant of the Norris Printing company at Eldora. He will move the plant to Ackley.

A rumor has been floating around Des Moines that Gen. James S. Clarkson, formerly the editor of the *Morning Register*, national committeeman from Iowa and chairman of the National Republican Committee, contemplates returning to Des Moines for the purpose of establishing a Republican morning newspaper. The report also says that the paper will strongly support the administration of President Taft and be vigorously in opposition to what has been called the insurgent movement. Those who are circulating the report explain that they want an old-fashioned Republican newspaper which shall stand for the party and its principles without apology. These claim that there is room for one such newspaper in Iowa.

System, Consultation and Co-operation

MECHANICAL knowledge, proper methods, skill, taste and effeciency are important to printing and newspaper making; but, while general principles can be taught and errors be corrected in the pages of the technical press, and samples, be given in demonstration of principles, still the mechanical branches must be learned in properly conducted trade or technical schools or in establishments able to give proper instruction. Efficiency must come by practice. The papers devoted to the calling can help in a useful and profitable way, yet their greatest values are in the fields of the general and special systemizing of the business, inspiring to proper ambition to learn and take pride in the work and by inculcating the useful ideals of co-operation, organization, consultation and service.

There has been, of late years, an almost complete revolution in the conducting of successful plants. While individuality of effort, of promotions and rewards have not been ignored, mutual consultation, inspiration, co-operation and interchange have come to be recognized as essential, and perfection will be reached when all work together in harmony for accomplishment not to get something more out of, or to secure an advantage over another, but each giving and receiving full confidence, consideration and value.

We have not been neglectful, in the NATIONAL PRINTER-JOURNALIST, as to best mechanical methods but feel we can be most useful in the way of showing the need of, and in inspiring to, higher attainments and the adoption and working out the ideals of full, faithful, highest and most worthy service, through harmonious action aided by consultation and conference, recognizing the fact that all industries and callings and all human society rest on the mutuality of service, for we are all servants one of the other whether acting as employers, salesmen, managers, superintendents, foremen or journeymen, all useful and equally responsible one to the other.

These meditations which we believe contain the most correct and valuable principles of well-ordered modern life and of worthy or permanent success in this age, were suggested through the reading of a handsomely printed and illustrated account, in magazine form, of the second annual convention of the Root Newspaper Association which publishes the following papers: *Dry Goods Economist,* N. Y.; *Dry Goods Reporter, The Milliner,* and the *General Merchants Review,* Chicago; *Drygoodsman* and *Shoe and Leather Gazette,* St. Louis; *Twin City Commercial Bulletin* and the *Hardware Trade,* Minneapolis-St. Paul; *Boot and Shoe Recorder* and *Apparel Retailer,* Boston; Cleveland *Trade Bulletin,* Cleveland; *Southwestern Merchant,* Dallas; *Merchants Journal,* Lynchburg, Va., and the *Pacific Coast Merchant,* San Francisco.

There were one hundred and forty-seven delegates or representatives of the different publications of the Association present. The thought occurs, that, if one business organization with fifteen publications can afford to gather one hundred and forty-seven members of its organization in meetings for consultation, from all parts of the country, in Chicago, twenty-four coming from Boston and sixty-four from New York, how unwise it is for editors and publishers of their own journals to neglect such conventions of the members of their calling or for printers and publishers to neglect the getting together of their employes and representatives in their own city, county or state? The convention was not only held and the discussions had, but a careful record was kept and full publication made for the benefit of all in any way connected with the great business, so varied in its work and the character of the papers issued, but yet joined by a common bond as to interests, aims and methods of accomplishment. What was brought out is of such value to every publisher of the United States as to justify the reprinting here the following extracts from the proceedings:

THE MODERN SPIRIT OF COOPERATION.

Mr. E. M. Skinner, President of the Chicago Association of Commerce, in an address of welcome said, among other things:

"This convention is particularly significant and illustrative of the spirit of modern commerce. Each one of you is interested—very naturally and properly—in his or her individual advancement and profit. Each company is interested, through its officers and those composing its staff, in the progress and profit of its particular publication. And the different companies, offices or publications are interested, as are also individuals, in the success of all the publications separately and of the affiliation of the several trade papers known as the Root Newspaper Association. This is true co-operation; and co-operation is the spirit of modern commerce.

"To the foreigner visiting our country today, probably the one thing which will attract his attention and impress him most is the aroused sentiment of the people in co-operation work for the improvement of the country, the State, the community and the individual. Even the most selfish and inactive are being converted to the idea that 'in union there is strength,' and are lending—sparingly perhaps—their assistance to the work of those in a community who are progressive and in touch with the times.

"I do not intend to refer in this brief word on this subject to the wonderful advancement in civic co-operation as is shown by the great results already accomplished in such cities as Galveston, Des Moines, Norfolk, Dubuque, Kansas City and San Francisco, as well as our own city of Chicago, but simply call to your attention some advantages of co-operation in its relation to commerce and the individual engaged in commerce.

"Co-operation is in reality a mighty good every-day religion. Co-operation means helpfulness. It means harmony and upbuilding and that most results can be accomplished by reasoning together. It means fair dealing. Co-operation is the kind of helpfulness that in helping yourself you help others.

"When you stop for a moment to consider it—our entire life is a life of dealing with others, and should be, therefore, a life of helpfulness or co-operation.

"Your own organization is simply a well-worked-out, advanced example, of co-operation, and these conventions are called simply in the spirit of co-operation to interest each and every one of you in your own particular work in the trade paper for which you hold particular responsibilities and to encourage in you a general helpfulness. A railroad, shop, foundry, bank or business is successful in the same measure or to the same extent as its employees co-operate with each other successfully. It is in the subordinate positions that most organizations are found weak and ineffective. Hence, it is necessary that the entire organization co-operate, from the smallest position or interest to the larger, in order that the results intended shall be successful.

THE OBJECTS AND BENEFITS OF ORGANIZATION—SOME SPLENDID BUSINESS MOTTOES.

The "Diamond," containing the initials "R. N. A." is the emblem of this organization, and in his address, Charles T. Root, President of the Association, speaking of the first convention held and its results and then of the object of the second convention, said:

It tightened the hands which hold this institution together. It gave each a wider acquaintance and a better insight into the qualities and capacities of his fellows. It impressed upon every one present a clearer comprehension of R. N. A. purposes and methods which in turn enlarged his respect for and confidence in the establishment as a whole. It furnished opportunity for individual expression and for the feeling on the part of all who had ideas to offer, that they might share in shaping the course of the ship, as well as in pulling at its ropes. It provided the occasion for clearing away any misunderstandings, such as are apt to arise among offices or men, obliged by the nature of the business to work together, but separated by hundreds or thousands of miles and knowing each other's plans and motives and problems only through the meagre medium of letter writing.

It formed or cemented personal friendships. It replenished everybody's idea-tank. It raised the temperature of enthusiasm a hundred degrees throughout the whole body and sent everyone home more intelligent, more institutional, better equipped for his work and hence worth more to himself and to the cause than before. In brief, it ploughed into our whole broad enterprise such a lot of good strong fertilizer that the business was set a-growing faster than ever before and has never since slackened its pace.

* * * * * * * * * *

Every working hour of this convention costs the concern several hundred dollars, and we all want the worth of our money. This can only be had through a military attention to discipline on the part of everyone in attendance. The management has worked long and hard upon the program which will yield rich results if every individual is on hand punctually at the beginning of every session at which he or she is expected, and remains in alert participation to the end. No one is brought here to be a mere passive spectator and listener. Each and every one has a function to perform. There has been no parsimony in the layout of this meeting, but there is one factor vital to its success, of which money can buy no increase — and that is time. Of that article we have got to be most economical. Let us not be kept waiting for anyone, and let us "boil down" to concentration whatever we have to say before putting it forth.

If this course is consistently followed the coming forty-eight hours are going to be among the richest in the experience of any of us. Let us all join to make them so.

In closing, let me tell you what I consider the greatest single thing that will or that can be done at this convention. That is to lay bare, in the sight of this majority of its working force, the basic, deep-in-the-ground foundation of the ROOT NEWSPAPER ASSOCIATION; to recall to our older members and reveal to the newer ones the massive R. N. A. corner-stone on which is cut deep the Diamond, and beneath it this motto: "The Best Interest of the Customer." And the other stones that surround this corner-stone agree well with it. They are inscribed, "Technical Knowledge," "Originality," "Sound Ideas," "Confidence in Our Own Value," "Purpose to Uplift," "Courage of Our Convictions," "Fearless Leadership," "Never-satisfied Ambition to Grow and to Improve," "Alertness for Opportunity," "Unsleeping Energy," "Co-operation," "Truth," "Good Will"—and so on all around the four square.

Can an institution built on such foundations fall? Or can competition, envy, jealousy, or misrepresentation overthrow it? Not if the superstructure is worthy of the base and that is what is up to us, for we are building at it all the time.

May the discussions and conclusions of these precious days demonstrate that we are building plumb and square and may each of us emerge from our Second Convention a brighter Diamond than he entered it.

Would it not be a glorious thing, for improvement and accomplishment, if every delegate to, or member of, our State and National Editorial and Printer Associations would always realize that every working hour of conventions costs, in the aggregate, hundreds, and can be made worth to the members thousands of dollars if each member were on hand punctually and remained *in alert participation to the end.*

POINTING THE WAY TO SUCCESS—HELPING SUBSCRIBERS.

In speaking on the topic "The R. N. A. and the Retailers," Mr. Charles G. Phillips dwelt largely on the service rendered to subscribers for the better conduct of their business and said:

"You cannot overestimate the great responsibility which rests upon us with such a constituency—so largely made up of able, successful, alert, experienced men and women.

"Our relations to the retailers of this country are apparent in the small town, as well as the large city. The R. N. A. relation to retailers has meant something. Almost a revolution in retailing methods has been the result, and the R. N. A. has been time and again crowned with those priceless words, 'You pointed the way to our success.'

* * * * * * * * * *

"I claim our work is on a par with that of the professions of the law, medicine or teaching. Our problems are as intricate and maybe they are greater because the conditions affecting values and sales are so variable."

SERVICE THE KEYNOTE.

In addressing the members of the Association at their staff dinner, Mr. Henry L. Bunting, editor of the *Novelty News* of Chicago,, said:

"To my mind, the word 'service' is the keynote of this generation. That idea of human service not only underlies all society, but must be the logical keynote of interpretation of every department of human activity. Human society is nothing if not built upon service. Religion,

politics, art, science, literature are all founded primarily upon the sincere service of man to man, in whatever relation of life each of us is called to fill, and as an outsider I wish to compliment you gentlemen with all my heart on the fact that you have grasped this essential principle of success, and have made good at rendering absolutely sincere and well-nigh perfect service all up and down the line."

"LEARN," "THINK," "IDEAS ETERNAL."

Manager Phillips, in saying the "final word" at the close of the convention gave expression to the following inspiring thoughts:

"The true R. N. A. spirit is more than enthusiasm—it is applying the acid test to every act and deed. Learn! Learn! Learn! Think! Think! Think! And then some more, until enthusiasm is tempered by self-criticism; and then the uttered word and the suggested plan will be worthy of our institution.

"Ideas are eternal and cannot be destroyed. Intelligence gives value to things. This convention should prove beyond any question the value of co-operation between every member of the R. N. A.

"If in the world every wayside kindness has a name, a history and a future, can we not add to the glorious R. N. A. record a greater spirit of respect for each other's powers and much patience with each other's weaknesses, until the spirit of 'do unto others as you would they should do unto you' shall make for each one a record for business and kindness which shall be given a great name, make a great history—assure a great future?"

Dr. Eliot's "Religion of the Future"

The venerable educator and philanthropist, Dr. Eliot, recently gave a list of best books of all the world, and through the press the world was informed of the wise selections, and men have been buying and reading these books with the results of great benefit to themselves, and a general uplift in strength and goodness and purpose among all people. Just the other day he spoke at Harvard University of "The Religion of the Future," which, after all, when analyzed, as propounded by him, is only the religion of Christ—genuine Christianity purged of creeds, Paganism, Judaism, and other excresences—of love and service, and now this "New Religion" is being made known through the press to all the peoples of the world. It is the religion that accords with the real work and life of every genuine newspaper worker, and the newspapers will do well to adopt its thought and spirit and to make these universal. The learned doctor's definitions of its principles, in the fewest words, "Are just those which Jesus said summed up all the Commandments, love toward God, and brotherliness to man. It will teach a universal goodwill, under the influence of which men will do their duty, and at the same time promote their own happiness. The devotees of a religion of service will always be asking what they can contribute to the common good; but their greatest service must always be to increase the stock of goodwill among men. One of the worst of chronic human evils is working for daily bread without any interest in the work, and with ill-will toward the institution or person that provides the work. The work of the world must be done, and the great question is, Shall it be done happily or unhappily? Much of it is today done unhappily. The new religion will contribute powerfully toward the reduction of this mass of unnecessary misery, and will do so chiefly by promoting goodwill among men."

These words should be printed on motto cards and be distributed everywhere, should be handsomely printed in large type, be framed and hung on the walls of every newspaper and printing office in the world. They contain nothing that is at variance with any true religion, creed, or belief, but the truths contained should be worked into the lives, the callings, trades, and businesses of men. What a grand improvement there would be in newspaper making and printing, and what increase of pleasures and banishing of worries would result, if all were striving to do their duty, seeking to contribute to the common good, to increase the stock of goodwill, with a lively interest in the work and with goodwill toward the institution or person that provides the work, and then performing every duty — no longer a task but a solid joy — with the view to promote goodwill among men?

Among the Newspaper Men

Milwaukee newspaper men will appear in a new role before the Milwaukee public within the next two months if they consent to the proposition which will be made to them through the agency of the Milwaukee Press Club by Manager Arthur S. Friend of the Shubert Theater to produce "The Stolen Story," there.

Kenosha, Wis., may have a third daily newspaper, to be of the old Jacksonian brand with W. T. McCreight, a Chicago man as its editor and publisher. The plans for the printing of the new paper are not as yet fully matured, but it is said that they provide for the issuance of the new paper with the opening of the new year.

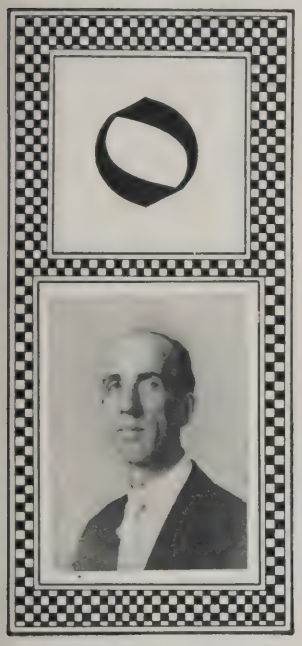
The Ludington, Mich., *Daily News* Company announces that there is a change in the business management. Messrs. E. A. Fonda, of Battle Creek, Mich., and R. D. Garton, of Des Moines, Iowa, have become respectively the business and advertising managers. Under their direction the *Daily News* will soon enlarge and greatly improve.

The Elgin, Ill., newspaper war is on. It was precipitated when Frank P. Hanafin, formerly city editor of the Aurora, Ill., *Beacon*, was elected president and general manager of the Elgin *Courier* Company. Mr. Hanafin, who has been one of the forces which brought the *Beacon* to its present state of efficiency, will move at once to Elgin, where he will reside, and become a citizen of that city.

Hugh E. Corbett was elected treasurer of the Lake County *Democrat*, a new daily publication for Gary, Ind. The *Democrat* is to be the organ of the party after which it is named and will enter the lists with the Lake County *Times*, the other paper in the new steel city. Attorney C. O. Sefton, the president and Mr. Corbett are resident officials. Edward Simon, the chief promoter resides in Hammond, Ind.

REVIEW OF JOB PRINTING

Address all communications to E. S. HANSON, 925 Linden Ave., Wilmette, Ill.



ONE of the gratifying features of this month's department is the fact that a number of new contributors have sent in specimens. This does not mean, of course, that we have any intention of going back on our old friends; but it is gratifying because it shows that our little family circle is broadening out. This is not an exclusive circle by any means, and it welcomes to its ranks any one who is really interested in the improvement of typography.

* * *

From A. G. Hallett, foreman of the Jos. Betz Printing Company, East Liverpool, Ohio, come a number of samples which are well worthy of reproduction. The letter head on which Mr. Hallett writes is very well executed in three colors and makes an attractive heading for a printing establishment. The heading for M. E. Eppley & Company is a good piece of work for a panel heading, although personally I believe that we have grown away from this style of composition.

From A. G. Hallet, East Liverpool, Ohio

R. C. Edgell, Wilderado, Texas, sends in a number of samples, some of them set recently and others from a more remote date. Concerning them Mr. Edgell writes me as follows:

The samples do not represent my best work by any means, but they are all I have available, and you can readily see that all of the work was done in a shop where job type is also used in ad work, hence so much impression was used.

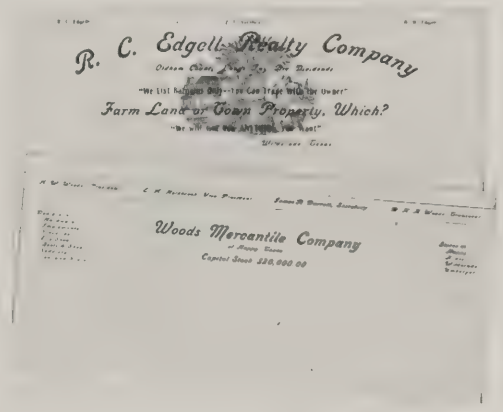
My idea is not to show press work, as it is impossible with battered rule and type and old rollers to do a job justice, but the samples are entered only on the strength of their general make-up and color schemes.

The largest portion of the work was done while I was foreman of the mechanical department of the Hale Co. *Herald*, at Plainview, Texas, and represents "rush jobs" only.

For the past six years I have used "High Art Stationery" for my "quality work" and you will find this one some of the samples.

Since May 1, 1909, I have been publishing the Wildorado *Herald*, doing job work and carrying on a real estate business on the side, with only what assistance my wife gave me.

This most recent letterhead I am trying to reproduce, although it is not easy, having a cut printed in a very heavy tint for a background. This letterhead is marred by having a large number of lines inserted

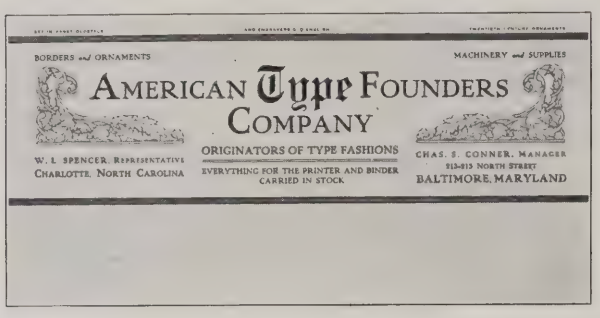


in quotation marks and dotted with capitals and various kinds of punctuation points. In fact if Mr. Edgell will forgive me for saying so, it reminded me at first glance of some of the yellow journals. This is not said in any spirit of mere criticism, but simply that we may get down to the facts of the case and look at things as they really are. I think, perhaps, no better suggestion could be made than to ask Mr. Edgell to compare it with the letterhead of the Woods Mercantile Company which he has sent in the same lot. While I do not particularly like an entire head set in this one style of type, this heading is about as near perfection as probably could have been done with this one series and with the copy as it is. On the other heading the tint is far too heavy, making the entire job look smudgy. The curved line does not present a true curve and there is an uncertainty and instability about it which is really annoying. The bill head for the Herald Publishing Company is a very good piece of work, as

is also the title page for the booklet describing Wilderado.

* * *

Sam H. White, Rock Hill, N. C., does me the honor to reproduce in a very attractive way on a monthly blotter some of the things which this department has said about his work. Everything we have said about him is true, however, and we have nothing to retract. Mr. White sends at the same time a letter head for



the American Type Founders Company which would easily put him in the artist class if he had never done anything else. This head will probably not show in the reproduction just what it is, but the word "Type" is in red, together with the rules under the line "originators of type fashions;" the ornaments and heavy rules at top and bottom are in a light green.

* * *

This little booklet, which was designed and printed by the White Advertising Bureau of Seattle, Wash., is reproduced merely to show what can be done with the die-cut cover. The little halftone which appears in the center is simply a part of the larger illustration printed on the first inside page and appearing through a hole in the cover. Printers who do not have access to regular die-cutting establishments can often improvise various shapes which can be cut by dies available in their own towns. Tin shops frequently have

Booklet with die-cut cover, showing halftone through opening

dies which the printer can readily get the use of. Sometimes a die which is used at the shoe shop for cutting out the heels of shoes can also be used to good effect. Various manufacturing industries which a town may afford can also be drawn upon, the size and shape of the dies available varying with the class of work which the factory is doing.

J. Warren Lewis, Ogden, Utah, has made an error in a line of Old English on the statement head for

John Smalley. He ought to be forgiven for this, however, in consideration of having submitted some very attractive envelope corners.

* * *

Willey & Danforth, Vermillion, So. Dak., send in a little booklet of the University of that state which is

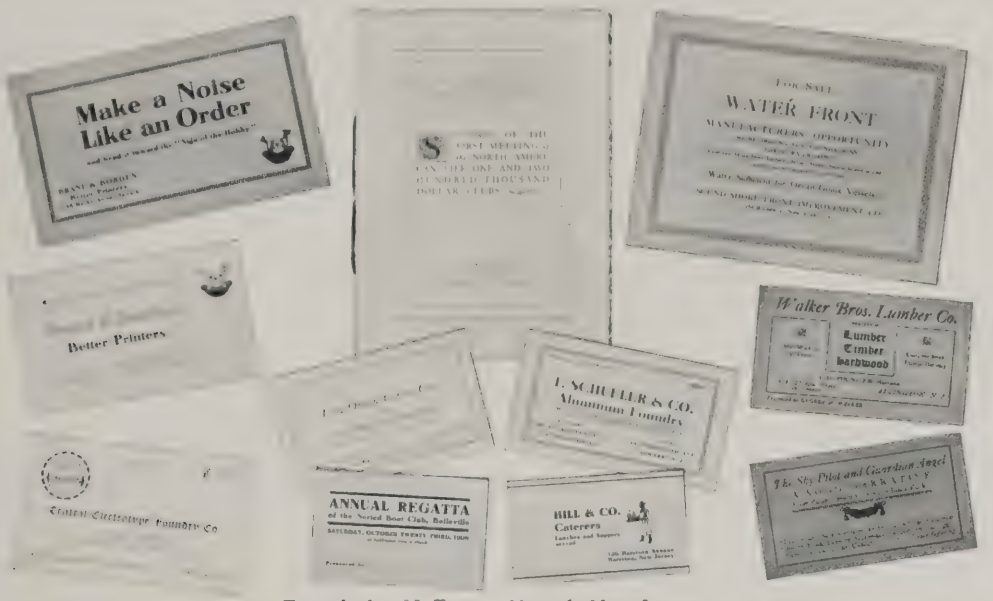
very attractively gotten up. I take pleasure in showing the cover of the booklet, which is a handsome combination of type design and artist's work.

* * *

Beers & Frey, Trenton, N. J., look as though they had the right ideas in printing. At least that is the

only opinion one can form from the samples recently sent in.

Arthur H. Farrow, Newark, N. J. sends in some booklets and other pieces of printed matter which are different from the ordinary and well worthy of careful consideration. Mr. Farrow is foreman for Brant & Borden, who claim to be "better printers" and



From Arthur H. Farrow, Newark, New Jersey

whose hobby is good printing. This company publishes a little house organ called "Our Hobby," which is a bright, breezy little publication, and from which I have made a couple of clippings:

THE RIGHT PERSPECTIVE.

A manufacturer who sent out some form letters to a large list of customers, decided that a high grade of paper would be too expensive, as his list included over twenty-five thousand dealers, so a cheap stock was used. That manufacturer had not the right perspective. He did not stop to think that each dealer would see only one of the letters, so that, while he would save money on the cost of production, he would lose in the end by the unfavorable impression created. Remember that your printed matter reflects your personality, and you will be judged according to its standard. If you would inspire confidence and respect in your customers and the public in general, don't stint the quality of the matter you send out. Getting the right perspective is vital.

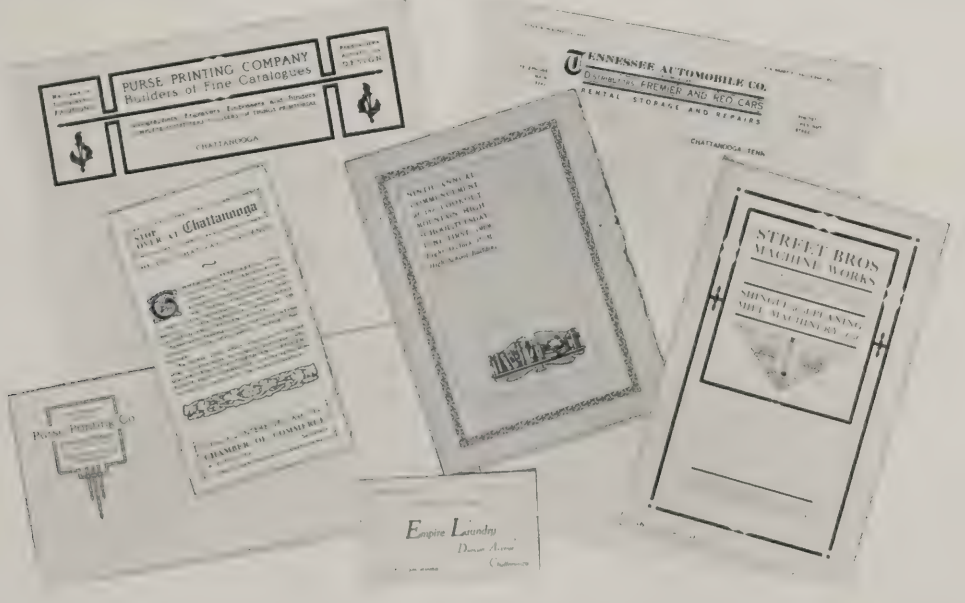
SPEED, BEAUTY, ACCURACY.

The successful printing establishment of today must have these three cardinal virtues in the execution of its orders. Nearly all contracts for printing are desired in a great rush, as it is an established fact that most people procrastinate in the direction of ordering their printing until the last previous order is completely exhausted. To have anything but attractive printing is a waste of money, for if you cannot attract the attention of the public by your advertising matter, the printer's bill is a dead loss. However valuable your goods are you cannot sell them until you get them before the buying public.

As to accuracy—well, that is as essential to good printing as sunshine is to good health, absolutely indispensable.

* * *

The Purse Printing Company, Chattanooga, Tenn., gets out a handsome letter head for its own use, as well as doing some very creditable printing for other



From the Purse Printing Co., Chattanooga, Tenn.

people. I am not sure that I like the card for the Empire Laundry, with its overgrown initials; but that sort of thing pleases a great many people.

* * *

Another new contributor is R. S. Grant, Maquoketa, Iowa, who says that his office is not equipped like a city job office, although doing the best it can under the circumstances. He sends in a booklet of eight pages and cover intended to advertise the *Jackson Republican*, of which Mr. Grant is one of the proprietors. It is gotten out in a style very creditable

to an office which is not handling that class of work every day.

* * *

Freeman & Son, Marcus, Iowa, publishers of the *Marcus News,* send a few samples with the statement that they are not so "thin skinned" that they cannot

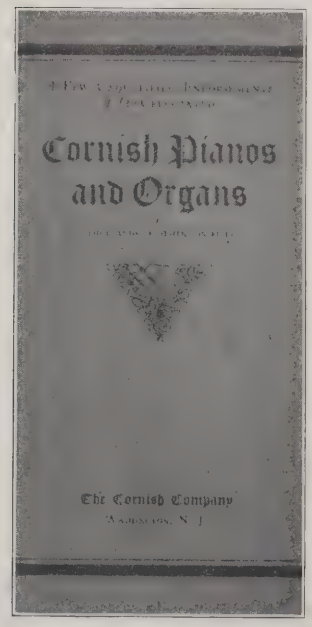
Grade

stand a little unfavorable criticism should the merits of the case demand it. I am happy to say, however, that there is little occasion for adverse comment, as the work is all of a very good order. The poorest piece of work is the title page for the grade reports of the Marcus Public Schools. I do not like the selection of type for this page, but that is possibly a matter of taste on which the best of critics might differ. However, there is no disputing the fact that the main line should be higher up on the page.

* * *

Herbert R. Smith of Washington, N. J., is still keeping up to his high standard. I have been much inter-



ested in looking over the two covers, both of them evidently intended for the same booklet. He does not say which one was chosen or whether or not there was an opportunity for choice. At any rate it would be a selection difficult to make, for it would be simply another case of being "happy with either were 'tother fair charmer away."

* * *

I have taken particular pleasure in looking over the catalog recently sent out by the Barnhart people of

Specimens of Old Roman

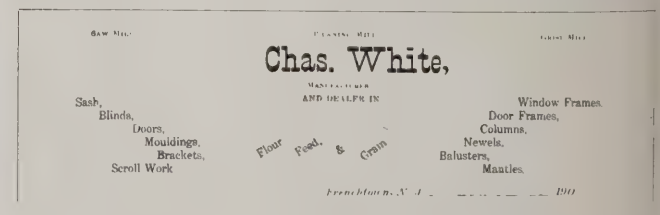
their Old Roman family. It is a letter which appeals to me as a general purpose series and I am seriously thinking of incorporating it in some of my own work.

* * *

I have secured in some way a little booklet intended to advertise Cordova, Alaska. There is no letter with it and it has no imprint, so that I do not know its origin; and perhaps that is just as well, for it is so poorly printed, bound and trimmed, as to lead me almost to suspect that it is merely a proof and not a copy of the regular edition. I certainly hope that this is the case.

* * *

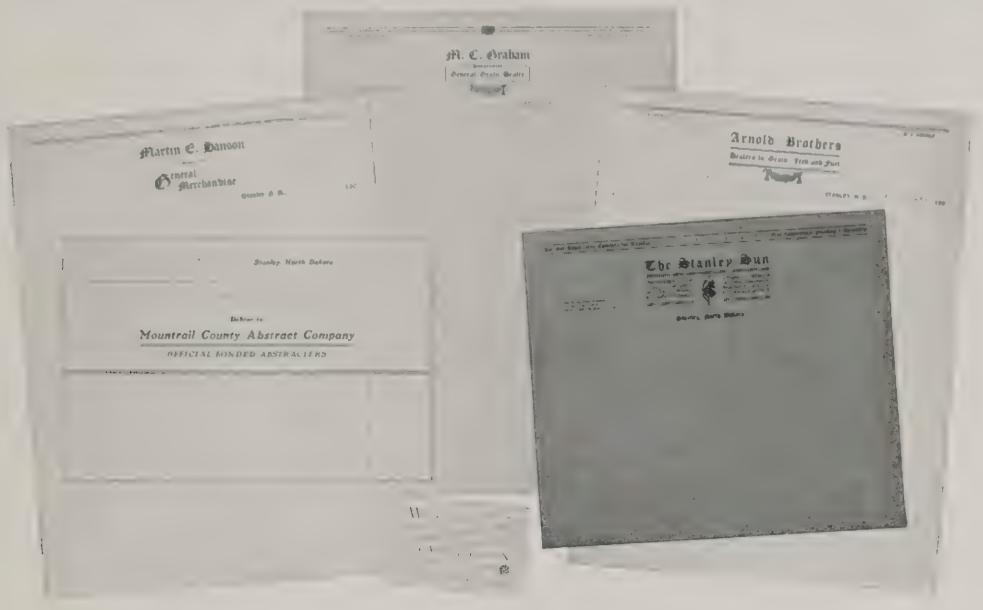
Herbert R. Smith of Washington, N. J., has sent in this letter head. No one I am sure will accuse him of



having set it himself. It is therefore hardly necessary to repeat what he says about it, although I will give an extract from his letter just to show his particular point of view. He says:

I am not able to comment on it, owing to a local ordinance forbidding the use of profanity.

Leo N. Sanford, manager of the job department of *The Stanley Sun,* Stanley, No. Dak., sends in some work which varies over a wide range. The letter head on which Mr. Sanford writes is a decidedly creditable

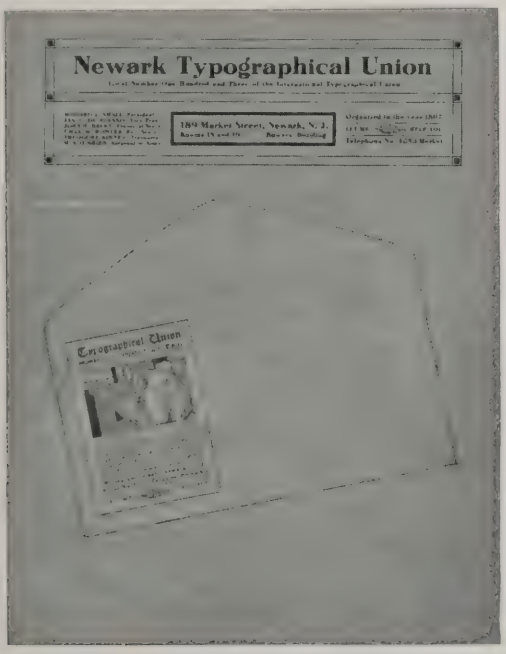


From Leo N. Sanford, Stanley, No. Dakota

piece of work and could scarcely be improved upon. At the same time, however, he sends a note head for his own company printed on a "brick wall" background, and another of the same variety for another firm, these two jobs being decidedly out of harmony with the general excellence of the other specimens submitted. I trust that these two are relics of a "former generation," for I should not want to think that they were recent specimens.

* * *

Arthur H. Farrow, Newark, N. J., sends a letter head and envelope for the Typographical Union of that city, which are remarkably well designed for the

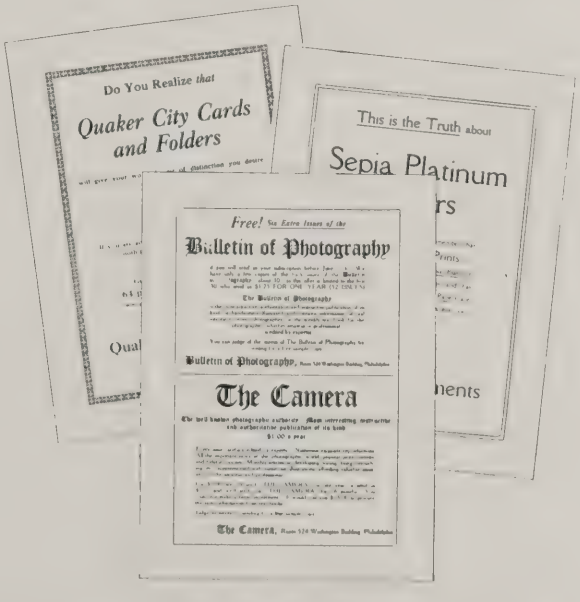


purpose. There is perhaps little necessity for having so much matter on an envelope, but at the same time it helps to square out the panel and makes a very attractive piece of printing.

Edwin C. Warren, La Harpe, Ill., is the compositor who is responsible for a large broadside advertisement for one of the stores of that city. It is set in advertising style and looks as though it might have originally been a double-page advertisement in a paper. It would have been improved by somewhat more uniformity in styles of type, but this is not always possible on a large piece of work like this, turned out by a small office, where fonts are limited.

* * *

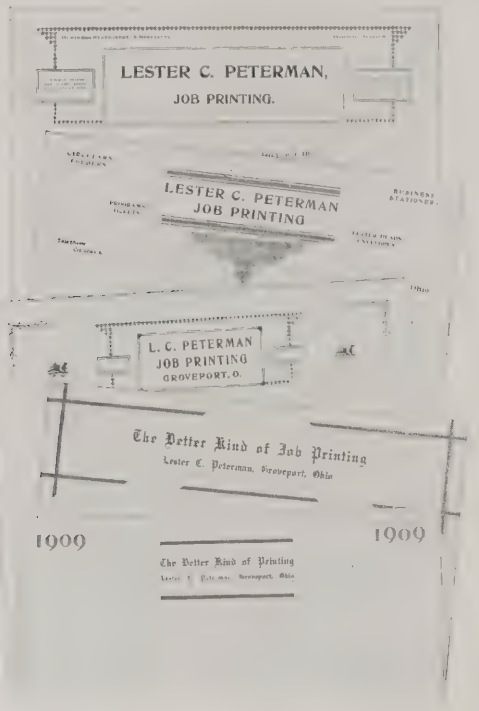
L. F. Evans, Raleigh, N. C., sends some magazine advertisements of a very good class. The weakest one in the lot is the advertisement for the Simplex Intensifier Company, which has the heaviest line at the bottom of the page and with nothing anywhere throughout the page to especially catch and hold the attention.



* * *

L. C. Peterman, Groveport, Ohio, has taken the trouble to number some of his specimens, showing the progress which he has made in typography. No. 1 was printed about two years ago when Mr. Peterman first started his office. No. 2 is certainly a decided im-

provement and is in some respects the best sample of the lot. No. 3 shows something of a reversion to the original design as shown in No. 1. No. 4 would be improved by having the rules in a much lighter shade of ink. As it is they tend to overbalance the printed lines. No. 5 is a much better setting of the same head and is from most points of view very satisfactory. I



might quote from Mr. Peterman's letter in order to show the view he takes of his work:

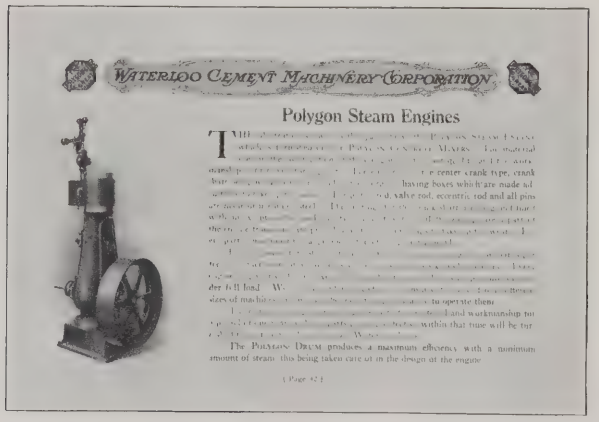
I have a small office here, and my experience is also very limited. But I am growing, and I wish to continue to grow, and for that reason I am trying to do only "Quality Printing." You will probably agree with me that all of the specimens could be easily improved.

You will notice that I have numbered the letter heads. These show what progress I have made, beginning with No. 1, which was printed about two years ago when starting up my office.

He certainly shows a progressive spirit and is apparently the kind of a man whose work will be heard from later.

* * *

I have received another catalog printed by the Stewart-Simmons Press, Waterloo, Iowa. It also has a

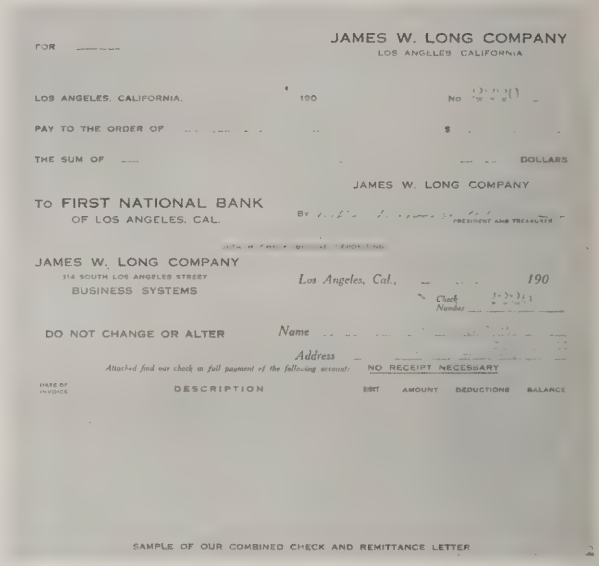


halftone running head as shown and commented upon in work from this shop last month. This head is somewhat more ornate than the one shown before, and I consider that it rather overbalances the rest of the page.

* * *

Claude Syler, Vandalia, Mo., sends in a number of specimens which would pass muster in almost any town of the size. He would do well, however, to study some of the best pieces of printing which come within his reach.

A SIMPLE CHECK AND REMITTANCE FORM



SAMPLE OF OUR COMBINED CHECK AND REMITTANCE LETTER

Not Without Honor in His Own State

INSTRUCTIVE WORDS BY AN EDITOR ABOUT AN EDITOR.

After giving a brief biography of the life of Hon. A. Nevin Pomeroy, President-elect of the National Editorial Association, the editor of the Lewisburgh, Pa., Saturday *News*, on the first page of that excellent paper, in the issue of September 4th, adds, in speaking of his recent election, the following, that contains the highest ideals of the profession, while being greatly complimentary to Mr. Pomeroy:

The editoral profession all over Pennsylvania feels proudly this distinction which has fallen upon a worthy fellow craftsman.

Mr. Pomeroy is a man of boundless energy. His Alma Mater is the university of hard work and doing things and all kinds of things and all the time. He is untiring and indefatigable in thinking out the philosophy of events. While always stepping forward he has time to be a companion and convince you that he is a man.

We found him genial and worth while years ago when we met him as a member of the Assembly at Harrisburg. And the mutual shine has never worn off.

We first saw Nevin Pomeroy twenty years ago in a printed picture in his Chambersburg paper showing the smiling face of a proud father with a baby boy on his shoulder. This picture carried its own tribute and spoke its own made volume. The believer in the holiness of home and who finds music in the babbling and prattling of a baby needs no eulogist.

From Seattle, on the shores of the western seas, Mr. Pomeroy brings back national honors bestowed upon him by a congress of men whose business is progress and enlightenment, brain workers who by press and pen saved the world to civilization and freedom and who to-day hold in the hollow of their hands the equilibrium of the political universe.

By concert of action the men who made Mr. Pomeroy their president could make any man President of the country; they could drive any man from power, make or destroy any political party or engulf the world in the horrors of war. But they prefer to walk the paths of peace and seek truth and knowledge for the enlightenment of the world by the lamp that ever burns at the feet of Minerva. The editors of America are more powerful than all the war lords of Europe with their marching armies, modern submarine and aerial navies and lyddite shells, or were the gathered hosts of the ancients with shield and battle axe.

To be at the head of this army of potential brain workers, men of courage, science, genius—philosophers and statesmen—men who prefer revelation and light to the bubble of fame or tawdry treasures, is a great honor.

Mr. Pomeroy is well worthy the distinction betowed upon him. It is a unique distinction from the fact that it comes from a source so great that it daily moulds and makes thought and leads all the world of men as certain as the tide follows the course of the moon.

And we are proud of the honor because it has fallen upon one of Pennsylvania's workers and builders, and who will wear the laurels modestly yet with dignity.

The Hudson-Fulton Celebration and New York's First Printer

A DELAYED EDITORIAL.

The following editorial was written in New York City, September 18th, for our October number, and crowded out by press of other matter, but we believe that it will still be found to contain matters of interest:

New York, where we write this, Sept. 18th, is all enthused over the celebration of the three hundredth anniversary of the discovery of the Hudson River and the hundredth anniversary of Fulton's first successful attempt at river navigation by steam. Great columns have been erected, hundreds of thousands of electric lights strung, buildings decorated with flags, and the navies of the world, or representatives therefrom, are gathering to make the occasion glorious. The papers are filled with illustrations, descriptions of the preparations and historic incidents connected with the great event. The hotels are over-run with visitors and yet the time is a week distant. We have been thinking how great a part the press has had in bringing this all about, yet we hear nothing about the first printer here, who peacefully sleeps on lower Broadway, in the church yard of the chapel to which George Washington repaired to worship, after his inauguration, a little distance up Wall Street. We are going to look at the old tombstone that marks his grave and pass a few minutes in contemplation over the wonderful advances made in printing and newspaper making since his day and send on for publication the quaint inscription chiseled to his memory before Chicago and all the country west thereof was known except as the home of Indians and the visiting place of hardy explorers, adventurers, hunters, and missionaries.

Here is the ancient inscription, on the tombstone of New York's first printer, in Trinity Church yard, as restored from the dimmed original by the Vestry of Trinity Church in 1869:

"Here lies the body of Mr. William Bradford, Printer, who departed this life, May 23, 1752, aged 92 years. He was born in Leicestershire in Old England in 1682, before the city of Philadelphia was laid out.

"He was a printer to this Government for upwards of fifty years and being quite worn out with old age and labours, he left this mortal State in the lively Hopes of a blessed Immortality.

"Reader, reflect how soon you'll quit this Stage.
You'll find but few attain to such an Age.
Life's full of Pain, Lo! here's a place of Rest.
Prepare to meet your God; then you are blest."

Copied Sept. 24th, 1909, verbatim et literatim et capitailzationem. Why the one who prepared the inscription away back in 1752 referred to the fact that Printer Bradford was born before Philadelphia was laid out must be accounted for by a rivalry between New York and the Quaker City that was so strong as to reach beyond death, affording added honor to the ashes of the deceased and possibly satisfaction to his wraith, to have the fact recorded on this tombstone that he had lived before Philadelphia existed. He, in life, probably, like the members of the press today, had been so staunch a friend and so unselfish a partizan of and worker for his city, that his friends understood that it would be a satisfaction to his ghost to see or realize that he, a resident of New York, had added some precedence to his own city above its rival by having come into existence before the rival city was laid out.

A Welcome to Editors

Lines of welcome to National Editorial Association, at Point Defiance Park, Tacoma, July 24, 1909:

BY CARRIE VIRGINIA THAW RICE.

Thrice welcome, dear friends, to this city of ours,
The city of homes, and the city of flowers,
In every breeze that goes wandering free,
Or dimples the blue of our fair Puget Sea;
In our millions of roses, of crimson and white,
That joyfully fling out their fragrance tonight,
A welcome breathes forth and a welcome endures,
A welcome, thrice welcome, to you and to yours.

Let those who will, sing of Leucadian deeps,
Illyrian woodlands and Phrygian steeps,
For *me*, I will sing of the charms that abound
Where the sun has so lavishly sifted his gold,
That the heart of the woodland is full as can hold,
And a sweep as of stately Virgilian lines
Is heard in the music of murmuring pines.

By our snow-covered mountain that towers aloof,
But waiting the stamping of Pegasus' hoof,
For fountains of bright inspiration to flow
As did Hippocrene, in the days long ago;
In the name of the Muses that people our hills,
By our streams that are fair as Castalian rills,
In the name of Tacoma's brave women and men,
A welcome, *thrice welcome* and WELCOME AGAIN!

Items of Interest

MAYOR EDWARD J. FOGARTY, of South Bend, has become general manager of the South Bend *Morning News*. It has been generally understood that the mayor had an interest in the *News* since it became a daily in March, 1908. The announcement of his connection with it as general manager is regarded as confirmation of this belief. South Bend has just completed a successful home-coming celebration which kept the South Bend newspapers busy. The *Tribune* covered itself with glory during the week by printing dozens of pictures of old-time scenes and pioneers who have passed away, accompanied by much valuable historical matter.

Harry V. Ross, publisher of the Sparta, Wis., Daily and Weekly *Advertiser*, has filed a voluntary petition in bankruptcy. The failure was caused by trying to publish a daily paper in a field insufficient for its support.

The West Allis, Wis., *Enterprise*, which has been in existence for the past seven years, has suspended publication. Fred Burke, the owner of the paper, is trying to dispose of the publication to some of the business men of the city.

The Des Moines, Iowa, Press Club has planned a series of entertainments for the winter months. A whist tournament is soon to be launched, and later a billiard tournament. W. C. Jarnagin, managing editor of the *Capital*, has been elected to fill the position as member of the executive board left vacant by the resignation of S. H. Cobb.

The Geneva, Ill., *Patrol* will hereafter be issued on Tuesday and Friday instead of weekly. The Geneva *Republican* is now issued Wednesday and Saturday, so an almost daily newspaper service is offered the citizens of the county seat.

Charles K. Needham, editor of the Washington, Iowa, *Press*, has purchased the Randall County *News* at Canyon City, Tex. This makes five papers in which the Iowa editor is interested—the Keokuk County *News* at Sigourney, the Montezuma *Republican*, the *Iowegian* at Centerville, and the Washington County *Press*. The managing editor of the Randall *News* is L. B. Christman of Chicago.

Roy Keator, publisher of the *Middle West*, a weekly newspaper, and formerly of the Chicago *Journal*, has been sentenced to serve six months in the bridewell by Judge Landis in the United States District Court. Keator was indicted several months ago on a charge of making false circulation statements to obtain second class mail rates. He admitted that in order to get advertising he had represented the circulation of his paper to be 100,000, when in fact he had but 1,000 subscribers, and that he has placed many names on his subscription lists without authority. The periodical was an agricultural journal, which he started in Grand Rapids, Mich., and later had printed in Chicago. He was formerly an advertising solicitor.

The Chicago Press League held another luncheon Saturday, October 16th, which was like the one it gave last year in the matter of distinguished guests, but unlike it in detail. This affair was an apple gathering and apple luncheon given in the gold banquet hall of the Congress Hotel. For guests of honor there were invited Mrs. Frederick Dent Grant, Mrs. Charles S. Deneen, Mrs. Charles H. Adams, Mrs. Francis E. Everett, Miss Helen Cannon and Mrs. William Lorimer.

The Women's Press League has started a campaign for 20% more pay for the school teachers. The movement is said to be the direct result of reports made to members of the Press League regarding manners and methods in which portions of the pedagogical staff of Chicago's schools were compelled to spend their vacations. It was found some worked as waiters in restaurants and did other menial work.

Claud Jarnigan, city editor of the Des Moines *Daily Capital*, and for years one of the best known newspaper men of Des Moines, will join the force of the Cedar Falls *Record* as city editor. The paper is owned and controlled by his father. Jarnigan left Des Moines for his work October 1st.

C. S. Butterworth of Aurora, Ill., has arrived at Green Bay, Wis., to take entire charge of the circulation department of the *Gazette*. The *Gazette's* circulation has increased to such proportions recently that it now requires the attention of a circulation manager. Mr. Butterworth has had several years' experience in this line of business.

Herman G. Johnson and Son, Elkins, W. Va., Manager and Assistant Manager, The Inter-Mountain Printing Co.

BOUQUETS EVEN SWEET TO AN EDITOR.

STERLING, KAN., SEPTEMBER 10, 1909.

Mr. B. B. Herbert, Chicago, Ill.

FRIEND HERBERT:—That was a mighty nice editorial mention in the September N. P.-J., and one which is greatly appreciated. Bouquets come so seldom in editorial work, that the perfume is very sweet when one is thrown our way. I find that editors are human like the rest of mankind. With kind regards, I am, Yours sincerely,

J. E. JUNKIN.

CHICAGO, NOVEMBER, 1909

FOR enterprise and highest excellence, the *Spokesman-Review,* of Spokane, Washington, stands without a peer among the dailies in cities of the class that it serves. A speaker at a recent convention of trade papers arraigned the daily papers as falling behind the papers devoted to the different callings, in the service rendered and of not performing the duties due to city, state and nation. He doubtless had in mind, some of the metropolitan papers in our largest cities, for he lives in the second largest city in the Nation, in which human interest is sought to be won by publishing, at great length, the details and incidents of the tragedies of life, the crimes, accidents, and outbreaking lusts and passions, to the neglect of those things that help toward improvement, enlightenment, goodness and upbuilding. He could not have had in mind the home dailies of our interior cities whose greatest effort and ever-present aim is that of useful, creative service, like the *Spokesman Review,* the *Kansas State Journal* and a round thousand of others that might well be named. On October 3rd the *Spokesman-Review* issued a most valuable number, containing seventy-six great, seven-column pages, that, while not omitting one item of important, clean, current news, gave such a showing of Spokane's advantages and attainments, and of all the attractions and opportunities of the rich region contributory thereto, as to make every reader no matter how happily located elsewhere, at once desirious of going over and abiding there. Things of good report, movements for the betterment of the community, incidents along all lines of progress, development and improvement, are given in a way to arouse human interest as thoroughly, and much more profitably, than by the stories of lawbreaking or out-breaking crimes and passions.

Commencing on the first page of this great issue and continued on the third page, as one of the leading news stories of the day is an account headed, "Sunday Schools in Great Pageant"—"Parade of Army of 12,000 Workers Makes Great Spectacle," and on the editorial page, as appropriate comment to this important event is the following editorial which might be viewed with some wonder if found in some of our great secular metropolitan dailies:

The Sunday School.

"Since that memorable July Sunday 129 years ago when Robert Raikes gathered up a class of street boys in Sooty alley, Gloucester, England, and started the first systematic movement for Sunday Schools, what a profound and splendid influence has been exerted by this agency upon the character and morals of countless millions! In storm and in sunshine, in summer heat and winter cold, in great city churches and beneath village spires, out in the forest depths and on the prairie's wide expanse, this noble influence has been exerted for religion, for morals, for good citizenship, clean living and patriotism.

It has imparted to weary millions happy memories of the clean, sweet days of childhood; and who can say how often those memories have leaped across the gulf of years and saved men and women in time of weakness and temptation. God bless the Sunday schools!"

This is given with the idea that it may more strikingly, than other quotations, illustrate the fact that no worthy interest of the community is slighted.

The advertising in this great number furnishes, through the liberal advertising patronage shown, ocular proof that the broad enterprise of the paper is fully appreciated by Spokane's enterprising business men. One leading drygoods store took nine full pages to announce an anniversary week sale. This, it is believed, is the largest advertisement ever inserted in one issue of any newspaper in the world.

* * *

Speaking about clean, serviceable newspapers; during a visit to Boston the first part of October, our attention was called to the somewhat novel daily newspaper started in that city last November and known as the *Chrstian Science Monitor,* and recognized for its cleanliness, brightness, mechanical excellence and news service and phenomenal success. It seems to have solved the question of the clean, high-toned newspaper and to have proved that neither sensationalism nor the publishing of wickedness and crimes are necessary to a newspaper's popularity. Whatever any one may think of the modern cult, no one will find anything that is cranky about the newspaper. Neatness,

harmony and worthiness are evident in every one of the pages. The paper contains fourteen full seven-column pages. The thirteenth page is devoted to a very interesting and instructive department under the heading, "The Home Forum," devoted to incidents, biographies, home philosophy, natural history, animal stories and bits of poetical selections. Five columns, six inches in depth or length, contain the only Christian Science teachings to be found in the paper and in this issue of October 20, the topic heading is "Every Whit Whole." The column to the left is devoted to advertising the paper and to the right is an advertisement of the book, "Science and Health." It is claimed that the paper has the largest number of individual paying subscribers of any daily in the world and it is sold on the news-stands throughout New England, and the sales, especially on Saturday, is large in Boston, it being bought by people regardless of creed or political affiliations. The paper, in giving the news, ignores all wrong-doing or wickedness, or crimes.

The last page is given up entirely to editorials with indented side-heads, and is surrounded by a neat border. We have reproduced the upper halves of the first and last pages as specimens of tasteful arrangement and good printing to be presented in the December issue.

* * *

Using the occasion of the Illinois State Fair in that city, the Springfield, Ill. *State Register,* issued a mammoth number on October 3rd, filled with good things about "The Greatest State Fair on Earth" and "Springfield Today," besides "all the news that is fit to print."

Right here, before it is overlooked, we want to commend the short, pithy, comprehensive index of the contents of the paper, printed in the first column of the first page, by the different sections of the paper and by pages in each. An index of contents, in this age of hurry, is of highest worth to a newspaper and not only should never be omitted but should be prepared with intelligent, painstaking care. An index of advertisements will be found profitable to advertisers and to the paper and will soon come to be appreciated by readers and be looked for as a help to the finding of the announcements of such goods or articles as they may wish to purchase. It will add to the value of the advertising and make the paper more popular as conserving the convenience of readers and showing to advertisers a desire in every way to help toward the effectiveness of their announcements.

This number contains seventy-two well filled and well printed pages and the high character of the printing is no small item and well worth the little additional cost over that of slovenly printing and careless makeup.

The *Register* is a clean paper, standing for things that are for the best and highest interests of city and state. It is timely and progressive. It's editorial page shows that every interest of the people receives full and intelligent attention. The first editorial in this issue is an excellently written, practical, impressive sermon on cheerful giving and here is a sentence containing a thought and sentiment that will be good for editors as a suggestion as to the spirit and manner in which they should say and print words for their readers, for a newspaper man is a giver, not on special occasions and holiday and Thanksgiving anniversaries, but all the year around:

> There are those who can say, "Good Morning" with such enthusiastic emphasis as to make the two words of tangible worth—as if they carried with them gold certificates that would be accepted by the bank.

It is not alone what a newspaper says but how it is said, with what spirit of love and earnest, unselfish sympathy, interest and goodwill, that counts. It was in our mind to go through all the departments of this model paper and to give the good points for the benefit of our newspaper readers, but the task is Herculean and the editor has aided us, in part, at least, by the following truthful statement in an editorial which shows that he has the right view of a newspaper, practicing what it preaches, through telling of its valuable features, as advertisers in its columns are urged to extol the good qualities of their own goods that they offer to the public:

> To our 17,000 or more regular subscribers, and to thousands of others throughout the city, state and nation who will receive copies of this morning's *State Register,* we present this greatest edition of greater Springfield's greatest newspaper with pride and satisfaction.
>
> To our patrons in city and country; to our advertisers, and to all those employes in the several departments who cooperated for the successful production of this magnificent edition, we first of all extend hearty congratulation!
>
> This morning's edition of the *State Register* is an achievement. It is a triumph.
>
> We present this big edition, not as a saving and summing up of special effort which, having been expended, is but in striking contrast with the daily effort to give to the people a newspaper "worth while." The *State Register* is always "worth while."
>
> This mammoth edition is rather in the nature of a demonstration of the *State Register's* reserve force. This great force is always at work, day and night. It's pride and its inspiration is not in doing great things on special occasions like this, but in achieving great things every day in our daily *State Register* which has won a deserved reputation as—
>
> "The best *news*paper in Springfield and Central Illinois!"
>
> We present this magnificent edition this morning as an especially attractive directory to the progressive, enterprising mercantile, commercial and industrial institutions in Springfield and tributary thereto.
>
> This issue of the *State Register,* containing *seventy-two pages,* is the largest newspaper ever published in this city for regular distribution. The comic section contains four pages. There are sixteen pages of "book" paper used for printing the fine engravings. In these sixteen pages alone there are approximately 150 interesting pictures. The news sections consist of 52 pages, containing a wealth of special features of all kinds, matter descriptive of Springfield, about seventy-five cuts of officials and of sights and scenes in Springfield, editorials, and, most important of all, the local news of Springfield and vicinity and the telegraph news from every

portion of the civilized world. The entire newspaper of 72 pages contains pictures showing some of the homes in Springfield, scenes at the state fair grounds, public buildings, churches, business houses, manufacturing institutions, parks, boulevards, institutes and illustrations of all sorts. There are advertisements of all kinds, constituting in their entirety the greatest advertising representation of the business houses of Greater Springfield that ever appeared in any newspaper. Along some of the streets nearly every business house is represented. It required nearly a car load of paper to produce this edition. If we attempted to detail the number of men employed, the amount of time and work and expense, exhaustive statistics would be necessary. Over 300 miles of heavy paper, thirty-three and one-half inches in width was used in printing the edition. Altogether nearly one million pages were printed.

No Springfield newspaper ever attempted so large an undertaking. The *State Register* has achieved this success with little difficulty.

First of all, the *State Register* has won laurels as a *newspaper* because of its superiority in presenting all the news of all the world and presenting it first.

Our policy is: "Get the *news* and get it first regardless of expense."

That's why we have won our way into the homes.

As a moulder of public opinion, the *State Register* has editorially sought to the best of its ability to advance the interests of all the people. We have been sneeringly called "knocker" by the "knockers" of Springfield whom *we* have have "knocked" because they were hurting Springfield by ignoring or violating law or otherwise. We have "boosted" consistently, unflinchingly and often in the face of most powerful opposition for better conditions in politics, in official life and in governmental affairs, city, state and nation.

We have been a "booster" of decency and law—a "knocker" of lawlessness and indecency. That's why we enjoy today the co-operation of the thinking, public-spirited people of Springfield. We have enjoyed these struggles. There was a splendid satisfaction in being on the side of great fights where conscience led the way.

And because of our patronage thus won among the people and the building up thus of by far the largest circulation in the city and territory surrounding Springfield, this newspaper has become unquestionably the most potential advertising medium. It is read by more people and read more studiously, advertisements and all, than any other newspaper in Central Illinois. That's why our advertisements bring best results.

Such is not our special effort, but our daily effort.

In all this is found a world wide instructiveness for the right kind of newspaper makers and all wonderfully inspiring as well. It is written in the spirit of the "Good Morning," described by the editor, carrying conviction or genuine "gold certificates," of truth and honest, earnest good-will "that would be accepted by the bank," the people served, without question or hesitation. The Pictorial Section of this paper, printed on hard-finished book paper, portrays most graphically the wonderful advances that have been made and the perfection and beauty of Springfield's public buildings, stores and residences. It is, as designated, a most complete "Panoramic story of the picturesque and historical capital of the State of Illinois, with glimpses of her majestic public structures, her greatest industries, her most up-to-date business establishments, her grandest buildings, her beautiful parks and boulevards and her modern homes and residences" fully proving that Springfield is entitled to the appellation frequently applied, of "The City Beautiful."

Who can estimate the present, practical, as well as the historic value of such an edition of a home paper? It impresses one with the truth that no other calling of this age or of all the ages, possesses or ever has possessed the opportunity or the ability to render such broad, constant and useful service to a community, city and state and to all the people as that of newspaper making.

The Illinois State Fair was a great accomplishment this year surpassing all former years, giving instruction and inspiration not only to the farmers, whose success is at the foundation of all prosperity, but to the intelligent, progressive followers of all other industries. This great attainment was reached largely through the aid of the press. That the business men and manufacturers are ever ready to second such enterprise as has been shown by the *Springfield Register* is shown by the fact that this issue contained four thousand inches of advertising. Each copy of the paper weighed one pound and four ounces, freighted not only with all the news and the portrayal of all the institutions and interests of the city and vicinity with their development and growth, and special features of the Fair, but with this unequaled advertising representation.

George H. Tyler Dies Suddenly

George H. Tyler, a representative of the Mergenthaler Iinotype Company, was found dead in his berth aboard the westbound Nickel Plate train which reached Erie, Pa., at 8:40 A. M., on Monday, October 4th. His death was due to heart failure. He lived in Newark, N. J., and left his home the night before apparently in good health and spirits, bound for Erie on some matters of business for the company. He was a member of Zion Lodge, No. 311, A. F. & A. M., of Troy, N. Y., and on arrival at Erie the body was taken charge of by the local Masons. The remains were subsequently sent to the home of his parents in Troy, where he was buried Friday, October 8th. Mr. Tyler leaves a wife and two children. He had a host of friends throughout the State of Pennsylvania, in which territory he had represented the Mergenthaler Linotype Company for some two and one-half years. He was a young man, being only thirty-seven at the time of his death, and was one of the most energetic salesmen in the company's employ. His untimely taking away was a shock to his many friends and associates, and his visits will be missed by those on whom he was in the habit of calling.

NEWSPAPER CHANGE

Robert W. Ruhl has retired from the Rockford, Ill., *Republic* after a year's service as managing editor. It is understood that he is to associate in the publication of a magazine in New York. In the reorganization of the editorial staff, made necessary by Mr. Ruhl's resignation, Addison Schuster becomes managing editor and Laverne Miller city editor. C. L. Miller remains chief editor, as heretofore.

Among Friends. With Notes by the Way

BY THE EDITOR

HEN on business trips, we have often found much pleasure and profit in turning aside for an hour or a day, to renew acquaintance and visit old friends. One of the highest compensations of our somewhat strenuous calling, during the past twenty-two years, has been the friendships we have formed and the opportunities we have enjoyed of meeting friends in all the different parts of the country. Such opportunities of meeting comrades, in the calling or related callings, should not be neglected by any printer or newspaper maker, for they bring knowledge as well as pleasure, and exercise a broadening, humanizing and uplifting influence.

During a recent trip East, we enjoyed several such delightful reunions with old friends.

A VISIT WITH JOHN MARDER AT HIS NEW HOME AT PALISADES ON THE HUDSON.

One of these was a visit with Mr. John Marder, for fifty years a type founder in Chicago and, previous to that, engaged in the printing business at Davenport, Iowa, who is known to thousands of readers of the NATIONAL PRINTER-JOURNALIST.

With John Marder, Fifty Years a Typefounder, at His Home, Palisades, Rockford Co., N. Y.

He is now enjoying a well earned retirement from active business amidst the most attractive rural surroundings. We were in New York City and had received an invitation, through his son Walter, when at Jersey City, to pass Saturday afternoon and Sunday at his home on the Hudson.

It was September 25th, one of the great days of the Hudson-Fulton Celebration and the streets of New York City were filled with marching thousands and on-looking millions. We took the Twenty-third Street Ferry for the Erie railroad. The river was filled with yachts, excursion steamers, ferry boats and all manner of steamers and sailing vessels, passing up and back in review of the great war ships of the United States and of the world, flanking the replicas of Hudson's good sailing vessel, the Halfmoon, and Fulton's primitive steamboat the Cleremont.

Already, multitudes were gathering on the shores and occupying the banks of improvised benches, at from $5.00 to $15.00 a seat, to watch the great navy parade. The sun shone its brightest and, everywhere, buildings and boats were bedecked with national colors, and flags were flying and whistles were blowing; all was brightness and life. Arriving at the Erie station, we found that the train we had expected to make had been taken off on account of the interest in the navy parade, which had, however, lost attractiveness to us, in prospect of the afternoon with an old friend. After a ten minutes' wait, a slow accomodation train was found, that stopped at every hamlet and though the delay caused us to miss arriving at our destination on the appointed time, the ride was greatly enjoyed as it was through a region of sylvan loveliness, with beautiful villages, homes, groves, well-kept grounds and lawns, strung along the tracks as on a necklace, and shining like amethysts and pearls, with a station every mile. Over an hour was taken to make the twenty miles, but the time was not regretted, and soon we were passing over a splendid road winding through valleys and woodland, past splendid estates, not ostentatious but quietly beautiful, with substantial residences on elevated grounds with attractive sloping lawns. At the end of a mile and a half we passed through a great gate, past a little lily pond, and then up among the trees to higher ground, and we were at the new home of our old friend who stood on the step of the broad veranda to welcome our coming. We were introduced to his estimable wife and later to the daughter at home, and were made to feel at ease among friends. After rest and conversation, we were soon out with Mr. Marder seeing the place, which consists of sixteen acres, half of which is still in native trees, a primeval forest. We visited the hot-house and barn, not omitting the poultry yard, the fruit-bearing shrubbery, and the garden, and then passed through the orchard, viewing the apple, peach, and cherry trees, and admiring the grove on the north, and then returned by way of the grapery, picking and eating some of the delicious fruit from the richly loaded overhanging vines, to the house to talk of old times and distant friends.

Just over the hill and across the Hudson is the mighty city with its millions of population—the metropolis of the republic.

Here was all the quiet, all the restful country loveliness and sweet seclusion to be found anywhere in the most retired spots of our beautiful land. To us it seemed just an ideal spot for enjoying the ripened years' well-earned leisure and a rest that is blessed with nature's sweet communion, enriched and made healthful and wholesomely engaging, useful and enjoyable by the gentle labors, in God's air and sunlight, of caring for and watching over the trees and plants, the shrubbery and lawns, the garden, the grapery, the orchard and the grove, the flowers and the domestic animals and fowls—a place to pass old age serene and bright amidst loved ones, blest with memories of life's struggles and victories but away from strife, envy and noise and yet near to all the grandest attainments of the world and within easy reach of all that wealth and highest civilization and enlightenment have to offer. It is a historic region, filled with memories of the early days when Washington had his headquarters at a house not far away. Before its purchase the place had been rented and was somewhat run down, and Mr. Marder has found new vigor and improved health, as well as pleasure, in daily work in the open air, putting things to rights and making improvements. He talked lovingly of his

fruit trees and of the attentions they were to be given for their improvement.

The next day was Sunday, and we walked a mile along the rustic road, bordered on one side by the native forest trees, to the old Presbyterian Church, and listened to a sermon from an appropriate text, on the progress of the world and all the wonderful possibilities, suggested by the celebration in the great city just over the river. In the morning the home was gladdened by the presence of the married daughter of Mr. and Mrs. Marder, with her husband, a leading lawyer of Brooklyn, and their two children, who pass their summers here, and who had been over in the city, the afternoon and night before, enjoying the sights and the wonderful electrical illumination.

A drive in the afternoon up the valley past great dairy farms, and over the hills and down to the Hudson, and then along the river through a continuous line of lovely villages—passing points of great historic interest as well as a picturesqueness of names and buildings inherited from the early Dutch settlers—and then back by the "highroad" home, afforded a charm in scenery and environment only to be realized by those who have traveled along the banks of the Hudson in September and witnessed all the novelty and attractiveness of its homes, and of the autumnal coloring of the rich foliage of the trees. Were we publishing other than a paper for the instructing of editors and printers in their callings, we would attempt a description. We have written this much out of the pleasure that was given us, and for the reason that we know that the thousands of friends of Mr. John Marder in the printing and allied callings will be equally gratified to be informed as to the manner in which he is passing the years of his retirement. For three months each year the family will live in Florida, the balance of each year will be passed at this delightful home, and that these years may be many will be the wish of thousands who have met, had dealings with, and received courteous, considerate treatment at the hands of the genial, kindhearted, thoughtful John Marder, during the years of his active business life.

MEET OLD FRIENDS AT NEW HAVEN, CONN.

One of the highest pleasures of our many business trips is the meeting with old friends of the U. T. A. and the N. E. A. At New Haven, Conn., we enjoyed very greatly a short visit with Messrs. Wilson H. Lee and C. S. Morehouse at the office of the former. These gentlemen are past presidents of the United Typothetæ of America, and are filled with kind memories of leading employing printers who dwell in different cities all over America, and inquired as to those whom we had recently met. Mr. Morehouse is passing golden years of leisure after a half century of successful life in the printing business, and finds happiness among the beauty spots of New England, and his multitude of friends. Mr. Lee has added to his activities as a printer and the most extensive directory publisher in the United States, the carrying on of a model dairy farm, on which he lives and which we gladly promised to visit at some future time. We had heard reports of his farm from others, and from these we know that it is conducted with all the orderliness, cleanliness and business system and method of his great printing and publishing establishment and it yields him pleasure and recreation as well as profit. The automobile has made it possible to live on a farm and enjoy all the healthful surroundings of rural life and still carry on business in a city.

AN AFTERNOON AND NIGHT AT THE HOME OF H. B. HALE, EAST HARTFORD, CONN.

We found that H. B. Hale had passed the summer with his family at his country place several miles away, coming in the morning and going out at night with his fine auto, a spin in which, with Mr. Hale and his son and daughter, through the beautiful streets and past the pretty homes of East Hartford, we greatly enjoyed. The members of the N. E. A. enjoyed Mr. Hale's presence at the convention in Seattle and on the memorable trip to Alaska. But the family are all at home now in their pleasant residence, with the printing office delightfully located on the same tract of land as the residence, facing another street and arranged with all the comforts of a dwelling house. Mr. and Mrs. Hale have an ideal family of five children, three daughters and two sons, and the mother "looketh well to the ways of her household, and eateth not the bread of idleness. Her children arise up and call her blessed, her husband also, and he praiseth her." Our own mother was a New England woman, and we may be partial, but when we say that we found this to be a well-ordered New England home of thrift, comfort and happiness, we give the highest praise that we know how to bestow. One of the little girls, whom we tried to help in her struggles with a difficult example in arithmetic, said to us, confidentially, in the morning, "We each have something to do about the house." Here is the secret of raising up children to become a blessing to themselves and others—let each have a duty to perform. It is the religion of loving service and that each one is to help, that gives object and glory to life. After an evening happily passed, we were delighted, before retiring, by pleasing music, with Mrs. Hale at the piano, the eldest daughter playing the bass viol, and Mr. Hale the cornet. No wonder that Mr. Hale is a boon, traveling companion, thoughtful of the happiness of all with whom he meets. Mr. Hale conducts only a weekly paper and job printing office of moderate size. Many of our readers have larger establishments, yet he supports a steam yacht, an automobile, takes his family to the country in the summer and frequently to Florida for a short time in the late winter, and finds time and means to attend the conventions of editors in his own state and the National Editorial Association. His office yields a good income, because he gives it personal attention, keeps his individuality back of the business, goes over his territory personally, meets customers and receives subscribers, and above all conducts the business in an orderly, systematic, economic manner. He loves the work and is never above looking to the details of the business. We had promised and had intended to reach this home earlier, and to enjoy with the home friends and neighbors the celebration of the twenty-fifth anniversary of the marriage of Mr. and Mrs. Hale, but business kept us in New York and we could only send a congratulatory telegram, and promise to be present at their golden anniversary even though business had to be put aside through permanent retirement therefrom.

The silver wedding of Mr. and Mrs. Hale was a most pleasant occasion and we were the only loser by our absence. It was on the evening of September 17th. It was blessed by the presence of life long friends. The house was beautifully trimmed with golden rod and asters by Mrs. Hale's schoolmates, who trimmed the church for her wedding, and two of the bridesmaids of twenty-five years before, presided in the dining-room. Besides the congratulations of the guests, Mr. and Mrs. Hale received many gifts, letters, and telegrams from their friends, with wishes for many more years of happiness.

We shall not soon forget our visit to the home and office of our friend H. B. Hale.

SUNDAY WITH HON. E. H. PIERCE AND WIFE AT THEIR HOME IN REVERE, MASS.

Just ten years ago we had something to say about a visit to Revere and vicinity, its town hall and wonderful beach. On our recent visit to Boston, Mr. Pierce made us doubly glad by meeting us at the United States Hotel and conducting us to his home, glad of a visit with old friends and with

renewing most pleasant memories of the former visit when we were accompanied by treasurer, James G. Gibbs, and were in Boston with the object of attending the Massachusetts Press Association and presenting a great hall clock to Past President J. B. Maccabe on behalf of the National Editorial Association. The banquet, during which the presentation occurred, was made especially memorable by the presence of Julia Ward Howe, author of the "Battle Hymn of the Republic." She delivered a stirring after dinner address on the occasion and entered into the full enjoyment of all the speeches.

On our recent visit, we went first to the office where is published the Revere *Journal* and a prosperous weekly for Winthrop is printed. The arrangement of the office is a model as to convenience and systematic orderliness. One example will suffice for illustration—and will be found to contain a valuable suggestion for other printers and publishers. Mr. Pierce has over eight hundred half tones of local people, buildings and scenes, and he retains ownership of all such cuts that he has made. These are wrapped and numbered and kept in the drawers of handsome electrotype cabinets. There is a complete card index system used, giving the name or subject of each cut, the number, and when and where used. Such an arrangement is not only convenient and time-saving but gives information that often saves much hunting through files of the paper to find the facts and data that appeared with the illustration. Mr. Pierce had commendatory words to say of the business-bringing power of the Mergenthaler linotype, finding that abundance of work comes in unsolicited from other offices, to their accommodation and to his own profit. Mr. Pierce is a native of Revere, as was his father and his grandfather before him, and his pleasant home stands upon a part of what was the old farm and orchard, now divided into city lots and covered with residences. On Sabbath morning, we all attended the old Unitarian Church, founded in 1710, and sat in the pew that has been occupied by the family for three generations, and listened to the organ which Mr. Pierce used to pump when a boy, but the organ boy of that day has been replaced by electricity. The minister preached on the text, "God is spirit," and taught how to realize his presence and beneficent influence by the wonderful works that show intelligent design as much as does a perfect building, that had assumed its beautiful completeness in one's absence, after he had looked upon the crude, shapeless material, gathered without order and in confusion around the site.

After service we wandered on the wonderful beach, maintained as a resort under the control of the State of Massachusetts, and witnessed the rolling ocean whose waves wash these historic shores. It was pretty late in the fall and cold, but the voice of the water still attracted enthusiastic bathers.

At three in the afternoon, as a contrast to the old church, we attended the church of the newest development of belief in religion, First Church of Christ, Scientist. It is a magnificent building of Bedford (Ind.) limestone, and has a seating capacity in the auditorium of five thousand people. "The mother Church," with a seating capacity of 1,100, is incorporated into the new church building and used as a lecture and Sunday School assembly room. Besides there are separate rooms for Sunday School and Bible classes and a foyer, or entrance lobby, supported by massive stone pillars, sufficient to accommodate two or three thousand people, and, in which, after the service, many of the congregation gathered in groups and engaged in conversation. We were told that the main subject of conversation is as to the cures that have been wrought during the week, and of the doctrines that have been taught in the texts read. The singing is congregational, with a lady leader, accompanied by one of the largest and sweetest organs in America. The service, aside from the singing of hymns, among which was that grand, old soul-stirring, "Prayer is the Soul's Sincere Desire," the services consisted of reading alternately passages from the Scripture by a lady elocutionist of special training and ability, that gave the deepest meanings of the texts, and of passages from Mary Baker Eddy's book, supposedly teaching truths in harmony with those of the Bible texts, by a former judge of Sioux City, Ia. At the Unitarian Church in the morning we had been taught "God is spirit." Here, by texts and readings, we were taught that man, made in the image of God, is spirit, and that the spirit is the source of and controlling force over all things; it only is abiding and eternal, all else is illusory, ephemeral, transitory, unreal.

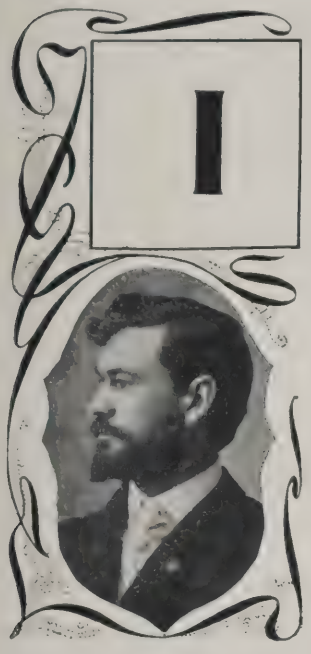
There was neither preaching nor exhortation, and the readings were the same as at the morning service, yet there were probably three thousand present. Across from the church is the great publishing house where the books and other publications of the church are issued and the *Daily Monitor* is published. It is equally massive as is the church. The location is in the fashionable Back Bay section of the city, a short distance beyond Trinity, New Old South Church and the great public library, the largest in the United States if not in the world outside of the Congressional library at Washington.

The evening was passed at the home of Mr. and Mrs. Herbert E. Emerson in Winthrop, editor of the *Sun* and *Visitor*. Mr. Emerson was married a year ago, so that it was a new home. He was a delegate to the twenty-second annual convention of the N. E. A. at Jamestown in 1907, and is a reader of the National Printer-Journalist, so that we felt that he was rightly a member of our journalist family and it was easy to find subjects of conversation of common interest. This completed a long day, and a return to the Pierce home resulted in early retirement and sound, refreshing sleep, to which the long rides, the visit to the shore and the pure, ocean air of Boston were all conducive. Of course, Mr. and Mrs. Pierce inquired about the last N. E. A. convention, as it was the first that they had missed in sixteen years, as well as about all the old members and those who went on the excursion. Mr. Pierce said he would not fail to be at the next meeting of the Executive Committee of the National Editorial Association and hoped that it would be called at an early date. One thing the association has accomplished, it has bound together hundreds of editors all over the country by the ties of closest friendship. This day in Boston will add to the others as another bright, grateful memory. Herein is our compensation. Our journeyings are all a part of our regular occupation but there is so much of good fellowship, and real enjoyment on the side, that we feel that we have made our work our constant pleasure so that we will never need to retire from business for rest, change, or recreation.

Willard J. Banyon, former city clerk, of Benton Harbor, Mich., who, during the past summer, has been connected with the St. Joseph *Daily Press*, has gone to Ann Arbor to take up his last year's work in the university. Mr. Banyon is one of the best known newspaper men in the county, having been connected with the twin city press at different times for nearly a decade. This year he will be one of the editorial assistants of the *Michigan Law Review*, a monthly magazine published by the law department and devoted exclusively to matters of legal information and subjects of interest to the legal profession.

The Champaign County *Gazette*, one of the oldest newspapers in Illinois, has suspended publication. The allegation that it has been made a personal organ, is said to have caused a lack of patronage, necessitating the suspension.

NEWSPAPER CRITICISMS



IT was once the popular opinion, and is yet among a certain few, that that which is most potent in the upbuilding of a big newspaper business, creating a wide circulation, and popularizing the paper, with the people generally, was simply making a good newspaper. In the day of least competition this was practically true, and, to a certain extent, it is so to this day; but being content only with making one's paper high class in every respect, however commendable, is nevertheless too much like the grocer who hopes to command trade merely by buying a high grade brand of goods, keeping his store neat and sanitary, pricing his stuffs right and treating his customers courteously, without advertising. The modern newspaper cannot succeed and prosper any better without advertising than can the grocer. The country weekly of today is succeeding, that is building up a wide circulation and a popular reputation, or the magazine or great daily, is the sheet that is being advertised. In view of this fact, it follows that in certain districts, then, it is not always the best publication that the masses are favoring, which only illustrates the subtle possibilities of proper publicity. I do not know if the advertising of a newspaper business differs materially from that of any other business concern; I only know that it is a very important feature of any business—as imperative in one as in another. There are a hundred efficacious ways of advertising a newspaper. Keeping a reader is quite as important as securing a new one, and one of the best means of keeping a paper's present readers reminded of the sheet's inherent virtues is through ads and locals in its own columns. This will also succeed in reaching a large class, no doubt, who are not regular readers. Care should be taken, however, not to overdo this self-praising stunt, and one should studiously avoid a spirit of vain boastfulness and braggardism. The paper's name, price and principal selling points should be kept constantly before the public eye; for any community of human beings is ever changing, and, even if it were not so, there is superlative virtue in repetition. In short, every legitimate form of advertising is good for a newspaper, and anything that causes the people to talk about the paper—provided such comment be favorable—is excellent advertising. That's why special editions and popular voting contests are so effectual.

KETTLE FALLS, WASH., August 19, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I notice you occasionally have a word to say in your journal about different newspaper make-ups—size and ad displays. What do you think of this one in a town like Kettle Falls? The undersigned is an old-time print—union—having worked in some of the leading offices in Chicago, Detroit and New York. Your criticism, either by letter or in magazine, will be highly appreciated.

Yours truly, W. H. BROOKS.

Few papers that I have examined lately have so thoroughly delighted me as has this little sheet from

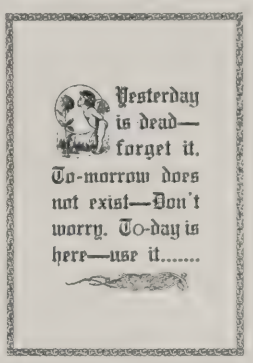


Exhibit 1

Brother Brooks. The Kettle Falls Valley *Tribune* is a four-column, sixteen-page product, into the making of which a commendably high degree of art has entered. The first page is really a cover page, containing besides the trite proverb quoted in exhibit No. 1, a complete index to displayed advertisements. The contents of the inner pages are ideal—an abundance

of local news, country correspondence, editorial notes, etc. This has all been written and edited in a style superior to the average, and given a typographical embellishment in the way of heading and makeup that cannot fail to charm the most fastidious of us. Various members of the famous Cheltenham family—than which there is none with prettier face or form—figure exclusively in the display of this neat little sheet, and with an eminent regard for white space, coupled with a master's skill for designing and displaying, in the main, the ads are all highly pleasing. Press work is entirely satisfactory. On every page this little paper shows not only much natural ability, but the loving interest and enthusiasm of the true printer. Singular,

too, by accident following immediately upon the introduction to this installment, here is a shop which is evidently being well advertised, as the two reproductions (Exhibits 2 and 3) demonstrate. Exhibit 4 is another neat ad specimen from this sheet. Brother Brooks confesses to be an "old-time print," and I think his handsome little paper is a pretty forcible proof of the necessity and advantage of practical men in the calling.

* * *

ELLENSBURG, WASH., August 25, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover we are mailing you a copy of the *Evening Record*, the only daily in Kittitas County, Washington. The *Record Press* took over this plant July 1 and changed the name of the *Evening Localizer* to the *Evening Record*. The two-page in this number was, I believe, the first advertisement ever run in two colors by a Central Washington newspaper. We have changed the entire style of make-up of the paper, removing all ads from front page, dropping all paid readers from among local items and revised the style of headlines. We believe that there still remains much ground for improvement, but hope you will take the trouble to point out our most glaring faults.

Very truly, THE RECORD PRESS,
J. Clifford Kaymor, Bus. Mgr.

And today, chiefly by virtue of the several innovations inaugurated by the new management, as outlined above, the *Evening Record* is one of the finest little dailies coming out of Washington—a state that is fast becoming famous for excellent printing and high class newspapers. The upper portion of its attractive title page may be seen in exhibit 5. A very good news

Exhibit 5

service is offered by the *Record*, and both the editorial and reportorial work is good. Presswork compares well with that of the average, and the mechanical makeup is considerably above that commonly met with in this class of lesser dailies. The two-color, double-page advertisement (Exhibit 6) mentioned in the foregoing letter, is a creditable piece of work, the uniformity of face and style maintained throughout be-

Exhibit 6

ing particularly correct and pleasing. Undoubtedly there is, as the brother suggests above, still some room for improvement in the *Evening Record*, but as regards faults, if indeed this paper has any at all, they are surely not "glaring," but well subdued—so well subdued, in fact, that I have failed to detect one.

* * *

LYNDEN, WASHINGTON, August 21, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending herewith check for a few months' subscription to the NATIONAL PRINTER-JOURNALIST. The magazine is a hummer and your department is especially worth while.

Under separate cover we are mailing you, for criticism, the last four copies of the *Tribune*. You will notice that when we are not tied down by contract, we are following your ideas in regard to making up ads.

Of our first page we are especially proud, and would like your opinion regarding it—whether it agrees with our own or not. Yours,

ROBERT QUILLEN, Foreman.

With my whole heart I can reply to Brother Quillen, that the beautiful first pages of the several copies of

the Lynden *Tribune* with which he has favored me, meet with my heartiest approval in every detail. It is difficult for me to make a selection for reproduction here, but have taken one purely at random (Exhibit 7.) If one were not satisfied that he is in his full normal condition of mind, he might fear that such an ideal front page as this possesses seductive hypnotic

powers compelling admiration of everything else about the paper, and, while I'm the last to deny the subtle influence of the excellent suggestion, still I realize that all the deep regard I feel for the balance of this sheet is real and well merited. Contents, typography, impression, advertisement composition, and practically every feature of the *Tribune*, is jolly near the perfection mark. And not by any means least among these is Editor Dan Cloud's work. His "Tribune Cozy Corner" is a veritable master-piece of its kind. Seldom have I read an editorial department in a country weekly

more nearly ideal—for seldom does a country editor get so near the hearts of his readers and write so truly confidential. Because of the simple fact that few of us possess the happy faculty of doing so. Country weekly editorial work is a fine art — becoming more and more important as times and conditions change. With practically every modern household possessing its dailies and its multitudes of magazines, it becomes virtually a waste of space and energy for the average country editor to endeavor to mold the opinion on issues of state; but there are homelier subjects—subjects nearer and dearer to the hearts of rural readers—all neglected by the daily paragraphers and magazine writers, that the alert country editor can seize upon for his

weekly themes, which cannot fail to not only catch and hold the interest of his readers for the time being, but must eventually endear him and his paper to the various households into which it goes. Such are the themes that occupy the editorial columns of Dan Cloud's *Tribune*. And take a look at these delightful ad specimens (Exhibits 8, 9 and 10.) The honor in these is probably all Foreman Robt. Quillen's.

O. Byron Copper, De Soto, Wis.

COON RAPIDS, IA., August 29, 1909.

DEAR SIR:—I mailed you under separate cover, August 25, three copies of the *Enterprise* (June 11, June 18, and July 9). I wish that you would point out the weak spots in Garst's two adds of June 11th, Speicher & Baugh's adds of June 18th and July 9th.

Your recent criticisms have been of a great help to me in the way of ad building. Yours respectfully,

T. E. WEST.

All of the advertisements to which my correspondent has directed attention are first class specimens of composition, being especially well planned, correctly displayed and skillfully whited out. They are all fashioned along those neat, simple and conservative lines

that can be heartily recommended for everyday use. These ads are practically without "weak spots," unless perchance, those black underscores could be so termed.

Exhibit 11

Exhibit 12

As a rule, underscoring weakens, instead of heightens, the conspicuity of the words under which they are used.

CARRINGTON, N. D., September 5, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Have just finished reading a sample copy of the interesting and instructive N. P.-J., and the thought has struck me that possibly a letter used last month by this paper might be of value to some of the boys who have run up against similar conditions.

Have been here about four months, and am pleased to say that home advertising is steadily improving. The merchants here had never been educated to using newspaper space. They are liberal spenders for bills, circulars letters, etc., but have considered newspaper publicity a waste of money. In desperation I fired the enclosed letter to them and the results were satisfactory—not exactly by direct contracts brought, but it had the effect of starting them to thinking. Believe by giving them other letters at times the *Independent* will carry the amount of advertising it should.

One considerable mistake made in the enclosed contract was in the amount of space to be used. It should have been double, or else left blank to suit the needs of the business to be advertised. Respectfully,

GEO. P. COLLINS.

Am also mailing you a copy of the paper—not necessarily for criticsm although it would stand much of it.

The subject of increased advertising support, or the means of increasing newspaper advertising as a direct check to mail order buying, is surely one of considerable moment to every newspaper man, and certainly of appropriate interest in this department; and therefore, Brother Collin's communication comes as a very welcome contribution. As both of his letters are of considerable length, and the two combine so nicely in a complete explanation of his scheme for increasing his advertising support, that I deem it unnecessary to further burden these columns with explanatory comment, but present the circular letter in full as follows:

DEAR SIR:—We will sign a legally binding contract with any merchant in Carrington to insure the carrying out of the following proposition:

A contract will be entered into for one year's advertising. The merchant must agree to use at least five inches of space for his store news *every* week, preferably quoting prices therein; the ad must be changed at least once in two weeks; the amount of space contracted for must average at least ten inches weekly.

On our part we agree: To write the adds, if requested; to boom the town and the principle of home trading. To refuse to publish ads from mail order firms in lines that conflict with home advertisers. *To refund every penny without quibble or bellyaching, at the end of the year if there has not been a satisfactory and material decrease in the amount of mail order business in your line going out of Carrington.*

We do not know of any way in which we can show more confidence in the *Independent* as an advertising medium. The refund of money clause is bona fide. We could not make this proposition if we did not know:

1. That newspaper advertising in the right paper is the the cheapest advertising.
2. That the *Independent* is such a right medium—double the circulation of any paper in this section.
3. That mail order patrons can be converted to home buyers if persistently and consistently solicited.
4. That one great reason why this is a notorious mail order town (according to the statements of local merchants) is because the business men in Carrington are equally as notorious as poor newspaper advertisers.
5. That mail order houses continue to prosper more from aggressive advertising than from cheaper prices or quality of goods.

The direct cause of our making this offer at this time is the fact that our attention was forcibly called to the evil effects of mail order houses on local merchants last week when one man walked into a bank and bought a draft for over $175 which was sent to a Twin City house. That amount of money from one man would have made a fair entire two days' business at a majority of the business houses of Carrington at this season of the year.

It is the desire of the publishers to give Carrington the best weekly newspaper in the State. There is no question but that a strong local paper is a great advertisement for the town. We invite comparison of the *Independent* with any paper published in a town this size in North Dakota. It takes money, though, to put out the paper we all want.

In this letter we are not making the slightest appeal to your charitable nature. It is a strictly business proposition with us and should be with you. We absolutely agree to dedeliver the goods. If our theory is correct—and we are risking several times what any single firm will risk—the cost of the advertising will more than be paid by your increased sales. If our theory is not correct you can have your money back. You can not lose. Will you put a stronger guarantee on your goods?

We enclose with this letter a specimen contract covering the conditions set forth above. We are desirous that you sign this contract at once that you may receive the full benefit of the heavy trade that is certain to follow the coming harvest. Yours truly,

INDEPENDENT PUBLISHING CO.,
Geo. P. Collins, Managing Editor.

As all must agree, who have taken the trouble to read it, the above is an especially well worded document and represents a plan that I am not surprised if fruitful. Such a proposition, of course, requires an implicit confidence in newspaper publicity, a knowledge, forsooth, that one's paper will bring results for its advertisers; but without such an intelligent confidence, no editor need hope to get his rightful share of business. I shall be pleased if Brother Collins will keep us informed as to further results of his effort to arouse his home merchants in regard to the use of *Independent* advertising space.

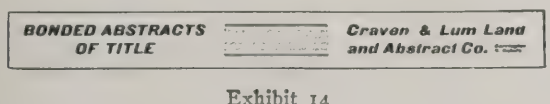
The Carrington Weekly *Independent* I find to be such a paper that its publisher need feel little trepidation in offering it to the scrutiny of even a more particular critic than I. It is an extremely well printed all-home quarto, with contents of such an abundance and of a class and style that one seldom sees surpassed. A superlative news-service, covering a wide field and including headed stories, local and personal mention and neighborhood news reported by a staff of correspondents, is the *Independent's* shining virtue, but not its only virtue, for the editorial department is really worthy of the columns of a greater sheet. Every line is written with an inspired hand and every word emanating from a mind rich in thinking power and intelligence. Nor is this sheet's excellence confined alone to its literary features. Its typography too, is wholly as delightful generally. The first page is as nearly

correct in every detail as I could have dictated it, and this covers not only the mechanical makeup, but everything else as well. (Exhibit 13.) The advertisement

Carrington Weekly Independent.

Exhibit 13

composition is all neatly and attractively done, and with perfect presswork crowning the glory of this worthy sheet, there is little left to be desired. In exhibit 14 I reproduce a full column advertisement that is only one of several commendable examples to be



BONDED ABSTRACTS OF TITLE — Craven & Lum Land and Abstract Co.

Exhibit 14

found in the *Independent's* well made pages. This is indeed a paper well deserving the most liberal support of its home merchants and citizens. May its prosperity increase and its excellent standards never grow less.

* * *

DODSON, LA., September 4, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—By this mail I am sending you under separate cover several copies of my paper, the Dodson *Times*, extending over quite a period of time, showing our style of headings and make-up, etc.

I am sending them to you that you may examine them and criticise them, offering any suggestions as to improvement that you may see fit.

I am a subscriber to the NATIONAL PRINTER-JOURNALIST and read it with great pleasure, and I trust profit. I always make it a point to read your department and think it one of the best features contained in the PRINTER-JOURNALIST.

We are printing an eight-page paper now, using four pages of ready-print, but did not have only one of the eight-page ones to send you.

With best wishes and hoping to hear from you through the NATIONAL PRINTER-JOURNALIST in October, I remain,

Yours truly, JOEL T. PAYNE.

I am highly pleased with Brother Payne's paper, because it is a live sheet, containing much good reading matter, including the local news and editorials. The typography is particularly praiseworthy, as the reproduction of the first page (Exhibit 15) and that of the advertisement (Exhibit 16) will ably demonstrate. I

The Dodson Times.

call especial attention to the artistic arrangement of the first-page matter. Two four-inch double-column ads appeared at the bottom of this first page, I am sorry to say, one in each corner, but as they were both passably neat, and inasmuch as so much artistic taste was employed in placing them, I have not the spirit to censure them too severely. By the way, this is another paper that believes in advertising itself through

its own columns. The presswork is good, showing that skilled hands attend to the making of this paper from the writing of the "copy" to pressing. I am glad of the privilege of reviewing it and hope to see it many times in the future. Brother Payne will find his interest in this journal and this department increasing in just the degree that he continues to patronize these columns.

* * *

(A press of matter has compelled the leaving over one-half of this department to December.—EDITOR)

As a result of the change in name of the Des Moines, Iowa, Women's Press Club, active newspaper and magazine women who are employed down town will probably start a separate club, retaining the old name, Des Moines Press Club, which was recently abandoned in favor of Women's Press and Authors Club.

AMONG THE ASSOCIATIONS

"IN UNITY IS STRENGTH"

N the whole world of human endeavor, nothing else is more promising of advancement, improvement and upbuilding than that of the friendly meeting, uniting and conferring of men of all callings, of all worthy movements and undertakings for mutual enlightenment and helpfulness and the advancement of individual and common good. This, above all else, is prophetic of the final conquest of good-will, of a broad, active, practical fraternity and mutual, intelligent service and helpfulness that pressage the dreamed-of period when peace, founded on justice and equity and the full recognition of individual, community, commercial, industrial, social and political rights, shall cover the whole world as the waters cover the mighty deep. Without this, there can not be either industrial or world peace.

Our attention is naturally directed to the efforts that are being made through the organizations of publishers, editors and printers—representing callings that are peerless among all the pursuits of men in power and the broad influence exercised over society, government, trade and the industries.

The pages of the National Printer-Journalist have borne testimony for now nearly a quarter of a century as to the increase of organizations, and their growth in power and influence, yet we can not record all, but endeavor to give the high lights, the things of real value. This month, we tell of the extending of this idea of conference and mutual helpfulness on a national scale among the employes of a single corporation—the Root Newspaper Association—in addition to the growing organizations of independent offices and publications.

Since September 20th we have had the pleasure of attending five conventions, all in the interest of printing and newspaper-making, as follows: The Printers' League of America and the Federation of Trade Press Associations of the U. S. in New York City, and First International Cost Congress of Employing Printers, the Inland Daily Press and Illinois Daily Newspaper Association in Chicago. All these were signalized by the earnestness of the members and the many particularly useful and informing papers read, discussions had and facts elicited.

PRINTERS' LEAGUE OF AMERICA

On September 23 and 24th, we enjoyed the pleasure of being present at the banquet and during one-half day's session of the Printer's League of America and of listening to the addresses and discussions of both the employes and the employers. It was the initial convention and resulted in the adoption of a Constitution and By-Laws and the election of officers. The attendance, outside of the members of the New York branch, was very small, yet it was asserted that responses had been received from some three hundred who had expressed their good will and interest.

An address by Charles Francis of New York, who was later elected president, stated fully the facts as to the inception of the League, "Its Meaning, Its Accomplishments. The Need of It," and what was hoped to obtain through the convention.

Mr. Francis said:

"Whatsoever a man soweth, that shall he also reap, and he that soweth the wind shall reap the whirlwind, but he who soweth peace shall of that seed reap prosperity and lovingkindness.

"For centuries mankind have had a tendency to take advantage one of the other, and a selfish spirit has greatly governed our actions. A certain kind of selfishness is not to be deprecated, but there is a selfishness which is despicable and should not be tolerated. It is this latter spirit which has from time immemorial sought to create an aristocracy to rule by force, contrary to the interests of any individual, community or nation.

Of late years this has been a mooted question between what is termed capital and labor, or employer and employee, and the countries throughout the civilized world have sought a remedy for existing evils with more or less satisfactory results.

Some hundred years or more since began the present antagonistic relations of the modern age between employer and employee, and they began to look upon one another as natural enemies.

The employer sought to extract from the employee the utmost amount of labor of which he was capable with as small a remuneration as was possible, and this resulted in a dissatisfied workman, who in turn endeavored to give as little as he could for the wages paid, and subsequently led to the combination of the workers ostensibly for mutual advancement and to care for their sick and needy. This movement developed in a way toward the advancement of labor and was consequently fought at every turn by the employer, so much so that strikes and lockouts became a constant source of trouble and affliction to both parties, costing this nation alone about a billion of dollars during the twenty years from 1880 to 1900. Many efforts were put forward to check this disastrous warfare in England, Germany, New Zealand and Australia.

Germany and New Zealand appear to have succeeded in establishing systems by which these conflicts are avoided, and by somewhat different methods reaching the same end.

Germany managed to organize the printing trade, both employer and employee, into a solid body comprising ninety per cent of the business, and any unfair dealing between employers, employees or between employer and employee is taken in hand by the combination and settled by tribunals established and working in districts as apportioned, approved by the crown and upheld by the courts. Of this movement, however, the speaker has only gathered his statements from observation and hearsay, but of the movement in New Zealand knows the causes which led up to the only government that has had the temerity to come out on the compulsory arbitration proposition to settle all differences arising between employer and employee. In a recent conversation with an employing printer from New Zealand, the speaker asked whether they now had much trouble from the unions, and the answer was, "Unions! There are no unions. The only union is the government." He was then asked how the country was getting along on this enforced arbitration law, and answered by the statement, that "both employer and employee were well satisfied and the prosperity of the country was never at any time as great as at present."

Among the speakers at the banquet of this new League, at Hotel Astor, Sept, 23rd, Rev. Theo. Henderson, pastor of

the Hanson Place M. E. church, Brooklyn, and John F. Oltrogge, President of the International Brotherhood of Bookbinders, especially took the broad and altruistic views, necessary to success in any undertaking where equal justice depends upon the mutual considering of and acceding to the rights of those whose interests are seemingly opposed, in that, on one side services in labor are rendered and on the other side are paid for in money which, if honest, is only accumulated earnings from labor performed, though possibly of a different character. Rev. Henderson spoke of the obligations of full service and of the ever-existing and ever-present rights of the third party or the public served alike by employer and employe, while President Oltrogge spoke broadly of the brotherhood of man, and the universal obligations ever existing and growing out of this relationship.

The other speakers at the banquet were: George L. Berry, President International Printing Pressmen and Assistants Union; George Stern, representing the Typographical Union or "Big Six" of N. Y.; Edward J. Carroll, Chairman Executive Committee of the Printers' League.

J. J. Little acted as toastmaster and introduced each speaker with informing and pleasing remarks. The following was the program of the addresses of the convention:

"The League; its Inception, its Meaning, its Accomplishments, the Need of it and what it hopes to attain through this Convention," Charles Francis; "The Economic Importance of the League Movement," Joseph J. Little, chairman Joint Conference Committee on Arbitration of the Printers' League of America; "Organized Labor and Publication Work. Spreading the League Doctrine to the Bookbinders—its result," John F. Oltrogge, president Bookbinders' League of America; "The League and the Apprenticeship Question; Abuses and Remedies; Making the Apprentice a Good Mechanic," William H. Van Wart, recording secretary Printers' League; "Past Trials of the Employer, Unaffiliated, and Remedies Possible Under Closer Adherence to League Principles," Oswald Maune, first chairman Executive Committee of the Printers' League; "Ends to be Obtained by the Electrotyping and Stereotyping Trades through the Spreading of the League Idea," H. J. Home, president Electrotypers' and Stereotypers' League; "Affiliation of the International Typographical Union and the National Printers' League of America—its Meaning to the Settled Commercial Peace of the Printing Trade," James Lynch, president International Typographical Union; "The League, the Pressman and Prosperity," George L. Berry, president International Printing Pressmen and Assistants' Union; "The Effect Possible on Local Conditions by a Closer Bond of Union Between the Employer and His Men. The League as a Possible Remedy for Existing Evils," James Tole, president of Typographical Union No. 6; "Amicable Relations with the Employer—what they can Mean to the Conscientious Employee," Peter J. Dobbs, president New York Pressmen's Union; "Master and Man; Peace and War; Prosperity and Adversity—How they are Viewed in the Union Ranks," John P. Mines president Franklin Association of New York; "The League Movement as Viewed by Trade Journalism," W. B. Prescott, of the *Inland Printer,* of Chicago, Ill.

There were discussions and extempore speeches by delegates and others and the following officers and committees were chosen:

President, Charles Francis, New York City; First Vice-President, John W. Hastie, president of the Chicago Employing Printers' Association, and manager of the mechanical department of th American Newspaper Association, of Chicago; Second Vice-President, J. J. Harrington, Oakland, Cal.; Secretary, D. W. Gregory; Treasurer, Wm. H. Van Wart.

Executive Committee, the officers and Messrs. Neale, San Francisco; R. E. Donnelly, Indianapolis; J. W. Kelly, Cincinnati; T. A. Raisbeck, New York; F. J. Quinn, Rahway, N. J.

Ways and Means Committee was nominated for election by the national body as follows:

J. J. Little, New York; J. A. Habey, New York; C. J. Crawford, New York; Mr. Clark, Newark, N. J.; C. J. McCoy, New York; Mrs. L. M. Wise, New York.

The Convention adjourned to meet in Chicago in 1910.

PUBLISHERS OF TRADE AND TECHNICAL PAPERS CONSULT.

The Fourth Annual Convention of the Federation of Trade Press Associations of the United States, held in New York City, September 27th and 28th, was especially educational and in every way valuable. The program and arrangements could hardly have been improved upon. It is difficult to discriminate, where every number on the program possessed great excellence, in the lines covered thereby.

To our way of thinking, the paper of peculiar, if not of highest value, was on the subject "The Large Service of the Trade Paper to its Subscribers" by Charles G. Phillips. The fact is that this idea of service and how to make the papers most useful and effective both for advertisers and subscribers were made prominent in all the papers and discussions.

No one who reads the account, elsewhere in this issue, of the very practical results of the convention in Chicago, of the employes of the Root Newspaper Association, needs any additional assurance that a paper by Charles T. Root, president of that Association, on the subject, "How to Inspire the Staff —Something about Conventions of Officers and Employees" was of great and practical value, interest and instruction.

"How to Create Favor for the Trade Paper" was presented by J. Newton Nind, a former president of the Federation. He advocated combined effort through a publicity bureau to make known the work of the trade press and the value of advertising in trade papers and the reasons. The discussion resulted in the appointment of a committee to carry out the plan. Some two years ago, the Minnesota Editorial Association entered upon some such a scheme or plan for educating home merchants in the value of the home newspapers in promoting local trade. There is a great lack of information and understanding among manufacturers and dealers as to the utility of advertising as an agency for the creation of new business, as well as regards the general good constantly being accomplished by the papers for improved methods that bring growth and prosperity, increasing the demand for merchandise, machinery, implements and manufactures, as well as the ability to purchase. The other subjects presented and discussed at this convention were:

"The Changing View of the Trade Paper Advertiser and the Publisher's Duty in Consequence." Discussion led by John A. Hill, publisher of the *American Machinist,* the *Engineering and Mining Journal, Power* and the *Engineer.*

"The Printing Situation," John Clyde Oswald, publisher of the *American Printer;* "The Paper Situation," Arthur C. Hastings, president American Paper and Pulp Association; "The Trade Press Outlook," Emerson P. Harris, of *Advertising and Selling;* "The Relation of the Business and Editorial Departments," Discussion led by Robert I. Clegg, of *Castings, Wood Craft,* etc.; "Developing a New Field." Discussion led by Henry S. Bunting, publisher of the *Novelty News.*

The New York organization, branch of the American Trade Press Association, tendered the visiting delegates a theater party on the evening of September 27th, to the play "Is Marriage a Failure?". The settings of the play were especially attractive, the incidents were amusing and the outcome was pleasingly illustrative of the success of marriage as a helper in all the vicissitudes of private life. It proved a grateful

rest from the arduous work and discussions of the convention. A banquet was enjoyed on the night of September 28th, presided over by Charles T. Root in a most pleasing manner. He introduced the following members and speakers.

A Few Words from our Retiring President.

A Few Words from our President Elect.

"The Postoffice," Hon. Edward M. Morgan.

"The Editor," Hon. Chas. F. Moore.

"The Business Man as a Prophet," Rev. Dr. N. M. Waters.

Resolutions of thanks to the officers, committees and to the American Trade Press Association of New York were adopted and the following officers were elected for the ensuing year at the closing session:

President, Chas. V. Anderson, *Drygoodsman*, St. Louis; Vice-President, Henry G. Lord, *Textile World-Record*, Boston; Secretary-treasurer, P. H. Litchfield, *Modern Miller*, St. Louis.

Through courtesy of Oswald Publishing Co., New York

Banquet of the Federation of Trade Press Associations, Hotel Astor, New York, September 28, 1909

THE INLAND DAILY PRESS ASSOCIATION.

This Association, that is one of the oldest among daily press organizations of the United States, held an especially important meeting at the rooms of the Press Club of Chicago, Tuesday, October 19th.

B. G. Goslin of the *Daily Gazette*, Janesville, Wis., told in an able paper, "How to Secure Subscribers in the Country other than by Premiums or by Contests." His plan was to give a paper of merit with the best possible local news service regardless of expense, as compared with first year's receipts, in the locality sought to be reached; send sample copies preceding a canvas; get a good man to correspond and work for subscribers; analyze the paper to the representative so that he will understand every feature of it and its worth. As an example, he analyzed his paper, the *Gazette*, saying:

"We have telegraph news from state service which gives news of the day from every part of the state. We have Associated Press dispatches which give news from every part of the world. We have cartoons on current topics, comic features, Household Hints, and six serial stories a year, which if purchased separately, would cost three times the subscription price of the paper. We have 104 correspondents in the country, which give the news from all sections; we have a news service from the particular point we are working on, that is unexcelled. We have the Janesville news, a 'Forty Years' Ago' feature, a 'Daily Human Interest Chit Chat,' our editorials and enough features to give a man or woman a good education. And more than that—we have the advertising which keeps the public informed of the news from the stores. Many of our subscribers tell us that they save the price of the paper (25 cents a month) time and time again by buying advertised goods."

He advocates the instructing of representatives of the paper in a thorough advertising talk and, if necessary, ask that they commit it to memory, and then supplements the efforts of the correspondent with letters from the home office.

Mr. W. F. Parrott of the Waterloo, Iowa, *Reporter*, lead in the discussion of the topic, and advocated that the publisher put his individuality behind the circulation efforts, personally seeking out non subscribers. Another member had found success in first going with a canvasser for a week or so, to get him thoroughly instructed and interested in the business and enthused and then aid with sending circular letters, made as personal as possible to non subscribers, stating that the paper would be sent free on trial for a week or more and that it was hoped that the party addressed would find it so satisfactory as to then become a permanent subscriber. Get the new subscribers to form the habit of reading your paper and then follow up with solicitation by personal letters. And advertise your paper thoroughly, all the time, as you ask merchants to advertise their goods.

Other subjects were considered, but the main interest centered in the print-paper question. Addresses were made by Congressman James R. Mann, John Norris of the American Newspaper Publishers Association and Mr. Medill McCormick, publisher of the Chicago *Tribune* and a member of the committee that represented the publishers in Washington in efforts to secure such legislation as would give low duties on wood pulp and print paper so as to make available the great spruce forests of Canada. Congressman Mann

gave a very interesting review of the paper situation, claiming that a paper famine would result, if the law passed by Congress, that really raises the tariff to eight dollars a ton, goes into effect in April, as it will if some action is not taken. He urged the repeal of the law. He was chairman of the House Committee that thoroughly investigated the situation and recommended that the tariff on print paper be fixed at $2.00, which would have been satisfactory to the Canadian people, but, disregarding the report of the committee, that had thoroughly studied the whole matter for ten months, Congress made the tariff $3.75 a ton with an added provision that will advance the charge, as above mentioned to over $8.00 a ton on April 1st. Mr. Mann seemingly blamed Senators Frye and Hale of Maine and Senator La Follette of Wisconsin for the unfortunate legislation that has led the Canadian authorities to retaliate by prohibiting the export of wood pulp from that country. These gentlemen, it seems, represented their boroughs or states instead of the nation, or rather certain interests in their states. It is some times a question whether or not there is, in fact, any general government in the United States so far as the House and Senate are concerned. Each member represents, trades and "log rolls" for his constituents, for his district or the leading interests therein with little care as to the general good, but no one represents the Nation as a whole.

The address of Mr. Norris was broadly useful and informing, not only as to the tariff and its effect in causing the prohibition of the export of pulp wood from Canada to this country but as to economies that may be practised in the use of paper. He contended in favor of standardizing paper, using the width of paper in rolls of fifty-seven inches with weight of 32 pounds to the ream of paper, 24 x 26 inches. and for that purpose employing nonpareil column rules and narrower page margin, making the outside margin 5-8th of an inch and the margins between pages 9-8ths inches. He stated that dailies by adopting this plan had saved from $1,500 to $75,000 a year and no one would have noticed any difference in appearance. He showed the great economy in the manufacture of paper by the standardization in width of rolls, weight, color, surface and quality. Machines can turn out a vastly greater product at a lower cost. It saves changing the machines for varying runs of different sizes, weight and quality. He claimed that there should be improved methods of manufacture, through skilled, trained workers and especially equipped superintendents, saving among other things, waste of materials. Mr. McCormick confirmed all that had been said by Messrs. Mann and Norris, and complained of arbitrary and inconsiderate and unfair treatment at the hands of Speaker Cannon, who had placed himself, with an emphatic "damned if there shall be" against investigation or action. He spoke with much feeling and claimed that while his paper, as he had declared to Mr. Cannon, could stand the rise in paper stock, it would prove injurious of not disastrous to many other publications.

After discussion, the Association passed the following resolutions:

Resolved, That we, the members of the Inland Daily Press Association, urge upon congress such changes in the tariff provision on pulp and print paper as will insure a full supply of pulp-wood for American paper mills. And be it further

Resolved, That we approve the text of the proposed letter to the president, herewith contained, in the matter of print paper, which letter has been approved by the representatives of the American Newspaper Publishers' Association, and the officers of this Association are authorized to sign a copy of that letter in our behalf.

In substance, the letter, which was called out by President Taft's speech at Winona, Minn., states that the President had been misled, by designing men, into a blunder to the changing of his previous attitude on print paper and as to what the Mann committee had recommended and the House approved. It is further charged in the letter that the fixing the tariff on print paper at $3.75 a ton has caused the Province of Quebec to prohibit the exportation of its pulp-wood and that many American paper mills must close or move to Canada and that the country is now in a fair way for a trade war with that country, and industrial disturbances which will involve business of interchanges amounting to $285,000,000. per annum, and expresses the hope that the President will find some method of rectifying the mistake into which he was led.

Frank D. Throop, publisher of the Muscatine, Iowa, *Journal* is President of the Association and as such, signed this open letter to the President.

THE ILLINOIS DAILY NEWSPAPER ASSOCIATION.

This is one of the active organizations of daily papers that has pardonable pride in the good work that it has accomplished for its members. The President, Henry M. Pindell is proprietor of the Peoria, Ill., *Evening Journal* and is prominent in Illinois journalism as well as in politics, having represented his party, as delegate at large from the State,

H. M. Pindell, Peoria, Ill., Evening Journal
President Illinois Daily Newspaper Association

at the last National Convention. He commenced newspaper life in Indiana as publisher of the Wabash *Times*, but in 1889, he founded the Peoria *Herald*, and in 1897, he purchased two of his contemporaries, the Morning *Times* and the Morning *Transcript*, the latter he combined with the *Herald* and sold the former to the *Journal*, and in 1902, he sold the *Herald-Transcript* and bought the *Journal* which he now publishes. He is forty-five years old, a native of St. Joseph, Mo., and a graduate of the De Paw University at Green Castle, Ind., and is a hustler in his business and for his association, which holds its meetings in the different cities of the State, for the benefits in every way secured, but this year held its annual convention in the new and elegant six-million dollar La Salle Hotel in Chicago. The sessions were in the College Room beginning at 11 A. M. Oct. 19th. Twenty-

seven members attended. Routine business, with report of Treasurer Miller, was first tranacted. An invitation to meet with the Inland Daily Press at the Chicago Press Club, was declined on account of the well filled program, that would consume all the time, but a committee of conference was appointed to extend a counter invitation to be present at the session of the Illinois Dailies in the afternoon and to bring any resolution adopted as to the print paper contest for consideration and joint action. The letter from John Norris to President Taft was then considered, but its adoption was opposed on the grounds that it was not couched in respectful terms and a committee was appointed to draft a suitable communication along the same lines but with more consideration of the exalted office of the President of the United States. The committee reported but later the action of the Inland Daily Press Association was substituted therefor, President Pindell submitted a resolution as to a primary election law which, after discussion and slight modification, was adopted as follows:

"*Whereas,* Justice and popular sentiment seem to demand a change from the old caucus way of selecting candidates by parties, owing to the frequent and irremediable abuse of the same; therefore be it

"*Resolved,* By this Association, that it heartily endorses the avowed purpose of Governor Deneen of Illinois to secure if possible the passage of a primary law, giving the voters of the parties an opportunity to choose their candidates by vote, thus giving the people the same opportunity in selection that they now enjoy in election."

MCCORMICK ENTERTAINS.

The morning session adjourned at 12:30 to the *Tribune* office where a complimentary luncheon was tendered the Association by Mr. Medill McCormick, publisher of the Chicago *Tribune*. The luncheon was served in the composing room and was one of the most enjoyable features of any meeting yet held, and highly appreciated by the members. After a splendid luncheon, Mr. McCormick gave an informal discussion of the newspaper problems from an evening, morning and Sunday issue standpoint. His talk was full of convincing information, reflecting an insight into the conduct and point of view of a great newspaper, pungent with advice and heralded some changes, modern life is making a necessity in newspaper contents, and finally subjected himself to a cross-fire from the members. A vote of thanks was tendered Mr. McCormick by the membership and a new mutual friendship was formed by the occasion.

TUESDAY AFTERNOON SESSION, OCT 19th.

ADDRESS ON SCHOOL OF JOURNALISM.

At 3:45 the afternoon sesion was called to order and an address was listened to by Mr. Walter Williams, Dean of the School of Journalism of the Missouri University, at Columbia, he being the guest of the association. Dean Williams' address was a "news story" of the great work he is conducting for the profession in his school, and was given with the idea of enlightening the membership as to the advisability of this association going on record favoring the establishing, or rather the broadening out of the present course in Journalism, now being given at the Illinois State University. The address was excellent, convincing and made friends of many of the members for the present movement in this state.

Dean Williams was followed by Prof. E. M. Halliday of the department of English at the State University, outlining something of the work now being done in newspaper teaching.

President F. D. Throop of the Inland Dailies was next presented to the meeting, with the resolution on the Norris letter, with added resolutions and slight changes.

A. W. Glessner followed with an invitation for all members of the Association to make themselves at home at the Chicago Press Club, and for which he would be glad to issue visitors' cards at any time.

On motion of Mr. Rees a rising vote of thanks was tendered Dean Williams and Prof. Halliday for their addresses.

Mr. Baldwin moved that the Association place itself on record as favoring the installation at the Illinois State University of a full course in journalism, together with the equipment necessary to give practical education in the work, and the Association's approval was evidenced by a committee being appointed, consisting of Messrs. Baldwin, Rees and Sterling to co-operate with the University people in getting the necessary appropriation for the broadening out of the present course.

President James of the University next happened in and made the membership a talk on the University and its property values in comparison with Harvard University. Mr. Norris also came in and made a brief talk in explanation of his letter and expressing his fears of a trade war with Canada unless something was done to lower the tariff on wood pulp.

The report of the special committee appointed to form suitable letter to give Mr. Norris the desired aid was next read, but after hearing Mr. Norris the membership concurred in the Inland letter, and President Pindell was instructed to write an identical letter with the Inland, only send the communication as one direct from this Association, instead of signing the Inland letter.

The session adjourned at 6 o'clock.

TUESDAY EVENING BANQUET.

At seven o'clock in the evening a banquet was served, to which most of the members responded and the feast was all that could be desired, with some splendid informal talks thrown in. President Pindell introduced J. Stanley Browne, editor of the Rockford *Star,* as toastmaster, and he served "in his usual winning way." Reminiscences of Prentiss and Bill Nye were given by Col. Wm. Lightfoot Vischer, of Chicago; some original "stuff" served by the Poet Laureate of the American Lumberman, Mr. Douglas Mallock; and a talk on ethics by B. B. Herbert of the NATIONAL PRINTER-JOURNALIST. Other interchanges of "confidences" and stories were made by Messrs. Sterling, Rees, Cobb, Townsend and Wheeler.

WEDNESDAY MORNING SESSION, OCT. 20TH.

The session convened at 10:45 and an address on foreign advertising by Mr. James Verree of Verree & Conklin, special agents, was thoroughly appreciated and much valuable information secured. Mr. Verree convinced those present of the real value of foreign advertising as a big revenue producer, and not being a side issue or by-product, and he told how to get it. The Association tendered him a vote of thanks.

The "Question Box" or replies to inquiries for topics to discuss, was next up, and the queries taken up one by one. Among them was print paper and a quotation of $2.16 net was the lowest noted, but that was for 80-ton lots. $2.22 to $2.25 seemed to be the average quotation at this moment, and a reluctance on part of manufacturers to contract at that.

The election of officers followed, and President H. M. Pindell of Peoria *Journal,* was again pressed into service owing to his good work, and the other officers were also re-elected as follows:—Vice President, C. C. Marquis, Bloomington *Pantagraph;* Secretary, V. E. Joy, Centralia *Sentinel;* Treasurer, W. W. Miller, Quincy *Whig;* Directors, Thomas Rees, Springfield *Register;* H. E. Baldwin, Joliet *News;* E. E. Bartlett, Rockford *Register-Gazette.*

The meeting adjourned sine die at one o'clock.

Process Plates for Color Printing

BY LOUIS FLADER, ADV. MANAGER, BARNES-CROSBY COMPANY.

EVERYONE is aware of the ever increasing demand for illustrations of every nature. The newspapers were perhaps the first to discover the public's desire to see pictures. They immediately catered to it and the greatest newspapers of today are the ones using the most illustrations. Whether their greatness rests upon this fact alone, is a matter open to discussion. It may be only a coincidence, but it's a fact nevertheless. The magazines were glad to follow the example set for them and were in turn followed by publishers generally. Manufacturers, wholesalers, jobbers and retailers were quick to see the drift of things and next availed themselves of illustrations. Nowadays, if a business man employs printed salesmanship—advertising—to sell his goods (there are but very few who do not) he invariably illustrates either the goods themselves or the selling talk. This idea is carried to such proportions that you may now take up a stove catalog and find it a work of art, made so entirely by the illustrations printed therein. Engravers can make a thing of beauty and consequently a joy forever, out of an article or subject. While the demand for illustrations is continually increasing, no branch of it has grown to the proportions assumed by three and four color process plates. In employing this method, we can photographically reproduce a copy or object in its natural colors. Practically every color, shade and tint can be obtained in but three or four printings made from the same number of plates. The method and the results obtained thereby are truly marvelous to the layman.

For the better understanding to readers of the NATIONAL PRINTER-JOURNALIST, a treatise on three and four color process work follows. While science has done a great deal to help the manufacturer, it has done comparatively little to assist the sales department. Universities throughout the world are daily dispensing knowledge, carrying on endless research and delving into the mysteries of chemistry, to help in the manufacture of things we need. This has been done to such an extent that we may say manufacturing is comparatively easy. How about selling? What has science done and what is it doing to help sell the goods on the one hand that it helps to manufacture on the other? It has at least done this. It has enabled the man with something to sell to show a picture of his wares in one or more colors, in fact an exact reproduction of it. It is said "Suggestion rules the world." What better form of suggestion exists than to appeal to the sense of sight? To show a man a pleasing picture of an article suggests its use to him and eventually results in sales.

From its inception, three-color process work has always been surrounded with a certain air of mystery. While buyers of engravings have become familiar with a number of trade terms used in connection therewith, not many understand their real meaning or the process itself. Theoretically at least, it is claimed that all colors can be made with a combination of the three primary colors, yellow red and blue. This is not absolutely true in practice but will answer for the purpose of illustration.

To begin with, a colored copy containing whatever colors it may, is placed before the camera to be photographed. By the old method of color photography called "indirect," the procedure is as follows: First, the colors must be separated, namely a negative must be made containing all the yellow tones in their proportion, another containing all the red tones, and the third containing all the blue tones. In each one of these operations, it is not only necessary to retain the particular color wanted, but the other two colors must also be eliminated. Dry plates are used in the making of these color-separation negatives.

At this step, we have separated the colors from each other, but since they must be printed from halftone plates, halftone negatives are necessary. As a negative cannot be made from them without reversing tone value and the image as well, an intermediate step is therefore necessary. Thus positives are made on glass to preserve register, since paper will either shrink or stretch during the process of developing. From the positives, three halftone negatives are made which are printed on copper, etched, engraved, finished, etc., resulting in the three color process plates.

It is seen from the foregoing that nine photographic operations or negatives are necessary in the making of a set of three-color plates. The disadvantages connected with that system consist in the amount of time required, materials consumed, loss of color values, lack of register, etc., all due to the repeated photographic operations. Consequently process-workers have been experimenting for years to evolve a system of direct color halftone photography.

Such a method has been discovered and perfected in Europe, and has been operated very successfully for several years. When tried in America, it invariably resulted in failure. About a year ago, a young German, Theodore Freundorfer by name, came to America and introduced his collodian emulsion system of direct color halftone negative making. It worked successfully from the beginning.

The Barnes-Crosby Company of Chicago, one of the very few engraving establishments that make and sell three and four color process plates to the public, secured Mr. Freundorfer's services and installed his process. They are more than satisfied with the results.

To the general public and printers in particular, this means that they can now purchase three and four color process plates outright, receiving an accurate reproduction of the original copy in quicker time than ever before. Color work has been so systemized by this firm that any first class printer can get good results from their plates. This should make a new departure in color printing. Heretofore, firms making a specialty of three color process plates have uniformly retained ownership of the plates, merely selling the printed matter.

The Editor at Westerly, Rhode Island

On the return from our delightful trip through New England, visiting New Haven, Hartford, Springfield, Mittencague, Westfield, Holyoke, and Boston, traveling a good deal on motor cars, to enjoy the enrapturing autumnal beauties made immortal by America poets and writers—Longfellow, Whittier, Emerson and others—we stopped at Westerly, Rhode Island, and Mystic, Conn., two among the lovely cities of "The land of the Pilgrim's Pride."

Westerly is noted all over the land, and all over the world for that matter, wherever printing is done, as the place of manufacture of Cottrell presses.

Filled with memories of a delightful hour passed in the place and in viewing the factory of the C. B. Cottrell & Sons Co., eighteen years before, following the convention of the United Typothetae of America at Boston in 1891, we stopped over to renew acquaintance and to note improvements. Previous to our visit in 1891, we had witnessed the working of the first offset press, that automatically changed tympans every fourteen or fifteen impressions, or as de-

sired, in the office of the *Youth's Companion,* we were interested in seeing these machines in the making.

On our last visit we passed through the factory with one of the three brothers, now conducting the works and were pleased to note the advances and improvements that had been made. We could not refrain from remarking as to how gratifying to the sons of the late C. B. Cottrell, who commenced making presses here fifty-five years ago, in a small frame building, must be the expansion and present satisfactory condition of the business. It indicates the great progress in printing and publishing that has been made with the consequent demand for improved machinery. We believe that no small proportion of this is to be credited to educative journals like the National Printer-Journalist, that have recorded every advance and taught the better and more effective, successful and improved methods of business management and printing, as well as to the enterprising press builders.

We gave a view of the greatly enlarged works in our October number but, as magnificently as the illustration showed the great extent of the plant, it gave little idea of the improved new machinery and appliance for manufacture that are seen by a passing through the establishment. It takes many ingeniously designed and costly machines to make the different parts of an up-to-date printing, magazine or newspaper press. Men of inventive genius of the highest trained ability in mechanical engineering and draughting, are all the time employed. Success has come through the use of system and brains for most advanced and perfect accomplishment. To us such an establishment is a constant wonder and joy as we witness what skilled men have wrought. To furnish the best possible means for most perfect, rapid, and useful production, is highest service and worthy of honor.

We cannot here enter into any attempt at detailed description, but those who are acquainted with Cottrell printing machines, like the one installed in leading offices throughout the country, can easily imagine what we witnessed of busy workmen operating the machines turning out the parts and perfecting the wonderful products for shipment to all parts of the country when we state that every portion of the great buildings are fully occupied and that it is necessary to run both day and night shifts of operators to meet the increasing demand. The city is attractive and interesting but to us the shops were the more instructive. The business office is well arranged, fitted up and furnished in the most neat, convenient and substantial modern style and worthy of mention, but the shops are where the wheels go round, the buzz of industry is heard, and the things of creative force are produced and finished with loving care in workable perfection and beauty.

* * *

Improvement and the meeting of all possible demands are becoming more and more the efforts of all leading manufacturers. The National Machine Company of Hartford, Conn., for so many years makers of the popular Universal presses, have found that there is demand for platen presses of a larger size than 14 x 22, and, accordingly, have designed and are manufacturing a press 17 x 25 inches. There are many large forms of job work that can be best printed on a strong platen press of this size and the press will be found convenient in newspaper offices for running off single-page supplements or illustrations when the press of matter makes this necessary and smaller papers in city suburbs or villages will find it applicable to their needs. It will pay to consult page 744 in this issue and find out the facts with regard to this large press and other manufactures of cutters, creasers, etc., made by the National Machine Co.

Relation of the Credit Man to the Printer

BY F. Y. NORRIS, J. W. BUTLER PAPER COMPANY, CHICAGO. ILL.

ALL business is started for the purpose of selling its products, whatever that may be, and, whether we realize it or not, every operation is a part of the sale. A sale, properly made, takes into consideration every stage of it from the time it is booked until the bookkeeper puts the red line under the cash entry. Upon the credit man rests the responsibility of knowing how well the sale has been made. He must know, not only the financial strength of his customer, but also how this sale will effect his business. He must follow to a certain extent, his goods beyond his customer to that party we have heard so much about, "the ultimate consumer." He must know something of how well his customer has sold, or will sell, his product. If he detects a weakness anywhere, it is his duty to point it out and do what he can to correct it. If he cannot correct it, and it will work harm to his customer, he should refuse the order, although he might be able to collect for it.

In the complex operations of business, the extension of credit seems to be an absolute necessity. The average merchant of today thinks more of, and will do more for, a customer who buys on time and pays promptly when the account is due, than for a customer who pays cash on delivery. This, of course, is not as it should be, but perhaps it would not be difficult to find the reason for it. Credit makes business transactions easier because it gives opportunity for both the buyer and seller to check for errors before settlement, and, above all, brings them together in such close relationship that the seller can do those little things that please his customer and win for him succeeding orders unsolicited.

Credit continues to be a mutually desirable help to business transactions just so far as the customer is not, under it, assuming obligations that he cannot then meet or, without question, meet at maturity,—in other words, in proportion as it is not a source of capital.

All this applies to commercial transactions as distinguished from banking. A bank's business is largely made up of loans. The interest accruing from these loans is one of the greatest sources of its profit. The bank itself furnishes only a small part of the capital used in its business. The deposits of its customers furnish most of it. That is why the size of the balance carried, rather than the amount deposited, measures the desirability of a banking account in the estimation of a banker. It will at once be seen that a very small percentage of profit on the whole moneys handled gives a large return on the capital stock which forms the basis of dividends.

Much has been said about the building up of a cost system, the outworkings of which will be satisfactory to the banker. Can it be in the minds of those men that the troubles of the printer will end as soon as he can make a loan from his bank? Can it be that any man here would advise the average printer to make a loan from his bank even if he could? Can we not, if lacking in experience of our own, learn from the experience of others? Have we so soon forgotten the lessons of 1907, when the bankers not only refused all help to the borrowing public but even refused to pay out moneys on deposit? Let me urge you to be careful what word goes out from this meeting on that point. Borrowing money from the bank is like taking strychnine—sometimes just the thing to do but extremely dangerous unless done with expert knowledge of its effect, and surely fatal if in too large doses.

In commercial lines, the capital is limited to that invested or borrowed at interest rates, and it follows that the margin of profit must be much larger than that of the bank, and it is equally apparent that a commercial house cannot afford

to loan its working capital to its customers in the form of credits beyond its regular terms or extended discounts.

Commercial credits are not all alike. A manufacturer making seasonable goods finds it of advantage to ship his product early and give long dating in his billing rather than provide warehouse space and make the great effort necessary should he try to ship just at the time goods are needed. The grocer, however, will not sell his sugars except on close terms. Between these two, there are almost as many different terms as there are kinds of business.

In fixing terms, probably margin of profit should have first consideration, but next to that comes the character of the product. It is reasonable to ask a year's time on the purchase of a press, but not in buying ink. The press is bought as a whole, because it is the only form in which it has any operating value, and not because of reduction in cost. In buying ink, however, for other than immediate use, the object must be speculation, and speculation is the last thing to be thought of in connection with the other man's money.

In business, the merchant is constantly tempted to overcome his competition by giving more liberal terms than have been offered, but in proportion as he listens to this will disaster stares him in the face. Giving longer terms destroys the stability of business in that it unsafely expands it beyond the ability of the capital upon which it rests.

Too many have the idea that it is shrewd business to buy on as long time as possible, but you need only casually to study the lives of those men who stand out unquestionably successful in business, to see that the very reverse of that is the keynote of success. Written all over their history, you will find, not "how much time," but "how much discount." They do not discount because they are successful, but are successful because they discount.

The value of discounting bills is not measured alone by reduction in cost. In fact, to a small or new business, that value sinks into insignificance when compared to the good resulting from the close study of every detail of the business to make discounting possible. You do not know of many men who have failed in business while they were discounting their bills. Gentlemen, I say to you, as I say to every man seeking for credit for a new business, if you want insurance against failure,—*discount your bills.*

I do not say that a business cannot be successful without discounting. Many have been strong enough to succeed against greater odds than the loss of discount, but I do say, without fear of contradiction, that no man has reached the full measure of his success before he takes advantage of cash discounts. You will agree with me in that statement and intend to reach that basis sometime. Any man who operates at a net profit, and does not go outside of his capital through over-expansion of his business, or unwise extension of credits, can discount his bills. If any man does much business at a loss after attending this Congress, he does not deserve discount, or even to be in business.

Aside from knowing the cost of his production, the printer should have terms,—30 days should be the limit, and no discount. A printer cannot afford to give cash discount, because too large a part of his product is labor, and discount was never created to apply to labor. Right here, let me say that cash discount, based on other than interest rates, is all wrong, and our allied trades are extremely slow in recognizing that fact.

As I have stated to you before, establish terms, and let those terms mean something, both to you and your customer. Time of payment is as much to be determined at time of contract as price. I do not mean that it is practical to arbitrarily fix terms and have every one yield to them. You have a limit below which you will not go in your price. In the same way, have a limit beyond which you will not go in the matter of terms. State your terms, and, if they are not satisfactory, and cannot, within reason, be modified to be so, you have the opportunity of avoiding an unsatisfactory deal.

In the larger cities, the newspaper publishers do not attempt other work than publishing papers, while in the smaller cities and country towns, the publisher does job printing. In publishing a paper, the principal source of revenue is advertising patronage. As the value of the advertising is based upon circulation of the paper, that must be built up without too much thought of cost. The natural result is, that much loss comes, and not unexpectedly, from unpaid subscriptions; from being perhaps excusably lenient in the collection of subscriptions, it is easy to fall into the serious error of letting job printing bills run indefinitely.

Many of these country papers are started for political purposes only, and, while the backers hope the expense of running will not be burdensome, they yet are prepared to be called upon for more or less deficit. In such an office, the job printing is looked upon as something to help in reducing the amount to be made up, and the average politican will give far more thought and study to a political contest than he will to printing costs. All of this creates a demoralized condition of the job printing business in that town, and no credit man should aggravate this situation by letting such a customer do other than pay promptly for his supplies.

A doctor, through his long study of cause and effect, as relating to life and health, becomes expert in his ability to diagnose disease; also in his ability to advise as to what are, and will be, healthful conditions. In the same way, the credit man knows those things that affect the life and health of business.

A baby comes to your family, and you are at a loss to know what is the best food. Do you go to the grocer, the butcher or the candy man for advice? No, you go to the doctor. Why, with equal wisdom, do you not go to the Doctor Credit Man to find out what is best for your infant industry?

If something appears to be wrong about your business, go to an experienced credit man and get his advice. Tell him all about the headache in your finances, but do not neglect to tell him about the slow circulation in your collections. Tell him all about your profits, but, at the same time, tell him about your starvation prices. Tell him all about the bad conditions in your sales, but go into minuter detail in describing the paralysis in your operating department.

In proportion as he knows all of the conditions surrounding your business, either through your having frankly told them to him, or by his having the ability, through experience and intuitive knowledge, to drag out of you the information, should he be able to give you sound advice.

In choosing the credit man to go to, if you select one who has had wide experience, you need have no fear that he will advise bleeding for an already impoverished business.

The part the credit man has in the making of conditions, either for good or for bad, is as difficult as it is important. Not only does it require long training and wide experience, but more than all, a fixed purpose and the ability to say "No" at just the right time.

So long as men in buying goods will threaten to withdraw their trade unless given all they ask in terms; so long as salesmen refuse to recognize the part payment has in a sale, and so long as credit men are looked upon as enemies to the Sales Department, so long will there be errors in credit giving. However, when we take into consideration the small percentage of loss resulting from careful credit-giving, we must all admit that, when it comes to honesty and integrity of purpose, the printing trade occupies a position second to none.

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

Mr. J. H. Taylor, formerly manager of the Keystone's branch house at Detroit, who has been in California for the past two years, returns to his former post about November 15th. Mr. Taylor is a Michigan man and has been connected with the Keystone for the past ten years. He is accredited with having more friends among the printers and publishers of Michigan than any other printers' supply man in the State, and they will doubtless give him a hearty welcome when he returns to his old home.

* * *

The American Sugar Refining Company, Jersey City, N. J., have recently installed one of the high-speed Brown & Carver Automatic cutting machines made by Oswego Machine Works, Oswego, N. Y.

* * *

Many printers visiting New York for the celebration took advantage of the invitation and found much of interest to repay a visit in looking through the typographic library and museum, as well as the Foundry which is the largest and most complete type founding plant in the world.

* * *

One of the most artistic and really beautiful pieces of printing in connection with the Hudson-Fulton Celebration was the souvenir issued by the American Type Founders Company. The two historical cuts representing the Half Moon on the Hudson and Fulton's first trip were reproduced from the original paintings and printed in three colors. The souvenir was also embellished with other cuts especially designed for the purpose, including the Wright and Curtis aeroplanes and the dirigible balloons.

* * *

AN EXCEPTIONALLY HANDSOME BOOKLET.

The American Type Founders Company have recently mailed to every printing office in the country an illustrated catalogue, descriptive of the Chandler & Price Gordon Press and other products of the Chandler & Price factory. This is deserving of more than a passing notice for it is an exceedingly attractive and beautiful piece of printing. The title page might well serve as a model. We fancy that more than one printer will adapt to his work some of the clever little stunts which mark this booklet as an example of exceptional typography.

It is of course printed in Cheltenham, in common with so much of the best printing of today, but it is something much more than a typefounder's specimen, for no printer can miss the message that each and every Selling House of the American Type Founders Company carry the Chandler & Price presses in stock ready for immediate delivery. That is the end and aim of the booklet, but there is no doubt but that the Foundry will reap the benefit from issuing such an unusually handsome booklet.

* * *

PLEASING THE ADVERTISER.

Nothing is more profitable in newspaper publishing than the acquisition of the art of pleasing the folks who pay for advertising. Nothing pleases the advertiser so much as finding that his advertisements are pulling in business. Too many publishers fail to please the advertisers by neglecting to exhibit an intelligent typographical interest in the composition of the advertisements.

Is it not true that the style of nearly every advertisement is indicated by a compositor who cannot be expected to have personal interest in the advertiser. Hence we find the advertisement commonly lacking in personality, the type thrown together without discrimination, one man's advertisement just like the other men's, and consequently the advertising pages are flat, stale, unattractive, if not repellant.

Yes, there are advertisements in nearly every paper that reaches us that owing to bad typography are repellant—driving away instead of attracting business. The publisher should see to it that every advertiser's space is utilized to the best typographical advantage, with a view to meeting the eye of the buyer. There is another set of eyes the well or ill-displayed advertisement meets—that of the man who pays for it; and if he sees it possesses personality or individuality he will be pleased to your subsequent and continuing profit.

We know that many publishers have achieved financial success by personal attention to this important factor in the profitableness of an advertisement. Type is now selling in weight fonts at low prices. Since the American Type Founders Company adopted the plan of selling its latest display faces, such as the Cheltenhams and scores of others, at the same low prices asked for plain body types, the expense of equipping a composing-room with ample advertiser-pleasing types is reduced to the minimum.

This is a favorable time for the publisher to wake up typographically.

* * *

Mr. F. M. Bashelier, formerly general manager of Tubbs Manufacturing Co., is now connected with the Keystone Type Foundry with headquarters at the Philadelphia house.

* * *

SMALLER OFFICES INSTALLING LINOTYPES.

The smaller job printing offices in the cities, and the country newspapers, are apparently awakening to their opportunities. According to figures recently given out by the Mergenthaler Linotype Company, 1,062 Standard Linotypes and 274 Junior Linotypes were sold during the year which ended September 30th. As many of the former and all of the latter were single installations, i. e., one machine to a plant—it would seem to indicate that more and more the setting of type by hand and all other methods of mechanical composition are giving way to the Linotype or slug-set way. The handling of composed matter in slugs has so many manifest advantages over matter composed of individual type that it is bound in time to supplant any other method.

* * *

UNITYPE EASY TERMS.

In putting the Unitype Typesetting machine upon the market, Wood & Nathan Company are offering unusual terms: The Unitype is sold with 400 pounds of type and all necessary appliances for $1,500; only 10 percent need be paid at the time of installation and the balance is spread over a period of three years in regular monthly payments; or it can be leased for five years (with the same down payment) at $22.50 per month, and at any time within three years the lease may be converted into a purchase applying to the purchase price all the money theretofore paid for rent, upon paying $4 per month for the time during which the lease contract was in force.

These terms are so easy that no one can longer afford the expense of hand composition, no matter how low the wages of hand compositors may be. The machine is especially adapted to the needs of the out-of-town publisher, and the kind of help ordinarily found in offices of this character can readily learn to operate it.

THE DEGRADATION OF AN ART.

The American Type Founders Company adds another chapter to its advertising campaign in this issue, and this message is worthy the careful attention of every wide-awake appreciative printer. These plain, every-day "talks" on questions of vital interest to the printer are making a big hit and this one entitled, "The Degradation of an Art," is one of the best yet. Every lover of good printing has on more than one occasion felt the shivers run down his back at the wretched typography, imperfect characters and poor printing resulting from the use of inferior casting type.

To quote the concluding paragraph: "What would the master printer of the past think of the books printed today? What will the master printer of the future think of the books printed today?"

* * *

A NEW SCOTT PRESS AGENT.

A. F. Wanner & Company, 340-42 Dearborn St., Chicago, have secured the agency of the Scott Improved News and Job Drum Cylinder Printing Press; for the states of Illinois, Indiana, Michigan and Wisconsin.

This machine was designed especially to meet the demands of the publishers of daily and weekly newspapers in the small towns and cities. No pains or expense have been spared by the manufacturers to make this the finest machine that can be produced for the work and it is only by the large quantities in which they are being built that they have been able to produce a machine of far more value for a comparatively small amount of money.

The frame is of the box construction, the bed drive is Scott's new patent mechanism, which entirely dispenses with any joint in the bed driving shaft. The distribution is rack and screw and table. There are four angle rollers, each with a steel vibrator and a top rider. Delivery is tapeless. The grippers are the new patent safety motion, which absolutely prevents damage when grippers are left in wrong position. Air chambers are equipped with automatic relief valves. Material is of the finest grade. Finish is of the best.

All the adjustments are conveniently located and can be quickly and accurately adjusted.

* * *

BIG TYPE ORDERS.

An interesting bit of news is contained in one of the full-page advertisements of the American Type Founders Company in this issue under the caption, "The Tide Has Turned." An order for 6,000 pounds of type from one book printer, and orders for 22,000 pounds of type from one of the largest book publishers in the country is of more than passing moment.

It is a very clear indication that large publishers are awake to the necessity for the very best foundry type in order to secure fine printing. Yea and something more than that, for it is likewise evident that these same publishers have found that the possible saving of a small amount in the item of composition by use of casting machine type, only resulted in actual increase in the total cost on account of delays and expenses of preparing forms for electrotyping, expensive make-ready, and constant expense of replacing badly defaced and defective letters.

* * *

VISIT TO THE FACTORY OF WALTER SCOTT & CO., PLAINFIELD, N. J.

One of the most interesting incidents and pleasures of our recent journeying in the East, was a visit to the model printing press manufacturing establishment of Walter Scott & Co., Plainfield, N. J., of which this paper recently contained an illustrated description. Our last previous visit was made with the members of the National Editorial Association of the United States in 1894, following the ever memorable convention at Asbury Park. The representative editors, publishers and printers, delegates to the convention, were then surprised and pleased with the extent of the works and the great variety, superior quality, completeness and adaptability of the printing presses complete and in course of construction, as they were also gratified with the kind words of welcome and the reception and entertainment extended by the much loved Walter Scott, since deceased, but worthily succeeded by his sons. The surprise would be greater now, if these same delegates could visit the factory again and witness the enlargements made, the new machinery that has been installed and the new and improved printing machines that are being manufactured in addition to the regular lines

The wonderful increase in the circulation of magazines, farm and trade journals and newspapers, has made a demand for the production of machines that will do more rapid work and cover a wider range. Walter Scott & Co. have kept pace with the demand. Mr. I. Scott, who has succeeded his father in the management, and who had been prepared for his responsible position by a thorough and broad technical education and by five or more years of training and experience in the mechanical engineering, draughting and other departments—conducted us through the different shops. His complete knowledge and descriptions made us to understand, and every step revealed how new conditions have required the production of new machines of ten times the value of those previously used, even by the greatest magazines. There were machines being completed that would print, gather, stitch, cover and deliver, counted, great magazines, farm and other journals, at a rate ten times more rapid than it was formerly possible to run one single form of sixteen pages on a flat bed press. This has been attained by the introduction of the offset device and the development of the rotary printing machines in a way to do the work on rotaries that was formerly only done on the flat bed presses. To aid in the accomplishment of this more rapid and complete work, the Scott Company had the valuable aid of their long years' of experience and high attainments as builders of rotary printing machines and lithographic presses. The shops presented a busy scene and while the size of the plant has been doubled, the value of the output must have been increased at least sixfold, and yet these costlier machines are vastly more profitable to buyers with publications of large circulation, for one machine does the work of ten of the old style presses, besides doing the binding and delivering the books complete. Later, we expect to give a full description of one of these new machines with illustrations. In the meantime, if any of our readers wish samples of the work done on these machines, the same can be obtained by writing to Walter Scott & Company, Plainfield, N. J. Of course the Scott Company manufacture all the various lines of presses that meet all the varying offices and newspapers of all sizes, and will make any machine in the printing line that may be ordered. Everything is made from the "News Drum" to the "Speed King" Rotary as will be more fully understood by carefully reading the Company's announcement on page 741 of this issue.

CENTURY OLD-STYLE.

The American Type Founders Company are showing in this issue specimens of the new Century Oldstyle, an oldstyle without a hair line. This is the latest design in an oldstyle face, and the foundry makes the prophecy that Century Oldstyle will have the largest sale of any oldstyle ever designed.

* * *

The Managers of the various houses of the Keystone Type Foundry made their annual visit to the general offices in Philadelphia the week of September 27th. This means renewed activity in the Keystone selling forces all along the line.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . . . .

WANTED—LADY COMPOSITOR TO PURCHASE INterest in live weekly paper in thriving Idaho town. Address, "Idahoan," care NATIONAL PRINTER-JOURNALIST.

WANTED—Type Casters: hand, steam and automatic; also type founders' other expert help wanted; steady work, full hours. Address Wm. F. Capitain, Superintendent American Type Founders Company, 300 Communipaw Avenue, Jersey City, New Jersey.

FOR SALE—TWO HUBER TWO-COLOR PRESSES. Bed 39x52. These presses have been thoroughly overhauled, and are in excellent condition. Price very low. Address, J. A. ROESE, P. O. Box 897, Pittsburg, Pa.

EDITORIAL—BRIGHT, ORIGINAL, EXCLUSIVE, PROgressive Republican or Independent; any proportion nonpolitical. Price low. G., care NATIONAL PRINTER-JOURNALIST.

LEAGUE BALL RESULTS FOR MORNING PAPERS, $1.00 per week. General news for evening papers. Special correspondence. Yard's News Bureau, 166 Washington St., Chicago, Ill.

BABCOCK DISPATCH PRESS 39x52. ELEGANT CONdition. W. L. A., care NATIONAL PRINTER-JOURNALIST.

PONY BOOK AND JOB CAMBELL 28x41; FINE MACHINE for newspaper and job work; good condition. C. H., NATIONAL PRINTER-JOURNALIST.

NEW TYPE FOR OLD, 1 lb. for 3 lbs., or 1 lb. new Empire for 6 lbs. stereos, electros, etc. Beautiful faces like the Caslons, Cheltenhams, Winchell, etc. EMPIRE TYPE FOUNDRY, Buffalo, N. Y.

THE VAN BIBBER ROLLER CO., Sixth and Vine Sts., Cincinnati, will give you *the best rollers* that can be made for any season or press. Our facilities are the best, and we use the latest Gatling Gun and compressed air apparatus. It pays you to have good rollers, and they count more in press work than anything else. In writing or shipping, "Cincinnati" is sufficient. Everybody knows us.

A COLD SIMPLEX STEREOTYPING OUTFIT, $17.00 and up, produces the finest book and job plates, and your type is not in danger of being ruined by heat. Simpler, better, quicker, safer, easier on the type and costs no more than papier-mache. Also two engraving methods costing only $5.00, with materials, by which engraved plates are cast in stereo metal from drawings, made on cardboard. "Ready-to-use" cold matrix sheets, $1.00. Come and see me if you can; if not, send postage for literature and samples. HENRY KAHRS, 240 East Thirty-third Street, New York.

FOR SALE—NEWSPAPER AND JOB OFFICE. Town 60 stores. $850 cash. Owner entering profession. News Lake City, South Carolina.

Different—of Course

A good many printers imagine their situation is exceptional—think honestly, that they are different from everybody else. The main difference we have been able to get a focus on is that some men who make a livin out of *other* people's advertising think *they* can do business without advertising.—If you are a real believer in advertising, get our proposition on building business for your job department—and do it now.

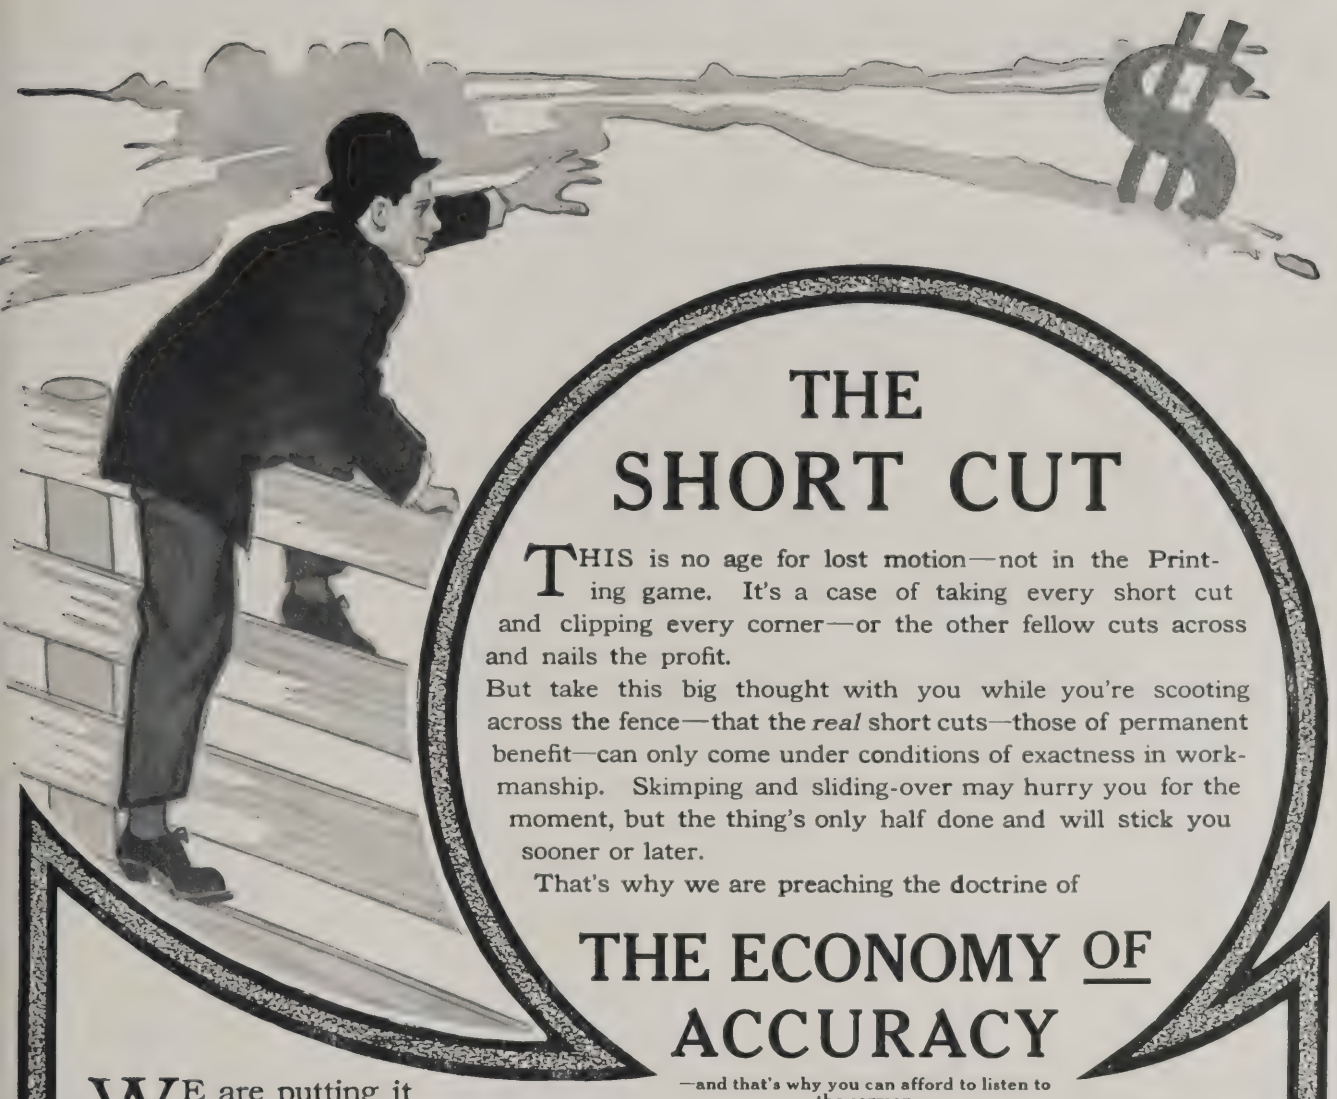
LON SANDERS, PRESIDENT
221 OLIVE STREET, ST. LOUIS, MO.



THE SHORT CUT

THIS is no age for lost motion—not in the Printing game. It's a case of taking every short cut and clipping every corner—or the other fellow cuts across and nails the profit.

But take this big thought with you while you're scooting across the fence—that the *real* short cuts—those of permanent benefit—can only come under conditions of exactness in workmanship. Skimping and sliding-over may hurry you for the moment, but the thing's only half done and will stick you sooner or later.

That's why we are preaching the doctrine of

THE ECONOMY OF ACCURACY

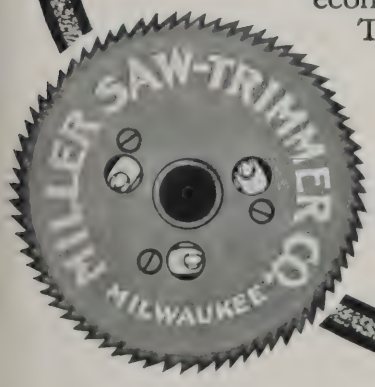
—and that's why you can afford to listen to the sermon

WE are putting it up to you straight that it means *real economy* for you to put into your shop a **MILLER SAW-TRIMMER**

You know what it does—how in the hands of any compositor, it saws all kinds of cuts, slugs and other printing material, and *trims them at the same operation*, reducing them precisely to *point measure*, so that they instantly fit and justify without patching or wedging. That's only the bare bones of it. It works countless other economies of labor and money, but the big point is its eternal accuracy. It does its work right the first time trying—*exactly to point measurement.*

You may not care just now to add to your *equipment* but you can't object to adding to your *knowledge.*

So get to us today with a demand for more chapters of this economy story and the terms of our offer of The Miller on **THIRTY DAYS' FREE TRIAL.**



Patented, April 9th, 1901, and May 18th, 1909. Other patents pending. The Miller Saw-Trimmers are fully covered by U S and foreign patents and pending applications, controlled exclusively by Miller Saw-Trimmer Co., who will vigorously protect its rights therein.

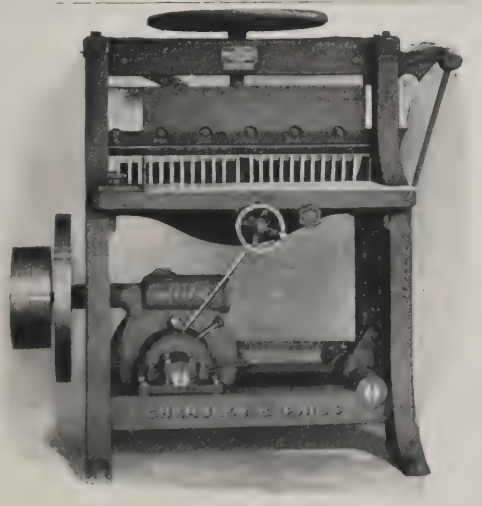
A FEW QUESTIONS TO OWNERS OF MEDIUM SIZED PRINT SHOPS



Did you ever run your plant without power? Perhaps you did, but you would not think of doing it now.

When you first bought your engine, motor or other power, didn't you think you were getting a little extravagant? That you didn't have enough work to warrant the purchase?

You think differently now, for you know full well that you never made a better investment. But, are you making all out of it you can possibly make?

You are using power to run your Presses, and perhaps some other machinery—are you using it on your Paper Cutter? Perhaps you think it would be extravagant for you to install a Power Cutter, but after you had bought it you would likely discover that you had made a very profitable investment.

Don't you think this matter is worth looking into? We feel sure it is worth your while to investigate.

Megill's Patent Automatic Register Gauge

The sheet as shown, is fed short of the gauge and yet it will register. When the press closes, the "Automatic" extends forward and gently pushes the sheet to exact position. It does not bite the sheet and prevent it from registering. It never pushes it out. It registers cardboard or paper. The ordinary gripper operates it. No extra fixtures. The gauge simply forms a stop for the sheet and then registers it. Feed ordinarily, but as fast as you like.

The Automatic Register Gauge, including a pair of the Double-Grip Gauges for the bottom, to your door for $5.95. *Testimonials and booklet.*

IMPORTANT ANNOUNCEMENT

We have recently made certain fundamental discoveries of a revolutionary character in the costs of machine composition, which are of the gravest import to the entire printing community.

These so nearly border on the sensational that we have been at a loss how best to announce them.

But as they are vital to all who depend for their living upon the profits of their composing rooms, we have arranged to state our discoveries in a personal letter to be sent to each employing printer in the United States on December 15th.

Our disclosures will be received

with astonishment and incredulity; but they must be accepted as founding an entirely new—and far more profitable—era in dealing with the costs of composition.

The facts that we shall then make known will cause no little consternation in certain interested quarters; and the practical use to which we shall put them will be followed by the stiffest battle that has ever been waged in the printing industry.

But, as we are now in position to render the trade an extraordinary service, we shall cheerfully take upon ourselves the burden of making the benefit of our discoveries wide, effective, and permanent.

WOOD & NATHAN CO.

"It's In the Pay Roll"

Said the foundry man to the foreman: "Doesn't it cost a good deal to cast your own type?"

"It certainly does," said the foreman to the foundry man.

"Then why do it?" said the foundry man to the foreman.

"Because it's in the pay roll," said the foreman to the foundry man.

"That seems a funny explanation," said the foundry man to the foreman.

"I'll tell you what I mean," said the foreman to the foundry man. "You see, when I wanted a few pounds of quads, or a font of type, I sent an order in to the office and got a 'call down'; was told of my extravagance, etc. So I figured with the boss one day, showing him that, while we were buying a good deal from the type foundry it was largely brass rule, chases, galleys, and a hundred other items, but I was really buying very little type—not $500 a year of actual type—but he said he guessed he would put in his own type casting machine and stop paying such large foundry bills.

"So he bought a machine, and while it costs us about $500 a year for interest and depreciation on the machine and matrices, and about $1,000 for labor and a few hundred dollars more for new matrices—and we haven't a tenth as many as we ought to have—still there is no more grumbling from the office—because 'it's in the pay roll.'

"I notice, though, he is buying just as much brass rule and other items from the foundry as ever, and buying about half as much type, because the machine doesn't cast a good deal of the type we require, and there are no matrices for so many sizes of so many faces we require; and furthermore, it would bankrupt the office if it bought matrices for all the sizes of even the new faces that are brought out every year."

Said the foundry man to the foreman: "That's mighty interesting. Did you ever figure it up and show the office the true situation?"

"Not on your life," said the foreman to the foundry man. "You don't think I'm going to try to prove the boss made a mistake, do you? And besides, I have more type, bad as it is, and when I order any type foundry type now there is no kick, because when they ask me why I don't cast it I say I haven't the matrices for that size of that face, and the office won't pay $25 for matrices when I only want $5 worth of type."

There are lots of things that are lost in the pay roll of the average printing office. Not in yours, of course, dear reader, but in the office of your neighbor, that "bad boy up the street."

Hundreds of dollars are lost every year through the pay roll which could have been saved with a reasonable supply of conveniences and necessaries for the composing room.

The pressroom gets along better. The presses have to run, but the poor old composing room must get along as best it can on short rations, and lose through the pay roll. "It's in the pay roll"—possibly yours—anyhow, your neighbor's.

Perhaps the Cost Committee of the Printers' International Cost Congress will do some figuring along these lines for the benefit of printers—at least that is the hope of the undersigned.

AMERICAN TYPE FOUNDERS CO.

LEADER IN TYPE FASHIONS

What Makes the Best Type?

Best material, best workmen,
best machinery, best system.

Who Makes the Best Type?

Experienced workmen—not boys or apprentices but **men.** One who knows, in an article discussing the Type Casting Machine Fad, hits the nail square on the head in these wise words:—

> "The enterprising machine salesman claims that a six or eight dollar boy can run a type casting machine and in many cases it was tried with the result of poor type, bad line, matrices burned out, and unsatisfactory results generally."

Anyone who knows the delicate, complicated, exacting nature of casting type in a foundry knows that a six or eight dollar boy **cannot** be depended upon to operate complicated type casting machines. In Barnhart Bros. & Spindler's type foundry, less than half a dozen apprentices are employed, and the policy prevails of employing **only skilled workmen** throughout the entire force of five hundred or more people. Although their business was never so great as now they have been able to secure sufficient skilled workmen to operate all their machines.

Who Sells the Best Type?

The house which has been called "The Tiffany of Type Founders" and who modestly sign as

Barnhart Bros. & Spindler

Independent Type Founders, Chicago, Ill., U. S. A.

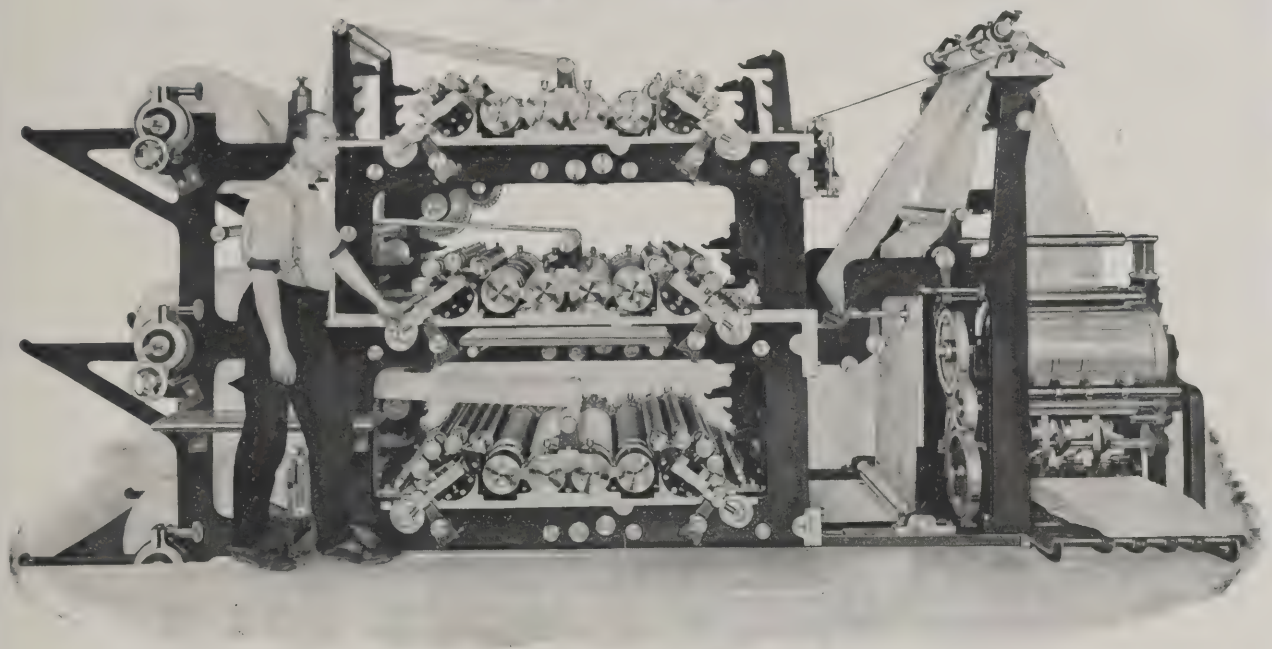
The Duplex Single-Plate Rotary

Built in 8, 12, 16 and 20-page sizes.
The smaller sizes may be readily increased by 4-page sections at any time.
Will print any even number of pages up to full capacity of press, at full speed.

All Straight Run and Book Fold

No Collecting! No Tapes! No Trouble!

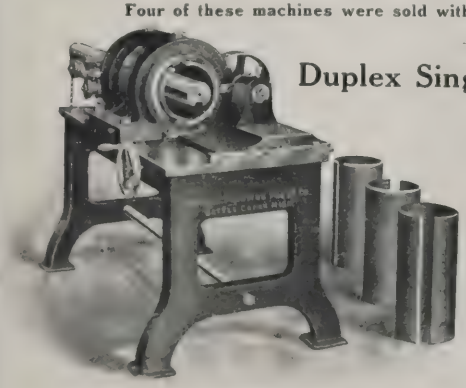
GREAT SPEED!



The first one of these presses was installed in the pressroom of the Kalamazoo,(Mich.) Daily Press in February of this year (1909). Four others are now in successful operation The following is a list of sales already made:

Kalamazoo, Mich., Press	Burlington, Vt., News	Rock Island, Ill Argus
New York, Bolletino della Sera	Rockford, Ill., Republic	Oklahoma City, Okla., News
Cedar Rapids, Ia., Gazette	Lansing, Mich., Journal	New York, N. Y., Bronx News
Santiago, Chili, S. A.	Columbia, S. C. Record	Charlotte, N. C. News
Lansing, Mich., State Republican		San Angelo, Tex., Standard

Four of these machines were sold without solicitation and without advertising, before the first one was completed.



Shaving Machine

Duplex Single-Plate 16-pp. Rotary Press as Compared with Others

OTHER MAKES				DUPLEX SINGLE-PLATE ROTARY

The Babcock Optimus

The Babcock Optimus

For the Optimus we especially court those buyers *whose work makes exceptionally trying demands upon a press.*

You may have tried all or enough of the others to believe that you cannot obtain a machine that will satisfy you.

The Optimus will. The hard, heavy, difficult work that your present presses unsatisfactorily do need bother you no longer. Exceptional exactions in quality and quantity will be met by exceptional efficiency and advantages.

This is demonstrable. We offer more than our word for it, though that is to be implicitly relied upon.

The press best for the hard work is superior for the easy.

Our descriptive matter opens the Optimus to the widest investigation. This much you can do at your leisure.

The Babcock Optimus

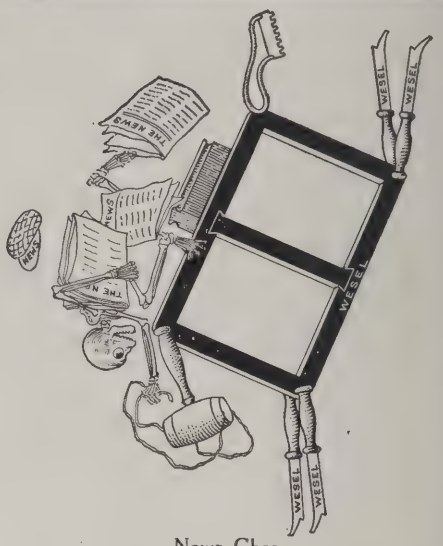
WESEL QUALITY
PRINTING MATERIAL



News Chase

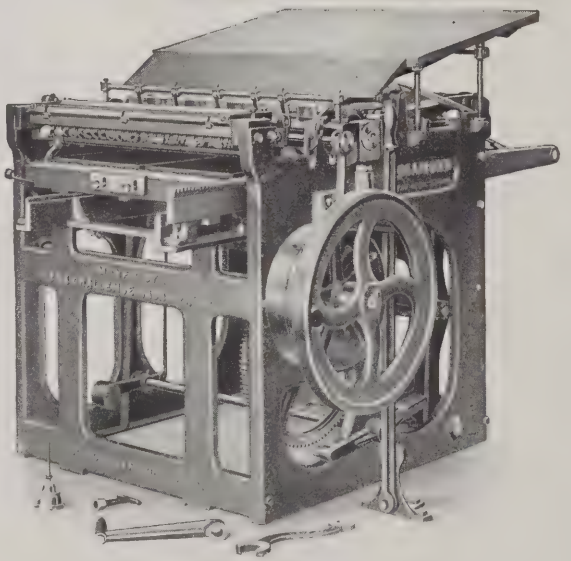
When you want things in your office better than the average,—the best made,—come to Wesel, whose trade is largely with the successful value-demanding offices. The Wesel Catalogue of Printing Machinery and Materials is years in advance of the catalogues of the average dealer. A study of it will benefit every progressive printer. When you buy Wesel manufactures, you buy quality, accuracy, durability, advanced ideas, superior efficiency—the real bargains. If these things appeal to you, write for that catalogue now, and tell us what you need. Your plant can't be thoroughly efficient without Wesel's goods.

F. WESEL MANUFACTURING CO. Main Office and Factory, 70-80 Cranberry St., Brooklyn, N. Y.

New York: 10 Spruce St. Chicago: 315 Dearborn St. Philadelphia: 712 Mutual Life Building

Other Catalogues: (1) Electrotyping Machinery and Appliances; (2) Photo Engraving Machinery and Appliances; (3) Stereotyping Machinery and Appliances; (4) Twentieth Century Proofing—Automatic; Self-Inking, Self-Feeding; (5) What a Printer Should Know About Registering Blocks.

DIAMOND SERVICE



Examine the work of the Diamond Cylinder Press—then examine the machine itself. You will be surprised that a press so simple and compact can do such a quantity and quality of printing. It is at its best in the steady work of the ordinary office. Nearly 800 newspapers are printed on the Diamond, and they are among the best printed newspapers in the country. Let us show you some of its work.

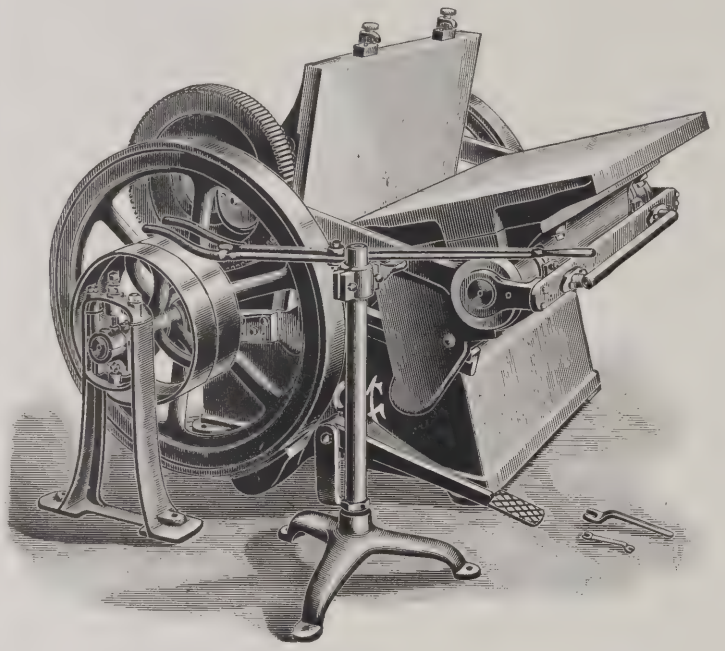
The National Machine Company

Sole Manufacturers

111-113 Sheldon Street, - Hartford, Conn., U.S.A



EARLY in 1876 the first printing presses adapted to the work of cutting and creasing paper and pasteboard for boxes were made by M. Gally, since which time there have been placed hundreds in most of the paper-box manufactories of the United States. The press now offered is the latest improvement, and is the most powerful and easily handled machine ever produced for this purpose. It has the improved platen movement of the Universal Press, it is remarkably simple, and being extremely solid in its build, it is peculiarly adapted for either stamping or paper-box cutting. All sizes have the extra steel gibbed lock and are also provided with phosphor-bronze bushings between the draw bars and impression cranks.

In these presses are combined unequaled power, speed, strength and facility for operating. The speed is limited only by the expertness of the feeder. The platen is under absolute control by means of the instantaneous throw-off. These presses are double geared, extremely powerful, durable and effective, and will not "stall."

The Largest Cutter and Creaser Made in the World

BUILT IN FIVE SIZES

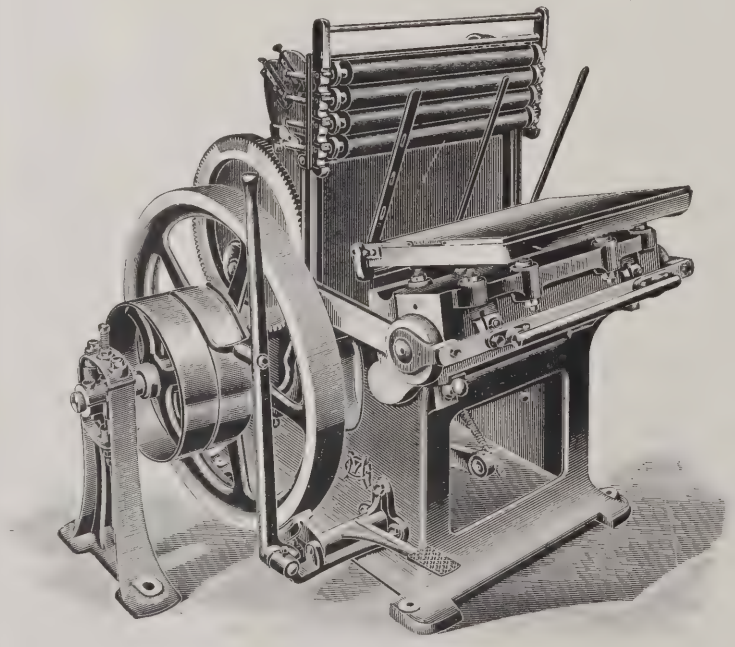
Cutting and Creasing Presses, 5 Sizes



Super Royal No. 4. 17x25 inside Chase.

TO meet the demand of those printers who require a larger press than the 14 x 22 inches; to publishers using ready prints, in small towns, for one-page work; blank book makers and others who do not have constant need for a cylinder press, we offer the Style No. 4 Universal. This press is built in one size only—17 inches by 25 inches inside chase, on new lines and no expense has been spared in this new production, now offered to the trade for the first time.

The frame is of a solid, modern design, and is proportionately heavier than the 14 x22 inches; the bridge, fly-wheel, hook connection and cam lever are heavier; the cam-way in the large gear wheel is of an improved design, requiring a larger friction roller; the gear wheel has the steel sections in the rim and cam-way like the Style No. 2 and Style No. 3 Universals; the carriage ways are of a new design, the carriage slot being perpendicular its full length; this press has the long pinion shaft with the outside floor support like the Style No. 3 Universal and the new style double inking device without springs is a part of the regular equipment.

The following small parts are included:—FIVE STEEL CHASES, one roller mould (for which a set of cast rollers will be substituted if preferred), eight form roller stocks, six distributor roller stocks, two vibrator or ductor roller stocks, sixteen roller wheels, (eight large and eight small,) three iron lateral distributors or changers, two feed tables and one set of wrenches. No treadle fixtures are supplied with this press. Each press is shipped complete with ink fountain and side power fixtures, including tight and loose pulleys, and the improved belt shifter and brake combined. Gross weight complete, crated for domestic shipment, 3,500 pounds; floor space required,—including feed tables and stands in position,—44 inches from front to back and 60 inches sideways; Pulleys, 16 inches in diameter with 3¾ inches face, carrying a 3½ inch belt; the flywheel makes eight (8) revolutions to each impression and the press will require about 1½ H. P. to operate it. Price furnished on application to Agents or The National Machine Co.

Write for Catalogue. Sold by All Reputable Dealers in the World.

THE NATIONAL MACHINE CO., **Sole Manufacturers** HARTFORD, CONN., U.S.A.

KEEP YOUR PLANT YOUNG

The really big successes in the printing business are made by those who do not let their plants get old with superceded machines and methods.

They continually renew the youth of the plant, keep it alive, vigorous and up-to-date.

They are prompt to take advantage of the new COTTRELL machines and methods, and thereby keep ahead of all competition.

The printer is very unwise who continues to use presses which are so slow and inefficient that they run his costs, up to a point where his profits are badly cut or wiped out—where he cannot really compete.

He is equally unwise who buys "more of the same" before he investigates the latest developments of COTTRELL genius, skill and experience.

After he makes that investigation he will revolutionize his methods and plant because we can give him something newer, faster, better and more profitable.

The new things we have worked out for others are at your service too.

It costs nothing to consult us. Do so—and there will be agreeable surprises in store for you.

C. B. COTTRELL & SONS CO.

Works: Westerly, R. I.

41 Park Row, New York **279 Dearborn St., Chicago**

HAMILTON'S MODERNIZED COMPOSING-ROOM FURNITURE PAYS FOR ITSELF

There are thousands of printing-plants throughout the country still working with antiquated equipment, which is far from space-saving or labor-saving.

Why should a printing-office proprietor hesitate about installing up-to-date equipment, when he can know for a certainty that the cost of installation will soon be returned in the way of increased profits occasioned by the saving of from twenty-five to fifty per cent in floor space and anywhere from ten to twenty-five per cent of labor?

Most printers believe this statement is exaggerated until they get in the advanced class. Then they wonder why they did not appreciate the advantage to be gained sooner.

Dozens of testimonials which we have lately received from up-to-date concerns bear out our claim, and we are ready at all times to prove what we say about the saving which can be accomplished.

We are continually adding representative plants to our list of modernized offices, and we urge upon every live printing-office proprietor not to lag behind in the procession. Be a leader, and don't be forced by your competitor into making a change which you should have considered long ago.

If you want to know about some printing-office which has been modernized in your vicinity, write us and we will refer you to the nearest plant, where you can see the furniture in actual use.

Better still, fill out the attached coupon, and let our representative show you what can be accomplished in your own composing-room. You will be surprised at the result, and you will be further surprised after you install up-to-date equipment, when you see your profits grow.

Save your floor space and economize your labor. That is the only way you can materially reduce your cost of production.

OUR CLAIM OF SELF-PAYMENT AGAIN SUBSTANTIATED

THE HAMILTON MFG. CO., Two Rivers, Wis.: *Cleveland, Ohio, October 21, 1909.*

Dear Sirs,—The Job Galley Cabinets that you installed in our plant here have met with great success. They both facilitate the handling of work and protect the type and plates. With the index system we are able to locate any one page immediately, a great saving in time. These cabinets have PAID FOR THEMSELVES in the short time that we have had them.

Yours truly, *THE BRITTON PRINTING CO.,*
J. E. Doyle, Supt.

We are interested in the question of Modernized Furniture and we would like to have your representative show us a floor plan of our composing-room as you would re-arrange it, with a view to our installing such furniture as you can show us would soon be paid for in the saving accomplished.

Megill's Patent Automatic Register Gauge

The sheet as shown, is fed short of the gauge and yet it will register. When the press closes, the "Automatic" extends forward and gently pushes the sheet to exact position. It does not bite the sheet and prevent it from registering. It never pushes it out. It registers cardboard or paper. The ordinary gripper operates it. No extra fixtures. The gauge simply forms a stop for the sheet and then registers it. Feed ordinarily, but as fast as you like.

The Automatic Register Gauge, including a pair of the Double-Grip Gauges for the bottom, to your door for $5.95. *Testimonials and booklet*

Electros from Halftones

IF your experience has been such as to lead you to believe it impossible to obtain electros from halftones with a printing quality equal to the cuts—we want you to know that we are making electros from halftones—every day—that are just as sharp and deep as the cuts, and that—the particular appliance that makes our quality of work possible was evolved by us. There is not another like it in the world.

One order will satisfy you that our electros are fully equal in sharpness, depth and printing quality to the forms or cuts sent us. Let us show you that the best electrotypes the world has ever seen are made by the

GLOBE ENGRAVING & ELECTROTYPE COMPANY

407-427 Dearborn St. CHICAGO

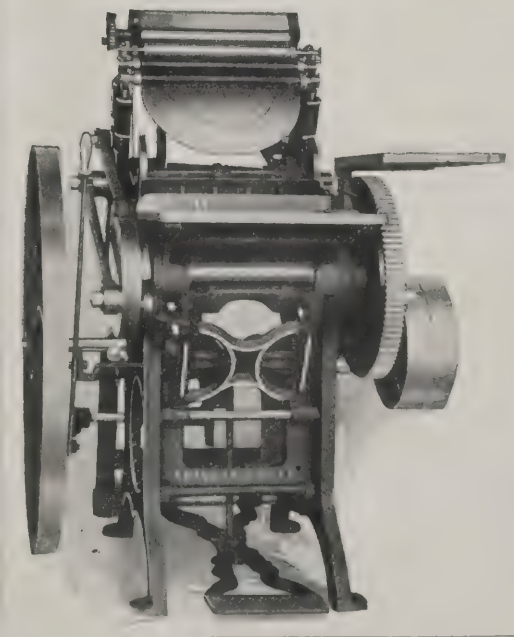
The Evidence is Yours for the Asking

We also make designs, drawings, halftones, zinc etchings, wood and wax engravings, but—we do no printing.

JOB PRINTING PRESSES

35000 C. & P. Gordons

Made and Sold in Twenty-three Years!



This wonderful record of sales talks harder for Chandler & Price Presses than any advertisement ever could. It stands as a monument to their value and their popularity. It is even more amazing when you consider that not one of the Chandler & Price Gordons has ever been returned to the factory as defective either in material or workmanship.

Points in which C. & P. Gordons Excel:

Perfection of Design
Simplicity of Construction
Quality of Material
Accuracy of Finish
Strength of Every Part
Rigidity of Impression
Reliability of Throw-off
Noiselessness of Disc Motion
Long Dwell of Platen
Vibrating Riding Roller
Excellence of Distribution
Ease of Operation
Low Cost of Maintenance
Interchangeability of Parts
Can be Run as Fast as they can be Fed
Built in Six Sizes

Eighth Annual December Clearance Sale, 1909

This offering is our eighth annual sale of good, standard Blue Grey Stones at unusually low prices, being about half the usual selling price.

Conditions of the sale are as follows: All purchases will be dated as January 2, 1910. **TERMS:** *F. O. B. Cincinnati or New York—Net 60 Days.* Average run of stones will be shipped and NO CLAIMS ALLOWED.

BLUE QUALITY

	Per Lb.
6 x 8 or 7 x 9	3c
8 x 10 up to 12 x 16	3½c
14 x 18	4c
14 x 20, 14 x 22, 15 x 19, 16 x 20, and 16 x 22	5c
17 x 23, 18 x 22, 18 x 24, and 19 x 25	7c
20 x 26, and 20 x 28	8c
22 x 28, 20 x 30, 22 x 30, 22 x 32, 24 x 30, 24 x 32, and 24 x 34	9c
24 x 36 up to 28 x 38	11c
28 x 40 up to 32 x 46	15c

YELLOW QUALITY

	Per Lb.
18 x 24, 19 x 25, and 20 x 26	3c
22 x 28, and 20 x 30	3½c
24 x 34, and 24 x 36	5c

Orders must be in Cincinnati or New York not later than December 20th, after which date no orders will be accepted at these figures.

The Blue Stones are from the famous German Quarries of Fisher & Kluge and Solnhofen Actien Verein, these two quarries producing the best litho stone in the world.

Send in your orders as soon as possible, please, as the dating is just the same. In event of our being out of any size of ENGRAVING STONES we reserve the right of sending the next larger size.

TESTS OF GOOD ADVERTISING THAT BRINGS RESULTS

Sound, Ethical Business Principles of Service—Good for the Christmas Season and All the Year Around—As Set Down by a Former Newspaper Maker Who Has Won Success in the Advertising Field With Benefit to Both Publishers and Advertisers.

THE Mahin Advertising Agency of Chicago, has had an especially satisfactory growth. Mr. Mahin, the head of the Company, is one of the "boys" of the late A. W. Lee of Ottumwa, Iowa, and had an admirable training for business. He has proved himself a hustler and an organizer and has gathered an efficient force, that works systematically to the accomplishment of well-defined purposes. The business has not "just growed." It has been built. Two of the agencies used to aid the energetic, intelligent workers in the advertising promotion are two valuable publications, side pocket size. The Mahin Advertising Data Book, is an annual publication and gives much general information on advertising subjects, statistics, city populations and increase, advertising mediums and methods, etc., etc. Among the interesting matters that we find in this little book, that is neatly and permanently gotten up and bound in morocco, is an article by Mr. John Lee Mahin, on "How to Test an Advertisement." The subject is treated under the following named "tests" as subheads: "Is it Natural?" "Is it Specific?" "Is it Timely?" "Is it Consistent?" "Is it Persistent?" "Is it Authoritative?" "Is it Institutional?" "Is it Plausible?" "Is it Sincere?"

Under the eighth test, "Is it Institutional?" which certainly seems novel as applied to advertising, the following thoughts will be found especially worthy of consideration as applicable not only to publicity but in a broad way to business organization and conduct. "An institution is composed of individuals who have many thoughts in common." "The circulation of a successful publication is necessarily institutional in character." "A group of people cannot be constantly reading a single publication day after day, without unconsciously accepting, and, at the same time, influencing the institutional quality of the publication. The business house that is well conducted necessarily develops an established order of doing things which gives it an institutional character."

"The best copy for an advertisement reflects not only the institutional quality of the business which it is promoting, but also takes cognizance in its appeal to the institutional traits of the readers of a publication." The one other paragraph treating of the institutional relations and the adaptation of advertising thereto leading up to the final statement and conclusion, is as follows:

"In this way the feeling of community of interest is fostered and the institutional idea in newspaper advertising is developed and emphasized to the highest possible degree."

Among other good things in this booklet, is the address delivered by Mr. Mahin before the National Editorial Association at St. Paul in August, 1908, which was published in our September issue one year ago. It should be looked up and studied. The ideas of the co-operation in advertising between the manufacturers, or wholesalers and local merchants are worthy of especial attention. The *Mahin Messenger*, a monthly, with pages 3 x 6 inches, published in paper covers, is in a measure supplementary to the "Data Book" and, besides this and advertisements of periodicals, is given up to advertising mottoes and articles on advertising. The following topics of articles appearing in the August issue are in themselves educative: "Imagination in Business," "Value of Inquiries," "Are You Discouraged?" "Don't Be Mysterious," "Future of Advertising," "Fundamental Principles," "Responsibility of Action."

The matter under the last-named topic consists of a synopsis of the leading thoughts from a Sunday afternoon discourse by Dr. W. T. McElveen, Pastor of the First Congregational Church, Evanston, Ill. These extracts are prefaced with the assertion, founded on their contents:

We believe that the successful preacher in building up and holding an appreciative congregation must observe the same fundamental laws as an advertiser in creating and maintaining a loyal constituency for his product.

It will be interesting to note that Dr. McElveen's mental attitude as expressed in his notes differs materially from that

of the business man who complains that the public does not appreciate the merits or the fruits of his labor.

Advertising is essentially in itself a positive force and these suggestions of Dr. McElveen's should be an inspiration in the development of more and better advertising.

Here are his notes:—

"The task of the preacher is not to make his hearers satisfied with him, but dissatisfied with themselves.

"Never was there a time when so many interests were calling for help or when intelligent service and generous giving could be so effective.

"Unless you are immortal before you die you may not be immortal after you die. The only way to be sure of entering into heaven is to have heaven enter into you here and now.

"The goal of life is set before us, and seemingly further as we approach it. Our ideal grows even more rapidly than our actualization of it. All moral advance widens the abyss between what we are and what we know we ought to be. Man's life is a process of endless becoming—of perpetual growth.

"Man is not simply all that he is; he is all that he may become. And there is no end to his growth in sight. Any statement of the eventual goal of humanity must be tentative. Humanity at its best opens up to take in Christ, but Christ is full of the consciousness of Divinity.

"Epictetus says that the best way to acquire a God-like character is to restrain the stream of vitality. Christ, on the other hand, says that the difficulty with and the defect of humanity is too little vitality.

"What a man needs, therefore, is not to subtract from his life, but to add to it, and to multiply it. Other religions are

John Lee Mahin, Head of Mahin Advertising Agency.

religions of subtraction and restriction. Christianity is a religion of addition and abundance.

"Goodness is not simply the absence of badness. Goodness is not abstinence from iniquity. It is the accomplishment of righteousness. Goodness asks not, 'What shall I leave undone?' but, 'What shall I do?' The servant who wrapped his talent in a napkin and buried it in the earth was not condemned because he wasted his talent in riotous living, but because he did not use it. He did not do any positive evil; he did nothing, and that sin of omission was his condemnation.

"The priest and the Levite, hurrying along the Jericho road to Jerusalem, did not further maltreat the unfortunate merchant who had been robbed and beaten by the thieves. They were sorry for him, but they did nothing. They passed by on the other side, and that sin of omission was their condemnation.

"Christ condemns unproductiveness, unfruitfulness and ineffectiveness, and some of the most stinging words he ever spoke were addressed to negatively good people.

"It is a good thing to 'keep oneself unspotted from the world,' but it is a far better thing to sally forth and attack some of the evil forces that are in this world. Goodness is not simply living on the defensive. It is not simply being on guard.

"The really good man does not sing any drivelling verse like 'Hold the Fort.' He is not content to hold his own. He must win his way.

"Christianity is not avoiding defeats. It is gaining victories.

"It is not obeying the 'Thou shalt nots' of the Old Testament; it is obeying the 'Thou shalts' of the New Testament.

"There are people who never make mistakes because they never try to do anything worth doing.

"There are some irresolute people who claim to possess spirituality because they do not do certain things. They do not play cards, they do not go to the theater, they do not dance. Their spirituality is made up of negatives. But spirituality is not negative; it is positive. It is not ascetic; it is athletic. It is not flight from the world; it is flight with the world. You cannot attain real spirituality by living behind a fence by which the world is shut out.

"Mæterlinck, in one of his books, intimates that the first duty in life is not to harm people, but that sentiment is not Christian. Not to harm your neighbor is negative. There is no action, no outgoing of self, no helpful service, in that attitude. You are to love your neighbor. You are to think and forethink for him. That is living positively, actively, helpfully, and profitably."

This sermon is adapted in its teachings to all newspaper makers, not only in the department of advertising, but in every branch of the work, the newspaper must be ever aggressive, ever doing and accomplishing, in all lines. There must be results for the advertiser, but, to that end, the paper must win confidence, good will, a reputation for reliability and aggressive usefulness; must be a positive force. There must be no resting with what is, but a pushing forward to all that is possible of attainment, a constant asking and seeking for what more can be done.

With the Trade

The Crary Printing Co. has purchased the Marquette, Mich., *Chronicle*, whose publisher, Will S. Adams, died recently.

———

The Le Mars, Iowa, *Globe-Post* was sold to W. F. Miller. A. P. Cramer was forced to sell the paper on account of ill health.

———

The Chicago *Examiner* made fun of the *Tribune's* recent big advertisement of itself as the biggest bargain because it has the most pages Sunday by comparing Laura Jean Libbey's writings with Shakespeare's on that plan. Well, the *Tribune* has quality as well as quantity.

———

The first issue of the new semi-weekly newspaper, *"Igazsag"* (*Truth*) appeared at Hammond, Ind., last week. The paper is in three languages, Hungarian, Roumanian and Croatian, and will deal with local, material and international affairs. Editor G. R. Ulrich formerly published the paper in South Bend.

———

The Milwaukee Press Club is twenty-four years old. This organization of Milwaukee newspapermen, whose fame extends from coast to coast, was formed one night after work in an alley back of the *Sentinel* offices and on Nov. 8, 1885, was incorporated. At the time of its organization it had eight members. Now there are 210 names on its rolls. Plans are already being made for a big celebration of the silver jubilee on Nov. 9, 1910.

———

EVERY NUMBER BETTER.

Republic, Wash., Nov. 10, 1909.

Gentlemen:—Enclosed find check for $2.00. I can't afford to be without the National Printer-Journalist. Every number is a little better than the preceding.

With regards and best wishes, I am,

Yours truly, C. E. Blair.

The Practical Education of Newspaper-Men

HOW A BOY MADE HIS OWN SCHOOL OF JOURNALISM—WORKING UP TO A COMPETENCY—J. NEWTON NIND IS NOW ON A TRIP AROUND THE WORLD—THE BLESSINGS OF AN EARLY TRAINING IN DOING THINGS.

EFFORTS are now being successfully made to help, with proper, systematic training in schools and universities, those who contemplate entering the calling of newspaper-making. The pages of the NATIONAL PRINTER-JOURNALIST have lately shown how general this movement of preparing young men, and young women as well, for entering this calling, has become. This month, we tell of how the generosity of a New York newspaper man, who gave a million dollars to the cause, is being discretely used in a great university in that city to lay the foundation for broad success. The idea of such an education, in connection with the schools, is scarcely a quarter of a century old.

In 1884, at a meeting of the Minnesota Editorial Association, at Mahtomedi assembly grounds, St. Paul, we urged that there should be a broad and thorough preparation of all who are to enter the calling, that, in its work, so closely touches and influences all the people of all conditions and relations of life, and that should nobly and effectively serve every worthy interest of men, society and government, and that to that end there should be schools of journalism, or departments of training for newspaper making in existing schools. We also insisted that every candidate for a position in this calling, that, in its sphere of influence, reaches and seeks to inform, not only the men as citizens—officials, lawyers and doctors in their offices, merchants in all the marts of trades, farmers on their farms, teachers in their schools, training the youth for life and citizenship, but old and young, youth and middle-aged in their homes by their hearthsides, where the greatest and most lasting impressions are made and noblest inspirations are received—should be required to pass a rigid examination as to education, fitness, ability and moral character. The same idea was presented and favorably acted upon at the convention of the National Editorial Association at Cincinnati in 1886, and has since been pushed forward by the members of the Association in the different states, and so much has been the advance and accomplishment, in the past decade, that it may be taken as assured that the time is not far distant in this country when schools or departments of newspaper-making will take highest rank, fully enforcing the highest ideals of responsibility and service and crowding out all the conditions of reckless "Bohemianism," all trifling with truth, all degrading sensationalism, and all empirics. All will then come to the calling with true valuation of its opportunities, duties and responsibilities, fully equipped and honorably desirous of performing the high functions of the calling worthily and usefully. Living in hopes of these better conditions, we have none but highest praise for those who, though they have been deprived of such advantages, have become self-taught, who have appreciated the great responsibilities, and have conscientiously prepared themselves for the work with an ever-active desire for usefulness and then have acquitted themselves manfully, wherever may have been their field, and have attained success. Some forty years ago, we knew a boy, who may well stand as a representative of a large and honorable class of American boys, who have entered the newspaper field. He was working his way through school and had become imbibed with a love for newspaper-making and printing. There were no schools of printing or newspaper-making, no "newspaper laboratory," to quote Dean Williams, so he created both for himself, and made them pay for his schooling besides. He did this by conducting a weekly school paper, aided, in a measure, by the Principal of the school, because of the favorable publicity afforded thereby to the institution. The publication was newsy, neatly gotten-up and well-printed. The name of the paper, *The North Star*, indicated, in part, the high ideals of the young publisher, J. Newton Nind, the division of whose name indicates not pride but love for his father and respect for ancestors on his father's side of the house.

The boy developed aptness and very early was called to regular newspaper work. He served with success on daily papers both in St. Paul and Minneapolis, but finally found his life-work in papers devoted to industrial callings.

The Newspaper Boy at School. | The Young Reporter | The Special Writer | The Mature Editor

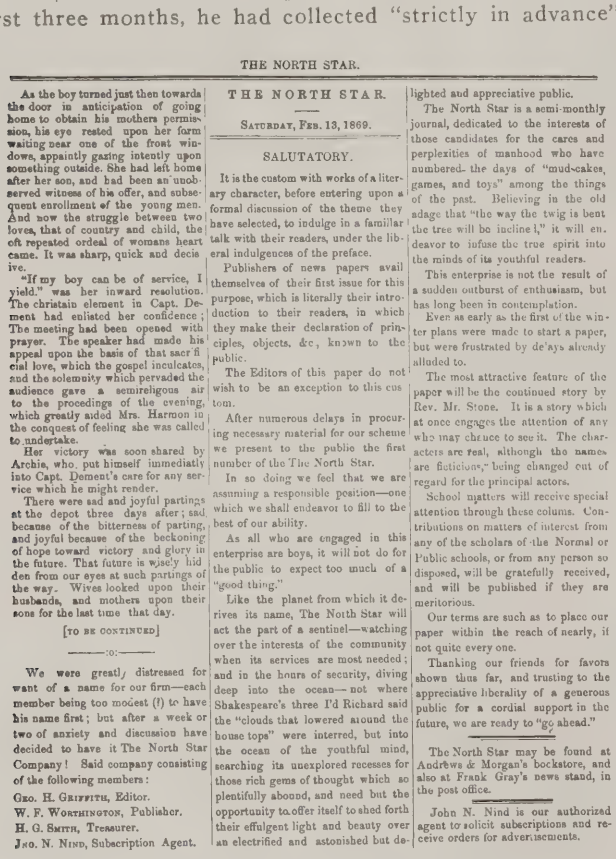
Different Stages in the Life of J. NEWTON NIND, who made his Own School and Laboratory of Journalism.

These trade papers differ from home newspapers only in that they serve, and give the news of, the trades or industries that they represent, instead of giving the news of communities, cities, counties, and states, in the fields of general happenings. Under such men as Mr. Nind, the object has come to be, throughout, that of useful service, the upbuilding of the subscribers of the paper in the business or calling to which they are devoted and helping them to greater success and, then, serving the advertisers by making the readers of the paper more profitable and more extensive buyers. This is a brief synopsis of the career of J. Newton Nind, who delivered an able address on, "The Relations of the Trade Press to Newspapers and Promotive Publicity," before the St. Paul convention of the National Editorial Association in 1908.

We give a reproduction of the second page of Mr. Nind's first paper, then printed at Winona, Minn., and afterwards removed to Red Wing, and we call attention to the ideals, proclaimed away back in 1869, of the boy newspaper-makers, of whom Mr. Nind was one, as to the responsibilities and aims of the press: "We present to the public the first number of *The North Star*. In so doing we feel that we are assuming a responsible position, one which we shall endeavor to fill to the best of our ability.

Like the star from which it derives its name, *The North Star* will act the part of sentinel, watching over the interests of the community."

Youth often have the highest, and hence the truest, ideals of the real, useful purposes of the callings. Their minds are pure, unprejudiced, aspiring after the good, the true, "unawed by fear, unbribed by gain." Blessed are they who retain these qualities through life. We give four portraits, showing the boy, the youth, the middle-aged man and the veteran editor, as illustrating how this practical, newspaper education has left the stamp of progress upon the face of the newspaper man. Mr. Nind's work for the last fifteen years has been that of editor of the *Furniture Journal* of Chicago, but his first work, as a boy, was in the subscription department where he had a chance to learn, by actual touch, what people wanted. He and his three boy associates commenced with a joint capital of $28.00 and as subscription agent, at the end of the first three months, he had collected "strictly in advance"



THE NORTH STAR.

As the boy turned just then towards the door in anticipation of going home to obtain his mothers permission, his eye rested upon her form waiting near one of the front windows, appaintly gazing intently upon something outside. She had left home after her son, and had been an unobserved witness of his offer, and subsequent enrollment of the young men. And now the struggle between two loves, that of country and child, the oft repeated ordeal of womans heart came. It was sharp, quick and decisive.

"If my boy can be of service, I yield." was her inward resolution. The christain element in Capt. Dement had enlisted her confidence; The meeting had been opened with prayer. The speaker had made his appeal upon the basis of that sacr fi cial love, which the gospel inculcates, and the solemnity which pervaded the audience gave a semireligious air to the proceedings of the evening, which greatly aided Mrs. Harmon in the conquest of feeling she was called to undertake.

Her victory was soon shared by Archie, who put himself immediatly into Capt. Dement's care for any service which he might render.

There were sad and joyful partings at the depot three days after; sad because of the bitterness of parting, and joyful because of the beckoning of hope toward victory and glory in the future. That future is wisely hidden from our eyes at such partings of the way. Wives looked upon their husbands, and mothers upon their sons for the last time that day.

[TO BE CONTINUED]

—:o:—

We were greatly distressed for want of a name for our firm—each member being too modest (!) to have his name first; but after a week or two of anxiety and discussion have decided to have it The North Star Company! Said company consisting of the following members:

GEO. H. GRIFFITH, Editor.
W. F. WORTHINGTON, Publisher.
H. G. SMITH, Treasurer.
JNO. N. NIND, Subscription Agent.

THE NORTH STAR.

SATURDAY, FEB. 13, 1869.

SALUTATORY.

It is the custom with works of a literary character, before entering upon a formal discussion of the theme they have selected, to indulge in a familiar talk with their readers, under the liberal indulgences of the preface.

Publishers of news papers avail themselves of their first issue for this purpose, which is literally their introduction to their readers, in which they make their declaration of principles, objects, &c, known to the public.

The Editors of this paper do not wish to be an exception to this custom.

After numerous delays in procuring necessary material for our scheme we present to the public the first number of the The North Star.

In so doing we feel that we are assuming a responsible position—one which we shall endeavor to fill to the best of our ability.

As all who are engaged in this enterprise are boys, it will not do for the public to expect too much of a "good thing."

Like the planet from which it derives its name, The North Star will act the part of a sentinel—watching over the interests of the community when its services are most needed; and in the hours of security, diving deep into the ocean—not where Shakespeare's three I'd Richard said the "clouds that lowered around the house tops" were interred, but into the ocean of the youthful mind, searching its unexplored recesses for those rich gems of thought which so plentifully abound, and need but the opportunity to offer itself to shed forth their effulgent light and beauty over an electrified and astonished but delighted and appreciative public.

The North Star is a semi-monthly journal, dedicated to the interests of those candidates for the cares and perplexities of manhood who have numbered the days of "mud-cakes, games, and toys" among the things of the past. Believing in the old adage that "the way the twig is bent the tree will be incline," it will endeavor to infuse the true spirit into the minds of its youthful readers.

This enterprise is not the result of a sudden outburst of enthusiasm, but has long been in contemplation.

Even as early as the first of the winter plans were made to start a paper, but were frustrated by delays already alluded to.

The most attractive feature of the paper will be the continued story by Rev. Mr. Stone. It is a story which at once engages the attention of any who may chance to see it. The characters are real, although the names are fictitious, being changed out of regard for the principal actors.

School matters will receive special attention through these colums. Contributions on matters of interest from any of the scholars of the Normal or Public schools, or from any person so disposed, will be gratefully received, and will be published if they are meritorious.

Our terms are such as to place our paper within the reach of nearly, if not quite every one.

Thanking our friends for favors shown thus far, and trusting to the appreciative liberality of a generous public for a cordial support in the future, we are ready to "go ahead."

The North Star may be found at Andrews & Morgan's bookstore, and also at Frank Gray's news stand, in the post office.

John N. Nind is our authorized agent to solicit subscriptions and receive orders for advertisements.

Specimen of Early Laboratory of Newspaper Work.

enough 25 cent pieces so that a dividend of $8.00 was declared to each of the four stockholders. There is before us, as we write, a neat little brochure giving, in a reminiscent way, Mr. Nind's newspaper career, and the following extracts will be read with interest as recalling incidents in the lives of many of our readers and showing how others of Mr. Nind's associates developed into newspaper men from this early and excellent training in this amateur, self-improvised department and laboratory of journalism:

"At the end of six months my associates wanted to give the paper up. I had no such disposition. I was just beginning to like the game. So I took over the material, added to it, rented an office, and enlarged the paper to five columns to the page, in which form it was published until July, 1871, when the printer who had furnished the presswork and the paper looked me up in the Bradstreet of that time and said he could furnish no more until the accumulated bill had been paid. The paper suspended then and there, and I went into the job-room of the Winona *Republican*, to work out the amount of my indebtedness upon a basis which was satisfactory to all concerned. The foreman of the job-room was a methodical and capable Englishman, who taught me many things which since have been of value. I washed rollers, kicked a Gordon press, distributed dead type and finally came to the stage of job composition. But my parents thought I ought to get back into school, as I did, putting in spare moments around the office of the Winona *Republican*, selling and carrying papers, posting bills, etc.

"I seem to have made an impression with *The North Star*, which, while dead, still lived, for Professor Hood, who was then superintendent of the schools in Winona, and who had a project for the establishment of an academy at Red Wing, invited me to resume the publication of the paper to Red Wing as an adjunct to his school, which I did as soon as the school opened. With the paper published in the five-column form as a weekly as a means of a livelihood I managed to get in another year at school. It was a year of intense application, for I was almost the only compositor the paper claimed, and much of the preparation of copy devolved on me. I had to keep up my studies and to sleep and eat and do a few other things boys of seventeen like to do. The type was set and the forms made up in a basement room in the school building, which was located on a hill back of the city, and the forms taken by me, by cart or sled, according to the season, to a down-town printing office, where the printing, etc., was done. I seem to have made enough of an impression with that weekly paper so that Louis A. Fisher, then managing editor of the St. Paul *Pioneer*, invited me before the end of the year to help report the session of the Minnesota legislature. My career as a daily newspaper man commenced as soon after that invitation came to me as I could make the arrangements. *The North Star* was continued as a monthly for a couple of years, however, by Ed. A. Henderson, who, like myself, became a newspaper man. During this period I continued to act as the editor, writing my "stuff" and sending it to Red Wing.

During the career of *The North Star*, others were from time to time associated with me, some of whom have found their way into the newspaper field. Among these are Ed. A. Henderson, already mentioned; William Howe Downes, who furnished stories, poems and editorials for the paper, and who is now one of the best known art critics in the country. Something from his pen on art appeared in one of the magazines only last month. Fred T. Flint, who was with me on the paper in Winona was long the competent night editor of the *Inter Ocean* and the *Record-Herald* in Chicago. Tams Bixby, later manager of the St. Paul *Pioneer-Press*, and interested in several other newspaper properties, did his first newspaper work in connection with *The North Star* while it was published at Red Wing. He was local reporter for a time."

Mr. Nind followed his work on the daily papers of St. Paul and Minneapolis with work on the *Northwestern Lumberman*, into which, in fact, his other work had naturally lead him. Mr. Nind seems to have followed the injunction of Bishop Simpson to his Methodist preachers, "Enter the next door that opens" and never lacked an opportunity for work. Mr. Nind says in his little brochure:

"The lumber interest was a considerable one in the Northwest, and it dawned on F. A. Carle, managing editor of the *Pioneer-Press*, that there was no one connected with the paper who knew anything about the interest or the subject. The paper, like other daily papers of that day and this, was constantly making itself absurd by announcing that great combinations had been formed by the lumbermen whenever two or more magnates get together and bought enough timber to stock some modest sawmill for a year or two. In the average newspaper office a million feet of logs and a million dollars in money have about the same relative importance, when, as a matter of fact, a million feet of logs is about two days' supply for some sawmills, and the dollars will last—well, the novelists and playwrights have dealt with that subject. So I was assigned to study the lumber industry, which I did successfully enough so that the discriminating editor of *The Northwestern Lumberman*, W. B. Judson, asked me to become the correspondent of that paper. I soon discovered that $5 for a column of 600 words, with no limit on amount if the "stuff" was good, counted up faster than the envelope

which came from the daily newspaper counting-room each Saturday night, and the contents of which varied from $25 to $40 per week, for which modest stipend I was expected to grind out long columns of copy, serve uncounted hours, worrying meanwhile about a staff of reporters and scoops which they might miss and which, if they missed, brought down on me the excited protests of an always watchful managing editor.

"I began to see that there was nothing for me to attain in the daily newspaper field which I had not achieved, and so I began to make my plans to get into trade journalism, with what success fully appears.

"The path I chose to pursue has not always been smooth. But the chronology discloses that I began to write about furniture in 1889, so I have to my credit approximately twenty years in this field. * * *

"During the forty years spanned by this narrative, under the stress of necessity, I have "got the habit" of working right on. Some boyhood dreams have meantime been shattered. I might not have done as well in some other vocation, for, when I undertake an analysis I am forced to the conclusion that in no other calling would I have been anywhere nearly as happy as I have been most of these forty years. There is something in the old adage of "as the twig is bent the tree will incline," and it is sometimes a mistake to bend the twig in some other direction than that to which it inclines."

The points in the life of this newspaper man, for the benefit of our readers, are that the boy who learned the rudiments and best principles and methods of the calling in his school days and who then imbibed a love for, and an enthusiasm in, the work, always found profitable employment and highest pleasure therein. He never imbibed anything stronger, eschewing, always, bad habits and never using liquor or tobacco in any form. He never suffered from that listlessness, ennui, or purposeless in life that lead young men to drink and to fall into "Bohemian" habits for lack of something worthily and joyously to occupy every moment of the time and to exercise their abundant vitalities and their exuberant spirits.

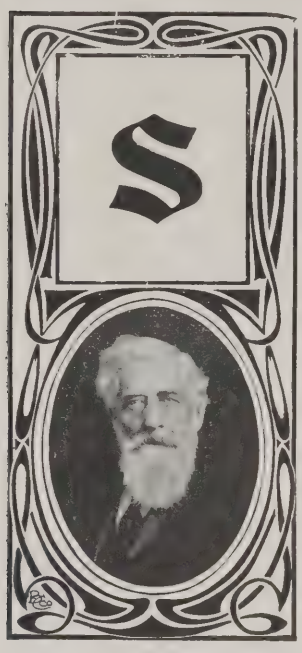
Mr. Nind has not only been successful in his calling but useful to hundreds of other members thereof. He has introduced and pushed forward many things for his calling and has been recognized as a leader, having served as President of the Chicago Trade Press Association and of the Federation of Trade Press Associations of America, in fact, he was the prime mover in the formation of the last named of these organizations. In attending their conventions, we have found it a pleasure to witness the respect that is paid to him and his views and his plans for progress and betterment.

He has reached a point where he is looking for a broader view and he finds himself provided with means to satisfy his desire. He has sold his business and starts the first of this month with his good wife, for a six months' trip on a journey around the world. He goes first through California, then to Seattle and on December 22nd, will take ship for the Orient. He expects to reach Oberammergau in Northern Bavaria, near Munich, about May 6th, to witness the Passion Play and then to visit England in that pleasantest of all months and from there return to America, when he will resume work once more in the calling, for, as he says, "in no other would I have been anywhere nearly as happy as I have been most of these forty years." These years have only served to fit him for better and broader work. He is fifty-five years young, full of fire and vigor. We doubt if in any other calling he could have been or ever would be half so useful. For real, useful work, no other vocation furnishes such and so numerous opportunities. In his career, we find with great satisfaction an illustration and proof of our early conceived ideas of the value of a training that gives children and youth, at the start, practical lessons in life's mission of useful, joyous service. To teach merely language, mathematics or other branches of knowledge with no inspiration as to use, tends to listlessness and dreariness. Hands and brains should be trained at the same time to work for worthy ends, with inspiring objects and for creative production. To learn to do, to master a trade or the primary principles thereof during school days, is of immeasurable value even though the trade is never followed. Mr. Nind would have been a better merchant, physician, architect or minister, had he turned aside to either of these callings, by reason of his having first learned printing, reporting, editing and business management, on his little newspaper, during his school boy days. There is nothing equal to the stimulating power, and joyousness of creative work, accompanied by study, in the formation of character. The system of education which does not provide for this is not only faulty but tends to undermining char-

J. Newton Nind, of Chicago, Retired Journalist, now on Trip around the World.

acter and health as well. "Team Work" in a printing office, in a carpenter shop or in the garden or fields, is away ahead of "team work" on the gridiron, in basketball or on the dancing floor. Play is all right, when used as a recreation, but when it becomes an object in life, and its excitement is made an end, to the rendering worthy employment dull and insipid, it becomes a curse. Early, useful employment is the secret of the successes of working boys, who have had to labor to pay their way through school, or have educated themselves during odd hours saved from their tasks, while thousands who had all the advantages of wealth and high school, collegiate and university education, have remained unknown and without any worthy attainment. Necessity enforced the training that a wrong system of education had denied to those who might have had both learning and the required development of creative faculties and of desires for accomplishment and service.

EDITORIAL NOTES AND POINTS



SHORT, human-interest stories are of great value to any newspaper but, as far as possible, these should have a local setting of news value. If one uses proper effort, there will be found no lack of incidents or subjects for entertaining narratives, connected with home people, localities or events, and for delight-bringing, entertaining and instructive illustrations therefor, in any community, city, county or state. Many sections of the country are new but there are very few where home biographical or historical incidents cannot be secured as to the pioneer or earlier days, and, all the time, there are occurrences that can be developed into short stories and made entertaining and pleasing, because of their nearness and associations. Scenes of loveliness in nature, and views of attractive homes, grounds, and gardens are always at hand.

The Michigan State University, that for many years led and furnished a model for all others, is said to have been the first to make newspaper-writing a regular part of the university curriculm. Prof. Fred Newton Scott, a former newspaper man, was the instructor. He was at the head of the department of rhetoric. There has also been maintained in the engineering department of this university a course on technical journalism. Now it is stated that in recognition of the great demand, plans are under consideration for the adoption of a complete department of journalism, with a course to compete with those presented at the universities of Missouri, Wisconsin, Washington and Pennsylvania. The good work goes on.

* * *

It were a consummation greatly to be wished, if all printing could be standardized as to quality, value, cost and price. How happy would be the printer, when once relieved of the suspicions of his patrons, the demand for competitive bids on every piece of printing, and the cry for lower prices, and the unholy competition, as well, of those who either know or care nothing about values, costs or prices, but make all estimates on the principle of getting work from competitors regardless of consequences? How unhappy the present conditions are, was exemplified by the attendance of two hundred and seventy employing printers, from all parts of America, with an aggregate expenditure of tens of thousands of dollars in money, and as much more in the value of time consumed, upon the First Printers' Cost Congress, that had only been announced two or three weeks in advance of the date of the meeting. It is believed that the formulating of a system for ascertaining cost, accurately and understandingly, will result in the standardizing of prices, for the reason that, on the one side, all honest customers or businessmen are willing to pay cost with a reasonable per cent of profit, hence there will not be so much temptation to cut prices, and on the other hand, when printers fully know the cost and are able to demonstrate the same, it is to be presumed that they will not do work for less than cost, unless they are wholely reckless and dishonest and deliberately set out to swindle those from whom they purchase supplies or to cheat themselves and their families out of what justly belongs to them. The cutting of prices from the standard of cost, with a reasonable added profit, must ever mean either lowering of quality, thereby defrauding the buyers, or robbing the supply men, the workmen, the landlord or one's self and family. High quality pays in commercial printing, while low quality is often almost worthless, if not injurious. The wise printer, who desires to serve the best interests of his patrons, will ever work with the view of producing the highest grade of work, adapted to the character of the business represented thereby, and can only do this by securing right prices therefor.

* * *

Job printing is a very important branch of business to nearly ninety per cent of our readers, and, for that matter, to nearly ninety per cent of the newspaper publishers of the United States. It is doubtful whether, out of the twenty-three thousand publications in the United States, over two thousand three hundred are without some kind of a printing business. For this reason we run "Review of Job Printing," and "More Work Through Publicity" departments, for the purpose of teaching the way to better production and the best methods of securing more work in this important branch of the printing business. We have hundreds

of testimonials as to the great practical value of these departments as well as to the usefulness of "Newspaper Criticisms" as helping to better and more profitable results.

So important and so generally carried on by newspaper publishers, is job printing, that they wisely give a place to its discussion at conventions of their organizations. Many associations have adopted the method of having competitive exhibitions of printing with liberal prizes for the best samples. In addition to this, a plan has been adopted, which is particularly gratifying to us, for forty-one years ago, before we ever thought of becoming an employing printer, at a country fair at Hader, Goodhue County, Minn., we advocated the adoption of identically the same method by farmers as to their products and their annual fairs. The plan is that of accompanying each exhibit—as we advocated, the accompanying each farm product entered for prize—with specifications as to production, and then discussing the same. At the recent meeting of the Western New York Publishers' Association, the discussions of samples of job work, submitted by members with full specifications, proved especially valuable and instructive. Those taking part in the discussions submitted estimates as to what they would charge for the different jobs, that were entered for prizes, and a comparison of these prices and the amounts really charged for the work, by the parties offering the samples, resulted in much enlightenment as to right methods and the cost of work and as to right charges to be made.

* * *

These discussions, among employers, suggest that the man who owns and conducts an office needs education, training and practical knowledge, not only at the beginning of his career, but all the time in conducting of business, in order to keep up with the advances and changes in methods and business. Whether he works inside the shop or not, he must be able to direct employes and see that they are kept up-to-date. Right here, too, it is worthy of remark, that, in figuring the cost of work, a fair salary to the working or superintending employer should be taken into account. He should be credited on the books with and draw a regular salary. There can be no profits until all the workers are paid, but some employers seem to forget this and to be content with considering what they draw as so much profit. It is not fair for the owner of an establishment to live on the leavings after all other charges are paid. In a recent issue of *The British Printer*, we find the following which, though it may not be entirely new, is extremely well put and deserves repetition just at the present time, when so general an effort is being made to arrive at the real cost of work:

> As long as a man is content to work for a salary in somebody else's establishment, he draws a regular income of so much per week or month.
>
> When the same man goes into business for himself, he usually takes the remnants and scraps which are left over after paying the rest of his workers.
>
> It has been suggested, and the suggestion is a good one, that the head of the firm, even though he be the "whole show" so far as ownership is concerned, should put himself on a regular salary, and count in that salary as part of the regular expense of the firm.
>
> Then if there is anything left in the way of profits, the head of the firm knows what his business is really making above the expenses.
>
> Naturally, the head of the house should receive the largest salary. It would be manifestly improper for the head of the estabishment, whose superior brains and experience are supposed to entitle him to leadership, to put himself on the pay roll for less money than his subordinates. If the head of the house isn't able to draw the biggest salary, he is not entitled to be head of the house.
>
> Having a definite salary, it enables the owner of the business to cut his personal expenses to fit the salary, and will in many cases result in an actual saving of considerable money.

There are a number of items of expense, besides the salary of the employer, that are too frequently not taken into account in making estimates. Among these, are office attendance, the waiting on customers, making estimates, soliciting work, and submitting proofs, corrections, distribution of type, buying and handling stock, losses from errors, spoiling of jobs and bad debts. The employer is worthy of his hire but he can not get any hire unless his wages are charged to the work, as well as all these other items of expense or loss for which he is compelled to pay.

* * *

In this same issue of this excellent paper, we find another article that is opportune by reason of the movements, recorded in this and previous issues of the NATIONAL PRINTER-JOURNALIST, for schools of printing and newspaper making. Mr. William H. Slater, who has been for seventeen years instructor at the Borough Printing Classes, London, S. E., in writing, at the request of the editor, on "A Night in a Printing Class," enlarges on his theme and treats, by way of opening, broadly on the ground work of all such teaching. He says:

> "I have heard scores of men, of apparently good standing, ridicule the theory classes; I cannot conceive why. Theoretical knowledge is at the back of everything, and to sneer at it is like sneering at the sun. Without the sun there would be no life; without theoretical instruction there would be no intelligent practice."

He then goes on with a very logical contention, "That information of a practical nature on many subjects can be given in theory more perfectly and more thoroughly, by descriptive, and comparative explanations and in less time than it can be given in any practical work-room. * * * A teacher cannot give a man experience, nor can he teach him resourcefulness in theory, this can be done only in the workshop—but, standing before a large body of men, he can suggest an infinity of resource."

He further shows, how short is the time, even if the number taught should not be more than twelve or fourteen, to instruct each in his actual work in the practice-room, but "when the matter is discussed in

theory from every possible standpoint and with the help of a wide experience, where it is possible to go wrong is pointed out equally emphatically with the straightforward progress towards success. Bad work (that is, work badly done) is referred to, how easy it is to fall into error in certain jobs, and, if the error is found out, how to recover quickly. The whole groundwork is prepared, the foundation is laid before work in the practical room commences, and if a student has been able to take notes and assimilate the instruction he has received in theory he should start practical work a long way in advance of the man who has not sat in the theory section at all."

This experienced teacher does not deprecate the "laboratory" work but establishes, beyond question, that the principles should be taught first and the laboratory be used to test knowledge, develop resource, correct errors that have resulted from lack of full understanding and to give experience.

* * *

Referring back, again, to the actual business of conducting a printing establishment, it is worthy of note, that at no other period of modern time, has so much time, money and thought been expended upon the solving of all the problems of economics and profitable production and all the items that enter into the same. Organization, system and careful account records, at every step, are the means now used in every successful productive industry. Even the farmer keeps an account with the soil, with the cattle and horses, and knows what cultivation and fertilization of the fields and the feed of the stock cost and what is the yield. Scientific farming requires this and the results are immensely satisfactory. If these things are essential in regular manufacturing industries and in farming, where the products of the same character are turned out, from year to year, how much more essential to what is known as commercial job printing, in which nearly every job varies in character from every other and has to be dealt with separately. In this day, skill, industry, perseverance and equipment, in a trade, will not, unaided, win success. Through organization with others in the same calling, the most progressive come to a better understanding as to limitations and possibilities, unfair competition and temptations thereto are lessened, co-operation to secure what is due the trade or calling is obtained, as well as broader, wider, greater enlightenment and perfection, through interchange of knowledge and experiences. Co-operation, within the business, factory or shop, sets all departments and all the employes to working in harmony for the same ends and gives each the benefit of the knowledge, methods and views of all, creates an *esprit de corps,* a feeling of mutual interest, a loyalty to and a pride in the whole establishment and in its worthy success. System saves time, waste, loss and money and reduces cost and increases production. At the very foundation of all, is the accounting department, that puts everything to the test of the figures that cannot lie and that must tell just what is necessary to secure the indespensable profit in production and the sources from which it comes. Without keeping a careful account with every department and every job, it is impossible to tell whether there is a profit or loss or where the profit or loss is or how to increase the former or to prevent the latter. Walter C. Kelly, Secretary of the Ben Franklin Club, Chicago, recently treating of this subject, made some excellent suggestions, besides giving most excellent and convincing reasons why printers should overcome their timidity, appreciate their calling at its full commercial value, and be brave enough to stand up before the best and wealthiest merchants and manufacturers, to demand full and adequate renumeration for their work that is not only useful and of highest value and that requires more than ordinary equipment, knowledge and skill, but is indispensible. He said among other things:

Just imagine for a moment, if you will, what would happen if all printing offices would close their doors. What would become of business, commerce, advertising, manufacturing and everything that goes to make up the present way of making our present and future progress- What could we do without printers' ink and its many products? Can you induce yourself to harbor the thought of no more newspapers, trade-papers, books or magazines? No more catalogues, booklets, circulars or the thousands of other kinds of advertising matter that has become so necessary to modern business? Every intelligent being must admit the almost immeasurable usefulness of this great army of educated craftsmen.

Although it must be conceded that printers are the backbone and furnish the initiative of all progress throughout the whole world, they seemingly are compelled to work more years and more hours during those years than any other class of skilled workmen to make a bare living, and it makes no difference whether they are working at the case, at the press, at the editor's table, at the office desk, at the binder's board or at the head of the financial end of the office, they have all been compelled to end about the same. Their life has been one of continued sacrifice for centuries past. It is also conceded by all men of affairs that their future is greater than ever before, and that they are more greatly needed at present than at any time in past history.

"WILL GET THE BEST."

Mt. Pleasant, Tenn., Nov. 4, 1909.

National Printer-Journalist Company, Chicago, Ill.

Gentlemen:—I have for some time been thinking very seriously of subscribing for a printers' journal and decided that I would put it off no longer as I figure that a printer is depriving himself of much knowledge when he is without one, therefore I will get the best there is while I am at it.

I deem it useless to say, "Please find $2.00 for the Journalist one year," for if you are anything like us that is the part you are looking for and generally find that and examine it before you do the letter, thinking that if the money is bogus that the letter is too.

Wishing you the best of everything, I remain,

Most Respectfully Yours, J. Percy Matkin.

A Model Newspape With Profitable Side Lines

SIDE Lines for Newspapers" was a topic ably presented and discussed at the recent meeting of the National Association. It was developed that many newspaper men had profitable "side lines" and still, none the less, conducted worthy and remunerative publications. Hon. Omar D. Gray, of Sturgeon, Mo., *Leader,* showed how, when the fire insurance and real estate men refused ads, he added these departments of business to that of publishing his newspaper and made money, soon having a larger business than that of all his competitors combined.

It is stated that Frank A. Munsey, who has so many papers that he can scarcely name all of them, recently made $5,000,000 in U. S. Steel stocks, and a large amount on other holdings, because of his knowledge of the country's resources and possibilities and his absolute faith founded on his broad information. We do not advise our wealthy newspaper friends to go into stocks, but there are many things that an intelligent newspaper man may enter into with profit if he has the pluck, intelligence and perseverance—things must come naturally in the line of his work as a promoter of local interests, yet he should never lose his hold upon his newspaper as the principal agency of usefulness and means for opening the way to opportunity.

The Oil City, Pa., *Derrick,* tells an interesting and instructive story of one such newspaper man who is well known to many of our readers. The *Derrick* says:

We have in mind one of our exchanges, a weekly newspaper that is ably edited, prints the news that is of interest to its readers and whose editor is a man of commanding influence in his community. As it lies before us it consists of two sections, sixteen pages in all. Typographically it is as pretty as a picture. Clean type, attractive headlines and newsy matter. The display advertising rivals that of the metropolitan dailies.

The first section is full of news. The second section has four pages of readable miscellany and four pages of hardly less interesting announcements of real estate for sale by the agency of which the editor of the paper is the head and heart. By this description every newspaper man in this region has recognized the Bolivar *Breeze,* and it is the Bolivar *Breeze* of which we speak. The institution is a triumph of brains over unfavorable circumstances.

John P. Herrick, editor of the *Breeze,* made his advent into Bolivar after it had been condemned as a "dead town." The glory of the oil boom had departed. People were becoming anxious to get away to some more promising field. So Mr. Herrick had a chance to buy a paper cheap, the owners being among those who desired to get away. He bought and began to put brains into the venture. The paper has prospered from the first. It is more prosperous now. It is what we have said, a model country newspaper. It has better patronage than any paper we know of its class.

One weekly paper, however, was not sufficient to engage all the energies of John P. Herrick. He engaged in the real estate business, particularly the sale of farm lands in his own section. He used his model paper as his advertising medium and his real estate business prospered as his paper had done. It has now grown to be an important part of the total business and covers Northern Pennsylvania as well as Southern New York. Mr. Herrick bought oil production, as he had bought a newspaper, because others were anxious to seek more inviting fields. He has made the wells pay. We hope the persons who sold them have done as well.

With all the rest, Mr. Herrick is postmaster in his town. He finds time to discharge the duties of this office to the satisfaction of its patrons. But above all, John P. Herrick is editor of the Bolivar *Breeze,* a model weekly newspaper. With a keen sense of news he is at the same time a thoroughgoing business man. That fact lends value to his appreciation of news, for he knows the news of real worth. On that he has built his success where failure had been predicted. The Bolivar *Breeze* is recognized, wherever it goes, for its sound judgment on public questions, so it has great influence upon the destinies of the section in which it is published, and really in a much wider field.

The Bolivar *Breeze* is worthy the study of other newspaper makers. If its particular field of circulation is better than that of any other weekly paper, it has been made so as much by the efforts of the *Breeze* as by any other cause. When the *Breeze* began to blow, as it now does, Bolivar, as we have said, had passed its boom. Many there were who were over-anxious to quit it as a thing that had been. Mr. Herrick, with keener insight, put new courage into the people and new hope in their hearts. To him there was much left in Bolivar to live for. And Bolivar has justified the faith. It is a thriving village, while its neighbors have gone to oblivion. The *Breeze* is as much responsible for this result as any other cause and it is the exponent of the spirit of enterprise that has kept Bolivar on the map and made of it an increasing part of the topography. Of such power is a model Country Newspaper.

Advertising Your Advertising

R. R. Shuman, of Chicago, is introducing a new and valuable advertising service. It is that of telling publishers how to advertise their own chief commodity, advertising, and also furnishing copy for such ads as will be effective. We are using one of the pages prepared by Mr. Shuman this month, but this article is not intended to exploit his business but to borrow some of his excellent ideas and arguments for the benefit of the readers of the NATIONAL PRINTER-JOURNALIST, to enforce the value and necessity of the adoption of methods for advertising their own publicity, systematically and persistently.

Mr. Shuman recently delivered a very interesting talk before the Chicago Trade Press Association, that has decided to enter, with like organizations in several large cities of the United States, upon an advertising campaign showing the value of trade paper publicity for reaching members of the various trades that they represent.

His plan for directly promoting advertising, is to prepare a series of advertisements, say twelve or more in number, and then go to the non-advertiser with this especially prepared copy and interest him in this advertising campaign, but like all commodities advertising must be advertised and his scheme for this is through co-operation therein as well as, through, carefully prepared ads, like the one used in this issue of the NATIONAL PRINTER-JOURNALIST in each publication. He illustrates as follows:

At the recent National Convention of the billposters of the United States they voted a fund of $50,000 to establish a Central publicity bureau for the purpose of educating the advertisers of the country to the excellence of bill posting as

a trade puller, and a central bureau has already been established in Chicago and the good work begun.

The method as to giving publicity as to the value of advertising is to have special advertisements prepared to run in the publication itself and then use such other advertising as may be thought effective. The Minnesota Editorial Association entered upon a campaign of this kind some two years ago. The advertisements were prepared and sent to all the papers that wished to use the same. Besides the advantage of having these advertisements, prepared by an expert and made attractive and tellingly effective, is the instituting and maintaining a systematic continuous campaign. The most of the advertising done by publications is desultory or haphazard with no system or thought. An advertisement of a publisher's own wares is frequently gotten up in a hurry, thrown together and put in, to fill space, at the last moment in the make-up of the paper, instead of being planned, after study, for the purpose of winning goodwill and business. Newspaper publisers and advertising managers frequently remark on the carelessness of their advertisers in preparing and changing their announcements, and then they set a bad example by being still more careless.

In soliciting advertising, the difficulty is often in securing a hearing but persistent, well prepared advertising creates a demand, an appreciation of the value for proper publicity and a desire for its use, then, if one goes with a clear, definite proposition for an intelligent campaign, and, if possible, with a series of ads mapped out, there will be very little trouble to secure a hearing and business.

Universality of Service—Reforming the Courts

Wisconsin State University is performing that universality of service to its state that should be likewise the part or work of every newspaper to its community. We have had occasion to remark on the service rendered by this model, modern State institution to dairying, and to farming in its broadest extent, as well as to the aid that has been given to legislation. There is scarcely any worthy industry or worthy institution in the state that has not felt its helpful influence. One of the recent undertakings of this school, that is not afraid of lowering scholarship by being practical and useful in its relations to men, society, government and the productive callings and to the professions of newspaper making, medicine and law, is for the improvement of the courts as to criminal proceedings—a work that ought to be seconded, taken up and heartily pushed forward by every newspaper.

The basis for the criticism directed against the administration of criminal justice and the possibilities of improving it, were the subjects of discussion for the first Wisconsin conference on criminal law and criminology held at Madison, Nov. 26 and 27, under the direction of the university.

Several hundred citizens of the state took part in the conference, including judges of the supreme court, circuit judges, prosecuting attorneys, heads of the state penal institutions, as well as probation officers, lawyers, social workers, alienists, physicians, clergymen and educators.

After brief addresses of welcome by President C. R. Van Hise, of the University of Wisconsin, and by Gov. Davidson on Friday afternoon, Nov. 27, the conference effected a permanent organization. Two important addresses were delivered on this occasion, one by Prof. Roscoe Pound, of the University of Chicago, on "The ritual of punitive justice," and the other by Justice W. H. Timlin, of the supreme court, on "The Problems Before the Conference."

The greater part of the conference was devoted to a discussion, through some eight committees, of the important questions connected with the trial and punishment of criminals. The jury system and its possible improvement; trial procedure, including the possibility of examining the accused in open court to discourage the sweating process of the third degree by the police; the trial of criminals when the question of mental responsibility is raised, including the value of expert alienists in such trials; the juvenile offender and how he should be dealt with; probation, parole, pardon, and indeterminate sentence and the cause and prevention of crime, were the subjects discussed by these committees and reported to the conference.

Now, we give this, not so much for its value as news but because of the opportuneness of taking up this matter of criminal proceedings. Crime is on the increase and there is good reason to believe that criminals are fostered and created by the faulty administration of justice in our courts. Judge Lindsey, has made this certain by his "Jungle" articles, treating of conditions in Denver, Colorado. What exists in Denver is found throughout the whole country to a greater or less degree. It is now no longer considered unprofessional for lawyers to endeavor to cheat justice, and to free criminals or protect wrong doers in their evil ways and in their dishonest gains, in their swindles, embezzelments, graft, thefts and murders, with all the learning, skill and zeal of one fighting for right and justice. Fees, by court officers and by lawyers, are sought with no regard to right or righteousness. Little or no discrimination is used between the follies of boys and the crimes of hardened criminals and the jails are transformed into schools of crime; the teachers are most hardened criminals and the pupils are furnished by the appointed guardians of law and justice, in the reckless struggle for increased fees. So great have become the delays, and the robberies through the courts; so uncertain the possibility of punishing criminals, that in desparation men are tempted to take enforcement of rights and righting or avenging wrongs into their own hands and to secure by violence, by bombs and mobs what cannot be obtained through the means that are constituted for the upholding the rights of citizens, redressing their wrongs and punishing evil doers. The governments of our cities are so debased that they encourage instead of prevent crimes, live off of criminals instead of punishing them, aid the white slavers, who force girls into lives of slavery and shame by beggardly wages, or by actual force, or seduction, for political influence and a share of the earning of the enslaved. At such a time, it is well for State Universities to take up the matter of both civil and criminal courts in an effort to discover methods of preventing these great iniquities. It is the duty of the newspapers to aid such a university in so commendable an undertaking and, all the time, to strike blows for justice and righteousness and for their inculcation and enforcement of right both inside and outside of the schools.

"THE BEST PAPER."

DOWS, IOWA, NOVEMBER 8, 1909.

B. B. HERBERT, CHICAGO, ILLINOIS.

DEAR SIR AND BROTHER:—Enclosed please find my check for $2.00 for which please peg up my subscription to the best paper that comes to my desk. I was prevented from attending the Seattle meeting for reasons that the enclosed post card will explain, and would like to have the report of the meeting if possible.

Thanking you for past favors, and trusting that all is well with the N. P.-J., I remain, Fraternally yours,

H. G. ZIMMERMAN.

[The proceedings will be mailed about Dec. 1st.—ED.]

Arthur Capper secured the serial rights to the Rev. Dr. Chas. N. Sheldon's new story "The Higher Calling," and is running it in both the *Daily* and *Weekly Capital*. Many critics have pronounced the new story superior in many respects to Dr. Sheldon's great success "In His Steps."

J. P. Baumgartner at the University of Missouri

A TALK ON NEWSPAPERS OF SOUTHERN CALIFORNIA, WITH SIDE REMARKS ON NEED OF PREPARATION FOR THE CALLING.

A COPY of the Columbia, Mo., *Herald* of November 5th, has reached this office containing a synopsis of an address by J. P. Baumgartner, of Pasadena, California, and First Vice-President of the National Editorial Association, before the Department of Journalism of the University of Missouri.

Mr. Baumgartner's able addresses, before the conventions of the National Editorial Association, have shown him to be a deep student of the newspaper calling as well as an intelligent enthusiast therein, fully appreciating its opportunities for broad usefulness and its many and weighty obligations. He is well fitted to instruct and inspire youth who are seeking an education and preparation to enter, as worthy members, the great faculty of this almost illimitable "College of the people" with its boundless curriculum, that includes all knowledge and all human interests and combines in itself a manufacturing industry, a commercial business, and the highest learned profession in that it seeks the information and instruction of all men and the members of all other vocations. It must have been an occasion of great gratification and pleasure to Mr. Baumgartner, for he had returned to his old school wherein had been a student, and to his old home, where, at the beginning of his career, he had been, for a time, an editor of the home paper, the Columbia *Herald*, which gives the following account of his address:

In introducing Mr. Baumgartner, Dean Walter Williams said he was proud to do so because Mr. Baumgartner was his friend and a former student of the University who had made good, both as a man and a journalist. "Mr. Baumgartner has builded no less than five splendid newspapers in California," said Mr. Williams, in two of which he is now financially and editorially interested and engaged. These are the Long Beach Daily Press and the Santa Ana Daily Register. Mr. Baumgartner's success it has seemed to me, is no less due to his high ideals than to his fine ability."

Mr. Baumgartner was scheduled to speak on "Pacific Coast Journalism" but he spoke principally of the newspapers of Southern California, which he said were as different from those of Central and Northern California as they were different from the papers of the Mississippi Valley or the Atlantic Coast.

He pointed out and exhibited papers to prove that the volume of advertising in Southern California newspapers is from three to ten times as large as that in the papers of most middle, western, and eastern sections of the country. This, he said, was due to the fact that publicity is the very life-blood of every community and of every individual business enterprise in Southern California. Taking Columbia and Santa Ana, California, for comparison, without odium or criticism, the speaker said Santa Ana is a city of 9,000, while Columbia has 12,000 permanent population. The Missouri City is by far, the richest city of the two, and has a richer and more populous tributary territory, surrounding it. The papers here do not come in such close competition with the large cities as those of Santa Ana, where the Los Angeles morning and evening papers are on the streets as early as the local papers can get out. And yet, Santa Ana has two evening papers of eight seven-column pages each, both having a telegraphic news service, and being gotten up in metropolitan style. The weekly newspaper is practically unknown in towns of over 5,000, all such towns have at least one, and most of them have two, live, snappy, daily papers, which are distributed by carriers over areas of from twelve to twenty-five miles in all directions from the town center. Southern California is building magnificent rock and oil and asphaltum roads everywhere, and the natural roads, owing to the character of the soil (a decomposed granite) are the finest in the world. This enables carriers to use bicycles and motor cycles to the best advantage.

Mr. Baumgartner spoke in hearty endorsement of the School of Journalism. He said he knew of no profession in which technical training was so badly needed or in which it would be of more value to the community. Also there was sad need in the newspaper profession of higher standards of qualification, both with respect to mental and moral fitness.

The speaker said the ideal newspaper was the well-balanced, perfectly-poised newspaper. It should not be a mere money making manufacturing enterprise, nor should it be mentally and morally top-heavy, intellectually shooting over the heads of its readers and undertaking to revolutionize the moral universe. The business side of a newspaper and the editorial department should co-operate and be mutually helpful, instead of one being built up at the expense of the other.

This most glaring fault and pitiable weakness of the newspaper profession, he said, is lack of efficiency, such as training in the School of Journalism is designed to remedy.

A Suggestion as to Profitable Aid to Merchants in Holiday Advertising

One of the most effective ways to increase advertising is to adopt methods to make the same more effective.

The Red Wing, Minn., *Daily Republican* has a method of running, as a reader, each day, a brief synopsis of what advertisers are offering in goods or bargains. This plan helps the advertisers and the readers. We suggested recently, the giving of an index of advertisements in each issue of the paper, which will not only prove a convenience but do a service and will carry the conviction that the publisher believes in and is desirous of aiding his patrons in making their announcements effective, in this way winning goodwill for the paper.

At the recent meeting of the Western New York Publishers' Association, Mr. R. A. Peck, of the Caledonia *Era*, told of a most successful method that he had used to secure increased holiday advertising. We do not see why the plan would not be equally valuable for every day of the year. In fact, we have found, from our experience in running both a weekly and daily paper, that it is generally pretty easy to fill all the space available at this time of the year, besides it is the steady, all-the-year advertiser who is most benefited and more valuable to the paper. Publisher Peck said:

I found that the best way to get to the pocketbook and interest of the merchant was to write out the ad that I thought would suit his business best, designate the space and cost and take the same to him nicely typewritten and ask if I should insert it. Invariably I would get the business, where if I went in and tried to interest him and get him to write his own copy he seemed all at sea as to what to say, how much space to use, when to use it, etc. I had to put some definite proposition directly to him where all he had to do was to say "yes."

One plan that netted me more than anything else was a two-column headed directory to Christmas shoppers. An attractive heading was shown, and under it a sentence or two were used descriptive of the show window or the stock of the advertiser, this gratis. Below this in single column, doubled up, were the articles offered for sale and in some cases the prices, followed by the merchant's name run in caps and small caps. I charged for this 10 cents per line per insertion, gave it a prominent place, and the two columns I secured paid me more than some whole pages of display.

The merchant needs education as to how to advertise, and if he can be brought to let you prepare copy for him you can usually keep him, but the rub is in the small busi-

ness to get time to do that. It can't be delegated to any seven-dollar-a-week boy, but wants the very best brain in the office. Care should be used not to presume to dictate officiously what should be said. I often urge my customers to change copy, and those who do not are usually complaining about poor results; those who do, rarely so.

It is up to the newspaper man to make the goods he offers valuable to his patrons and in order to do this, he must sell something more than the space.

E. O. Rose, Deceased

Another of the veteran members of the National Editorial Association has passed away. Mr. E. A. Rose retired from active newspaper work about two years since, at the advanced age of seventy-nine years, and had accepted a position in the U. S. postal service as railway mail clerk, with a run from Jackson to Adrian, Michigan, and return. On the evening of October 22, 1909, while in the performance of his duty, he was accidentally killed. The Steuben, Ind., Republican says: "It was his habit to go to his car in the yards in Adrian as soon as the mail was delivered, generally about an hour before time for the departure of the train, in order to get the mail well distributed. Then just before the train left he would go to the mail box at the station and take out the mail for the train. He was following this routine and about eight o'clock was walking along the track toward the mail box. An eye-witness said he evidently heard the engine approaching and thinking it was on another track stepped the wrong way and directly in front of the engine, which struck him with terrific force in the back, throwing him to the ground and grinding him beneath the wheels to an instant death."

Previous to the war for the preservation of the Union, Mr. Rose was engaged in the practice of law at Angola, Ind. In August, 1861, he enlisted as a volunteer in Company A, 44th Indiana Vol., and was elected First Lieutenant by an almost unanimous vote. Because of a severe wound and impaired health, he was compelled to resign. In 1863 Mr. and Mrs. Rose removed to Big Rapids, Mich., then a small village seventy miles from a railroad, and there they lived until the town grew to be an incorporated city with three railroads. Mr. Rose engaged in a law partnership with C. C. Fuller, and he followed that profession until 1872 when he acquired an interest in a newspaper; and shortly afterward he turned his whole attention to journalism, which remained his chief vocation till the end of his life. His first paper was the Big Rapids *Magnet,* shortly afterward merged with the *Pioneer* as the *Pioneer-Magnet* which he published in partnership with Chas. Gay until he disposed of his interest in 1882. He then moved to Grand Rapids and was connected with the *Saturday Evening Post* for a short time, and later entered the railway mail service. During their twenty-five years residence in Michigan, Mr. Rose held the office of Prosecuting Attorney for four years, and he was a member of the Michigan legislature in 1873 and '74. In 1893, in partnership with Clyde C. Carlin, he founded the Angola Magnet and he held his connection with that paper, most of the time as its editor, until the fall of 1907. He was a member of the Indiana Republican Editorial Association and the National Editorial Association, and was a prominent and active worker in these organizations, by reason of which, and his ability as a newspaper writer, he enjoyed a wide acquaintance among the fraternity.

He attended many conventions of the National Editorial Association and was ever interested in the work of that body. His accounts of the meetings and excursions in his own paper were always written with great care and were broadly instructive, for he was a close observer and deeply interested in affairs and in all the interests and developments of the sections visited. His last attendance was at the convention in 1908, at St. Paul, and his account would make a most interesting book of travel. The Republican truthfully says of his life and character:

"Mr. Rose was a gentleman of strong personality, active and vigorous throughout his life. His education was supplemented by reading and wide travel, so that his fund of information was valuable, and he was capable of imparting it in the manner of an interesting writer and entertaining companion. In his home life he was kind hearted and generous, and the recollection of the years are very tender to the daughters and the companion of more than half a century.

"In his public life he was painstaking and conscientious, no officer ever serving with greater fidelity to his trust than he. He was likewise faithful to his duties as a soldier, and as a private citizen he stood always for the law, truth and justice. Therefore a wide circle of friends mourn with the family circle and near relatives in his untimely end."

Interesting Briefs

The Allegany County (N. Y.) Press association held its annual meeting at Wellsville, Oct. 15. Those present were Messrs. Backus of the Andover *News,* Herrick of the Bolivar *Breeze,* Miller of the Canaseraga *Times,* Fish of the Whitesville *News,* Thornton and Norton of the Belmont *Dispatch,* Stickle of the Cuba *Patriot,* E. W. Barnes of the Wellsville *Daily Reporter* and Cowles, Dornew and Thorpe of the Wellsville *Democrat.*

The following officers were elected: President, John P. Herrick, Bolivar; Vice-President, Arthur A Norton, Belmont; Secretary and Treasurer, J. Backus, Andover.

An interesting feature of the Fort Worth Star-Telegram endurance run that was held November 23 to 27, made a very complete record of tire troubles it is proposed to keep. A small trophy was awarded to the tires going through with the most perfect score, it being necessary that at least eight tires of the same make be entered in the competition. No contest of a similar sort had ever been held.

It is hoped by the promoters of the run that the experiment of scoring tires will lead promoters of other runs to adopt a similar plan, and that out of the various runs an effective method of scoring tires will be developed.

The Star-Telegram run covered a distance of about 800 miles, being from Fort Worth to San Angelo and return. Fourteen cars were entered before the pathfinding car started out.

The pathfinding car on the run was the famous Thomas Flyer, which won the race from New York to Paris. The old car attracted circus crowds in every town it stopped. The route through West Texas was through a part of the plains district where the perfectly level country made an ideal place for automobiles. The result is that in some of the small towns several hundred cars are maintained and automobile enthusiasm high. Extensive plans for the entertainment of the contestants were made.

INDESPENSIBLE.

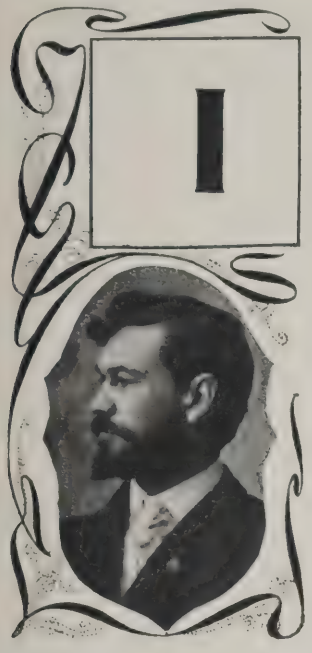
National Printer-Journalist, Chicago, Ill.

Dear Sirs:—Enclosed find money-order for $2.00 to renew subscription to Journalist. Cannot afford to be without it.

Respectfully, E. A. Wasser.

NEWSPAPER CRITICISMS



IT is generally supposed, and is quite frequently true, too that the most brilliant newspaper men are called sooner or later to the larger fields of labor upon the great city dailies, but I am indeed proud of the many really splendid fellows who stick to their country shops. Even in this commercial age there are men who are worthy to be in higher seats — who have even turned deaf ears upon urgent calls to more eminent places—but who remain in their little country offices because they love them and love the simple life within them. This may not be practical, but real genius has never been noted for very much of that quality. The primitive editor was a printer, too, and surely no man can know the full joy of the calling who has not possessed a little print-shop of his own, wherein all that were done must be wrought by his own hands, or at least overseen by his own eyes. I do not want to deny the city journalist his fame nor his happinesses, but I doubt if his days are filled with the rich, ripe pleasures that are born of the simplicity that follows the career of the country editor. The country editor's life is the simple life, the useful life, the life full of intimate human joys, close friendships and lasting honors. Even those country editors who have gone on at the call of duty to the administration of higher affairs, always look back with a tender eye upon their country experience. That day is past when the country editor is an object of jest and ridicule. Today he is respected and esteemed as he should be.

* * *

RED LAKE FALLS, MINN., October 15, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Am sending you today under separate cover, a copy of the Red Lake Falls *Gazette*, containing three ads on which I would like to have your criticism. I appreciate the assistance you give to amateur ad-setters, and am anxious to know both the good and the bad points about my work. The ads I have reference to are (1) The Big Store, (2) Garceau & Rubertus, and (3) Joseph Helm. Hoping to see your comments in an early issue of the PRINTER-JOURNALIST, I beg to remain, Yours thankfully,

HOMER F. MUSSEY.

That the readers may better appreciate the criticism, I will reproduce two of these ad specimens from Brother Mussey, namely the last two mentioned (Exhibits 1 and 2). It will at once be agreed that this compositor knows how to produce striking, strong, clean effects; but notwithstanding this compliment, there are yet several faults, which I shall attempt to point out as I proceed. The predominating beauty of Mr. Mussey's work is the abundance of white preserved. In the Garceau & Rubertus specimen, the black rules at top and bottom are superfluous—yea, even damaging to the effect desired. Omitted, the display would have been stronger and the whole result more harmonious and pleasing. The general design of this advertisement is very good, but some uneven spacing is noted in both the display lines and the body matter. In job and ad work the compositor is supposed to

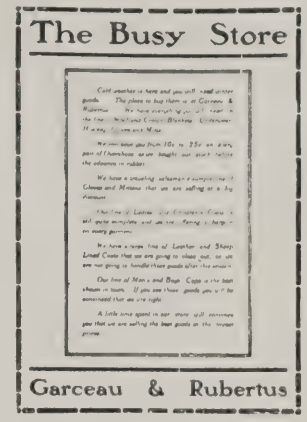


Exhibit 1

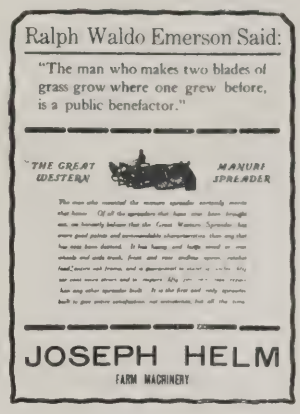

Ralph Waldo Emerson Said:
"The man who makes two blades of grass grow where one grew before, is a public benefactor."
THE GREAT WESTERN
MANURE SPREADER
JOSEPH HELM
FARM MACHINERY

Exhibit 2

keep his lines evenly spaced. There are only two flaws in the Joseph Helm specimen that occur to me: First, the underscoring of the first line is a mistake. This gives a suggestion of cutting off that line from the matter following, with which in reality it is very closely connected; and then besides I want to teach ad-men to use nicer discrimination in the use of rules anyway. So many ad-setters, as well as job-men—stick in a rule or ornament whenever there is a little extra space, whereas the effect were far better without them. The second flaw intimated above is the way in which the line, "Farm Machinery," has been treated. This line should have appeared in a more extended face, with the dashes on both ends left off. Otherwise this is a very creditable specimen. Referring now to the ad of The Big Store (which is not shown here) I do not wish the contributor to infer that it is wholly bad, for I can see many excellent features in it; but, that full benefit may be derived, I want to consider the faults first: The chief display line is defective, because of its shortness, but, if it could not have been lengthened by adding a word or two, then I believe it ought to have appeared right in the center of the line with normal spacing. Of course, if set in Post Old Style, as the signature is, then the proper way out of the dilemma would be letter-spacing, to achieve a full line, but I would never recommend this in the case of a DeVinne line. The introduction in any event ought to have occupied the full measure. Then the several columns of body or price list could have been treated

very much as it is, only entirely encircled with rule of the same one-point face as that used horizontally to divide the various columns. I observe that in setting the introduction, the compositor has used a two-em quad at the beginning of each sentence, which is entirely erroneous, because it gives the mass an extremely undesirable spotted aspect. I have found it the best practice in setting all ad and job work, especially, and I employ it even in the composition of straight matter, to make no special allowance of space at the beginning of sentences, but use simply the ordinary space that is required between other words in the line, thus securing a delightfully even-printed effect.

* * *

EAST OAKLAND, CALIF., October 9, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I am sending you the first and last copies of our paper, the East Oakland *Herald*, and would be pleased to have your criticism on same, if you can find room for it. We are only two boys, nineteen years old, and have not had any previous experience in this line.

Yours very truly, GEORGE W. STEWART, Editor.

Comparing these two issues of the *Herald*, I am indeed pleased with the strides toward improvement that are in evidence, and, with my eye on the last copy, I must declare that for two lads of such tender age and limited experience, Messrs. Stewart & Barrett, editors and publishers, are doing first rate. Of course, as is inevitable with those of inexperience, these young men are doing many things that are wrong, especially in a mechanical way, but in the main their efforts are highly creditable. The impression on the latest copy of the *Herald* is pretty good and the makeup, particularly of the first page, is especially good—only the make-up man should remember to insert a six-point slug between his matter in each column and the head rule. I shall be interested in future copies of this enterprising little sheet.

* * *

NORWOOD, OHIO, October 7, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending you today under separate cover a copy of the *Gazette*, which we have just changed to a 7-column sheet. Also the last issue of the paper while it was a 6-column folio.

Any criticism you make will be appreciated—good or bad.

Respectfully, FRANK L. STILL,
Foreman Composing Room.

Wth its additional column per page, the Norwood *Gazette* has a veritable metropolitan aspect. The *Gazette* is a daily, devoted exclusively to chronicling the local news. Filling up eight pages seven columns wide every day with local news is no small undertaking but the way the *Gazette* force is succeeding in their attempt to do this is extremely satisfactory. A breezy, terse style is maintained in presenting the news, resulting in a very interesting paper. Besides the headed stories with which the first page is replete, there are an excellent editorial department, a page of correspondence, a page of society notes and a page of the sports, thereby thoroughly covering the local field in a fashion seldom equaled. An extremely liberal advertising support is accorded this paper, and throughout this has received plain, every-day, economical treatment at the compositor's hands. There is really but one feature about this sheet that is positively obnoxious to me, and that is the typographical style employed in the heads. These heads are entirely too black and boisterous to appeal strongly to one of good taste, let him be printer or reader. They suggest sensation and lack of dignity. That this remark may be

more fully appreciated, I will show the upper part of the *Gazette's* front page herewith in exhibit 3.

* * *

Here is a much appreciated letter from my old-time friend, Fred F. Flatt, now of the Starbuck, Minn., *Times*. It goes to show what this journal is to many a printer-journalist.

STARBUCK, MINN., September 19, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR MR. COPPER:—I want to thank you for the recent criticism of my work in the Starbuck *Times*, and to assure you that I appreciate it. It is my desire to do the best work possible, and I have been greatly benefitted from your reviews of the past few years. Your department is worth the price of the N. P.-J. alone and I get other helps from it.

I am enclosing some advertising matter which we have been using to boost the *Times*. The advertising contract enclosed will explain why we have ads on the front page. I will also say here that we have more advertising than the county seat papers, which we think is pretty good. We will soon install a Junior Linotype and then we hope to produce a much better paper both typographical and in news matter.

Thanking you for all favors, and assuring you that I appreciate them very much, I am yours truly,

FRED F. FLATT.

Much of the advertising matter which Brother Flatt sends meets with my heartiest approval, but the clause to which he refers in the foregoing letter as explanatory to the appearance of ads on the *Times'* front page strikes me as a queer proposition. The clause is this: "If the merchants' advertising amounts to $2.00 or more per week, he is to have the privilege of front-page space once each month." It strikes me that this arrangement only stimulates the advertisers' desire for front page space, makes him want it all the time, and gives him a notion that the back or inner page spaces are no good. It is a better policy to work up a wide circulation, earn a high reputation as an excellent advertising medium by making a good paper first and then advertising every result obtained by its advertisers, and give both the reader and the advertiser to understand that there's no front-page space for sale at any price. It's a dignified proposition that benefits all concerned, and one that none can fail to appreciate.

* * *

That unknown friend of mine at Elgin, Ills., has again favored me with another trio of ads constructed by different compositors, evidently, from the same copy, asking comparison and criticism. It has taken me but a moment to place these specimens in order of respective excellence—exhibits 5, 6 and 7. There is but one feature in which exhibit 6 excels exhibit 5, namely, the treatment of the two panels near the top,

which in the sixth exhibit, having been extended in width, make a little the better effect. It is strange to

Exhibit 7

heading was treated. The display within the panels in this specimen, too, is not well placed. In my estimation the signature in none of these ads has been perfectly done. That of the latter two is better than that of the first, but all have their errors. In the first the two lines are too widely separated; in the second, "The Big Store, Elgin, Ills.," should have been closed up in the center under the signature, whereupon the effect would have been very neat and tasteful; in the third I object to the rule between the two lines, and also to the hyphens between the two parts of the last line.

* * *

SEPTEMBER 25, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I am sending you a copy of the *Standard*, on which paper I am doing the mechanical work. Will you please tell me what you think of the appearance and make-up of the paper.

Any comments or criticisms will be appreciated.

Yours very truly,

Westhope, N. Dak. LEO F. RASKE,

The first and most commendable feature about this contribution from Brother Raske is the delightfully clean and carefully imposed front page, which, as a reward, I take pleasure in showing herewith as exhibit 8. Of course, as those well acquainted with my scribblings in these columns are well aware, I am no great

WESTHOPE STANDARD.

Exhibit 8

lover of any Gothic face—especially not for head purposes—and more especially not bold, black Gothic like that in the headlines in this sheet. Still I must not fail to compliment the makeup man upon the neat balance he has succeeded in achieving. I regret, however, that he who wrote the two scare heads did not enlist sufficient discretion to make the two inverted pyramids of corresponding length—one is a three-liner, whereas the other consists of but two lines. Another little detail that I have often cited, with reference to the proper way of treating this style of head, is to use an ordinary, 13-em piece of column rule for cutting off the main headlines from the matter in the column under it to which it is not related, thus per-

mitting the employment of a nonpareil ornament of some kind as a corner piece where the ends of the two rules join. The contents of the *Standard* are very good. It is an all-home print product, the inner four pages being made up principally of plate. The advertising patronage is liberal, and, while I can appreciate the noble aims of the compositor, yet the evidence is such as to indicate that as yet many of the fundamental principles of artistic ad-composition is far beyond his grasp. Anyone, I suppose, who knows how to hold a stick and find the letters in a printer's case, can set an ad, after a fashion, but few there are who can do it right—or even well. In my time I have had much to do with working printers, and now, as I think of it, not over five per cent of all the printers I have known ought to be entitled to the name of finished journeymen. One of the chief reasons for this deplorable fact is that many men who become so-called printers are not naturally fitted for the work; another reason is that, in a great many offices where apprentices are taken the recruit is shoved along without any particular training or instruction and finally allowed to do work that is rotten but passes alright, because the public at large is unable generally to distinguish between good and bad printing unless they have the two for comparison, and even then, I'm not sure which they'd choose. Having learned to do the work that way, it is extremely difficult for the apprentice to unlearn his faults. But all of this is not necessarily pertinent to the case. Generally, as country newspaper advertisements go, the ads in the *Standard* are not so bad. It is only in point of detail that I can object; but I have already written at such length in this paragraph, that I can scarcely afford to enter into further discussion. Suffice to suggest that the ad compositor on this sheet begin at once striving to improve his work. Let him eliminate all ornamentation, eschew underscores, and study all specimens of reliable printing closely and critically.

* * *

And here is a gem of an editorial which I clip from the Stanley, N. D., *Sun*, which I trust is original with the editor of that sheet, since it is accredited to none other. It ought to interest every one of us:

"The editor of a newspaper is often accused of leaving out certain items of news purposely, because of a dislike of the person to be mentioned, or from prejudice or another cause. This is all bosh. The editor has something like a million different things to think of in connection with the issue of one paper and it is not surprising if he misses an item occasionally or sometimes forgets one which has been called to his attention. Nine out of ten people you ask for news items will tell you they can't think of any. But in most cases they expect the editor to think of them all and criticise him if he fails in a single item. The best way is to give the editor credit for what he does find and mention and for some things that he finds and doesn't mention.

* * *

MANDAN, N. D., October 2, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—By separate cover, I am sending you some specimens of my ad work which I have done on the *Pioneer* lately, and would appreciate your criticisms through the NATIONAL PRINTER-JOURNALIST. This is the first of any of my work ever sent in to a trade magazine.

Sincerely yours, CHAS. S. TROUTMAN.

Those who have bothered to read the preceding paragraph will understand me when I say that here is a printer whom I must count among the five per cent mentioned above. At least he is able to set an ad well, if not perfectly right in every instance. I am showing four of his ad specimens (Exhibits 9, 10, 11 and 12). While the first of these is probably as pleasing as any in the collection, yet I must object to the inversion of the lower rule. Count it as a whim, if you wish, but I must also question the use of these bold rules in any

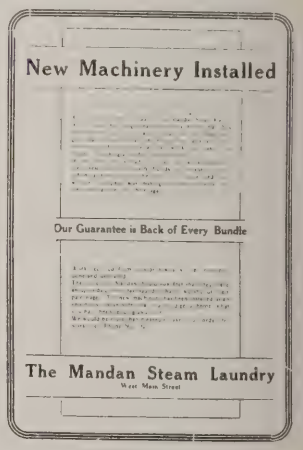

Exhibit 12

The rest of the bunch are all good enough to pass without comment. The better a specimen is, the less a critic need say.

* * *

It would be interesting to say the least, if I had my last criticism of the Robinson, Kansas, *Index* here to refer to ere I pass an opinion on the copy now before me; but unfortunately I have not, and am therefore at a loss in determining whether or not any innovations or improvements have been inaugurated since my late inspection. At present the *Index* is a veritable delight throughout. The first page is so extremely attractive in its style of makeup that I cannot forego showing it in whole herewith. (Exhibit 13.) This is an all-home-printed quarto and one especially noticeable feature of this issue is that the whole of the inner folio section is used exclusively in giving publicity to the

local Golden Rule Store. These four big ads are neatly and plainly set. What a veritable genius this Editor Harry M. Leslie of the *Index* really is! He's a town booster, too. Combining the two qualities, he brings forth among other peerless things in this issue a fall-time effusion in praise of the town of Robinson and Northwestern Kansas that cannot fail to stir the

ROBINSON INDEX.

Exhibit 13

heart of the "deadest" soul that breathes the pure Kansas air. Such newspaper men are those who count; they have good taste, as a rule, for the best in all departments of the calling, with the result of directly elevating the standards of newspaper making. The news service of this sheet is also praiseworthy.

The Following Continued from Last Month

CENTRALIA, WASH., September 20.

O. Byron Copper, De Soto, Wis.

DEAR MR. COPPER:—The NATIONAL PRINTER-JOURNALIST (Printers' Bible) for September has recently reached us, and having observed the reproductions, the originals of which were undoubtedly sent you by my friend, Mr. Dunckley, in which you so carefully read and marked same for correction, will say that this was the fault of a careless "print" who had been consigned to correcting ads. Nevertheless, I cannot refrain from expressing to you my deep appreciation of the criticisms accorded me by your department, and, as evidence that we value your remarkable journal, I am sending you along with this same mail a few more of the *Chronicle's* ads. Thanking you very heartily for the kind advice, will ask you to remember me as the "kid" on the Yakima *Morning Herald* some three years ago. At that time, I believe, you were doing a stunt on the Yakima *Republic*, just across the street.

Yours very truly,
E. KENNEDY,
With the *Chronicle*.

I want to say here that which I have intended, but neglected, to say by personal letter to Brother Kennedy, namely, that it was not I, but the person who sent the ad in, who so carefully proof read and corrected his advertisement which was reproduced in this department for September, as must have been made clear to him, had not the compositor been guilty of a gross "leave-out" at the bottom of the last column of page 625 of the September JOURNALIST. I am pleased to learn the correct identity of my correspondent. Up

to this time I had not suspicioned that he were one and the same "kid" who worked "just across the street" from me in North Yakima. I am pleased indeed to see that he has developed into so complete a compositor. That he is competent is proved beyond the possible shade of a doubt by the ads with which he has favored

Exhibit 18

this department, including those sent in with the foregoing letter. Any and all of this last budget are good enough for reproduction here, but for convenience, I am showing but two, exhibits 17 and 18. They are indeed exceptionally well done. Wishing Brother Kennedy a continuance of success in the calling, I will leave him for the time being, trusting that his contri-

butions to this department have become a permanent thing.

HOOKER, OKLA., September 15, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—You heard from me some time ago and I then told you that I was going to send you a copy of the paper when we "got our hand in." I am sending you herewith four copies of the *Advance,* one before we obtained possession and the last three copies, which we have published under our own name. I have been editing the paper the past three weeks and therefore have not been doing the mechanical work lately, but set the page ad in the issue of August 13th. I am also making up the paper now and you will notice that I have not made up any two of them exactly alike, as I have been trying to improve the looks of it. I did not know just how I should arrange my double heads but like my last arrangement best. Any criticisms or suggestions will be gratefully received. Yours truly,

CHAS. E. HOOLE.

P. S.—I had anticipated a great deal of trouble in getting the advertisers off the front page, but they did not object very strenuously when they found out my purpose. C. E. H.

Indeed "the boys" have gotten their hands in alright, and it is a pleasure, too, to note the improvement. The new firm name is Southworth & Hoole, publishers, and I congratulate them on their marked success. The advertisement composition is not bad all through, and the page ad referred to was a very good job. But it is in mechanical makeup that the great strides for the

better have been made. I like the style of the makeup of the issue of August 27, the only objection being that the first line in the first head was not a full one. But the style for which Brother Hoole declares a preference is also very satisfactory, being a trifle more elaborate. This is shown in exhibit 19. In regard to this, it will be found an improvement to use a 13-em piece of common column rule for cutting off the double column head-lines from the heads following in the inner columns. A nonpareil ornament of some kind can then be inserted where the parallel rule corners onto the perpendicular rule, giving a finished aspect. Brother Hoole's editorial work is good, being quite as remarkable for its extensiveness as for its excellence. Note what the brother says in his postscript. He had little trouble in arranging with his advertisers in preparing a clean front page. It's a pretty grouchy business man who will not concede to taking space on another page, if the case is properly presented to him. If he can be made to see that it is for the mutual good of all concerned to make the paper better, he is going to make the concession willingly. The *Advance* bears every evidence of prosperity, as it certainly should, and I hope it may never show evidence of anything less gratifying.

* * *

STANLEY, N. D., September 11, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending you under separate cover a copy of the Stanley *Sun,* also a few ads cut from the same paper, which we would like to have you review in the NATIONAL PRINTER-JOURNALIST at your convenience.

The last time you reviewed any of my work was last fall, at the time I was interested in the Williston *World.* You had the pleasure of giving your honest opinion of some of my ads, and of the make-up of the paper.

My work here consists of job work and ad-setting. We have a very modern shop—a great deal better than the average country shop in "these parts," and one that it is a pleasure to work in.

The paper varies in size from an eight-page paper—four pages patent—to twelve pages all home print, according to the number of ads, and they are numerous at this time of the year.

The editor, Mr. McLeod, carries out one idea that you will appreciate—the idea of no ads on the front page.

Thanking you for past favors, I remain,

Most truy yours, LEO N. SANFORD.

As Brother Sanford suggests, the fact that Editor McLeod favors the clean front page idea and puts the idea into practice is highly appreciable, and the page is made up in a way that gives it an interesting appearance, too; but I believe by following out some such a scheme as that shown in the first page reproduction from the Hooker, Oklahoma, *Advance,* above would be found advisable. That the head to the left has an inverted pyramid of some six lines while that to the right has but two lines in it is hardly uniform or consistent. In all cases certain head styles should be chosen and adhered to throughout, at least in a single issue. Brother Sanford is a first class workman, as his ads in this publication prove. But unfortunately, I have either mislaid the specimens which he says he sends me, else he inadvertently failed to include them when this paper was mailed and therefore I am somewhat at a loss in offering due comment. It seems to me as I remember Mr. Sanford's work on the Williston *World,* it was somewhat superior to this in the *Sun,* but this condition could doubtlessly be readily explained. Still, I would not have it inferred that the ad work in this publication is not good. Contents, editorial work and impression of the *Sun* have all been well done—and I am wondering if this Geo. W. Wilson who is the *Sun's* publisher, is the same for whom I once set ads at Minot. Of course, it's none of my business, Brother Sanford, but I just want to say, by way of closing, that the letter head on which you have written me is a mighty neat piece of work.

* * *

VEBLEN, S. D., September 14, 1909.

Mr. O. Byron Copper, De Soto, Wis.

DEAR SIR:—I am sending to you under separate cover a copy of the Veblen *Advance,* of which I am the editor and

owner. I have had the *Advance* two years, and want to send, for your personal inspection, also a copy of the paper issued just previous to my taking charge that you may see whether or not I have made any improvement and how great is that improvement. The *Advance* is printed on the old stand-by Washington hand press, but we always manage to get a good tone to the paper by taking a little care. Veblen is only a town with a population of 200 and in such a small place some would think it almost impossible to make a newspaper pay. All that need be said to verify this is that the first year I was here my cash receipts amounted to more than $2,000, and the second year increased to nearly $3,500. I was only nineteen years of age when I took charge of the *Advance* and had only had about nine months' experience in actual newspaper work, but I made that count, and by keeping "everlastingly at it" and taking advantage of criticisms in journals like the NATIONAL PRINTER-JOURNALIST, have been able to keep my head above water. Any suggestions you may offer will be most gratefully accepted. Thanking you in advance for inspecting the columns of the *Advance*, I am,

Yours very truly, HARRY E. POLK.

The *Advance* of today and the *Advance* of two years ago are as vastly different as day is different from night; and the *Advance* of today quite as far transcends the *Advance* of old as the brilliancy of the sun transcends that of the moon. Notwithstanding that this paper is impressed on a Washington hand press, the print is excellent, showing that Brother Polk speaks truly when he says that care is exercised in the pressing. The old *Advance* was a seven-column folio with ready-print interior, whereas, the present *Advance* is a five-column quarto on ready-prints. The latter is much handier in size, far more pleasing in appearance, and by far the best in mechanical makeup. The contents of the *Advance* up-to-date are creditable, there being a few headed articles, a department of local mention, several news-letters, and exchange selections. Generally the advertisement composition is quite neat, and the head styles are fairly uniform and proper. Regretably the front page contains displayed matter. While the liberal advertising support may partially excuse this blemish, it cannot wholly do so; for I have estimated that the matter could be so arranged as to give a clean front page and yet admit of a reasonable amount of reading matter on other pages. Try it, brother, and see how delightful a thing a clean front page is. The annual earnings of the *Advance* office, considering the population of Veblen, is surely no less remarkable than Brother Polk's almost unprecedented success as a newspaper-maker with such limited age and experience. He is following the proper course to reap the richest rewards, and this department will be flattered with his further favors.

* * *

MANDAN, N. D., September 6, 1909.

O. Byron Copper, De Soto, Wis.

DEAR SIR:—Under separate cover I am mailing you two copies of the *News* and one of the *Independent*. Our present publication, as you will note, succeeds the old *Independent* combined with the *Democrat*. The *Democrat* had no plant, however, and the real combination was in fact only a matter of uniting circulations. What I wish to impress upon you is the fact that the same material continues to be used.

Our management of the local paper only covers over the period of time since March 1st and all along business is developing. A little later we hope to be able to execute that sort of printing that will at least satisfy ourselves. Through it all, however, we manage to get our share even at present in a field covered by four publications, and thus with a promise of additional equipment we are made to look at the situation optimistically.

Like your position with regard to Rex Lampman, whom I admired much in his uphill fight for principles at Neche, this State. My years compared with his being nearly equal (in our advantage, I think) was no doubt significant in our disposition of sympathy. His real ability is also a matter that will be made to be realized. This is our prophecy, at any rate.

The N. P.-J. is interesting to us. In fact, my ideas in many instances originate from conclusions wrought through the perusal of your writings therein.

Yours very truly, EVERETT J. CONRAD.

N. B.—The press work of the *News* is done on a Chicago Stop Cylinder—400 per hour. The color page of the April issue was done on a jobber.

In point of contents I doubt if there is another weekly paper in the whole state of North Dakota that excels this Mandan *News*, the upper portion of whose artistic two-color first page, alluded to in the foregoing letter, I am showing as exhibit 20. As will be noted, this was of the issue prior to Memorial Day, last spring, hence, the bi-color effect, which, in combination with the white stock, gave the three national hues—red, white and blue. It would be difficult to devise a more tasteful and truly artistic type page. The first pages of the regular editions, while lacking the colors, are no less artistic. There is always that high degree of dignity, regularity and cleanliness. As

to these double-deck heads, however, I should prefer the two-line pyramid immediately following the main scare-line, with the three-line pyramid below the second scare or key line, thus obviating the rather top-heavy effect. Above I mentioned the excellence of the contents of this sheet, but in those few random words I did not presume to do that peerless feature full justice. The contents are excellent. The news stories are well told, and well headed. The editorial work is first class, too. But the press work is rather inferior to the other high standards in this paper, due probably either to a worn dress or a worn press, or both. In the main, there is little wrong with the style of the advertisement composition; forsooth, there are instances of really creditable work, but frequently the antiquated faces render the aspect more or less displeasing. One especially charming fact noticeable in the *News* is the nice attention given to detail. Not one of the thousand little things about the makeup, etc., that mean so much to the experienced eye (and so little to the novice) have been permitted to go undone. With me this is always the test of a good workman—the mark of a good shop. Up to this point I have failed to say that the *News* is a six-column paper, all-home-print, and evidently varying in size from six to eight pages, according to run of matter. Withal, it is a very creditable newspaper, and I wish it luck.

The Elgin, Ill., *Courier*, building is being enlarged and remodeled so as to make a very commodious and up-to-date newspaper office.

An Advertisement that Brought Results

ONE $100 AD SOLD FORTY-FIVE HOUSES TO FORTY-FIVE DIFFERENT PERSONS. THE TOTAL SALES AGGREGATING $222,000.

On several occasions, during the past twelve or more years, we have called attention to the methods, accomplishments and successes of that model, home paper, the Brooklyn, N. Y., *Daily Eagle*. The *Eagle* furnishes a splendid example of that universality of service to a community by a newspaper, to which reference is made elsewhere in this issue. The *Eagle* covers its field and every interest therein. Let every newspaper do the same and there will be no longer any lack of circulation or of profitable advertising results.

The following from the advertising manager of the *Eagle* explains how profitably such a publication is able to secure results for its advertisers:

PUBLICATION OFFICE, THE BROOKLYN DAILY EAGLE.
BROOKLYN, NEW YORK, NOV. 15, 1909.

National Printer-Journalist, 4618 W. Ravenswood Park, Chicago, Illinois.

GENTLEMEN:—I enclose herewith an advertisement of the John R. Corbin Company that appeared in the *Eagle* on Sunday, November 7th, and also the story in connection with it that was in the *Eagle* on Saturday, November 13th. I also enclose clipping of the advertisement that appeared in our issue of Sunday, November 14th. Through the one advertisement that appeared in the Brooklyn *Eagle* only, on November 7th, the Corbin Company sold forty-five houses to forty-five different people—$222,000 worth of property. The advertisement cost them about one hundred dollars. This, to my mind, is one of the most wonderful expositions of the value of newspaper advertising that has occurred in recent years. Further confirmation of these statements may be had from the John R. Corbin Company direct.

Very truly yours, B. T. BUTTERWORTH,
Advertising Manager.

This success in newspaper advertising is so remarkable that we feel that our readers will be interested in reading the full details as to the same given in the Brooklyn *Eagle* as follows:

What will probably stand for a long while as a record in advertising results was achieved this week by the John R. Corbin Company. The single insertion of an advertisement costing less than $100 completely swamped the company with orders and an extensive advertising campaign that had been mapped out had to be abandoned because the firm contracted at once for all the work that it was possible to handle.

When the returns from this advertisement are closely analyzed the results are even more remarkable than is disclosed in the bare statement that the company found itself unable to accept further orders.

From an investment of less than $100 for the advertisement the Corbin Company received orders amounting to $222,750. These orders were confirmed and contracts signed with purchasers of Corbin houses within three days after the insertion of the advertisement in the *Eagle* last Sunday.

The advertisement in question, consisting of a quarter page announcement in the Sunday *Eagle* that the Corbin Company was prepared to build one of its regular type of $5,900 houses for $4,950, was published with a coupon attached which the applicant was called upon to fill out and return to the company. The *Eagle* was the only paper used for the advertisement that it was intended to follow up with similar announcement in other papers.

On Monday, however, when the replies to the advertisement were received at the offices of the company, together with personal applications from a large number of people who wished to embrace the firm's offer, it was hurriedly decided to cancel the advertisements which had been prepared for the other newspapers, as any further business would have been embarrassing to the company, to say the least.

In three days contracts for forty-five of the Corbin houses, upon terms announced in the advertisement, had been signed and still replies and personal applications from prospective purchasers of Corbin houses continued to be received.

The offer made through the advertisement was that to the first 100 persons whose applications were accepted the firm would build one of its houses, to be ready for occupancy next spring, upon the terms set forth. It was explained that the Corbin Company was desirous of having sufficient work ahead to keep its plant, the largest house building concern in the country, busy throughout the winter months and that the firm could readily afford the saving to purchasers of Corbin houses, which the offer involved, if this result was achieved.

While newspaper and magazine advertisers have frequently proclaimed the large results which have been obtained from certain advertisements, it is doubtful if there have ever been recorded results comparable to those which the advertisement of the Corbin Company in last Sunday's Eagle achieved. The Corbin Company regard it as the most remarkable tribute to the value of *Eagle* advertising that has thus far been made public.

"Such an unexampled response," said John R. Corbin, president of the Corbin firm, "to our offer shows that the public know a good thing when they see it, and realize that the good faith of the Corbin Company is pledged to carry out what it puts forward. We had no idea that there would be so many persons who would wish to avail themselves of the opportunity to secure a bargain home.

"It also shows how good a medium for reaching the right sort of public the *Eagle* affords. On Sunday we were busy from the middle of the day until after dark with those who wanted to purchase, and the mails have since been full of applications, so full that we have not yet had time to examine and tabulate many of the letters received. So we are forced to halt the campaign for publicity and wait until we are able to arrange for a new offer to the public."

The offers made in the advertisement were attractive and prices were given. There was a definite proposition. The trouble with much advertising is that it is "up in the air," lacks pointedness, tells nothing definitely; is not clear, informing or in the nature to awaken any definite interest or desire. Advertising must have the power of turning the interested attention of prospective purchasers to the thing advertised but no matter how good the announcement, the medium through which it is sent out must not only go to the people whom it is desired to reach but must command their attention, confidence and good will. In these essentials the Brooklyn *Eagle* stands pre-eminent. Its closeness to all the people of Brooklyn is equally remarkable with the universality and the thoroughness of its home news and other service.

Here and There

The Colfax, Iowa, *Tribune* has again changed hands, Mr. C. L. Smith, of Muscatine, has purchased the plant of W. R. Markley. The paper was founded by W. L. Hitchcock in 1893, since passing out of his hands six years later, it has been resold five times.

C. T. Willson, formerly a Chicago newspaper man of note, and later editor-in-chief of the Joliet, Ill., *Republican*, after a year's absence assumes his duties on that paper which he served well and faithfully for several years.

E. L. Howe, a veteran editor of Wisconsin and publisher of the Ripon *Press* and Rosendale *Journal*, died at his home at Ripon, Wis., recently. Mr. Howe was well known throughout the southern portion of the state. At different times he published the Fennimore *Times*, Cambridge *News*, Lancaster *Reporter*, Montford *Sentinel*, Wazeka Kickapo *Chief* and Fairweather *Register*, the last three of which he established.

It is stated that the efforts to settle the affairs of the Waukegan, Ill., *Evening News*, now in bankruptcy court, have failed owing to the two factions being too unfriendly and it looks as if the entire property would pass out of existence.

GIVES ENJOYMENT.

ELMORE, MINN., OCT. 30, 1909.

PRINTER-JOURNALIST:—I enclose $1.00 to apply on my subscription. I enjoy reading the JOURNALIST and congratulate you on getting out such an excellent magazine.

Truly Yours, W. A. BRUSS.

Members of British Institute of Journalists at St. Andrew's Church, Plymouth

BY ETHELBERT ALLEN, KANSAS CITY, MO.

THE 1909 Annual Conference of the British Institute of Journalists was held in the Council Chamber, Plymouth, England, Monday, Tuesday and Wednesday, 30th and 31st August, and 1st September.

In addition to the important meetings in connection with the conference, the following are worthy of note:

Reception in City Guild Hall to the members of the Institute by the Worshipful, the Mayor and Mayoress of Plymouth, Mr. and Mrs. A. Edmund Spender. Also the Conference Dinner held at Royal Hotel.

The group photograph of the delegates to the British Institute of Journalists, was taken September 1st, 1909, immediately following the adjournment of the morning session. The place selected being in front of St. Andrews church which occupies the site of the building where the pilgrim fathers held their prayer service immediately before sailing on the Mayflower. The single picture on the lower margin is that of Hon. Samuel S. Campion, J. P., of Northamton, England, President of the Association at such conference, and in the front row and reclining to the right, we recognize the picture of the Hon. Herbert Cornish, the Secretary. Near the center of the third row from the front, we see the likeness of the Hon. Henry W. Lawson, Editor, and now President of the Institute and proprietor of the London *Telegraph*, and immediately to his right is the Hon. Walter Williams of Columbia, Mo., and the Worshipful, the Mayor of Plymouth, Mr. A. Edmund Spender. On the extreme left of the picture occupying a chair is Mr. Wm. Hill of London, and standing just back of Mr. Hill is Mr. C. B. Hayes of London News Agency, Limited.

A. P. Steer, Photo., Plymouth, England. Institute of Journalists, Plymouth, England.

One of the principal features of the convention, was the presence of Walter Williams, Dean of the School of Journalism of the University of Missouri, U. S. A. The presentation of his important paper on College Journalism, Tuesday P. M., created great interest among all of the delegates in attendance, and the remainder of the afternoon session, and as well a part of the morning session following, was consumed in discussing Mr. Williams' paper. The reception accorded Mr. Williams on the following morning was most noticeable. A hearty applause and greeting marked his entrance into the Council of Deliberation. Unanimous thanks of approval by a rising vote was extended the Missourian for the great interest his presence and paper had awakened in the Congress.

On the evening of Wednesday, the 31st of August, the annual Conference Dinner was held in the spacious dining-hall of the Royal Hotel, and here again, Mr. Williams distinguished himself, and in a most eloquent manner presented to the great assemblage, the toast "The Mother of all Plymouths." Mr. Williams proved himself a credit to his state and country, and his address was received with the greatest of enthusiasm. The writer of this article had the pleasure of a conversation with Mr. Campion, the President, on the following morning at the Royal Hotel, and Mr. Campion stated that the coming of Mr. Williams with his splendid paper, and most able speech, had aroused great interest at the Institute; was highly appreciated and the benefits derived therefrom could not but prove long and lasting.

Plymouth was an ideal place for such an important Congress. For Plymouth's name is "writ large" on the history of England, whose early growth of supremacy on land and sea is beautifully interwoven alike with the history of "the mother Plymouth sitting by the sea." Perhaps next to the historical charm surrounding St. Andrews Church, is the Barbicon, the point from which old Plymouth radiated. Here can be seen the place from which the Mayflower sailed with its precious freight in 1620, and again near St. Andrews Church is St. Andrews Cross, and almost in the center of Guild Hall square on the site of the old churchyard which was the resting place for centuries of the forefathers of Plymouth; again on the south side of the square stands Guild Hall without a rival in stateliness in the south and west of England. It was built from public funds for the benefit and pleasure of the people. It has 14 large windows with stained glass, and each containing historical information in connection with the city.

[With Mr. Williams at the Institute at Plymouth were Ethelbert Allen, one of Kansas City's most distinguished citizens, and Campbell Wells, of Platte City, Missouri, for years chairman of the executive committee of the board of curators of the University of Missouri.—EDITOR.]

CHICAGO, DECEMBER, 1909

Opportunity is the demand of this age and country and to point the way, and when occasion may require, to open up, to help in the building and to keep clear of obstructing monopoly or other selfish devices of greed or special privileges, free, high roads of opportunity for each and every one, are to be the highest services of the independent American press for the coming years.

* * *

When honored, recently in New York, by his brother publishers, upon retiring, after fifty years of a successful career in the calling which he had honored, as recorded elsewhere in this issue of the NATIONAL PRINTER-JOURNALIST, Mr. David Williams, of the *Iron Age,* expressed thankfulness, that it had fallen to his lot to enter life and business at the time of the beginning of the wonderful industrial accomplishments, the consummation of which he had been permitted to witness and in which he had taken part. To understand how great and numerous the substantial reasons for his thankfulness, every editor should read his eloquent words, and the just encomiums of his successors, in presenting to him a slight memento of the esteem in which he is held.

* * *

Mr. Williams won a fortune running into the millions in useful work for the patrons of his paper, not one dollar of which was ever tainted with dishonesty, greed or graft. The question of importance to all workers in the calling of editing and publishing is as to whether the possibilities today are as great as a half century ago. We believe that they are greater. Never have there been greater advances in all departments of newspaper making than during the past decade.

* * *

Great changes have been worked in the years just passed. Greater personal, professional, business and material equipments are required than ever before; higher, more direct and helpful work and results are demanded but the field is vastly enlarged for those who deal with men and their affairs; with social conditions, government, industrial pursuits and all other callings. There are new and greater difficulties to face, to meet and to overcome and more important victories to win.

* * *

Progress must now come through a more thorough understanding, a deeper and a more sympathetic knowledge and a more intelligent and systematic application of that knowledge—through the making the most of all natural resources and their conservation, and the conservation of men as well, and the wise, harmonious direction of all their powers and the fortifying, safeguarding and upbuilding of their work and lives with a view to individual and common good. Man is rapidly subduing all nature, the land, the water, the air, the mechanical forces, the elements of heat and electricity as well as the mysteries of mind and soul, and making them to do him service, where, in the past, the muscles of the body and the sweat of the brow were the main reliance for accomplishment. To direct, carefully, safely and successfully, the forces now brought into service, a knowledge of all the laws of the material world, of mind and heart, of the natural, governmental, social, mental and moral sciences, must in a great measure, be understood. All human knowledge must be specialized in order to subserve and direct the forces now necessary to command, and to restore, resources that have been wasted through ignorance, profligacy or recklessness.

* * *

When men lived in a measure isolated, or in scattered communities, they were independent of or little affected by the condition of their distant neighbors. Today, when the homes of the people touch one the other, conditions are entirely different. When the foot or bridle path would answer every purpose, questions of street or road construction and improvements were unknown, but when population increased and existence depended on the transportation of the products of the fields and of the shops and factories, improved highways became not only a necessity but among the very greatest promoters and conservators of the wealth of the people. The more dense the population the more interdependent are men and the more are they at the mercy of their neighbors, and the more are they affected and influenced by the conditions of all others. Contagions may not spread at all in the country where homes are isolated, but in a city the greatest precau-

tions must be taken and strictest rules and laws against the spread of diseases must be enforced. Crimes, all kinds of wrong and injustices, as well as poverty, are incident to great populations and seem in a measure to have become contagious.

They attract less attention and arouse less indignation. Individuals are lost in the great mass of humanity. A striking illustration is the growth of what has come to be known as "white slavery." It is authoritatively stated that two hundred thousand women in this country are, today, living in the most loathsome slavery. Many have been lured into their slavery through promises of honorable employment, others through promise of marriage and seduction—by the taking advantage of the noblest sentiment and instincts of love and motherhood,—others by actual violence. The average lives of these slaves, during which they endure degradation, shame, beatings and sufferings unknown to the most degraded African slavery, is said to be five years. In order to meet the demand, forty thousand free white girls are enslaved every year, and vile men, their masters, live off their unholy earnings. Yet this traffic is carried on with the connivance and knowledge of public officers, elected by the people to guard their rights. These are the daughters and sisters of free men. Their enslavers go unmolested, live in luxury and dissipation, or, if caught, at the very worst go free on the payment of a small fine—one-tenth as much as the price of a negro in slavery days—or after being kept in jail six or twelve months. There is no sane, right-minded man but that deems such a a crime should be punished with death, yet there is no outcry, no general uprising, demanding the release of the enslaved, suffering a slavery worse than death, and the prompt execution of their enslavers and murderers, though any man's wife, daughter or sister is liable to be the next victim of these fiends in human shape.

* * *

In the early days, when every man, past middle life, owned his own shop or his own farm or his own store, and his employes became members of his own family, or at the remotest, were the children of his neighbors, there were no labor questions to settle. Wages were low, but so was also the cost of living and every apprentice was taught directly by his employer and every journeyman was looking forward either to the becoming a partner in the business or to owning a business of his own. Employer and employes were like members of one family, were friends, and comrades. The increase in population, production, and demand has changed all this and the interest of employers in their employes is a thing of the past in nearly all large establishments. The feeling of the head of establishments for the wellbeing, morals and good behavior of those to whom he pays wages, is a thing, too, generally unknown. Everything is too much on the basis of get all you can for as little as you can and leave the results to the devil. So much has this come to be true in large cities, especially in the employment of girls, that wages are placed so low that, it is stated, that in many department stores and some factories, girls are driven into "white slavery" in order to piece out a living, and employers, though getting services for less than they are worth, are swelling their profits and hoarding up wealth off of the immoral wages of these white slaves—unwarned by the press, the people give them their custom and share in their blood money.

Transportation and many other problems, besides monopolistic organizations and methods in restraint of trade and to crush out individual effort or success, have developed out of the great extent of manufacturing and commerce, so that the subduing of the forces of nature and bringing them to do men's services, redound largely only the enrichment of the few to the impoverishment, degradation and damnation of the many.

* * *

In view of all this and of the fact that, with a square and equal chance, never were the opportunities for the benefiting and upbuilding of all, who can estimate the field open to a fearless, independent, ably, conscientiously conducted press? The members of the newspaper calling have the means under their control for the broadest enlightenment of the people as to their rights, and the enforcement of justice and righteousness, and to win, in the end, a success that will be honorable and adequate. In this month, in which we commemorate the birth of the Savior of man, who lived, taught, suffered and died for men, it is well to get new inspiration and to take lessons as to duties and opportunities for service.

* * *

The conditions are right and ripe; a glory and a progress can be attained beyond the noblest dreams, but the press and the people need men, great-minded, brave, noble-hearted men, such men at the head of every newspaper, as was Richard Watson Gilder of the *Century Magazine*, who so recently passed away, with hearts of fearless heroes, and the loving sympathy of good angels; with a courage that never quails before the doers or champions of wrong or shame, no matter how lofty in position or how strong in power, or organized pelf. These must work inside and outside their publications, and when their work is nobly done, we may all rightly be joyous in the glories of a glad, pure and holy Christmas time, but until then we should work and hope and pray or else slink into darkness and hide our faces in very shame, for no other age has been blessed with such advantages, and possibilities of making this earth a very Heaven of enlightenment ,of freedom from all care, want, injustice and wrong, with every dweller in the land surrounded by abundance, comfort, security and happiness.

On November 10th, 1831, was issued the first number of the Illinois *State Journal,* in weekly form, and later became a semi-weekly and from that evolved into the daily and semi-weekly, published by the Journal Company today. On November 10th, 1909, just seventy-eight years to a day from the first issue, it moved into new editorial quarters. The increase of the staff and the growing needs of the paper necessitated the providing of larger apartments. There are not only larger, more modern and attractive news rooms, but the bindery, connected with the publication which is also making strides in growth, has been enlarged by a suitable addition.

The *State Journal* is an excellent morning daily of metropolitan proportions, ably edited and conducted.

* * *

In his writeup of the editorial trip through the Northwest and Alaska, with the National Editorial Association, Editor Adolph Candrian of La Crosse, Wis., not only spoke highly of Alaska but expressed a decided preference for a vigorous climate, with perceptable changes of season, for health and the development of strong, hardy, fully developed men, over a monotonous climate like Southern California. Mr. Candrian said among other things, first quoting the words of another writer as to nature's method of highest creation:

"'Through the sudden changes of weal and woe, heat and cold, nature produces its most magnificent creatures.'

"But it does not and cannot do it in California! Sad commentaries of its 'heavenly' climate are daily to be seen right in the railroad depots of Los Angeles, where whole stacks of coffins are piled up, of health seekers on their last return voyage home!

"Regarding California's means of subsistence, notably in Los Angeles, it cannot be denied that the tourist crop consitutes its main revenue. So long as the wealthy people from the east, and south and west pour their millions into California and choose to make it their sport and playground, it can surround and sun itself in luxury and splendor, but not otherwise!

"Far be it from me to decry or to 'knock' California, and in my subsequent sketches I will, in detail and without a particle of prejudice, describe its real possibilities and advantages, as I see them.

"At Santa Catalina island, one of Los Angeles' cleverest attractions, I had the pleasure to meet Mr. Harry Brook, editor of the 'Care of the Body' department of the Los Angeles *Times* and a writer of national renown, and I spent some time in his genial company. Mr. Brook and the *Times* are doing pioneer work of incalculable value for the cause of rational health culture and drugless and knifeless methods of cure."

Mr. Brooks answered the criticisms of California climate and the answer was published in the La Crosse *Chronicle,* in which paper Mr. Candrian replied at length, repeating his former criticisms and giving his reasons, with a further statement of conditions that impressed him unfavorably. He makes it strongly evident that he considers La Crosse, much more desirable as a dwelling place, which is his right. Editor Candrian, however, is the wrong man to attack when it comes to discussing matters of health or of physical wellbeing or development, for these are his specialties and he is always fortified by an array of reasons and facts.

* * *

The Suffolk *Weekly Times,* of Greenport, New York, John L. Kahler, Jr., editor and proprietor, rejoices in a new home, 25x88 feet in size, two stories in height, with an eight-foot basement. An illustration of the building shows delightful surroundings and "a corner of the office," a pleasant interior. The paper is in its fifty-sixth year but the record shows most satisfactory progress in the past four years under the control of its present proprietor's vigorous, progressive management and methods, though for many years the paper had been classed as one of the best weeklies of its section. As recorded and shown by this issue of October 23rd:

"The past four years have been very busy ones. But the time has been well spent. In some sections the subscription list has been doubled. The single copy sales at the news stands have increased more than 85 per cent.

"The advertising has kept pace with the growing subscription list until the office has had more advertising business than it could handle with justice to its readers. It has therefore decided to enlarge the size of the paper to seven columns to the page, instead of six, giving 160 more inches of reading matter. Its style and general form have also been changed to conform with more modern ideas of newspaperdom.

"The new building has been completed and occupied, new machinery has been installed and the equipment is complete and modern. The boiler, engine, shafting and all unsightly machinery are in the basement. On the next floor are the three big job presses, the newspaper press, the folding machine, type-setter, paper-cutter, proof presses, make-up and composing room."

The point is that, with the right kind of intelligent enterprise, energy and push, there need be no time in the life of a paper, no matter how old, when advancement and growth, increase of influence, goodwill and power, are impossible. The rightly conducted newspaper has a new birth with every issue. This world is old but ever new to those who truly live, hope, strive and achieve.

* * *

Frankfort, Kentucky's capital, is not a large, but it is a most beautiful, historic and interesting, residential city, now rapidly becoming progressive, as is fully proven by the copy of the first anniversary number of the Frankfort *News* that has reached our desk, and from the fact that in a city with a population, at the last census, of less than ten thousand and a county of twenty thousand people, this paper has reached a daily circulation of three thousand copies, equal to one paper for each three inhabitants of the city, including "the fellow citizens of Africa decent" who are not generally counted as great newspaper readers. The paper is to have a magnificent new five-story building next year,

of which an excellent illustration is given from the architect's design. This anniversary number is splendidly illustrated throughout with views of residences, business houses, and public buildings, including Kentucky's new capitol, which is worthy the Blue Grass State and was built "free from the slightest taint of graft" in any form. The portraits show the faces of strong, manly men. This paper has grown through faith in the city and a loyalty to its people and all its interests. This anniversary number contained thirty-six pages in five sections. How the paper has grown is well and instructively told as follows:

Every member of the *News* staff had done everything on the metropolitan newspapers from police court to the most important political and general assignment work. They knew that the people will have the news of the day and that they are no respecters of persons when it comes to seeking a medium. They knew that the medium that ultimately wins favor with the public is the one that publishes the truth regardless of the consequences and that gives the news when it is fresh. The paper that gives "today's news today and a square deal for everybody." The paper that gives its news clearly, succinctly and in a manner to attract the eye and hold the attention of the reader until the story is told.

Then they knew that, having won the public confidence and a general patronage, the merchant with something to sell would learn to seek its columns, for in no other way can he reach the prospective buyer so effectually, so cheaply or so quickly.

The management believed that the time was opportune for the launching of a metropolitan paper in Frankfort. And how well its opinion was borne out is attested by the fact that before the two big Miehle presses had turned a wheel seventeen hundred bona fide subscribers had been put on the company's book. And the *News* claims the state's championship on its initial performance. This circulation has been almost doubled in one year.

At first the advertisers were slow to take hold although the first edition of thirty-two pages was filled with advertising. The merchants responded generously but they had been used to advertising as a compliment to the publisher—they had never been brought to the sticking point nor had the secret of profitable advertising been revealed to them. Most of the advertising matter read in this interesting fashion: "John Smith, the butcher. He sells meat." But John Smith expected no return when he made that solemn avowal—and he got no more than he expected he would get. But the *News* put men into the field who were capable of suggesting advertisements such as bring results. And the results followed, for the advertisements were read and the wide circulation of the paper came to be a matter of history with the Frankfort merchants.

In all matters pertaining to the betterment and advancement of Frankfort and Franklin county the *News* has been the first to speak. At times it has been necessary to handle certain evils without gloves but the results of its efforts are manifest.

So the *News* waxed strong in the public favor until, at its first birthday celebration, it stands as the recognized leader at the state capital.

A few months will witness the erection of the handsomest newspaper building in the entire state. It will be the home of the Frankfort *News* and the Frankfort Printing Company. It will be known as "The Frankfort News Building," and the equipment will be the latest and the best. The structure will be at least five stories in height with a modern basement which will be used as the press room. A handsomely-designed roof garden will add to the popularity of the building.

The paper promises to do bigger things in the future, to be first in all that is essential to its constituency, "to be a leader, never a trailer."

Herein are the leading essentials to the success of every newspaper: First, a well trained, experienced force, who know; second, the news and all the news without respect to persons; third, give the truth without fear as to consequences; fourth, "today's news today with a square deal"; fifth, the news given clearly, succinctly, attractively and in a way to command and hold attention and interest; sixth, as large a circulation among interested, well-served and loyal subscribers and readers as the field can supply as the first means to liberal advertising patronage; seventh, advertising so written, edited and displayed as to give interesting information, be pleasing and entertaining and to be attractive and satisfying; eighth, to be first and ever usefully effective in service to all interests of the city and county covered by the paper; ninth, to have, as soon as possible, the best and most central, most attractive and convenient building obtainable; tenth, to have the most complete, up-to-date equipment; eleventh, to be a leader and ever proposing, undertaking and carrying forward better things and broader accomplishments.

Here is the newspaper decalogue, with an eleventh commandment added to cover the future activities, all set forth in this first anniversary issue of this paper that has succeeded.

A Magnificent Showing

THE AUGUSTA (GA.) CHRONICLE BREAKS ALL RECORDS.

"The South's Oldest Newspaper," the Augusta, Ga., *Chronicle* is doing big things in the way of increases and breaking advertising records.

On November 7th, 1909, the *Chronicle* printed its fourth Fair Edition. It was a 100-page paper—one of the largest papers ever printed in the South, and carried 7,896 inches of paid advertising, which is the largest volume ever carried by a newspaper in the *Chronicle's* territory. No other newspaper printed in Augusta has ever carried half this amount of advertising.

Considering the fact that Augusta is only a city of 55,000 tells a comprehensive story of the conditions prevailing in "The rich Savannah River Valley" and of the regard in which the *Chronicle* is held by the merchants and manufacturers of Augusta.

This edition of 110,544 lines breaks the *Chronicle's* own record which was 79,800 lines.

One advertising man handled and secured this stupendous volume of advertising, as well as handling the entire foreign and local advertising for the daily, Sunday and semi-weekly editions.

There is prosperity in Augusta and the *Chronicle's* Fair Edition plainly tells how very good it is.

Mr. C. B. Hanson, advertising manager of the *Chronicle* is to be congratulated on this remarkable showing.

Long may the *Chronicle* live and prosper.

"Boosting" and Duty

"SUPPORTED BY THE PEOPLE, THE NEWSPAPER MUST SUPPORT THE PEOPLE."

"PROGRESS" is a good motto and certainly not an inappropriate name for a newspaper of the right, helpful, upbuilding kind. The Macdowell, N. C. *Democrat*, S. C. Little, editor, and S. E. Whitten, manager, after fourteen years, has changed its name to the Marion *Progress* and on November 11th, issued a "booster" number, in which a boost was given to Marion's present and prospective industries, and to the business men and all worthy institutions. Halftone illustrations and portraits were used and the needs, possibilities and the resources of its region were set forth, and the proper use and development of the same were urged. The paper not only gave a good example of boosting but preached the new gospel of go-ahead, very effectively. In a well-written editorial about the paper, for the special interest of which credit is duly given to "the enterprising firms and business men who have made it possible by liberal advertising," the editor enunciated some excellent newspaper principles that are applicable to all newspapers, big or little, metropolitan or rural, as follows:

"The publishers of this paper feel that they have fulfilled, up to the present, every promise made to the public and the future of this paper is now in the hands of the people. A newspaper is a public institution maintained by the people and for the people. Without the support of the people no newspaper can exist, unless it is owned by great corporative interests.

"A newspaper's duty is to protect the interests of the people, rich and poor alike, without fear and without favor and without thought of personal aggrandizment. Horace Greely called a newspaper, "the watch dog of the people's interests." Being supported by the people a newspaper must support the people.

"No plans that we might make for the future can be carried out without the support of the public. Of that support we feel sure.

"This county and section asks for a paper worthy of its past, prophetic of its future, asks for a paper which places the prosperity, enlightenment and betterment of its people above mere partisan politics. That paper we hope shall be the Marion *Progress*."

In the carrying out of these ideals this paper of progress declares the following as its platform and it will be found entirely adaptable to any and every newspaper in the United States:

"Good roads, better schools, a full understanding of the opportunities offered in our community, equal taxation for poor and rich alike, a higher plane of Christian citizenship, enforcement of the laws and the upbuilding of our section, is the platform upon which the Marion *Progress* asks for your support."

This issue is claimed to be the largest single edition ever attempted by a weekly paper in North Carolina Many prominent people were interested and contributed valuable articles.

The name of the newspaper edited and published by Secretary R. H. Walker, of the National Editorial Association, at Athens, Alabama, is the *Lime Stone* Democrat. A paper so named ought to withstand wind, flood and fire. However, Mr. Walker's office was in the line of the twisting cyclone that passed over his section of the State on the night of October 14th, and was wrecked. The paper fell not, for its cognomen was founded on a rock. An issue was not even missed, though the enterprising editor and publisher was compelled to accept the willing aid of the good newspaper folks of Birmingham, a hundred miles away. New type, machinery and material were ordered at once, the work of reconstruction was begun and, on November 16th, Mr. Walker moved in, with everything as substantial as the name of his paper indicates.

With the wisdom of the Athenians, he carried a cyclone insurance, so that ready cash was on hand with which to pay for the replenishment.

The lesson, to newspaper makers, is to be always fortified and prepared to meet adverse winds, storms and adversities.

* * *

The December issue of the NATIONAL PRINTER-JOURNALIST goes to press too early to give any account of the meeting of the Executive Committee of the National Editorial Association in Chicago, December 7th. The members are to meet and be entertained at the new building of the Press Club of Chicago and can be relied upon to prepare an attractive program for the Twenty-fifth, or Silver Anniversary, Convention of the National Editorial Association, which was organized in New Orleans, La., February 19th and 20th, 1885.

VERSATILITY OF THE JUNIOR LINOTYPE

The Mergenthaler Linotype Company up to the present time, has completed twelve different fonts for their two-letter Junior, ranging in size from 6-point to 10-point. This gives the machine a greater varsatility and widens its scope, so that a large proportion of ad, job, and miscellaneous composition can be produced, as well as straight matter for the paper.

The large assortment of plain and fancy rules and borders, (more than 300), which can be made on the machine, adds greatly to its value as a job office accessory. These can be cast up in quantities automatically, at any time when the machine happens to have an idle hour or two, and can be kept on hand in plentiful supply. They can be used lavishly, as there is no waste entailed, since they are all returned to the crucible after being used, to be recast into bright, new material again.

This is only one of the many great advantages to be derived from the use of a strictly one-man machine, which is absolutely automatic in all its operations, except the manipulating of the keyboard. Its price ($1,500), is so low, and the terms on which it is sold are so liberal, that not even the smallest office need be deterred from installing one, as it will more than pay for itself in actual profits and economies effected by its use.

Christmas Not Xmas

A BRIGHT, suburban paper has reached our desk, bearing the name, Rainier Valley *Record*. It is neatly gotten up and began its fifth volume on Nov. 18th. This is not old, but it is a pretty good age for a paper that serves a suburb of the new city of Seattle which has not had outlying communities for very long, sufficiently populous to support a local press. The *Record* has shown very satisfactory growth under its present editor and manager, Edwin S. Gill, who, in the nineteen months, has increased the circulation four fold as shown by the receipts for postage paid at the local postoffice. The size of the paper has been nearly doubled during that time, its general news service has been increased and everything possible has been done to give its people "the best paper." As the secret of success and as a claim for recognition and business, the paper gives the following, that will be appreciated by all successful newspaper makers and should be heeded by all others, as to services for their constituent communities, if liberal support is expected:

"Throughout its career the *Record* has stood unflinchingly for the advancement and upbuilding of the Rainier Valley, advocating all that was best and opposing that which it felt was not for the best interests of the people as a whole."

But what first attracted our attention in this paper, was the following editorial, surrounded by a border of stars, rightly criticising the irreverent abbreviation of the name of what has become, everywhere in this land, the dearest, sweetest and most sacred of all holidays, Christmas:

Again as the holidays approach does the fool appear who seems to think it smart to write Christmas, "Xmas." The *Record* desires to give notice now to all its readers and advertisers that the term "Xmas" will not be permitted in its columns. The Savior of mankind was not known as Jesus X, nor is he so known now. "X" is the symbol for the unknown quantity in mathematics, but it is not the symbol for the Son of Man.

No one would think of writing "Xians" for Christians, yet it would be no more foolish or reprehensible than is the custom of writing "Xmas" for Christmas. The editor of this paper does not lay claim to any superior goodness, but there are some things he cannot stand for and the sacrilege of writing Christmas, "Xmas," is one of them. So please remember that "Xmas" has no place in the vocabulary of the *Record* and will not under any circumstances be permitted in its columns, either in a news way or in advertising.

A newspaper should always show reverence and regard for the highest and holiest sentiments of its read ers, whatever may or may not be the private belief of its editor. It matters not what may have been the origin of the earliest Yuletide festivities among our remote ancestors, it is the name and life of Christ, the story of His gift to man, His life of service and sacrifice, His teachings of the brotherhood of men and the Fatherhood of God, of the preciousness of little children and His love for them and regard for their innocence and purity "for of such is the kingdom of Heaven," that gives the deep meaning to Christmas.

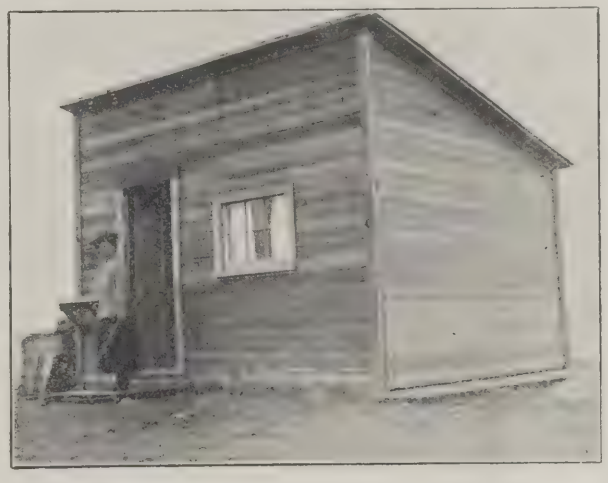
Pioneering

AN EDITOR'S DAUGHTER SECURES A GOVERNMENT CLAIM IN MONTANA AND IS OPENING UP A HOME.

In giving an account of the editorial trip through Montana, we mentioned the pleasant incident of a visit to the party at Billings, of Miss Todd, daughter of Editor Irving Todd, of the *Gazette*, Hastings, Minn. She is a newspaper woman by inheritance and practice and a printer as well and has worked in both departments. She has been a frequent attendant at the National Editorial Association and was welcomed, at the train for Seattle, by many old friends, who were a little surprised to learn of her venturing into the wilds of the frontier to open up a new home for herself but it was recognized that in this she exhibited the true newspaper spirit. She went in search of health as well as of land and found both. We asked her to send a picture showing how a lone printer-girl looked in a claim cabin. She has complied and her friends will be pleased with the accompanying letter and illustration:

DEWDROP INN, MOUNTAIN VIEW RANCH,
LAUREL, MONT., NOV. 9, 1909.

DEAR MR. HERBERT:—I feel very much flattered at your request for a picture of self and cabin, taken on my ranch in the wilds of Montana, to be published in the NATINAL PRINTER-JOURNALIST, so have enclosed one. Knowing the wide circulation of the JOURNALIST among my friends of the National Editorial Association it will give them an opportunity to see how one of their members has been living the past year. Even though I have been corralled, lassoed and branded into the cowboy girl association of Montana, I shall always claim a membership with the pen pushers of the N. E. A. and trust I may be so situated as to join in their next trip.



An Editor's Daughter, Pioneering in Montana

You asked for a little writeup on ranch life, but as my experiences have been so numerous and my life so varied I fear it would be hardly possible to keep within reasonable bounds of space, so will not attempt anything of the kind, only to say I am enjoying the new life immensely, yet would not advise anyone to do likewise unless they have the makeup of true sports, willing to endure a few hardships, and equal to anything from riding a bucking broncho to milking a cow.

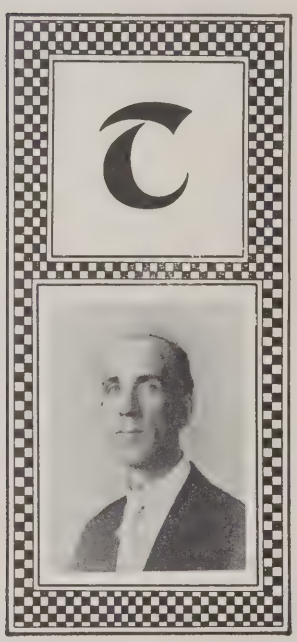
Thanking you for the notice in the JOURNALIST of September and with kind regards, I am,

Yours sincerely, LOUISE TODD.

L. I. Holliday, who has been publishing the *Bulletin* at Kent, Iowa, has discontinued the newspaper, giving as his reason that the town was too small for its support. He goes to Gunnison, Col.

REVIEW OF JOB PRINTING

Address all communications to E. S. Hanson, 925 Linden Ave., Wilmette, Ill.



THAT competition which was spoken of a couple of months ago has caused some inquiry and comment among the friends of this department, and I am now ready to announce the details of it so that those who desire to compete can get busy and prepare their specimens for entry. As announced previously, the contest will take the form of the designing of department heads for this paper. Although there are several departments in the Journalist, only one head need be submitted, however; and in order to make them uniform we will ask you to submit a heading for this particular department. The copy will be the same as to be found at the head of this department as it now runs, with the exception, of course, of the monogram. The contestant need not confine himself, however, to the matter found there unless he so desires. That is, he may use his own discretion in adding other matter if he feels that it would be to the advantage of the department to do so. For instance, someone may think of a catchy phrase which will accurately describe the work which this department is attempting to do. If so, he is at liberty to include it in any manner which he sees fit. Thus it will be seen that the contestant is allowed extreme latitude in designing a head.

Practically the only restriction that we care to place on him is that he must use such type, rule and ornaments as are the ordinary product of the type foundries, not using any specially engraved designs. Under the circumstances it is not necessary to state that the specimen must be submitted in black and white only. The contestant need not limit himself to the exact depth of heading now used, but it is not our purpose to get into headings which take up too much space.

All specimens on this contest must be in by February first and announcement of awards will be made in the March issue.

The principal consideration which will be given for the successful specimen is that it will be used for several months at least as the heading of this department, and possibly the successful contestant may be asked to modify it for use at the head of other departments in this publication. In connection with the heading the typographer will be allowed to use his own imprint, which must be a personal imprint of the one who sets up the head, and not the imprint of the firm with which he is connected. The compositor should set up this imprint with his specimen, sending one proof containing the imprint for identification and one proof without the imprint for submission to the judges. The proof containing the imprint can be enclosed in a sealed envelope and sent with the plain proof. The imprint should preferably give merely the name and address of the compositor followed by the word "typographer."

In addition to this recognition of ability which this imprint will give to the successful contestant, he will also be given as a premium a 24-inch Lincoln type measure. This is an extremely handy article for any printer, being in the form of a steel tape which rolls up in a small German silver case, the same as an ordinary pocket tape measure. It not only has an inch scale, but is graduated for all sizes of type from agate to pica.

While of course only one heading can be used, at least for the present, the contestant whose work is ranked second will receive a prize of a 10-inch Rouse job stick. This is a nickel-plated stick, 2¼ inches deep, and just the kind of a tool that every printer is anxious to possess for himself. Its instantaneous and accurate adjustment to picas and nonpareils makes it a valuable addition to any man's equipment.

I believe that this contest will develop some latent possibilities among the readers of these pages and that the result will be a heading better than we have ever had. I am anxious to have this such a perfect piece of workmanship that it will remain at the head of this department for a number of months as an example of what such a piece of work should be. I want it especially to show the possibilities of type composition for such a purpose as this, and I want it to prove conclusively that it is not necessary to call in the services of an engraver whenever a piece of work of more than ordinary importance is to be executed.

I have now put the matter squarely up to the fellows who are following this department from month to month, and from now on the success of this contest depends largely upon them. I do not have any fear but that there will be a sufficient number of creditable entries from which to select a suitable heading for our use; though if there should not be I presume the publishers of the National Printer-Journalist would not hesitate to turn down all the entries and either get up a heading of their own or resort to the engraver, as they have done at a number of other times. My hope is that we may produce a heading which will make such a favorable impression that this method of securing them may be kept up indefinitely. Who will be the first to send in a specimen?

I am trying to reproduce from a half-tone print a group of printed booklets done by the Bartlett-Orr Press, of New York, and sent out by C. B. Cottrell & Sons Company to show the work done on this company's new series high-speed two-revolution press. It is an array of handsome printing which ought to be an inspiration to any printer.

Covers from Bartlett-Orr Press, New York

* * *

A recent copy of the *Iron Port,* published at Escanaba, Michigan, contains the announcement that our old friend, Chas. C. Metcalf, has been elected secretary and treasurer of the company which publishes that paper and will fill the positions of manager and editor. Personally we wish to congratulate him on these evidences of prosperity, though it will probably mean that we shall see and hear little of him in this department from this time on. While Mr. Metcalf leaves the post of foreman he will see to it, I feel satisfied, that the work of the mechanical department is kept up to its customary high standard.

* * *

One of our readers takes occasion to write me an explanation of the why and wherefore of some work which I quite severely criticised in the November number. The letter is so personal that it would be entirely out of place to reproduce it or even give any clue to its origin. The writer says, however, that the work was not due to any lack of knowledge or artistic sense on the part of the compositor but to the insistence of men who knew something about typographic styles a quarter of a century ago. The customer insisted on having "something different," and he certainly got it, in spite of the protest of the compositor, whose artistic sense was sorely outraged. I am very glad to get this explanation, though the facts are about as I had suspected all along.

* * *

Howard C. Hull, who is now manager of Hull's Art Printery, Ashville, N. C., appears to be very busy for he has time to write only a couple of lines with his last bunch of specimens, just to let us know that he is still printing. He very thoughtfully sends a black-and-white proof of his letter head, which I wish more of our contributors would do on their color work. This head is on green stock and printed in a very satisfactory combination of green and red.

* * *

One of the most attractive catalogues which it has been my pleasure to see for several months is one which recently reached me from the Chandler & Price Company, of Cleveland, Ohio. I shall try to reproduce one or two pages, though no reproduction can show the beauty of the engraving, the perfection of the press work, the exquisite delicacy of the color combinations or the stippled effect of the stock. I am not authorized to say so by the company, but I imagine they would be glad to send a copy of this catalogue to any printer, and it would certainly repay a careful study from a typographic standpoint.

Attractive Catalogue Title Page

The type founders never forget the coming of Christmas and are usually prepared with a suitable selection of borders and ornaments. I consider it quite a piece of good fortune to have received a specimen book from Barnhart Brothers & Spindler showing their selections for the Yule-tide. It contains some borders and ornaments which depart, to a considerable extent, from the conventional Christmas decorations and are remarkably well executed. They are combined in a number of attractive designs with the Barnharts' Engravers Old Black text, which makes a remarkably attractive combination appropriate for Christmas printing.

* * *

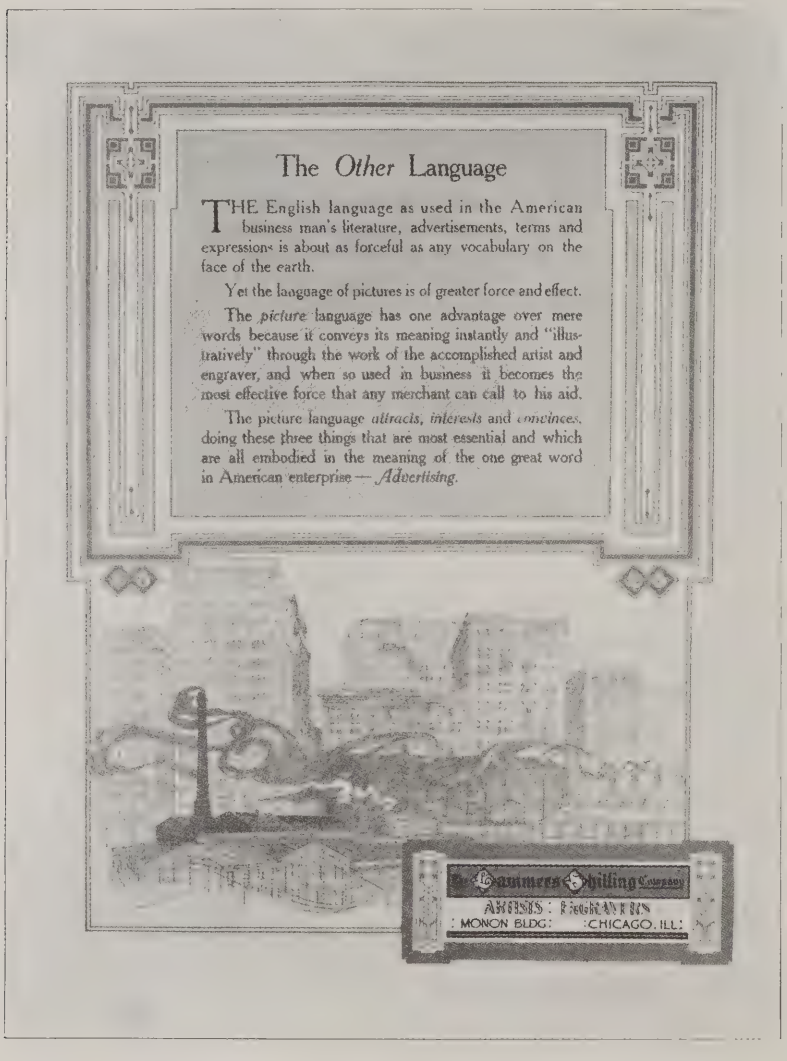
Leo N. Sanford, of Stanley, North Dakota, sends in a number of specimens to supplement those which he sent last month. About the only criticism I can offer is the use of the heavy black rules on two or three of the jobs. When rules as heavy as these are resorted to they should be run in a very light color in order to soften them down so that they will not attract all the attention from the matter which they are supposed to ornament. Several of your jobs, however, show unusual excellence.

* * *

Harvey H. Sherer, Waterville, Ohio, in sending his subscription for the National Printer-Journalist, says that he should like to have criticism on his letter head. The head is of rather a peculiar makeup, due to the fact, I take it, that Mr. Sherer has had but brief experience in the mechanical end of a print shop. The most serious fault, however, is an alarmingly apparent error in spelling, which I can account for only on the theory that Mr. Sherer is of foreign birth and has not yet mastered the English language. My suggestion to him would be to use these heads for scratch pads and print a new lot, making sure to spell the word "artistic" as it is found in the dictionary. I wish that I might get a glimpse of the type faces in your plant so that I could suggest a better line for you to use in your heading; but I do not know what your equipment is and possibly this is the best one you have. I should suggest also that your own name be set in a line of caps in an extended letter, of a somewhat smaller body than the line you have used.

* * *

I want to beg the pardon of Warren S. Dressler, of Camden, N. J., for making two or three errors in his address in our last issue. He has become such an old friend to us of this department that we all of us know where to locate him, but from what he writes me I judge the error has caused him considerable personal annoyance, a number of his friends evidently taking the opportunity to poke a lot of good-natured fun at him. At the same time Mr. Dressler sends a number of other specimens which I have looked over with considerable interest. He asks especially for my opinion on the stationery of Gluck Brothers. From the standpoint of composition it could scarcely be improved upon. I do not like such a decided color; but



The Other Language
THE English language as used in the American business man's literature, advertisements, terms and expressions is about as forceful as any vocabulary on the face of the earth.
Yet the language of pictures is of greater force and effect.
The picture language has one advantage over mere words because it conveys its meaning instantly and "illustratively" through the work of the accomplished artist and engraver, and when so used in business it becomes the most effective force that any merchant can call to his aid.
The picture language attracts, interests and convinces, doing these three things that are most essential and which are all embodied in the meaning of the one great word in American enterprise — Advertising.

ARTISTS : PROGRAMMERS
MONON BLDG. CHICAGO, ILL.

THE First International Cost Congress *of* Employing Printers will meet at *Chicago* Monday, Tuesday *and* Wednesday, October 18*th* to the 20*th*, 1909

Purpose of the Congress

THIS meeting is called for the purpose of *standardizing the method of figuring costs* and the *adoption of an international cost-finding system.* Delegates from the leading printers' organizations of the United States will be present, and men who have made a special study of cost accounting as applied to printing will present papers and give talks on this subject.

An elaborate program of entertainment has been arranged, and every printer in Chicago is especially requested to serve on the reception committee, and so give the delegates and visitors from other localities reason to remember Chicago's welcome and hospitality.

W. J. HARTMAN
President BEN FRANKLIN CLUB, *Chicago*

that is a matter of taste and was, I understand, decided upon by the customers themselves. It is all the more unfortunate because it is a color which does not admit of reproduction, and I am therefore unable to show any of these specimens which are, in some respects, the best of the lot. Mr. Dressler again sends some reset specimens which are of particular interest.

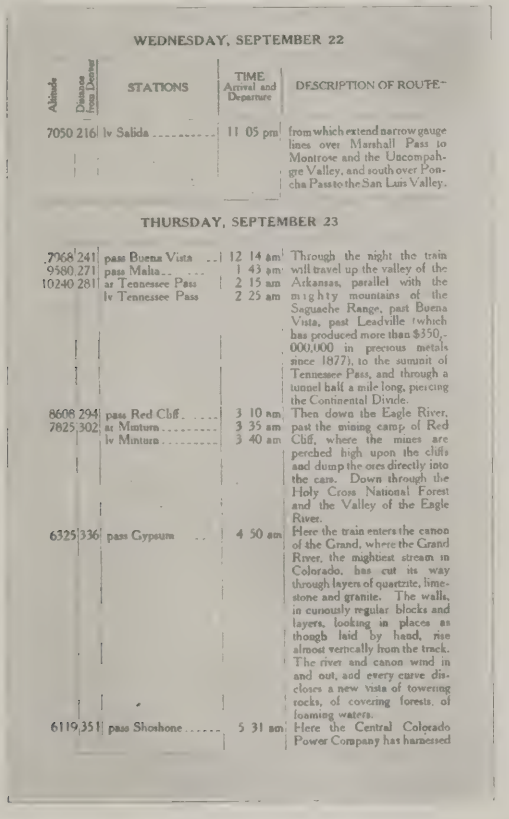
The latest to be received from the Carson-Harper Company, of Denver, is a little booklet giving the schedule of President Taft and his party from Denver to Salt Lake City over the Denver and Rio Grande



WEDNESDAY, SEPTEMBER 22

Altitude	Distance From Denver	STATIONS	TIME Arrival and Departure	DESCRIPTION OF ROUTE
7050	216	lv Salida	11 05 pm	from which extend narrow gauge lines over Marshall Pass to Montrose and the Uncompahgre Valley, and south over Poncha Pass to the San Luis Valley.

THURSDAY, SEPTEMBER 23

7068	241	pass Buena Vista	12 14 am	Through the night the train
9580	271	pass Malta	1 43 am	will travel up the valley of the
10240	281	ar Tennessee Pass	2 15 am	Arkansas, parallel with the
		lv Tennessee Pass	2 25 am	mighty mountains of the Sawatche Range, past Buena Vista, past Leadville (which has produced more than $350,000,000 in precious metals since 1877), to the summit of Tennessee Pass, and through a tunnel half a mile long, piercing the Continental Divide.
8608	294	pass Red Cliff	3 10 am	Then down the Eagle River,
7825	302	ar Minturn	3 35 am	past the mining camp of Red
		lv Minturn	3 40 am	Cliff, where the mines are perched high upon the cliffs and dump the ores directly into the cars. Down through the Holy Cross National Forest and the Valley of the Eagle River.
6325	336	pass Gypsum	4 50 am	Here the train enters the canon of the Grand, where the Grand River, the mightiest stream in Colorado, has cut its way through layers of quartzite, limestone and granite. The walls, in curiously regular blocks and layers, looking in places as though laid by hand, rise almost vertically from the track. The river and canon wind in and out, and every curve discloses a new vista of towering rocks, of covering forests, of looming waters.
6119	351	pass Shoshone	5 31 am	Here the Central Colorado Power Company has harnessed

Railroad. It is very admirably arranged as the selection of a page shown herewith will show.

* * *

Arthur H. Farrow, Newark, N. J., sends a bunch of specimens which are well worthy of careful study. The covers of what seems to have been a prospectus for the Country Life Hotel have given me a very delightful half-hour, for I have spent considerable time studying them in detail and noting their excellence. I might say for the benefit of those who see them only in reproduction that the outside border is green, the three initials of the main line are in red and the balance of the job is in black. One of them is printed on rough gray cover stock and the other on a pink mottled cover. The first thing to attract one's attention is the delicacy of the illustration at the top of the page. The typographer has so built his design around this as to make it an integral part of the cover itself and everything else has been planned in harmony with it. Note particularly the two ornaments at the bottom of the page which harmonize perfectly with the illustration at the top and also with the subject to which it is sought to direct one's attention. Of these two covers I much prefer the one on the lighter stock. It is, all things considered, more harmonious and creates a more favorable impression than the other.

* * *

Whenever Winfred Arthur Woodis, of Worcester, Mass., sends in anything to this department it is sure to be something worth while. Am showing two covers which he has recently sent me and which I wish all of of you might see in their original beauty. The smaller one is in two shades of blue on smooth stock, and the larger in two shades of green with the harp ornament in gold and is printed on rough white stock. Personally I prefer the smaller one, though it is simply a question of personal liking and not artistic merit.

THE
STURTEVANT PLAN
Protects and Satisfies Purchasers
The Benefit of Thirty Years Experience.
The advantage of Testing Large Samples in Machines of Full Size, and Opportunity to Purchase on Trial.
30 YEARS EXPERIENCE.
¶ The experience gained in producing for more than thirty years stock reducing machinery of a high class has a real value. Designs tested by thousands of users, and faults discovered and corrected, form a strong basis for confidence. It is only gradually that good machines are evolved. That they do not break is because we have been taught where to make them strong, that they give maximum outputs is because experience has shown how to make them effective. What each will do is known, and in most cases what each will not do. No machine is sold unless believed fit for its purpose. Machinery that is sure to run well is certain of appreciation.
SAMPLE TESTING.
¶ Every prospective purchaser is invited to send samples (transportation prepaid) to the Company's Testing Department, equipped with machines of full size. Here, without charge, tests may be personally conducted, and as thoroughly as is required to determine the adaptability and efficiency of Sturtevant machinery. Trials are frequently ordered by inquirers, and results reported to them. This Testing Department of the Sturtevant works is largely availed of by manufacturers, and decisions of great importance to them are frequently made, and costly errors avoided.
PURCHASES ON TRIAL.
¶ "Because performance equals expectation," Sturtevant machines may be bought on trial and if not satisfactory in everyway —even to the color of the paint— they may be returned. For particulars see our "Special Sale or Return Proposition," Page 27
STURTEVANT MILL COMPANY
HARRISON SQUARE BOSTON MASSACHUSETTS

Lester C. Peterman, Groveport, Ohio, sends a little booklet gotten out for a school of music in Columbus. It is very well done, although it is scarcely up to the standard of work usually demanded by an institution of this kind. The title page might have been improved by a little judicious letter spacing, doing away with the uneven and awkward spacing of the words as they now stand.

Technical Publicity Association Meeting

DO SPECIAL ISSUES PAY?

SO similar in most methods of business and management that bring success, are all publications, newspapers or periodicals that the consideration given to the ever-live subject of special issues, by the members of the leading organization of technical publishers, will be found of value and interest to all NATIONAL PRINTER-JOURNALIST readers. The discussions, given below, were by the most successful and most prominent men in the calling who spoke from wide experience and close observation and the conclusion ought to be that all special issues are valuable when there are reasons for their issue and they are properly gotten up:

The Technical Publicity Association held its second fall meeting on Thursday evening, Nov. 11, at the National Arts Club, 14 Gramercy Park, New York. There was an unusually large attendance at the informal dinner, which was followed by an interesting program. The feature of the evening was a spirited debate on the merits of special issues of technical and trade papers. Arguments were supplied by several men of national reputation in the technical advertising field.

A novelty was the vote taken by the members of the association at the close of the debate. All were asked to confine their balloting strictly to the merits of the arguments as presented. When the vote was counted, it showed that 25 were opposed to special issues of trade journals and 10 in favor. One man voted "Yes, for real issues."

The argument was opened by Mr. James H. McGraw, president of the McGraw Publishing Company, who spoke for the affirmative. He declared that he believes in the special issue to a certain extent, but it must have three features to make it of extra value to the advertiser. "In the first place," said Mr. McGraw, "it must have a legitimate reason for its publication. The editorial matter must be distinctive, and the extra circulation promised must be honestly given."

"When these three are present," said the speaker, "it is unquestionably a good advertising medium."

Mr. McGraw declared that he always put the subscriber first and that the advertiser should put him first. He gave a concrete example of a very well known special, or as he said, "souvenir" edition of a technical trade journal. The situation in this particular field has shown so many changes in the past half-dozen years that there are comparatively few books on the subject. A book if presented with such an end in view," he said, "would become obsolete by the time a demand had been created for it, because of the many changes in the field." The special issues of the trade journal printed each year on the occasion of an annual convenition, according to Mr. McGraw, supplied the place of an engineering textbook, dictionary and encyclopedia for that special field. A number of special issues of this sort if preserved, will have the merit of a series of volumes on special subjects.

That there was a demand on the part of his subscribers for a special issue, was Mr. McGraw's strongest point. He declared that inquiries concerning the special issue to which he referred had been sent out to the subscribers and that over 90 out of every 100 replies received were favorable to the special or souvenir edition. The issue, he said, should be planned along some central idea. There should be some legitimate reason for its publication, in which case it is not looked upon merely as an excuse for soliciting advertising.

This sort of issue, stated Mr. McGraw, is not as profitable as some may think because of the changed conditions of publication.

"But then," said he, "technical journalism is not play. If the paper is made up of paste-pot and scissors it is not worthy to be considered by the man who has money to spend on advertising. The technical and trade paper field has suffered because of its early history and the traditions surrounding it."

Mr. Robert Frothingham, advertising manager of *Everybody's*, made the first speech of those opposed to special issues. Mr. Frothingham spoke vigorously and his enthusiasm was infectious.

"The average special issue," said Mr. Frothingham, "is a tactical blunder and has no place in twentieth century trade journalism. Some advertisers call it graft. It is a practical confession that the publisher is short-changing his readers in all his regular issues. If the matter is live and vital it ought to be in each issue."

The speaker was of the opinion that the failure of the special issues in the past to give returns to the advertisers had done considerable harm by driving out of the advertising field men who might have benefited by other methods of publicity. To him it seemed like killing the goose that lays the golden egg. The average special edition, he declared, is purely for the benefit of the publisher, "and the advertiser pays the freight."

He closed with the words, "the special edition and the archaic business card advertisement are the two diseased members of trade journalism. They are musty relics of days gone by, and the sooner they are consigned to the scrap-heap the better."

Mr. J. George Frederick, managing editor of *Printer's Ink*, spoke earnestly in favor of special issues, but with certain limitations. He cited an instance where the diversity of interests in a particular field required special issues so that the editors might concentrate in separate numbers matter which could not well be presented otherwise. The abuses of the special issue he declared to be the exaggerated value to advertisers as represented by certain publishers. He did not think special issues of very much greater value than the regular issues, but declared there was a medium between the two extremes. "A quiet editorial policy of concentration," he said, "makes a paper more valuable."

Mr. L. F. Hamilton, of the National Tube Co., gave the point of view of a member of the T. P. A. He declared that in his personal experience, special issues had been considered merely on their merits as regular editions at the time they were published.

Mr. Carpenter, of Philadelphia, a new member, declared that his advice to a certain trade-paper publisher, when asked for his opinion on special issues, was:

"Yes, get out one interesting number. For Heaven's sake send us one which we will read."

The Technical Publicity Association elected a number of new members at the meeting. In the absence of President Redfield, Mr. O. C. Harn, advertising manager of the National Lead Company, was toastmaster. Mr. Howard M. Post, chairman of the Publicity Committee, reported very satisfactory progress. He presented a portfolio of technical and trade-paper comments showing graphically the increasing recognition of the T. P. A. as a factor in the technical advertising field. The association, at the close of a very profitable evening, adjourned to meet again Thursday, Dec. 8.

GREAT HELP TO CAUSE OF JOURNALISTIC EDUCATION.

UNIVERSITY OF MISSOURI SCHOOL OF JOURNALISM.
COLUMBIA, MISSOURI, Nov. 15, 1909.

B. B. Herbert, Editor National Printer-Journalist,

DEAR HERBERT:—I thank you for your continued courtesy. The NATIONAL PRINTER-JOURNALIST is a great help to the cause of journalistic education in America.

With personal regards, I am,

Very sincerely, WALTER WILLIAMS.

What a Cost System Has Done for Minneapolis

WITH the above as a topic, Mr. Gilbert L. Byron, of Minneapolis, presented a paper before the International Cost Congress in Chicago, that received general attention and highest commendations. The interest was greater because Mr. Byron spoke of accomplishments, of those things that had been tried with profitable and satisfactory results. An ounce of practical results, or of examples from experience, is often more valuable than a pound of theory. While the proceedings of the First International Cost Congress is being published in full and will be very widely circulated, we believe that the calling attention to some of the facts given in this paper will prove immensely profitable to our readers. The organization at Minneapolis, like that in Chicago and other cities, is called the Ben Franklin Club. It meets twice each month in its own club room. A member usually leads, at every meeting, with a paper pertaining to the printing business. A blackboard is used and chalk talks are frequent. There are no salaried officers and though the printers are busy men, time is willingly given for the benefits received, and discussions are frequently carried on well into the nights. The club is growing steadily, now embracing eighty per cent of the job printing business in the city. The declared object of the club is "promoting a spirit of friendship, and business education between all of the printing offices in the city." Through the education as to cost of work, many thousands of dollars have already been realized by, or saved to, the employing printers. One of the pleasures of the members of the club, that results in benefits as well, is a week-end luncheon held, informally, every Saturday noon, when the members—fellow brother employing-printers—discuss freely experiences, mistakes and achievements of the previous week and strengthen the bonds of friendship through mutual confidence and good fellowship, without which so much has been missed in the past that would have resulted for the best interests of each and all. The results have exceeded, in a social and business way, the fondest hopes of all. Mr. Byron gave as his conclusion, "A firm belief that the only foundation for a printers' organization is an accurate knowledge of the cost of production."

"No concern can have absolute faith in itself unless it knows to a certainty the cost of its product.

"Any cost system is better than none. A system that will get at approximate cost is a great help. A simple system that will lead ultimately to something more nearly perfect is, in my judgment, an excellent beginning.

"The average printer is a peculiar man. He is the most faithful, hardest-worked and generous individual that it has ever been my pleasure to know.

"He is above the average man in intelligence and integrity. He is sometimes one of the leaders in his community. He is more frequently a laughing stock in his community, however, and he rarely, very rarely, stands well with his banker.

"Taking it all in all, the master printer, so-called, has been a most composite individual.

"The cost system is developing master printers in Minneapolis. These men are head and shoulders higher in our business community than they were six months ago.

"Concerns which are now being guided by cost systems are actually invited by their bankers to borrow money.

First International Cost Congress in Session in Chicago.

"Concerns which are operating cost systems very rarely take work at less than cost, and only then because they lack the judgment to correctly guess the time it will require to produce the job.

"We are making a close study of proper methods of estimating at present. We hold regular classes in esimating, and, knowing our cost of production, which is half the battle, we are helping each other to learn how to figure.

"This portion of our education we find is even more difficult to master than the science of cost. In ascertaining cost we have prescribed rules to govern us. Estimating has always been guesswork—it probably always will be. No two jobs are exactly alike, and to make one's estimate pan out with the right price for the finished product is an art that most of us have yet to acquire.

"We are studying the matter systematically, however. We have a committee at work on the preparation of a uniform estimate blank which will correspond in general make-up to a blank used in our cost memorandum blank, with the idea that each item in both blanks can be compared item for item after any specific job is completed, which will give a perfectly clear analysis of a job before and after taking. This work is occupying our attention at the present time and will be of inestimable value to us in the further pursuit of our study of the printing business.

"In adopting certain ~~uniform~~ rules for ascertaining cost, I thought there might be some opposition to accepting specific items that are just as surely a part of the cost burden as anything else that enters into our product, namely, a salary for the proprietor and interest and depreciation on his plant. With over sixty cost systems installed in Minnesota rarely have these items been questioned as being too large, nor legitimate expenses of the business.

"I will say, however, that until these items were put into the first cost summary, the last two especially, were overlooked by nearly every shop in the past. This means that an interest charge of six per cent a year, and a depreciation charge of ten per cent per year, or a total of sixteen per cent a year on the value of the plant was donated to the customer.

"Here is a case in point and will prove the value of a cost system as a check on a book-keeping system. Two weeks ago a firm that had just installed a cost system took its first cost summary. The accountant for this firm drew off his regular balance sheet which showed a profit of $500 on the previous month's business. It was difficult to reconcile the cost sheet with this trial balance, however, and in analyzing each it was discovered that the real profit was 50 cents instead of $500, the bookkeeper having overlooked the two little items of interest and depreciation which amounted to the difference of just $499.50.

"It seems to me that few printers have been willing to look facts concerning their own business squarely in the eye.

"Another debatable matter of great importance brought out as the result of studying our cost, is the amount of profit that a printer is legitimately entitled to.

"You can readily believe when a live community once becomes aroused, that plenty of subjects present themselves for discussion, and with most of us who are in dead earnest, these discussions of ways and means for bettering our condition are a most agreeable pastime, I assure you.

"I could argue for an hour on what profit a printer ought to add to the cost of his product. I would advocate a much greater profit than he thinks he is getting.

"There is not the slightest doubt about a cost system's elevating the selling price. It does, notwithstanding the fact that it points out many shop leaks which never could be discovered without it.

"Some five years ago when I began the study of cost in my own business, and gathered what information I could from every possible source, the installation of a uniform cost system seemed to me to be an impossibility.

"Today I am appalled at the struggle most of us have been making for so many years to get at the simple facts.

"Experience is a great teacher, and if I am any judge of the matter, cost systems will never be generally installed without personal supervision in each case, because a cost system is too mysterious a proposition for the ordinary printer to comprehend until it has actually been demonstrated to him in his own shop.

"It is also my experience with cost systems that once demonstrated and worked out, under the personal supervision of an expert, the printer taking every figure from his own records, he would not part with his cost system for the best printing press in his outfit."

S. BLAKE WILLSDEN. NEWSPAPER PREMIUM SPECIALIST, CHICAGO

Mr. Willsden has just presented us with his Unrivaled Live Stock Anatomical Chart, a three-sheet combination containing 6 pages of the best reference matter for the veterinarian, farmer, or live-stock breeder it has been our pleasure to inspect.

S. Blake Willsden

This publication has been endorsed by the Veterinarian of the State University of Illinois College of Agriculture. It has also been endorsed by many Secretaries of State Boards of Agriculture throughout the United States and it is the general opinion that Mr. Willsden has produced a real reference work of great value to the farmer and live-stock breeder. This publication is gotten up at such a low price that any publisher can afford to offer it to subscribers at a very nominal cost, or if they are so disposed, give it free for paid-in-advance subscriptions on weekly publications.

Mr. Willsden is well known to the publishers of daily and weekly newspapers, also farm journals, and has traveled extensively in visiting the publishers in every state and territory of the United States also the Provinces of Canada. His experience enables him to give suggestions to the publishers which will be valuable in circulation promotion work, therefore, anyone placing their business with him can depend upon getting good returns for their money. It will pay you to write Mr. Willsden and learn about the terms for his Unrivaled Live Stock Anatomical Chart.

Henry H. Legler of Milwaukee has accepted the position of city librarian of Chicago, being the unanimous choice of the board. He was one of the nineteen men who took the civil service examination for the position. He was once a newspaper man in Milwaukee, having worked up to the city editorship of the *Sentinel*.

A Retiring Publisher Honored

A TRIBUTE TO DAVID WILLIAMS, OF NEW YORK, WITH INCIDENTS AND WORDS OF WISDOM, OF INTEREST AND VALUE TO ALL NEWSPAPER PUBLISHERS.

ON Tuesday evening, September 28, the third annual convention of the Federation of Trade Press Associations in the United States was brought to a close by a banquet in the Hotel Astor, New York. The retiring president of the federation, David Williams, was the guest of honor on this occasion. The guests numbered in the neighborhood of 90 and included, besides the delegates of the various newspaper associations to the convention, representative men in the iron machinery and hardware industries, the postmaster of New York City and members of the staff of *The Iron Age*. Charles T. Root was the toastmaster and opened the speaking of the evening, saying in part:

I have had devolved upon me a most agreeable duty, which presently I shall endeavor to perform; but before doing so I ask the forbearance of the company while I indulge in a brief personal reminiscence. I came to New York just 34 years ago, my visible assets consisting of a young bride and about money enough to pay our board and carfare for a month. I came with the purpose of breaking into journalism in some form. My first engagement was as a representative in New York of a daily in another city. That did not last very long, because I found my interest speedily attracted to the trade field, which I shortly entered in a very modest way. My attention was soon riveted upon four bright particular stars in the trade firmament. They were the *Oil, Paint and Drug Reporter*, the *Shoe and Leather Reporter*, the *United States Economist and Dry Goods Reporter* and *The Iron Age*. These papers were the objects of my reverence and of my wild dreams, and I often said to myself that if I could ever rise to be the publisher of one of these papers my cup of pride and satisfaction would be full.

Within a half dozen years, I became the publisher of the *Oil, Paint and Drug Reporter*. Another half dozen years and I became the publisher of the *United States Economist and Dry Goods Reporter*. Within 10 years more I published the *Shoe and Leather Reporter*. And a week ago today I was elected president of the David Williams Company, becoming the publisher of *The Iron Age*. I venture on this personal reminiscence because it seems to me that it is not often given to men to realize thus specifically their particular ambitions.

The circumstances which rendered possible the final fulfillment of my early aspirations was the decision of David Williams, the builder and publisher of *The Iron Age*, to retire from the activities of the publishing side of his business and thereafter to devote such time as he might choose to give to affairs to his other important activities. Myself and certain associates sought the opportunity of taking over the publishing business of Mr. Williams, and our negotiations were finally successful. He was not at all precipitate, and I felt definitely complimented when he finally decided that we were suitable repositories for the important trust—which every influential newspaper should be held to be—and which he himself had administered for about a half century. So it comes about that almost simultaneously with his retirement from the presidency of this federation—the crowning honor within the gift of the trade paper fraternity—he relinquishes also his individual activities and responsibilities as a publisher.

Mr. Williams, some of your colleagues, who feel that in honoring you they honor themselves, have selected as a gift to you on this occasion yonder bit of bronze. Its title is "La Forge." It represents a primitive blacksmith and typical iron worker, and therefore presumably a denizen of *the iron age*. At all events, he appears to be a man as sturdy, as downright and as upright as yourself. Perhaps the little statute ought to have been made of iron; but bronze, they tell us, is even more enduring and so better typifies, we hope, your work and your renown. In the name of the donors I ask you to accept this as a token of the cordial good will and esteem that all your colleagues feel for you.

For myself and my immediate associates in the David Williams Company, may I be permitted to add that we, your successors, feel that if we shall be able to hold as high and as firmly as you have done the standards of accuracy, impartiality and unswerving independence which you have raised and maintained over the publications we have inherited; if we can hold to the end of our administration the public confidence that you have won, and if we can at last retire from this field as you are now retiring, unassailed by enmity and unscathed by criticism, followed by the gratitude and affection of your employees and the respect of the trades with which your name has for so long been linked, with malice toward none, with charity for all—if we can

The Bronze Statue, "La Forge," Bearing the Inscription, "Presented to David Williams, President of the Federation of Trade Press Associations in the United States, by His Fellow Publishers, Sept. 28, 1909."

follow in your footsteps to that extent, we shall certainly esteem ourselves among the most fortunate of our profession.

Finally, I cannot say that we regret your retirement from an increasingly difficult business. You have earned an honorable release and it is coming to you. But I will voice the sincere and universal hope that during a long future your life will be as calm, as fortunate and as happy as your past.

And so, David Williams, if we may borrow the classical toast of that beloved vagabond, Rip Van Winkle, "Here's your good health and your family's, and may they all live long and prosper."

At the close of Mr. Root's remarks the applause was so enthusiastic that it was some time before Mr. Williams, who rose to respond, was able to begin. He spoke as follows:

MR. TOASTMASTER AND GENTLEMEN: I have not words to thank you; and yet how inadequate would words be to express the thoughts they represent—much more the feelings, sentiments, memories and hopes that lie at the bottom of my heart. I thank you for this exquisite gift, which I shall always cherish, not only for its beauty but also as a reminder of the donors with whom I have had so many years of friendly association. I thank you, too, for the kind and too flattering words which accompanied its presentation.

This is a memorable night to me. It marks the end of my career as a publisher, reaching back more than 50 years to the small beginning of what has since become a great journal—a business career longer than is given to most men to enjoy. It reminds me, too, that I am nearing the milestone marking the three score years and ten that are supposed to be the limit of man's active life.

It is no light thing to sever old associations and give up what has been one's life work, but it is the common lot. Man, like the trees, has his growth, maturity and age; and a younger generation stands ever ready to carry on the work we have begun.

My life has been a long and prosperous and happy one. If I was born at the time I would have chosen, at the commencement of the most wonderful era that has dawned upon this world, when the arts and sciences, which make the time we live in so different from all that have preceded it, were just beginning to make their influence felt. You young men can never appreciate how great this change has been. What were the wonders of a former time have become the commonplaces of today. Try to imagine the condition of the arts and industry and commerce when I was born. The railroad was emerging from its experimental stage, and had solved its first problems. It already joined together places that were near, but only in the minds of men with the boldest imagination was there any anticipation of the state of things today, when the farthest corners of a continent are connected by bands of steel and its scattered communities have been made a homogeneous and united people. Steamboats plied on inland waters, but ventured little on the ocean, with whose waves they were ill fitted to contend, and gave little promise of the majestic structures of today, which force their imperious way in spite of wind and wave, with the regularity of the clock.

The steam engine, too, had reached the practical stage and had made an impression on the arts and industries. It was said to be doing man's work; but no one imagined that it would, as is the case today, perform the task of giants, rivaling the fabled labors of Hercules. All that was known of electricity was the story of Franklin's kite and a few laboratory experiments, without a hint of telegraph or telephone, electric motors or electric light. Petroleum, with its countless derivatives, was not yet discovered. Gas was to be found in the larger places, but candles and whale oil lamps were still the common sources of light. Coal was used in small quantities within a short radius of the mines. There was no agricultural machinery; in fact, little machinery of any kind. Practically all the mechanical devices which we depend upon so much were lacking. Try to picture what life must be under such conditions and then try to imagine doing business in a city where there were no office buildings—to say nothing of

TO MOTHER GOOSE

Beware! Mother Goose, of the things you may state
Regarding the beasts and the birds;
We are watching the nature observers, of late
So be careful to ponder your words:
From the way in which folks have begun to assail
"Nature fakers," we fear, pretty soon,
There'll be some of them doubting your wonderful tale
Of the row that jumped over the moon

And there is another big yarn you relate
About that most wonderful hen
You venture to tell us would sometimes lay eight
Lovely eggs when she didn't lay ten.
And the beautiful story of "Little Bo Peep"—
(As a "story" we think it is good)
Don't you fear you are wrong when you say that her sheep
Could hang up their tails when they would?

For years you've been teaching your wonderful tales
To our youths in your wonderful way,
And your manner of "seeing things" may be what aids
Our nature observers today
But the people are yearning for facts
That are true
So dear Mother Goose—oh, won't
You be careful, hereafter to tell us, oh, do!
Just when you do mean it or don't?

THE GREATER GOOD.

City Man—I should think you would walk in from your suburban home to your office just to get the needed exercise.

Commuter—Oh I require something more strenuous, which I get by running to catch my trains

The recent polar photographic exposure adds interest to future developments

If expressing the opinion that his endurance is being overtaxed by too much western hospitality and too many big dinners President Taft feels like speaking, no doubt "Defend me from my friends I can defend myself from my enemies."

DR. COOK NOW SEEKS FOR HIS VINDICATION BY HARRY WHITNEY

Hopes to Have a Public Interview With Returned New Haven Man, Hoping to Clear Controversy.

NOW IN NEW YORK

NEW YORK.—Dr. Frederick A. Cook arrived at the Grand Central station early this morning on the midnight express from Boston, where he lectured Friday night.

He was driven at once to his hotel. Tonight he is due to lecture in Brooklyn and tomorrow he will speak in Washington.

He had a brief interview with Harry Whitney, the Arctic hunter of New Haven, on the train and will from now on do his utmost to secure a public interview with Mr. Whitney.

Dr. Cook all along has said that Mr. Whitney is the one man who can do more than any other to bear out the surgeon's claims to having reached the north pole in April 1908.

He has been confidently awaiting Mr. Whitney's return from the north and now that he is here will do his best to seek vindication as far as possible at the hands of the first man he met on his return from the pole and to whom was first confided the fact that 90 deg of latitude had been reached.

Mr. Whitney will seek seclusion for a few days with his family at New Haven. It is said that he has planned an automobile trip to last several days.

Dr. Frederick A. Cook and Harry Whitney met Friday night on the midnight express from Boston to New York and held an earnest consultation. Just what was said is not known, as no newspapers were admitted.

Dr. Cook had telegraphed Mr. Whitney the New Haven Arctic hunter who met Dr. Cook in the Arctic regions and who was the first white man to be made aware of the conquest of the world's northernmost spot, to meet him in Boston.

Mr. Whitney, however, lost the train at Edgewood and returned to this city in an

PORTLAND IS TODAY HOST OF PRESIDENT ON COAST JOURNEY

Mr Taft Remains in Oregon City Until Sunday Night and Has Completed Series of Set Speeches.

TREND SOUTHERLY

PORTLAND, Ore.—Portland today is entertaining President Taft who arrived from Tacoma on the second section of the southerly leg of his trip. He will remain here two days leaving Sunday evening.

The President has completed his set speeches having made eight of first importance but he has talked to audiences more than 60 times in two weeks and a half. His addresses constitute a record of the work with which Congress will be entrusted.

President Taft at Tacoma Friday night received from an audience that thronged the big armory a most cordial greeting. He was entertained at dinner at the Union Club after making the trip from Seattle on board the yacht E. Primere owned by Chester Thorne.

The President has promised to attend another exposition to be held on the Pacific coast in 1915, in celebration of the completion of the Panama canal. Mr. Taft said the date was beyond his term of office but readily gave his promise to attend. The invitation was given by Col. D. C. Collier, director general of the Panama California exposition, which is to be held in San Diego, Cal., the most western coast American city to the Pacific entrance of the canal.

The President's outspoken opposition to self-government for Alaska unquestionably caused consternation in this region and rates right on the heels of the despatch of a petition from Alaska asking his support of home rule in that territory. The President has taken particular pains to let it be known that he feels Alaska has been somewhat neglected in the past.

At a Seattle dinner the President said: "I am doing the best I can to carry

ST LOUIS BELLS WILL RING AS CENTENNIAL DAY DAWNS

Week's Celebration Beginning Tomorrow Will Include Aeroplane and Balloon Flights, a Lecture by Dr. Frederick A. Cook and Pageant Features.

CITY HALL, ST. LOUIS

The city which begins on Sunday the celebration of a century of corporate life now has a population of over 700,000. Its bank clearings in 1908 were $3,974,000,000

ST. LOUIS—With the concerted ringing at sunrise next Sunday morning of the bells of 644 churches in this city will begin the St. Louis centennial celebration, which will continue throughout the week. The important features of the event will be the presence of Dr. Frederick A. Cook, who on Wednesday night will deliver his first lecture here on the attainment of the north pole; Glenn H. Curtiss, who has broken all speed records of flying in a machine heavier than air, will be here.

The Aero Club has closed contracts for the exhibition here during centennial week of the Henry Farman aeroplane and the W. A. Anthaut wireless dirigible balloon.

Monday Oct. 4, there will be distance races for spherical balloons and the reception of mayors of 1004 cities. Tuesday will occur the water pageant commemorating the founding of St. Louis with four United States war vessels participating, and the Veiled Prophet's parade.

Wednesday the corner-stone of municipal buildings costing $1,500,000 will be laid.

On Thursday there will be an industrial pageant comprising more than 200 floats and a costume ball at the new Coliseum.

Friday the national historical and military pageant will take place.

Saturday, the closing day, there will be a race for dirigible balloons over a triangular course, the automobile parade with more than 10,000 cars in line, and the celebration will be brought to a close by a banquet.

On Wednesday Thursday Friday and Saturday aeroplane flights will be made by Glenn H. Curtiss and others.

British and German Troops in New York

HUDSON FETE TODAY GIVEN TO CHILDREN'S FESTIVAL PARADES

Forty-Six Special Districts in Greater New York Are Laid Out for Celebration Exercises.

CARNIVAL TONIGHT

Aeroplanists Ready for New Flights, While the Clermont and Half Moon Continue up the River.

NEW YORK—Today is the day of the Hudson-Fulton celebration which is for the most part devoted to children's features. All the available park space in the boroughs of Greater New York will be given over to festivals and pageants which will be participated in by thousands of children.

Both Wilbur Wright and Glenn H. Curtiss are prepared to make aeroplane flights if conditions are favorable. The dirigible balloon race to Albany has been abandoned by Capt. Thomas S. Baldwin and George L. Tomlinson.

Forty-six special districts have been laid off for the children's pageant. The parade in each district will be in two divisions. The costumed parts in each will be taken by children of all schools while the escorts and the singing will be furnished by thousands of elementary public school pupils. The parade will start early in the afternoon from meeting points appointed for each district.

The part which will be taken by the public schools is fully shown in a special circular issued to the principals of elementary schools in which Superintendent Maxwell directs the school superintendents in each district to organize the elementary school pupils in five regiments to consist of two battalions of six companies each, all the children carrying flags. The said colors will be

skyscrapers—without stenographers, typewriters or even district messenger boys; when quill pens were still used, and black sand served instead of blotting paper.

To appreciate the present we must understand the past. And I am thankful that I have been able to watch the change from the old order to the new and in some small degree to aid in its development.

To what is this wonderful change due? To the sciences which underlie our industrial arts, which in their turn depend on technical literature. So it all comes down to the printing press. Students of history choose different events as marking the turning or dividing point between the ancient or medieval and the modern world. For me there can be but one—the discovery of printing. Before that, men were as strong and brave, endowed with minds as keen, imaginations as vivid, as today. With all our boasted progress we still look for the masterpieces of art and architecture, of poetry, philosophy and

President Favors Ship Subsidies

It is significant that in a section of the country where ship subsidies have been very determinedly opposed, the President's declaration in favor of them should have been, according to the despatches, "received with great applause." The chief magistrate was addressing a gathering of 20,000 people in the National amphitheater of the Alaska-Yukon-Pacific exposition on Thursday when he put himself on record with regard to this matter. It is significant, because it indicates a changing popular sentiment. This sentiment has heretofore been affected by the argument alluded to by the President, that the help that was proposed for our merchant marine "would be a contribution to private companies out of the treasury of the United States." But, as he said we are thus contributing in various ways along similar lines, by our protective tariff laws, our river and harbor bills, and our reclamation service. He might have added that we are doing these things with much less warrant than that involved in the application of national aid to the upbuilding of national commerce. The protective tariff duties may be attacked on the ground that in many instances they serve simply to strengthen private interests, the river and harbor and reclamation, conservation and waterway appropriations may be attacked on the ground that in many instances they simply serve local purposes, but the restoration of the merchant marine is something that concerns every man, woman and child in the United States, since it is at once a matter of national pride and of national interest.

The specific measure that the President had in mind when addressing the great concourse at Seattle was the bill already introduced and very likely to come before the next session of Congress, which undertakes to regulate our merchant marine in a way to establish American lines between Atlantic and South American ports, and between Pacific ports and the Orient and the Philippines. Referring to this proposal, the President said: "We earn a profit from our foreign mails of from $6,000,000 to $8,000,000 a year. The appropriation of that amount would be quite sufficient to put on a satisfactory basis two or three oriental lines and several lines from the East to South America."

There are some things with relation to our merchant marine with which the people of the United States cannot be familiar. If they were there would have been a loud popular demand for constructive legislation in this particular long ago. How many, for example, are acquainted with the fact that our ship tonnage is 200,000 less than it was 100 years ago, or that our ships now carry less than 9 per cent of our foreign commerce while in 1861 they carried 65 per cent, or that there is [illegible]

to facilitate business in this country. The American crop moving season heretofore has invariably witnessed higher money rates. Although right in the midst of crop moving and notwithstanding the fact that it will require more money than ever before to ship the crops to market, the advance in money rates has been comparatively slight. In view of the great expansion in business that has taken place the demand for funds has largely increased from this source, but there seems to be an abundance for all needs. The interest and dividend disbursements for the month of October payable by industrial, traction and railroad corporations are estimated at $161,781,104. This compares with a total for the corresponding month last year of $145,146,496, an increase of $16,574,609. These figures speak more eloquently than words of the business revival that has taken place in this country.

Now that President Taft has smoothed out the wrinkles that were said to exist in that branch of the government devoted to the conservation of our forests, the log rollers and stump speakers will have to find some other timber of which to make a plank for their platform.

Flying Across the Sahara

Postal service by aeroplane across the African desert is the latest project for applied aviation. Word comes from Paris that the French authorities are considering a scheme worked out by the president of the National Aerial League on the basis of the results of the Rheims aviation week. It is a stupendous project, since the Sahara is still one of the greatest barriers to travel and transportation despite incessant efforts made by the French colonial authorities to penetrate it, to establish security and to improve its hazardous means of communication. Thus the mail service established last year among the numerous military posts along the northern, western and southern edge of the Sahara is followed by the telegraph system, which will eventually span the Sahara, connecting Timbuctoo with Algiers. But before this can be attempted, the center of the desert will have to be brought within the scope of military police and posts of unusual strength established between the Niger and Colomb-Bechar, the southern terminal of the Algerian railroad.

Now comes the aeroplane proposition, which puts a new complexion on Saharan travel and communication. It is estimated that the "thousand miles of desert and oases separating the Niger from Colomb-Bechar could be covered in twenty-four hours by aeroplane. At present it takes three months. The aeroplane trip could be made in three stretches of eight hours each, three stations being provided for taking fuel; and the whole journey need not take longer than three days at the most. Doubtless, the use of aeroplanes is not yet sufficiently developed for such a daring undertaking as the crossing of the Sahara, but it is manifest that by conducting experiments on the edge of the desert with a view to immediate penetration, mea-

When the project of a Franco-British tunnel under the channel was dismissed despite "l'entente cordiale," the train-ferry scheme took its place. Winston Churchill recently said that the British government viewed with interest and approval the efforts of the company that had been formed for the promotion of the project. Nearly all the technical difficulties of the channel ferry have already been solved on the Danish, the Zuidet Zee, and the Messina ferries, and especially by the recently inaugurated train ferry by which the German and Swedish governments have joined their railway systems across the Baltic, between Sassnitz and Trelleborg. The trains are enclosed in the steel hull of the specially-constructed steamer, almost entirely eliminating rolling and pitching.

The Channel Ferry

There remains, however, the tidal problem. The difference of sea level in the channel at various tides, is, of course, considerable. While the railroad at Calais, where the French terminal would naturally be, is more than twenty-eight feet above sea level the rails on the ferry will be at thirteen feet at low tide and thirty-eight feet at high tide. Various methods are under consideration to obviate this difficulty. One is to lower or to raise the carriages or lift; another is a special quay with a triple platform that may be adjusted to the ferry by a movable bridge; the third is a modification of the second by two movable levels, a long one to bring the trains to the ferry and a short one serving as a bridge. In short, the scheme is taking tangible shape and since the gauge of the French and English railroads is the same results may be looked for at an early date.

In 1907, it is stated, the three channel lines, Calais-Dover, Boulogne-Folkestone and Dieppe Newhaven, carried 882,000 passengers. There should be a very considerable increase in this traffic as well a in the transportation of merchandise on the opening of the ferry. for during the same year the ferry between Denmark and Germany a mere by-way of travel and transit, carried nearly 100,000 passengers and over 100,000 tons of merchandise with an average of eighty-eight railroad cars per day. To reach England by railroad ferry is quite different from taking a steamer, and it is likely that the new method will be simply a step toward the eventual construction of the Franco-British tunnel.

State Elections This Year

Governors or minor state officers will be elected in ten states early in November, the elections occurring on either the second or the sixth of the month. Only a few of them will have importance, however, in a political way. The election in Massachusetts will be interesting, although the element of doubt will not be present to any great extent. This state gave Bryan 155,543 votes, Taft 265,[illegible] Vahey 181,162 and Draper 228,818 in

Reproduction of the Upper Half of the Last Page of The Christian Science Monitor.

history to ancient Greece and Rome. But when we look for what we call science, what do we find? Nothing worthy the name. Astronomy almost down to our day was a system of pretty dreams; chemistry, a mixture of alchemy, magic and the search for the philosopher's stone; medicine, a barbarous collection of superstition and grotesque remedies. Before the printing pressmen did as well as we, all that an individual man might do by his own proper powers, but it was all individual work. No one could reap the results of other men's work as now. With the invention of printing what a change! The printed book went at once to all the centers of learning, the universities and libraries, as well as to private scholars. It was subjected to the simultaneous criticism of the whole world, its facts discussed, its theories weighed; and so, gradually a body of truth grew until at last, and not so long ago, the practical sciences which are the basis of our industrial arts took form. This has been a process of evolution, and it is hard to conceive how slow it has been and how great a mass of books has been required. A few years ago a certain professor tried to induce the Engineers' Club to undertake the collection of a library of engineering books. I asked him once how much room such a library would require. He said he thought the clubhouse could contain them if books on chemistry were not included; that if they were, as much more room would be needed. The club house was four stories and basement, 27½ ft. front and probably 70 ft. deep. This immense mass of books were practically all dead. They were the ore from which the truth had been refined. They were as the countless generations required in the evolution of a new type of life.

At last the pace of invention, discovery and scientific progress grew so rapid that the book became too slow. It is a lucky book that lives ten years: some are outgrown in two; and I have known a book to be obsolete before it was printed. Hence the technical periodical which keeps its readers informed of the developments in its special field. No one expects the general newspaper to deal intelligently or adequately with any technical subject. It will flash the news of a discovery or happening all around the world if it be deemed of popular interest, but all who desire more than a superficial account must wait for the technical journal which will treat the subject fully, intelligently and fairly.

The Good Book tells us the Creator gave our first parents two commands. In one he forbad them to do something which they immediately did. In the other he commanded them to subdue the earth. How little of that subjugation was accomplished during the long ages that preceded the invention of printing, less than 500 years ago! How much has been accomplished during the few years that have elapsed since then, and how rapid has been the progress since the technical journal came upon the scene!

You, gentlemen, technical and trade journalists, are the vanguard of the procession which is marching toward the fulfillment of that command of God. You are the forerunners of the time when man, having subdued the forces of nature, shall make them do his work, and with the fulfillment of the command shall escape from the curse. "In the sweat of thy face shalt thou eat bread."

That all your journals may continue to grow and prosper and that you may live long in health and happiness is the earnest wish of him who was your Dean.—*Iron Age.*

Pecos Valley, N. M., Press Association

PECOS Valley Press Association held its third annual meeting at Carlsbad, New Mexico, October 5th, 6th and 7th. It is the pioneer association of the Territory and this meeting was the largest attended and was one of the most interesting to editors and publishers. The Association was organized three years ago at Roswell and its territory consists of the country east and south of the Rock Island road in New Mexico. The local press club of Carlsbad, namely, W. H. Mullane, Bernie Mullane and V. Albritton of the *Current;* W. T. Reed, Mrs. Asbury Moore, Ray Blocker of the *Argus,* and A. M. Hove, of the *Drovers' Journal,* did the honors in entertaining the Association, assisted by the members of the Commercial Club and their ladies. New Mexico is not a prohibition Territory and for that reason the Governors of North and South Carolina right royally assisted the local press committee in the entertainment of the members of the Association. The following program was rendered:

"The Relation of the Newspapers and Railways under the Inter-state Commerce Commission," by J. M. Wood of the Lakewood *Progress.*

Open discussion brought forth good thought by various members present, it being the general concensus of opinion that the present plan of the railways to pay cash for their advertising was the proper method, for the newspapers required cash more than passes.

The next paper was by President Loomis, of the Texico *Trumpet,* "A Uniform Rate for Foreign Advertising." The paper was full of meat and good advice and developed much comment from the members that altogether added much valuable information to the whole meeting.

The next paper was by Wm. H. Mullane, "Legitimate Newspaper Property in News and Editorial Comment." The paper drew a distinct line on the right of the newspaper to news and editorial comment, telling where duty and right are separated from malice and wrong.

Ex-president Will Robinson of the Roswell *Register-Tribune,* was assigned the subject, "Charity of the Newspaper," and for more than an hour he kept his listeners in rapt attention. His paper was full of pathos and elucidated the relation of the newspaper man to the community and the community to the newspaper man.

Judge Wm. H. Pope, who adjourned court to attend the meeting, responded in a half-hour of very happy remarks, saying that he was himself an old newspaper man, and that as a judge, he believed in using the newspaper men as public benefactors, and practically admitted that a good, sincere and deserving newspaper man could have anything he could give him, even to being excused from jury duty if it would cause the non-appearance of the paper, and that any office in his gift from U. S. Commissioner to jury commissioner was at the command of the newspaper men of his district. He complimented the fraternity as good, law-abiding people and a great help to the enforcement of law and order, saying he knew of none who were not of the best class of citizens in his district.

Capt. B. F. Harlow, of the Roswell Printing Co., responded to the subject, "Apprentices for Country Newspapers." His paper brought out much valuable information from the members on the subject, it being finally concluded that if the newspapers ever have followers in the business they must adopt the anti-race suicide policy and raise their own newspaper men for it developed that every one in the meeting was brought up by newspaper people and that four of the members were actually born in printing offices or in rooms connected with the office and learned the case before they could remember, one being Mr. Curran of the Clovis *News,* who was born twenty-eight years ago in the office of the Deming *Headlight,* and B. F. Mullane, who was born in the office (or in the rooms attached) of the Neola (Ia.) *Reporter,* twenty-five years ago. Three others were born while their parents were running papers and the balance, among them Will Robinson and Capt. Harlow, were all of the newspaper stock for centuries back. So it was determined to replenish the fraternity by natural means, it being the judgment of the meeting that it was better to work in accord with than against nature. Even F. G. Prouty of the Malaga *News,* was born in the office of the *Freeman's Champion* at Burlington in the Territory of Kansas in May, 1861. On that account his illustrious sire was elected the first state printer of Kansas, in 1868, and he was known as Col. S. S. Prouty. All the members also have sons who are becoming printers as fast as possible, and some have grandsons that are toddling around the printing offices being fed on printers' pi.

W. T. Reed, of the Carlsbad *Argus,* read a paper, "Reminiscences of a Printer-Editor." He seems to be the only editor in the country that does not want a son to become a printer, though he himself is the son of a printer-newspaper man. He started in Kansas, graduated in Texas and has washed rollers in Carlsbad for twenty years.

The last on the program was the paper by Jas. D. Whelan of the Artesia *Advocate,* entitled, "Postal Censorship." Mr. Whelan holds that the censorship of the press by the postal authorities is unconstitutional and that Congress should be called upon for relief; that the Czar of Russia is a pigmy as a despot when compared to the Postoffice Department and the U. S. Assistant Attorney-General, who have assumed powers that were never dreamed of by a people who have a constitution and a free government, that no monarchy is as badly cursed with despotism as is this free United States when the postal rulings are taken into consideration.

Mr. Whalen introduced the following resolutions which were adopted:

Resolved, That it is the sense of this meeting of the Pecos Valley Press Association, that all regulations relating to the transmission of newspapers through the mails, and to the grounds upon which such transmission may be refused by the postal authorities, shall be made definite and certain by a statute enacted for that purpose, and that in all cases, the publisher whose periodical has been refused transmission may appeal to the ordinary courts for a review of the legality of the ruling of the postal authorities.

Resolved, That copies of this resolution be sent to the delegate from New Mexico and to the members of the United States Senate from the adjoining States of Texas and Colorado with the request that they endeavor to secure favorable action upon them in Congress.

The matter of representation in the National Editorial Association was then taken up, and it was agreed to be the proper thing to elect committeemen, delegates and alternates to the National Association. The following were chosen:

Committeeman—Frank Prouty of the Malanaga *News.*

Delegates—Will Robinson of the Roswell *Register-Tribune,* and W. H. Mullane of the Carlsbad *Current.*

Alternates—A. E. Curren of the Clovis *News* and Leroy P. Loomis of the Texico *Trumpet.*

The following officers were elected for the ensuing year:

President, J. M. Wood of the Lakewood *Progress.*

Vice-President, Gayle Talbot of Artesia.

Secretary-Treasurer, A. E. Curran of the Clovis *News.*

Clovis, New Mexico, was selected as the place for holding the 1910 meeting.

Electrotyping Halftones

Advances made in engraving and illustrating have been frequent subjects of remarks in these pages. The halftone process has worked a revolution in illustrations, yet there remained, for a long time, one difficulty that some had thought could not be overcome. It was the supposed impossibility of electrotyping the plates in a way to make the electros satisfactory. Means were finally found for the satisfactory electrotyping of coarse screened cuts, but now the Globe Engraving and Electrotype Company, of Chicago, have found a way to retain all the details, all the lights and shades, to perfection, of the very finest halftones and this means of all halftones. The two illustrations, made by that Company, presented herewith, show the absolute perfection obtainable. The halftone is one of the finest that can be desired for any purpose, being three hundred lines, or 90,000 dots, to the inch,

300-line Halftone, 90,000 dots to the square inch

Electro from 300-line Halftone.

yet the electrotype is so perfect that it is doubtful whether anyone would be able to tell the difference between the two, or which is the original and which the electrotype, if this were not indicated by the line under each.

The Globe Engraving and Electrotype Company, by a process and appliance that they have evolved, are making electrotypes from halftones, every day, that are just as sharp and deep as are these cuts. As a convincing demonstration of their ability to accomplish this no better proof or demonstration is needed than are these illustrations. No practical printer need to be told of the economy that this means; forms can be duplicated without having new engravings made, and the original halftones can be filed away and preserved so that when the electrotypes become wornout, new ones can be made so that the perfection of the illustrations can be kept up. You can always, in reality, have a new or unworn cut. Electrotypes from these perfect electrotypes can be made of equal quality with the originals, so there is no need nor excuse for using or for a customer furnishing wornout cuts. The electrotyping process is so cheap that no one would think of letting the small expense stand in the way of securing satisfactory work. "Seeing is believing" that is, to anyone who is not entirely convinced, a trial order will remove all doubt

Changes of Traveling Men

Mr. Clarence Urban, who formerly represented the Barnhart Type Foundry Co., in South Texas, has resigned to engage in the mercantile business in Corsicana, Texas. Mr. Urban was a very successful salesman and counted his friends by the hundreds, and carries with him in his new business the best wishes of his many friends, as well as his former employers.

The Barnhart Type Foundry Co. also announce that they have secured the services of Col. F. B. Baillio, who will represent them in east, west and northwest Texas.

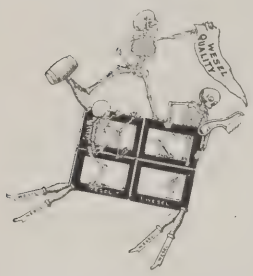
Col. Baillio is well known and popular with the Texas Press, and is ex-president of the Texas Press Association; also ex-president of the National Editorial Association. He was for several years actively engaged in the publishing business, but for the past several years he has been traveling representative for the Western Newspaper Union. The Cleburne *Enterprise*, his home paper, says: "Col F. B. Baillio, of this city, has accepted a position with the Barnhart Type Foundry Company at Dallas, as their traveling representative, and will start out tomorrow on his initial trip. Col. Ballio is one of the best newspaper men in the State, known and popular with all the boys. He was for several years, after giving up active newspaper work, the traveling representative of the Western Newspaper Union, his record is a good one. The Colonel is a hustler, and a pleasant and a genial gentleman, and the *Enterprise*, knowing him so well, unhesitatingly congratulates the Barnhart people in securing his services, and along with the Colonel's many friends, wishes him success and prosperity."

BUSINESS NOTES

This Department is conducted for the benefit of advertisers, and expresses their claims and views

CHASE THE CHEAPENER.

Reputation can only be gained by doing honest work, making honest goods, striving to excel in quality, using progressive ideas. The manufacturer who has achieved a great reputation has added one satisfied customer to another satisfied customer until his manufactures become the standard of quality. Such a manufacturer goes along serenely extending his business. He sees from year to year competitors enter his field, offering things cheaper, and cheaper and cheaper still. To do this they drag down quality. They do the whole trade an injury by cheapening quality—skinning materials and labor to gain orders by offering "bargains" that are always dear bargains. They find a market, but the manufacturer of quality bargains sees the cheapener spring up, make a noise like a business and then sink out of sight, one after another. This proves that the majority of printers are buyers of value and efficiency, backed by honestly-won reputation. Such a manufacturer is Ferdinand Wesel, the active head of the F. Wesel Manufacturing Company. Wesel quality has been accepted in both hemispheres as synonymous with best quality. It is the foundation of a great business—a business supremely useful to the printers and plate-makers of the world. In it hundreds of time-saving efficiency-increasing machines, tools and appliances have been evolved. Wesel has given his best to the printers, and erected a monumental business in doing so, that is alike creditable to the printers and himself. Long pre-eminent in printing materials, Wesel in latter years has added the most complete constructive line of machines and appliances for photo-engraving, stereotyping and electrotyping. As illustrative of what Wesel Quality means we instance the following letter from George H. Benedict, the best-known platemaker in America. Referring to Wesel's Hydraulic Moulding Press, he writes: "A better moulding press may be a possibility, but we will not believe it until shown. For speed, it is equal to two ordinary power moulding presses. It has set a new pace in moulding in our plant. We have no more trouble in moulding the largest halftones or solid color plates than ordinary type forms."



We could exhibit, if necessary, scores of similar letters relating to every department of the Wesel business. This tells the story of quality and satisfaction with quality which knits Wesel customers to him so firmly. The only bargain is that which wears well.

HEAVY COPPERPLATE GOTHIC EXTENDED.

The new series of Heavy Copperplate Gothic Extended now shown for the first time by the American Type Founders Company is the latest addition to their popular Copperplate Gothic Family. Like everything worth while which is undertaken by the great type company, this family absolutely cleans up the situation so far as Copperplate Gothics are concerned, and when the rumored new additions come along, printers will have the very last word as regards this type of lettering.

It is doubtful if there was ever a face of this character which became so universally popular for the varied styles of refined printing. In the regular job fonts they are put up in popular priced fonts, and inasmuch as the printer can obtain them in regular weight fonts at body type prices there is every inducement for the best printers to buy in full cases, and thus be prepared for any emergency which his customer's orders may present.

The Publishers Press started its leased wire service under the most favorable auspices. The wire service reached from New York to the Pacific Coast and evidently was very attractive to the papers who came in with this new news gathering organization at the start. The Pittsburg *Leader,* for example, printed something more than twenty columns of the service in its Sunday morning edition on October 3rd; the Denver *News* about twenty-five columns; Minneapolis *Tribune* about the same amount; the St. Paul *Pioneer-Press,* Oakland, California, *Tribune* and the other papers taking the service found it attractive and played it up in good style.

Among the contributors to the service were W. E. Carson and Paul Lambeth of London, Paul Villiers of Paris, Malcolm Clarke of Berlin and Clement J. Barrett in special cable letters. Bat Masterson, Richard Dahlgren, Hillary H. Olmann, Manhattan and Jeff Thompson contributed sporting letters. General news letters bear the names of Ralph M. Whiteside of Washington, Ralph Johnson, James Grant Thurston, Clarence E. Sayd and Robert Lee Carter of New York.

The service was started with a signed statement written especially for the Publishers Press by Vice-President Sherman, giving his impressions of the Hudson-Fulton Celebration. Professor Hyslop and others contributed signed news articles for the first night's report.

The wire report was particularly strong in the cable end, about 2,000 words of cable having been sent over on Saturday night by Mr. W. E. Carson, the European representative of the Publishers Press. A splendid picture service also constituted a part of the report.

W. G. F. Price, H. A. Holensworth and Frank Charlton are in charge of the New York end.

W. E. Carson, formerly in charge of the Harmsworth chain of newspapers in America, is in charge of the London Bureau, with offices at 49 Fleet Street, London, E. C.

George W. Irwin is in charge of the Chicago Bureau, which is in the Iroquois Building.

Fred Thorp is in charge of the Pittsburg office.

Russell Harper is in charge of the San Francisco office, Ralph M. Whiteside is in charge of the Washington office.

IT'S IN THE PAY ROLL.

The American Type Founders Company's page advertisement in this issue entitled, "It's in the Pay Roll," contains the suggestion that with a fixed charge of $500 a year for interest and depreciation on the machine and matrices, and about $1,000 for labor, with a few hundred dollars more for new matrices the office still does not have type enough—and yet there is no kicking from the proprietor, because "it's in the pay roll."

One result of this plain presentation of vital facts is that the proprietor is awakening to the suspicion that hundreds of dollars are possibly being lost every year through the pay roll which might be saved with a reasonable supply of conveniences and necessaries for the composing-room.

In this series of advertising talks to printers, President Nelson is doing a good work and one which is certain to cause an awakening of interest in the possibility of increasing profits in the composing-room end of the printing business. These articles should be read carefully by every progressive, wide-awake printer.

GET ADVERTISEMENTS BY PLEASING THE ADVERTISERS.

Experience has taught us that the time to please an advertiser is after you have got his contract. We have found that personal attention to type display and the introduction of some typographic novelty into an advertisement is the first great step toward pleasing the man whose dollars are essential to your prosperity. Every new type face issued by the typefounders should be studied to see if it has not in it some merit that will please the advertisers, or those who want catalogues or other job printing. Do not leave this important matter to any mechanical subordinate. It requires the attention of one who knows what insistence business men give to getting value for their outlay with you.

There is, for instance, a new type family, called Century Old Style, which is now advancing toward popularity with a rapidity which presages success. Have you seen it? Have you studied its design? Are there not some of your customers who would be stimulated to the point of increasing their advertising space by just such a type face? It has taken years to perfect this type design and prepare it for use. It merits study, but the point we wish to make is that it is vital to your business as a publisher and printer to study the types.

Every publisher who is alive to his own interests knows that the great Cheltenham family has added hundreds of extra dollars to the incomes of publishers and printers. Century Old Style is made by the same type foundry—the American Type Founders Company from whom specimens may be obtained. In producing its great type successes this company has rendered the publishers and printers an immense service, for all these type successes give impetus to the demand for advertising.

Another point may be made, and that is the wisdom of buying original designs—not poor imitations of some other concern's successes. The imitator of type designs does nothing but degrade the printing business for the purpose of trying to get a look in on the prosperity of those who have brains enough to be leaders and originators. These imitations cost just as much as the real articles. Do not buy near Century Expanded, near Cheltenham, nor any other emasculated parody of the genuine design. Go to headquarters at once. Go to the world-acknowledged leaders of type fashions, the American Type Founders Company, the designers of types that make printing and advertising popular.

TYPE IS CHEAPER THAN TIME.

We quote the following from an attractive little booklet reprinted by the American Type Founders Company from one of the recent trade publications and mailed to every printing office in the country:

"We are entering on a period of common sense in purchasing type. The type founders recognize it by selling useful display fonts that really fill a case at greatly reduced prices—the same price as plain body types, which were formerly the only fonts generally bought in common sense quantities. When we bought scanty job fonts we found them worn out in the face in a short time; with fonts that fill a case the wear is longer, jobs are set quicker; if bought in families the jobs look better, more tasteful and harmonious.

Buy consistently, letting one font harmonize with others. Discard the font from which you can only set lines for the fonts with which you can set pages or paragraphs, for that way economy lies. Keep your men producing every minute by using foresight, an ounce of which we are told is worth a pound of hindsight."

No one but the American would have thought of reprinting this article in the ultra-art form in which it has been treated—printed in a dark brown ink, on a brown shade of cover paper and illuminated with a decorative band in olive ink. Altogether it is attractive and unique, and we are not sure but that it will better serve its mission on this very account.

Paul W. Shattuck, manager of the San Francisco House of the Keystone Type Foundry, recently, spent some time in Chicago, Philadelphia and New York, getting in touch. He visited the Keystone houses in those cities and other manufacturers whose products he handles on the Pacific Coast. Mr. Shattuck is the son of William F. Shattuck, one of the pioneer typefounders of San Francisco, and at his father's death succeeded to the control of the Pacific States Type Foundry, which concern was lately consolidated with the Keystone Type Foundry's branch house under the corporate title of Keystone Type Foundry of California.

IS THE PRINTER GETTING HIS SHARE?

Countless millions are expended at Christmastide, and nearly all businesses are striving to sidetrack some of the expenditures into their yards. The printers—too many of them—stand and wait until some of this Christmas money is forced upon them. Printing is a business that requires, above all others, stimulation. The printer's customers can get along without much printing, but they can get along more prosperously by using more printing. The part of the wise printer, then, is to educate the community into appreciation of the value of "more" printing. Once the printer gets his community started, they will find that there is no such thing as "enough" printing.

To aid in this profitable crusade into Santa Claus Land, the American Type Founders Company has issued a superbly printed specimen in colors of a new line of Holiday Decorators and Holiday Borders, designed by eminent artists, and all cast in moulds. The display is very large, covering all requirements of those who solicit Christmas printing. The American Type Founders Company advances the proposition in this splendid specimen that the printer's customers be allowed to select and pay for such designs as they may wish to use in their holiday printing and advertisements. Everyone with any advertising sense will appreciate the type company's enterprise in presenting this timely collection of business-getting decorators at the proper time, and combining with them fine examples of the best ways of using them.

FISHING FOR BUSINESS.

Such is the caption of an immensely attractive booklet or type showing which recently reached our desk from the great type distributors of the world, the American Type Founders Company. We cannot be too enthusiastic in praise of this, and every printer, and every business house interested in advertising, who received a copy will unquestionably echo our sentiments.

There is hardly an example of typography which the printer cannot profitably borrow outright and adapt to his own work or for his customers. If you have not a copy just drop a line to our friend Frank B. Berry, Manager of the Typographic Department, 300 Communipaw Avenue, Jersey City, and see how promptly one will find its way to your own desk.

It contains specimens of more than a hundred unique and snappy designs for holiday advertising which have very properly been designated as Holiday Decorators.

WANTS AND FOR SALE

Advertisements will be inserted in this column at the rate of 25 cents a line, ten words to the line. Copy must reach this office not later than the 20th of the month preceding date of publication. Cash must accompany order . .

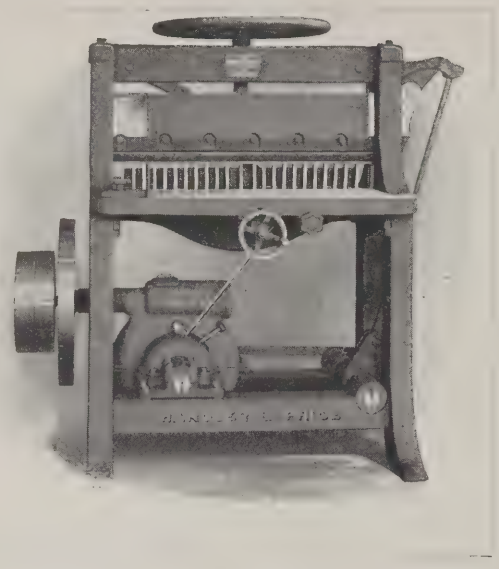
A FEW QUESTIONS TO OWNERS OF MEDIUM SIZED PRINT SHOPS



Did you ever run your plant without power? Perhaps you did, but you would not think of doing it now.

When you first bought your engine, motor or other power, didn't you think you were getting a little extravagant? That you didn't have enough work to warrant the purchase?

You think differently now, for you know full well that you never made a better investment. But, are you making all out of it you can possibly make?

You are using power to run your Presses, and perhaps some other machinery—are you using it on your Paper Cutter? Perhaps you think it would be extravagant for you to install a Power Cutter, but after you had bought it you would likely discover that you had made a very profitable investment.

Don't you think this matter is worth looking into? We feel sure it is worth your while to investigate.

CHANDLER & PRICE POWER CUTTERS

They are the latest and consequently the most up-to-date Power Cutters on the market, and they are designed and built in accordance with the Chandler & Price standard, which means that they are the best Power Paper Cutters built.

PRACTICAL JOURNALISM

A Complete Handbook of Modern Newspaper Methods

By EDWIN L. SHUMAN

Author of "Steps into Journalism"
Literary Editor of the Chicago *Record-Herald*

Illustrated, 12 mo. Cloth $1.25 net; postage 12c additional

THIS is the most comprehensive treatise on newspaper work that has thus far appeared. It explains the organization of a newspaper staff, the best way to enter journalism, the usual steps of promotion, the salaries paid, etc. There are practical chapters on how to start and run a country newspaper, and for workers on the country press there are valuable suggestions on how to make connections with large city papers. There is a chapter for the country correspondent.

Mr. Shuman's method in regard to the large journals has been to tell what each department does, and the best methods of doing it. We get a view of the reporter at work, coupled with clear instructions on how to write a news story. The question of how to get a start is answered in regard to every department. For the experienced editor there is much valuable information in the chapters on errors, libels and copyright. There are chapters for artists, ad writers, women and special writers. The book covers the whole field of journalism with a thoroughness never before attempted.
